Board of Directors of the Sonoma County Agricultural Preservation and Open Space District
Board of Commissioners of the Community Development Commission

Board Agenda Date: December 11, 2018

Vote Requirement: Informational Only

Department or Agency Name(s): County Administrator’s Office, Sonoma County Employees’ Retirement Association, Auditor-Controller-Treasurer-Tax Collector

Staff Name and Phone Number:
Nikolas Klein (CAO), 707-565-5312
Julie Wyne (SCERA), 707-565-8103
Amanda Ruch (ACTTC), 707-565-3274

Supervisorial District(s):
Countywide

Title: 2018 State of the Retirement System Report

Recommended Actions:

Receive an informational report on the state of the County’s pension system that highlights annual costs, unfunded liabilities, results from the 2017 annual actuarial valuation, and anticipated impacts from the upcoming 2018 experience study and valuation.

Executive Summary:

The 2018 State of the Retirement System Report is a recurring annual update highlighting Sonoma County’s annual pension costs, unfunded liabilities, and impacts of recent and future actuarial valuations and studies. This update is part of the County’s ongoing efforts to improve accountability and transparency with respect to reporting on the County’s pension costs and liabilities, which is one of the Board’s major pension reform goals. The need for annual pension system reports has been identified and recommended in the FY 2014-15 Sonoma County Grand Jury Report, the July 2016 report of the former Independent Citizens’ Advisory Committee on Pension Matters, and most recently, the September 2018 report of the Board’s Ad Hoc Committee on Pension Reform.

Discussion:

This annual report presents data and information on several topics relevant to the County’s retirement system: annual pension contribution costs, Pension Obligation Bond costs and principal balances, unfunded liabilities, retirement system membership data, average retirement benefits, historical investment returns, 2017 actuarial valuation impact, and a preview of the upcoming 2018 actuarial valuation and experience study. Refer to the attached *2018 State of the Retirement System Report* for details.

Prior Board Actions:

09-11-2018 - Approved Pension Ad Hoc Report Recommendations
07-12-2016 - Received final report of the Independent Citizens Advisory Committee.
06-14-2016 - Pension System Actuarial Valuation Update
01-27-2015 - Received a staff update on Pension Reform efforts initiated in November 2011.

Strategic Plan Alignment Goal 2: Economic and Environmental Stewardship

Ongoing review of the County's pension costs and long term liabilities ensures the Board and the public are kept apprised of how obligations impact the County's fiscal health. Discussing the annual actuarial valuation of the retirement system with the Board of Supervisors helps improve transparency and public understanding of pension matters.

II. County's Pension Costs

III. County's Pension Liabilities

IV. SCERA Retirement Administrator Update

V. Segal 2017 Actuarial Valuation

VI. Segal 2018 Experience Study Preview

VII. Next Steps

I. Background & Pension System Overview

Background

- Prior pension system updates in January 2015 and June 2016.
- One of the County's primary pension reform goals is to improve accountability and transparency, which includes periodic reports to the Board of Supervisors and public.
- September 2018 Pension Ad Hoc Report reiterated the need for annual pension system updates going forward.
- Both the Citizens' Pension Advisory Committee and Grand Jury recommended that the County present annual pension reports.

Pension System Overview

- The Sonoma County Employees' Retirement Association (SCERA) Board administers the defined benefit pension plan for multiple employers, including the County, Superior Court, SCTA, and Valley of the Moon Fire District.

- Benefits are set by the employers' governing body.

- Employees' pension benefits are funded by contributions from participating employers, employees, and investment earnings.

- Annual actuarial valuations determine contribution rates.

- County pays both contributions to SCERA and Pension Obligation Bond (POB) debt service costs to bondholders.

County’s Pension Obligation Bonds

- POB Debt = Refinanced the County’s Unfunded Liability to an interest rate lower than SCERA’s 8% or 8.25% interest rate assumed at the time of each bond issuance.
- Bond proceeds were deposited in the SCERA pension fund upon issuance.
- County pays debt service to bond holders, not to SCERA, per <u>fixed</u> payment schedules.

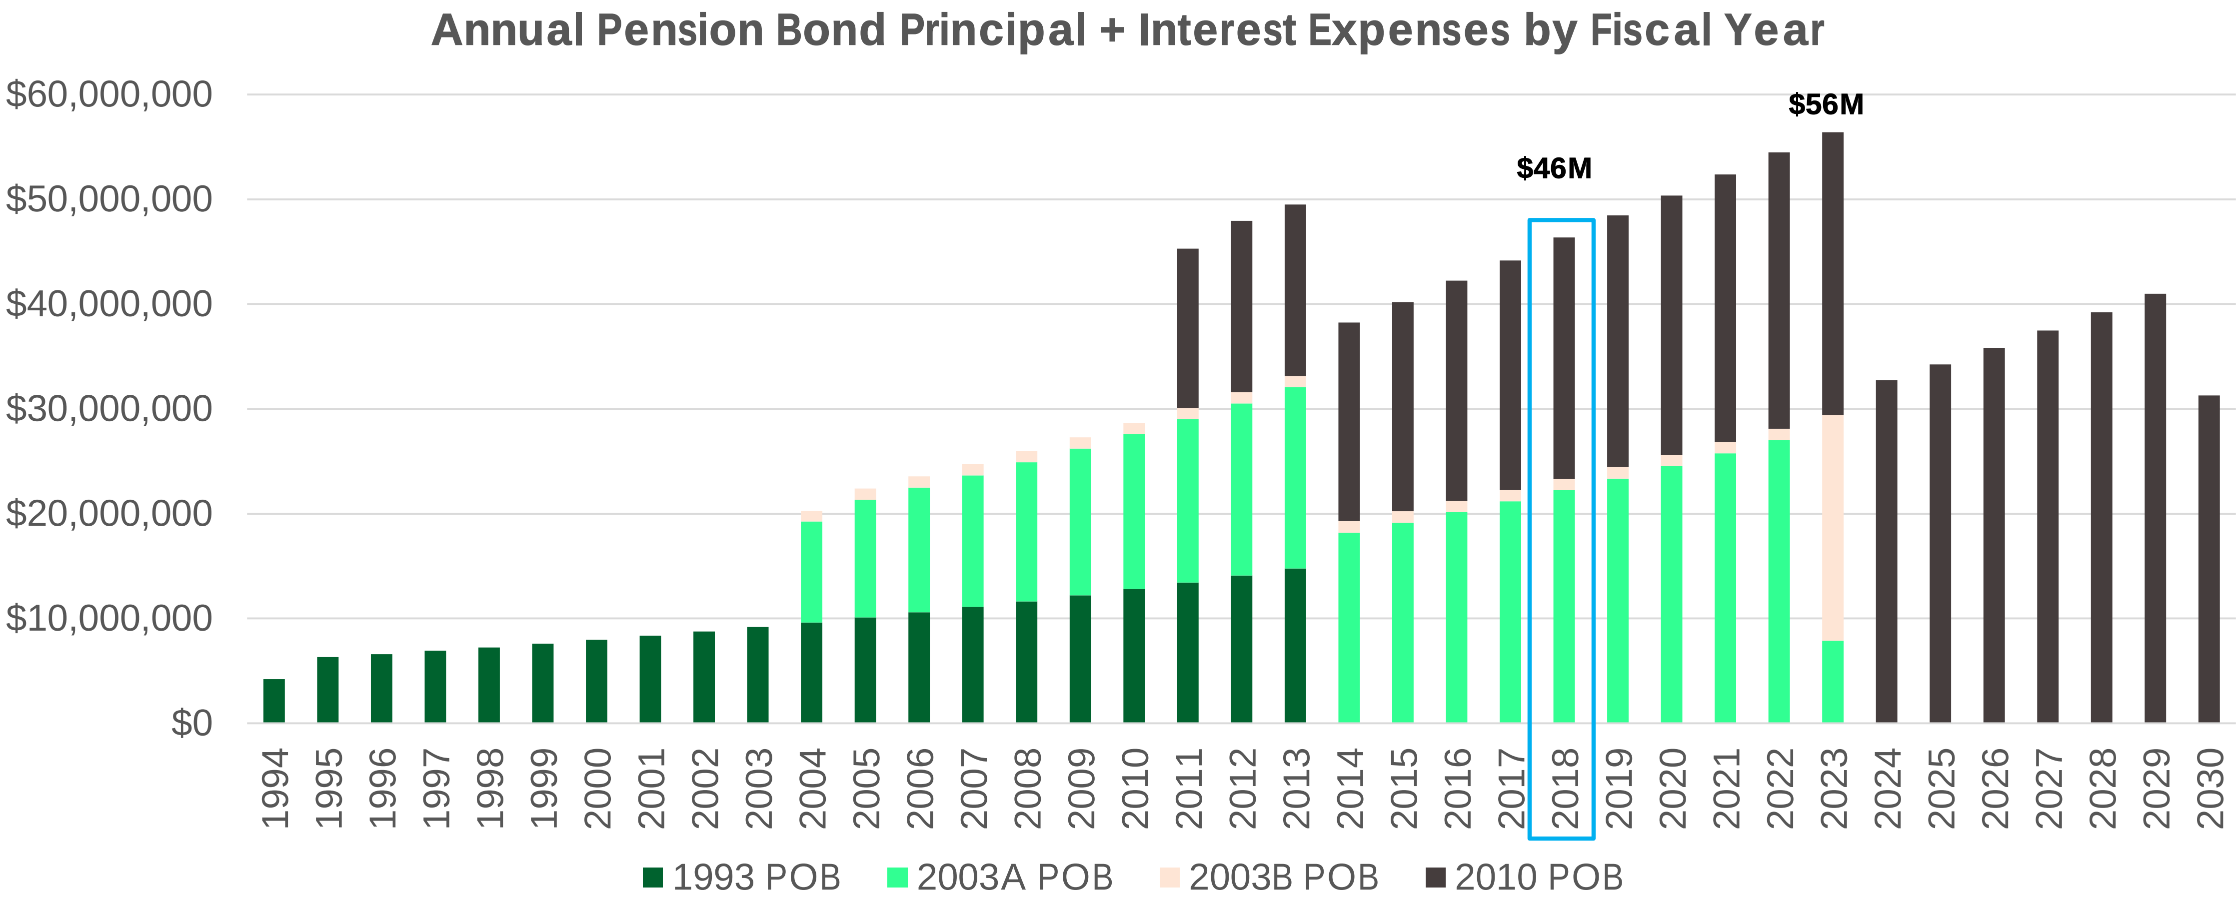
Summary of Pension Obligation Bonds ($ in millions)									
	Bond Information			Total Debt Issuance			Balance as of 6/30/18		
Description	Interest Rate	Term (Years)	Final Maturity (FY)	Principal	Interest	Total	Principal	Interest	Total
Series 1993	6.72%	20	2013	$ 97.4	$ 96.1	$ 193.5	-	-	-
Series 2003A	4.80%	20	2023	$ 210.2	$ 135.9	$ 346.1	$ 97.1	$ 11.4	$ 108.5
Series 2003B	5.18%	20	2023	$ 21.0	$ 20.9	$ 41.9	$ 21.0	$ 4.8	$ 25.8
Series 2010A	5.90%	20	2030	$ 289.3	$ 242.9	$ 532.2	$261.8	$ 117.6	$ 379.4
Grand Total				**$ 617.9**	**$ 495.8**	**$ 1,113.7**	**$ 379.9**	**$ 133.9**	**$ 513.8**

II. County’s Pension Costs

County Pension Costs – Data Assumptions & Sources

- The County's pension contribution, covered payroll, operating revenue, and net pension liability amounts presented in this annual report include:
  - All primary Governmental and Business-Type activities reported in the County's Comprehensive Annual Financial Reports (CAFR), including: County departments, Open Space District; and affiliated agencies such as SCERA, Fair, First 5, Law Library, LAFCO, Waste Management, and Northern Air Pollution Control District.
  - Water Agency as reported in its CAFR and prior year audited financial reports.
  - Community Development Commission as reported in its audited financial reports.
- The County's reported costs <u>exclude</u> the following non-County government entities participating in SCERA's pension plan: Superior Court of Sonoma County, Valley of the Moon Fire Protection District, and Sonoma County Transportation Authority.
- All FY 17-18 information is <u>preliminary</u> pending publication of the audited CAFR.
- Annual expenses and principal balances for Pension Obligation Bonds are based on the County's CAFR and the bonds' respective 20-year fixed payment schedules.

POB Expenses Based on Fixed Payment Schedules



Segal Consulting

County Pension Expenses by Fiscal Year

	FY 14-15	FY 15-16	FY 16-17	FY 17-18
Pension Contribution Expenses [1]				
County of Sonoma	$55,980,924	$56,663,114	$52,980,683	$55,480,438
Accelerated UAAL Payment [2]	$0	$3,553,000	$0	$0
Community Development Commission	$499,498	$636,796	$489,353	$548,624
Sonoma County Water Agency	$3,713,006	$4,481,365	$3,581,629	$3,946,189
Normal Cost Share Reimbursement [3]	$0	$0	$1,917,134	$3,455,349
Total Pension Contribution Expense	**$60,193,428**	**$65,334,275**	**$58,968,799**	**$63,430,600**
Pension Obligation Bonds (POB) Debt Exp.				
2003A POB	$19,147,786	$20,136,014	$21,167,370	$22,243,337
2003B POB	$1,075,200	$1,075,200	$1,075,200	$1,075,200
2010 POB	$19,972,314	$21,013,543	$21,903,048	$23,034,117
Total POB Debt Expense	**$40,195,300**	**$42,224,757**	**$44,145,618**	**$46,352,654**
Total Employer Expense (Pension + POB)	**$100,388,728**	**$107,559,032**	**$103,114,417**	**$109,783,254**

Note 1: *County source data from audited annual financial reports for FY 14-15, FY 15-16 & FY 16-17; FY 17-18 amounts are unaudited as of 11/14/18.*
Note 2: *In FY 15-16, the Board of Supervisors approved a one-time accelerated payment towards outstanding UAAL.*
Note 3: *Under labor agreements negotiated in 2016-17, the County agreed to reimburse legacy employees for their higher normal costs contributions.*

County Pension Expenses – Measurement Ratios

	FY 14-15	FY 15-16	FY 16-17	FY 17-18
Total Employer Expense (Pension + POB)	**$100,388,728**	**$107,559,032**	**$103,114,417**	**$109,783,254**
Total Covered Payroll [1]	$286,842,630	$313,526,539	$320,173,397	$328,766,520
Total Salaries & Benefits [2]	$526,150,477	$551,436,816	$589,853,663	$611,820,469
Total Operating Revenue [1]	$1,031,452,795	$1,067,483,017	$1,103,317,902	$1,129,155,235
Pension Expense as % of Covered Payroll	35.0%	37.5%	35.9%	38.3%
Pension Expense as % of Total Sal. & Benefits (S&B)	19.1%	20.4%	19.6%	20.9%

County's total Pension Expense to total S&B Target is 10% by 2023

Pension Contributions as % of Operating Revenue				
Sonoma County	9.7%	10.1%	9.3%	9.7%
Statewide Average [3 & 4]	8.9%	9.1%	n/a	n/a
National Average [3 & 4]	6.3%	6.5%	n/a	n/a

Note 1: *County source data from audited annual financial reports for FY 14-15, FY 15-16 & FY 16-17; FY 17-18 amounts are unaudited as of 11/14/18.*
Note 2: *Total S&B data from the County's Enterprise Financial System.*
Note 3: *Statewide and national weighted averages for local pension plans sourced from the Public Plans Database (http://publicplansdata.org/) state data for California. Data unavailable for FY 16-17 and FY 17-18.*
Note 4: *It is not clear if Statewide/National data includes local jurisdictions' respective Pension Obligation Bond costs. As a result, the County's pension costs and ratio measures reported here may appear relatively* ***higher****, because they factor in both pension and POB expenses.*

III. County Liabilities

Net Pension Liability vs. Unfunded Actuarial Accrued Liability UAAL

- To comply with Government Accounting Standards, Sonoma County reports its proportionate share of **Net Pension Liability (NPL)** in the Comprehensive Annual Financial Report (CAFR) .
- NPL is the difference between the pension plan's Total Pension Liability and its Fiduciary Net Position, or Market Value of Assets, measured by the price that would be received if assets were sold on a given date.
  - Not the same as **Unfunded Actuarial Accrued Liability (UAAL)**, which is the difference between the pension plan's total liability and its Actuarial Value of Assets, which accounts for recognizing investment gains and losses on a smoothed basis over a 5-year period to help mitigate significant swings year-over-year.
- NPL is required for financial reporting; UAAL is used by the actuary in its annual valuations to determine contribution rates needed to fund the pension plan.

Net Pension Liability vs. UAAL

SCERA GAS 68 Report for 6/30/18 Reporting Date ($ millions)

	Amount
SCERA Total Pension Liability	$2,917
SCERA Fiduciary Net Position/Market Value of Assets	$(2,748)
Total Net Pension Liability (NPL) Based on Market Assets Value	**$169**
County's Proportionate Share of NPL (87% of Total)	**$146**

	Amount
SCERA Total Pension Liability	$2,917
Actuarial Valuation of Assets	$(2,557)
Total Unfunded Actuarial Accrued Liability (UAAL)	**$360**
County's Proportionate Share of UAAL (91% of Total)[1]	**$328**

Note 1: *Calculated using the Appendix D "Amortization Schedule for UAAL" data in SCERA's Actuarial Valuation dated 12/31/17.*

Unfunded Actuarial Accrued Liability (UAAL) Major Events in Past 15 Years

Increasing

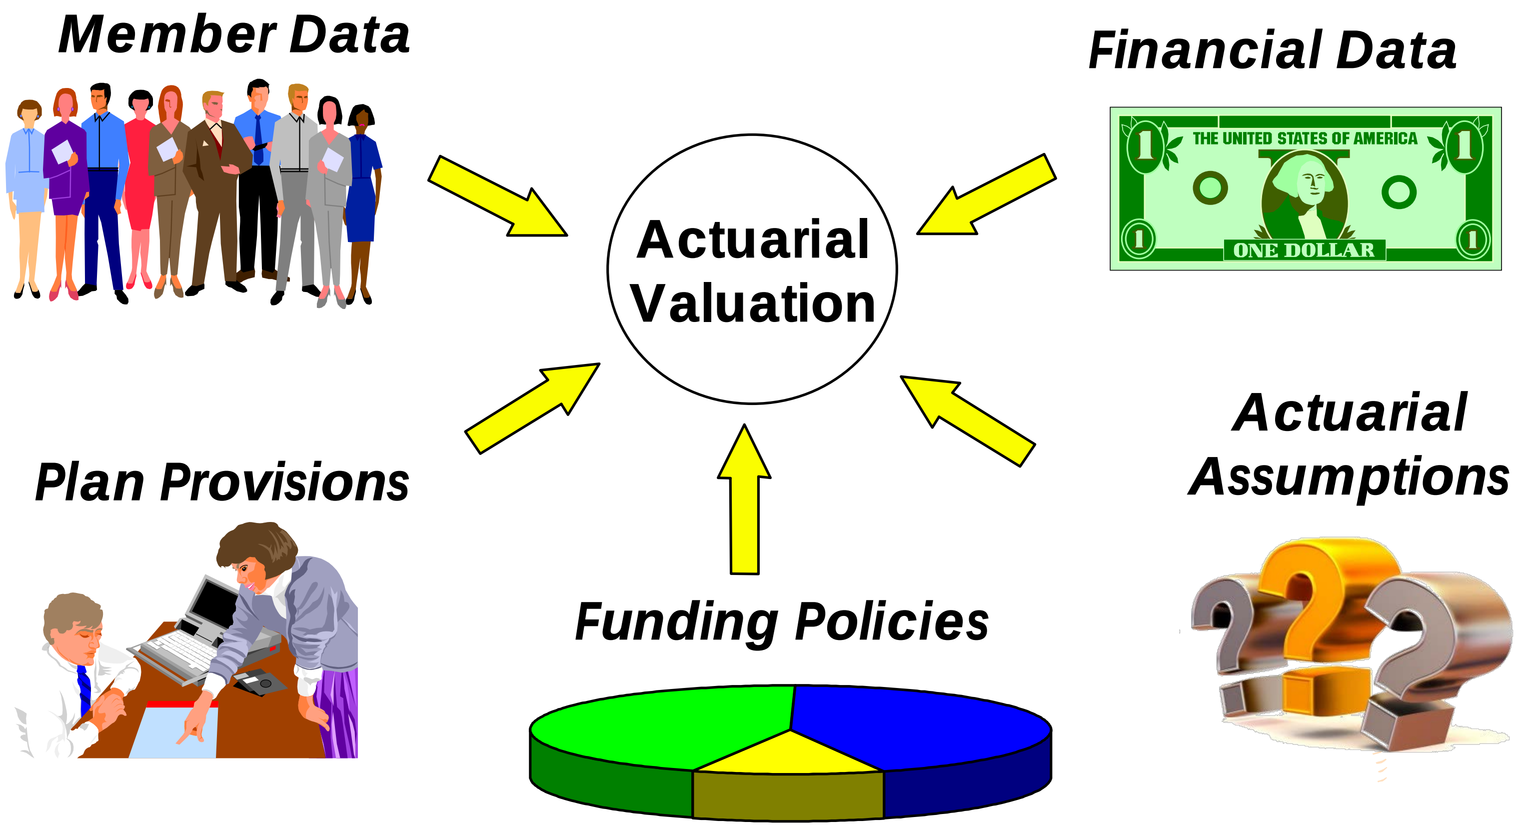
- Safety members: 3% at 55 (2003)
- General Members: 3% at 60 (2004)
- Safety Members: 3% at 50 (2006)
- Financial Market Downturn/"Great Recession" (2008)
- Cash Allowance Benefit (2009)
- Actuarial Assumption Changes 2005, 2008, 2009, 2010, 2011, 2014

Decreasing

- Pension Obligation Bonds Proceeds
  - May 2003 $210M
  - September 2010 $289M
- Public Employees Pension Reform Act – PEPRA (2013)
- County Elimination of Cash Outs in Final Average Salary Calculations (2013, impacted 2012 valuation)
- Additional UAAL Payments

V. Segal – 2017 Actuarial Valuation

What goes into an Actuarial Valuation?



Member Data

Financial Data

Actuarial Valuation

Plan Provisions

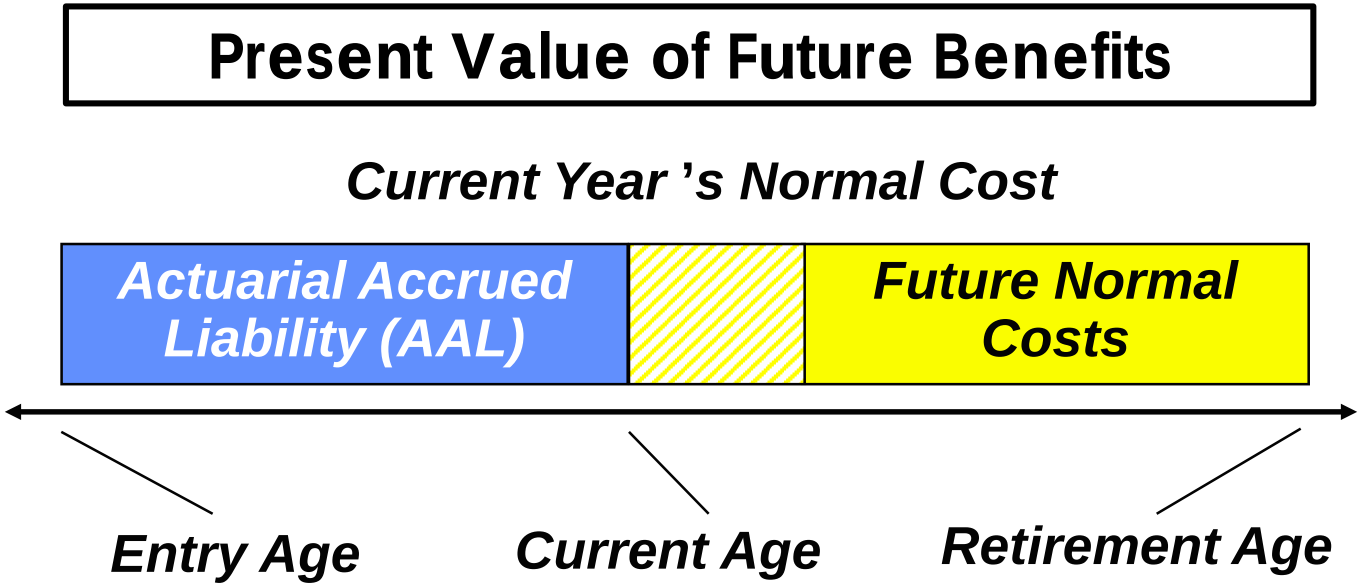
Actuarial Assumptions

Funding Policies

Funding Retirement Benefits – Actuarial Terminology

- **The Normal Cost is the portion of the cost the member's projected benefit allocated to a year of service**—only active members have a current Normal Cost

- **The Actuarial Accrued Liability (AAL) measures the Normal Costs from past years**—for retired members, the AAL is the entire present value of their benefit



Present Value of Future Benefits

Current Year 's Normal Cost

Actuarial Accrued Liability (AAL)

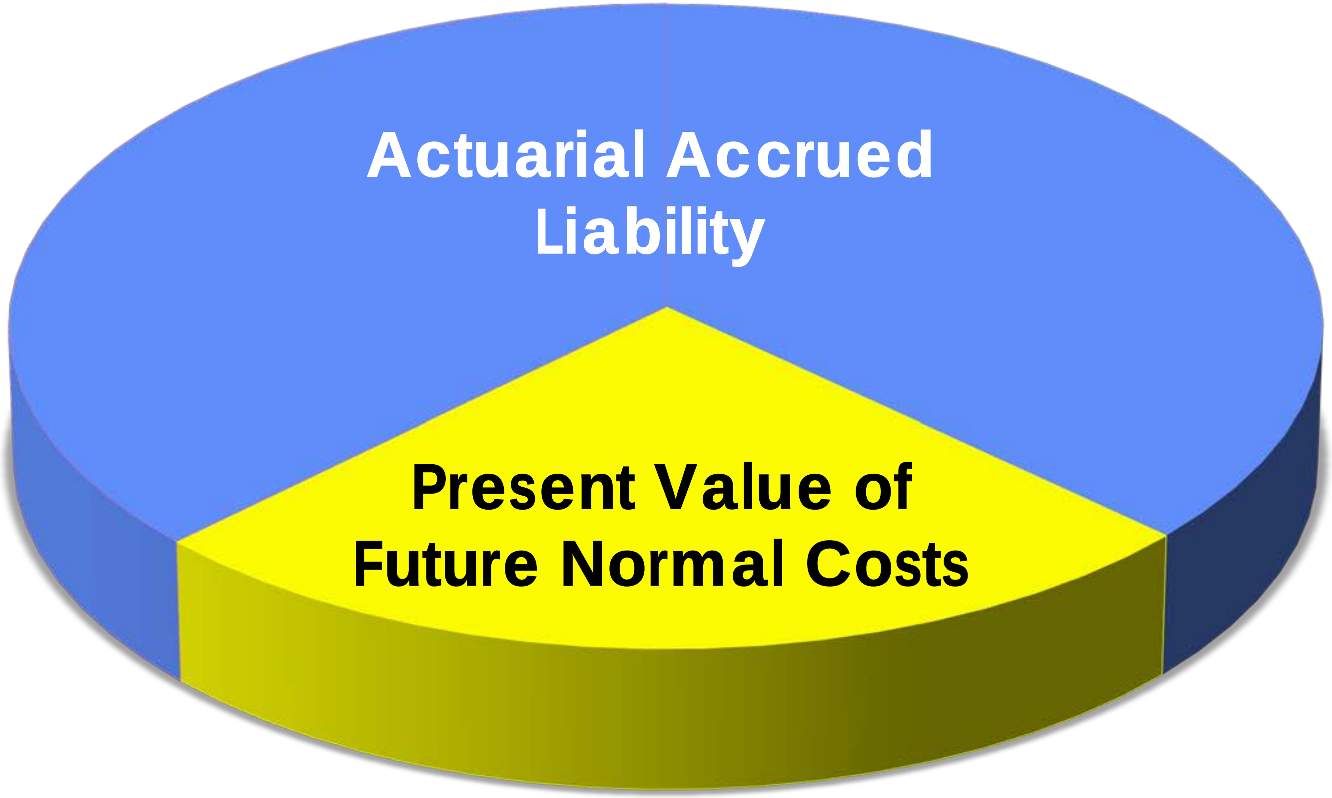
Future Normal Costs

Entry Age

Current Age

Retirement Age

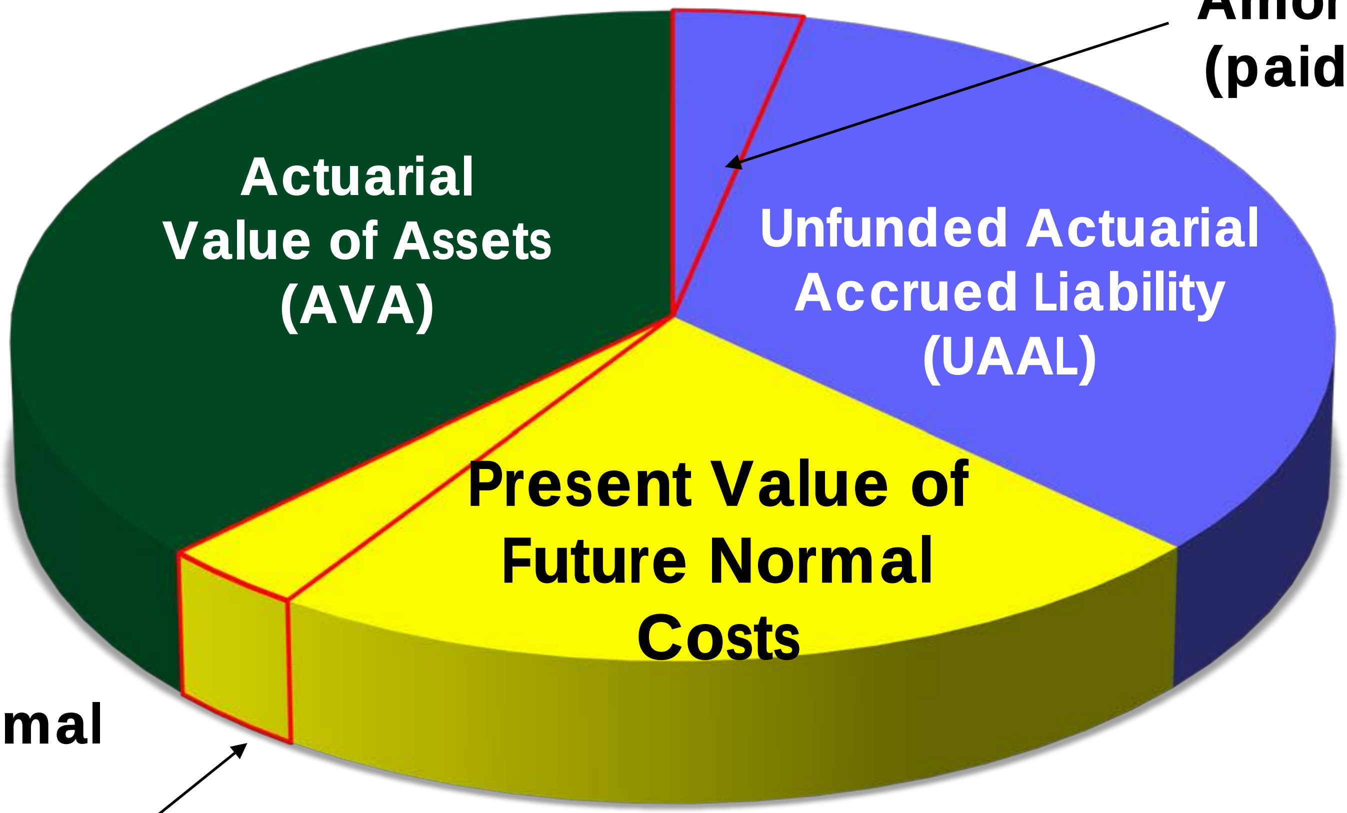
Present Value of Future Benefits – Entire Plan



Actuarial Accrued Liability

Present Value of Future Normal Costs

Funding Retirement Benefits – Contribution Elements



Current Year's Amortization of UAAL (paid by employers)

Current Year's Normal Cost (paid by members and employers)

Purpose of the Actuarial Valuation

- Summarizes the actuarial data used in the valuation
- Analyzes the preceding year's experience
- Determines SCERA's funded status as of December 31, 2017
- Establishes funding requirements for fiscal year 2019 - 2020

Valuation Results ($ in thousands)

	12/31/2017	12/31/2016
Market Value of Assets (MVA)	$2,748,040	$2,414,828
Valuation Value of Assets (VVA)	$2,557,299	$2,399,171
Actuarial Accrued Liability (AAL)	$2,916,856	$2,807,398
Unfunded AAL (AAL less VVA)	$359,557	$408,227
Funded Percentage (VVA Basis)	87.7%	85.5%
Funded Percentage with recognition of deferred gains	94.2%	86.0%

Valuation Results ($ in thousands)

	12/31/2017	12/31/2016
Employer Contributions:		
General Contribution Rate		
(% of payroll)	17.1%	17.8%
Estimated Annual Contribution	$50,438	$52,457
Safety Contribution Rate		
(% of payroll)	26.3%	27.8%
Estimated Annual Contribution	$19,832	$20,939
Total Contribution Rate		
(% of payroll)	19.0%	19.9%
Total Estimated Annual Contribution	$70,270	$73,396

Experience During the Year (continued)

- Investment Experience for year ending December 31, 2017
  - Market Value of Assets earned 16.4%, which is greater than the assumed rate of return of 7.25%
  - Valuation (smoothed) Value of Assets earned 9.1% (more than 7.25%)
    - Deferred investment gains increased from $16M in 2016 valuation to $191M in 2017 valuation

- *If the $191M in deferred gains were recognized immediately:*
  - *Funded ratio would increase from 87.7% to 94.2%*
  - *Average employer contribution rate would decrease from 19.0% to 15.3% of payroll*

Development of Unfunded Actuarial Accrued Liability

		(Amounts in Thousands)
1. Unfunded actuarial accrued liability at beginning of year		$408,227
2. Normal Cost		74,355
3. Expected employer and member contributions		-112,391
4. Interest		28,358
5. Expected unfunded actuarial accrued liability		$398,549
6. Actuarial (gain)/loss due to all changes:		
a. Investment gain	-$44,256	
b. Lower than expected contributions	4,568	
c. Higher than expected salary increases	4,586	
d. Other experience gains	-3,890	
e. Total		-$38,992
7. Unfunded SCERA's actuarial accrued liability at 12/31/2017		**$359,557**

Change in Average Employer Contribution Rates

	Contribution Rate (% of pay)	Estimated Annual Dollar Cost ($000)
Recommended Average Employer Contribution Rate as of December 31, 2016	**19.85%**	**$73,396**
Effect of investment gain	-0.85%	-3,143
Effect of difference between actual and expected contributions	0.09%	333
Effect of difference in actual versus expected individual salary increases	0.09%	333
Effect of decrease in UAAL rate from higher than expected increases in total payroll	-0.03%	-111
Effect of demographic changes	-0.07%	-259
Effect of other experience gains	-0.08%	-279

VI. Segal – 2018 Experience Study Preview

Actuarial Assumptions for Next Valuation (Dec. 31, 2018)

Actuarial assumptions—two kinds:

- Demographic
  - When benefits will be payable
  - Amount of benefits
  - Developed using experience from January 1, 2015 to Dec. 31, 2017
- Economic
  - How assets grow
  - How salaries and benefits increase

Demographic Assumptions

- **Rates of “decrement”**
  - Termination, mortality, disability, retirement
  - Termination
    - Withdrawal
    - Vested termination

  - Mortality:
    - Before and after retirement
    - Service connected or not
    - Service, disability, beneficiary

- **Other retirement related assumptions**

Economic Assumptions

- Price inflation (CPI)
  - Component of Investment Return, Salary Increases
- Investment return
  - Price inflation
  - Real return, net of administrative and investment expenses
- Salary increases
  - Price inflation
  - Real wage increases (“across the board”)
    - Total payroll assumed to grow at price inflation plus real wage growth
  - Promotional and merit

Selection of Actuarial Assumptions

- Objective, long term
- Recent experience or future expectations
  - Demographic: recent experience
  - Economic: not necessarily!
- System specific or not
  - All assumptions are system specific except price inflation
- Consistency among assumptions
- Desired pattern of cost incidence
  - Good assumptions produce level cost
  - Beware “results based” assumptions!

Always remember

C + I = B + E

Contributions + Investment Income

equals

Benefit Payments + Expenses

- Actuarial valuation determines the current or “measured” cost, not the ultimate cost
- Assumptions and funding methods affect only the timing of costs

Recommended Demographic Assumptions

- Rates of termination, mortality, disability and retirement
  - Small adjustments to the rates
- Mortality Rates
  - Use Mortality table developed by the Society of Actuaries
    - Adjust to reflect experience observed at SCERA
  - Use "generational" approach to anticipate future mortality improvement
    - Each new generation of retirees are expected to live longer than last generation
  - Slightly less future mortality improvement than currently assumed

Economic Assumptions

- Price Inflation (CPI)
  - Investment Return, Salary Increases
- Salary Increases
  - Wage inflation (or payroll growth)
    - Includes price inflation plus "across the board" real wage growth
  - Promotional and merit: based on experience
- Investment Return (Investment Earnings)
  - Components include price inflation, real return, expenses (administrative and investment)
  - Generally based on passive returns

Recommended Economic Assumptions

	12/31/2015 Val'n		Recommended	
	Return	**Pay***	**Return**	**Pay****
Price Inflation	3.00%	3.00%	2.75%	2.75%
Real Wages	n/a	0.50%	n/a	0.50%
Net Real Return	4.25%***	n/a	4.25%***	n/a
Total	**7.25%**	**3.50%**	**7.00%**	**3.25%**

* Total payroll growth. Excludes Merit and Promotion component of assumed individual salary increases, which after 5 years are 0.50% for General and Safety.

** Total payroll growth. Excludes Merit and Promotion component of assumed individual salary increases, which after 15 years are 0.50% for General and 0.75% for Safety.

*** Return is net of investment and administrative expenses

Investment Earnings Assumption

- Comparison with other systems
  - National median is 7.50% but continues to trend down nationwide
  - Most common for California county retirement systems is 7.25%
  - Seven California county retirement system have adopted 7.00%
    - San Mateo is at 6.75% (with 2.50% inflation)
    - San Diego City system is reducing to 6.50%
    - Both San Jose City systems are at 6.875%
  - CalPERS and CalSTRS both approved reduction to 7.00%

Anticipated Impact on Valuation Results

Modeled as of December 31, 2017 for illustration

- **Increase in Actuarial Accrued Liability: $31 million**
- Total increase in average required employer contribution: 1.36% of pay
- Total increase in average member rate: 0.47% of pay
- Impacts vary by cost group
- Proposed changes in economic assumptions account for most of the overall cost impact

VII. Next Steps

Summary

- The Pension Plan is 87.7% funded as of Dec. 31, 2017.
- The 2017 Actuarial Valuation was positive overall, which means the County's contribution costs should remain stable through FY 19-20.
- The County's costs are expected to increase in FY 20-21 due to anticipated adverse impacts from the upcoming 2018 Valuation/Experience Study.
- Annual Pension Bond costs will continue to rise roughly $2M per year, peaking in FY 22-23, before final payment in FY 2029-30.
- The Net Pension Liability portion of unfunded liability has declined over the years, but it is volatile and will likely increase as a result of the 2018 Valuation.

Looking Ahead

- Today's report is informational only; and serves as summary reference for the Board's long term fiscal planning.
- **January 2019 or after:** report to be reviewed by the Citizens' Pension Committee
- **April 2019:** staff will present a new financial policy for Board approval to implement an accelerated approach of making prepayments towards UAAL (September 2018 Pension Ad Hoc Report Recommendation).
- **April – May 2019:** publish Segal's SCERA 2018 Experience Study and Valuation; the rates included therein will impact the County's FY 2020-21 budget.
- **January 2020:** Next "State of the Pension System" Annual Report.

Questions/Discussion

County of Sonoma Agenda Item Summary Report

Clerk of the Board
575 Administration Drive
Santa Rosa, CA 95403

Agenda Item Number:
(This Section for use by Clerk of the Board Only.)

To: Board of Supervisors
Directors, Sonoma County Water Agency, Ag Preservation & Open Space, Northern Sonoma County Air Pollution Control District, Community Development Commission

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): County Administrator's Office

Staff Name and Phone Number:
Niki Berrocal, Deputy County Administrator
707-565-2431

Supervisorial District(s):

Title: FY 2019/20 Budget Development

Recommended Actions:

a. Receive and accept updated FY 2018/19 – FY 2022/23 Five Year General Fund Fiscal Forecast.
b. Review the FY 2019/20 Budget Framework and provide additional direction.
c. Adopt an immediate budget balancing strategy in the form of a hiring freeze on all positions which are not currently under recruitment and have been vacant for longer than nine months as of December 11, 2018.

Executive Summary:

In preparing the budget for FY 2019/20, it is important to review the County's General Fund 5-year fiscal outlook and revisit the 2017 wildfire disaster financial impacts. The County of Sonoma experienced three Presidential Major Disaster declarations in 2017. Fortunately, the County has been able to maintain flexibility in its budgeting approach and the Board has prioritized establishing a Recovery Framework plan, which as a separate item, is being presented today for the Board's adoption. The financial impacts from the 2017 Wildfire disaster will continue to influence the County's fiscal sustainability beyond our five year forecast.

This item provides an updated General Fund fiscal forecast, update on disaster recovery FEMA claim costs, FY 2019/20 budget development, and recommends a hiring freeze on positions that have remained vacant for over 9 months as an initial balancing strategy. Key dates and budget framework are highlighted in the discussion for FY 2019/20 budget development cycle.

Discussion:

As part of the Recovery Framework initiative County departments have already started prioritizing services to support recovery efforts. In parallel, the development for the FY 2019/20 budget cycle is underway and for FY 2019/20, staff anticipates a general fund shortfall of $12.8 million due to no planned State secured property tax backfill at the same time as expenses are anticipated to increase by about 2%. FY 2019/20 budget development is detailed below for additional direction by the Board. FY 2018/19 is being tracked closely as the first year without year-end savings built into the budgeted revenues. Budget pressures and anticipated increases in ongoing staffing costs are a huge consideration in vacancy and recruitment management.

County General Fund 5-Year Fiscal Outlook (Attachment A)

The last fiscal outlook update was presented to the Board on November 13, 2018. The forecast has been updated to true-up one-time property tax backfill with latest information and recognizes the County's anticipated labor changes. Additionally, staff analyzed disaster cost and reimbursement estimates and additional one-time required expense adjustments.

The fiscal outlook is focused on the General Fund as the main area of discretionary funds for the County. The recent California State Legislative Analyst Office released a fiscal outlook that maintains a positive outlook statewide. It doesn't include impacts from the October 2017 wildfires in these forecasts, and given the other economic indicators of slowing activity, staff remains cautiously optimistic and plan for slow growth. The California Assembly Budget Committee "FY 2019-20 Blueprint for a Responsible Budget" indicates that even though the economy is strong, a recession is looming and are planning accordingly (http://budgettrack.blob.core.windows.net/btdocs2019/16.pdf).

As presented to the Board on November 13, 2018, the updated County fiscal forecast assumes improved County General Fund Property Tax revenue growth of 4% for FY 2018/19, and County Administrator's staff projected future increases at 4%; 3.5%; 3%; and 2.5% through FY 2022/23. Modest growth is based on the following factors: (1) recovery focus on rebuilding which will restore assessed values lost during the fire and new housing units mainly within city limits; (2) consideration for the County's low housing inventory limiting sales and transfers; (3) delayed growth from fire recovery; (4) focus on developing affordable housing units; and (5) Proposition 13 limits property valuation assessment to a 2% inflation factor, as long as a properties are not sold or improved. Staff from the Assessor's Office, the Tax Collector's Office, Permit Sonoma, and the County Administrator's office met in early December to review the latest information, and determined that no change should be made to this forecast at this time based on available information.

Overall, the five-year General Fund baseline expenses combined with existing level of strategic investments are projected to outpace expected available funds and revenues, which results in an annual gap of $12.8 million in FY 2019/20; the out years show $22 - $28 million in need annually across FY 2020/21 through FY 2022/23, which does not include new demands for General Fund as discussed below under FY 2019/20 Challenges**.**

Vacancies

There are currently 350 vacancies across the County organization. There are 56 vacancies older than nine months and represents $2.6 million of annualized cost within General Fund budgets and $5.0

million annualized cost for all other funds. Please see Attachment B. It should be noted that some of the savings from these positions may be associated with offsetting revenue or departments may have unfunded positions in their allocation lowering the amount of savings available. Given the current forecast balancing challenge of $12.8 million starting in FY 2019/20 mainly as a result of no anticipated State backfill of secured property tax and updating anticipated staffing cost adjustments, the County Administrator recommends implementing an immediate hiring freeze of all job types, including extra help, for positions vacant over nine months as of December 11, 2018.

Recommended Action: Approve the implementation of a hiring freeze for all current vacancies, including extra help, over nine months as of December 11, 2018, unless approved by the Board of Supervisors.

Disaster Recovery Federal Emergency Management Agency (FEMA) Claim
The disaster impact is currently estimated at $36 million in potentially eligible FEMA claim costs with an additional $5.0 million covered through the County's insurance. The remaining amount of General Fund reimbursement expected over the next fiscal year is $6 million. As part of the updated General Fund Reserve financial policy reference below, the General Fund reimbursement will mostly go toward replenishing General Fund Reserves as well as priority Recovery Framework projects. There are approximately $15 million of permanent projects that are non-General Fund that will be implemented as obligations are approved. There are an estimated $1.9 million of ineligible expenses that were paid through the disaster fund to date. According to some jurisdictions, FEMA reimbursement took on average 18 months to two years after filing the required documentation before they began to receive claim amounts.

General Fund Reserves
The County's current target for discretionary General Fund Reserve level is 16.67% (equivalent to two months) of General Fund operating revenues and is consistent with the Government Finance Officers Association (GFOA) guidance. Based on the adopted FY 2018/19 budget, the County currently has $50.3 million in reserves, which represents 11% of the adopted FY 2018/19 General Fund revenues. Achieving a 16.7% target would require the reserve level to be approximately $76 million. In order to maintain sufficient discretionary reserves in the event of a future disaster, in FY 2018/19, the Board adopted a revised General Fund Reserve policy. The Board adopted a minimum discretionary General Fund Reserve of one month operating revenues or 8.3 %. Additionally, the revised policy requires a replenishment schedule for any draw down on discretionary reserves to help achieve the County's target of 16.67% of operating revenues.

Within the General Fund, the County's discretionary Reserves have a balance of $50.3 million (after using the $2.7 million FY 2018/19 draw down to balance the recommended budget). In FY 2018/19, the Board adopted that $8.5 million be assigned to finance strategic disaster recovery and resiliency investments. Of the $8.5million, the Board has designated $6.8 million for recovery projects and grant matches over the next three years starting in FY 2019/20, and $1.7 million for information technology resiliency. Any draw on the assignments will return for the Board's consideration later in FY 2018/19. The Board also adopted $3.9 million, or 20% of submitted reimbursements to FEMA, be assigned in fund balance as a set aside for FEMA audit reserves as an Office of Inspector General audit is anticipated for a disaster event the size of the 2017 Sonoma Complex Fires.

The table below shows the current discretionary General Fund Reserve balance:

(in millions)		
FY 2018/19 GF Reserve	$	50.3
Recovery Projects Assignment	$	8.5
20% FEMA Audit Reserve Assignment	$	3.9
FY 2018/19 GF Reserve Available Balance	$	37.9
FY 2018-19 GF Minimum Reserve Balance at 8.3%	$	37.8

FY 2019/20 Budget Development

The County Administrator will be recommending a budget that is built on historical actuals with current revenue assumptions. The demands for General Fund dollars are ever increasing as state and federal resources become impacted along with rising recovery needs that must be financed strategically. It is important to recognize that the structural imbalance will stay with the County until on-going revenues match on-going expenditures and one-time revenues are tied to one-time uses or reserves.

Year over year the County has relied on year-end General Fund savings or year-end fund balance to finance the new year's recommended budget. However, in FY 2017/18, the Board approved a financial policy to eliminate year-end balance reliance by FY 2020/21. This means that year end savings buffer are no longer assumed to be available to carry forward and finance future years' costs.

In developing the FY 2019/20 budget, staff assessed revenues available for budgeting, one-time sources and uses, and ongoing needs when developing department General Fund contributions. The total General Fund revenues available for such contributions in FY 2019/20 is $258.7 million. Note that this is less than total projected General Fund revenues because it excludes department-specific revenues such as fees and grants, which may only be used for the approved purpose and because certain obligations budgeted centrally for the County have been removed from this total. One-time revenues and expenditures were removed or added as appropriate. Next, staff considered department average General Fund expenditures from FY 2015/16 and FY 2016/17 to assign a distribution percentage for the available revenues. Unaudited actuals from FY 2017/18 were analyzed and due to the unanticipated costs from the wildfire event used for comparison only. The table below shows impacts to the FY 2019/20 General Fund resulting in a decrease from FY 2018/19 General Fund Contributions of $5.8 million. In addition, Departments operating baseline costs are expected to adjust up due to increased operating costs, including labor, which are assumed to increase by 3% or about $14.3 million for General Fund budgets. The total impact to General Fund departments is estimated at $20.1 million, or 8%, plus any increases to services and supplies. The table below demonstrates FY 2019/20 General Fund contributions and impacts to General Fund departments.

Available General Fund Contributions

Baseline General Fund Available	$ 273,038,006
FY 2019/20 New Ongoing Impacts	$ (14,342,944)
FY 2019/20 Available for Distribution	**$ 258,695,062**
FY 2018/19 Baseline	$ 264,507,144
FY 2019/20 Estimated Wage and Benefit Increases	$ 14,313,300
FY 2019/20 Total Estimated Operations	**$ 278,820,444**
FY 2019/20 Balancing Challenge	$ (20,125,382)
FY 2019/20 Balancing Challenge %	-8%

FY 2019/20 Challenges
The mid-year forecast of current year revenues and expenses and the updated fiscal forecast provide the framework for the development of a balanced budget and discussing upcoming challenges and opportunities. The following challenges represent some of the biggest known impacts to the County's budget for FY 2019/20.

Recovery Framework Projects
Recovery and Resiliency Framework (Framework) impacts to FY 2019/20 are under development. Today, under a separate Board item, the Board will adopt the Framework and provide direction on which projects should be prioritized for implementation. County staff anticipates cost estimates will be brought to the Board for consideration in April 2019. Funding for recovery projects for FY 2019/20 and beyond will be requested through the annual budget process.

In addition, the County has submitted 31 recovery-related grant applications for funding requests totaling almost $51 million. Though the County is unlikely to be awarded all grants requested, at this time the total County General Fund match totals $5.2 million over three years. The $6.8 million assigned in the General Fund Reserves for recovery projects by the Board is available and should be reserved for expected match funds.

Contract services costs associated with the disaster recovery consultant agreement and an anticipated insurance claim administrator contract are currently estimated at $4 – $6 million over the next three years and are not included in the recovery assignment representing a fiscal challenge starting in FY 2018/19. These two consultant contracts may be largely reimbursable from Housing and Urban Development (HUD) Community Development Block Grant - Disaster Recovery (CDBG-DR) fund and the FEMA Public Assistance claim. Both of these efforts are currently being scoped to match the grant award levels and reasonable due diligence.

Labor
The County has commenced a new round of labor negotiations, which is triggered by the first labor agreement extension expiring in February 2019. Multi-year successor labor agreements influenced by the County's fiscal capacity will provide the Board, the public, and employees with a critical tool for fiscal planning. A stable and affordable labor force is instrumental to continue with Recovery progress. Of the

total FY 2018/19 adopted expenditure budget of $1.8 billion, about 40% is made up of salaries and benefits; and 60% is the portion of staffing costs within the County's main operating General Fund.

It is estimated that the County's FY 2019/20 overall operating expenditure budget will increase by about 3% from the FY 2018/19 projected amount. Affording staffing cost changes relies not only on growth of the General Fund post-disaster discretionary revenues such as taxes, but also significantly relies on funding allocations from state and federal sources increasing enough to cover augmented staffing costs.

Sheriff's Office Behavioral Health Inmate Housing Unit

In 2015, the County applied for and received $40 million of SB 863 state grant funding to finance construction of a new Behavioral Health Inmate Housing Unit adjacent to the Main Adult Detention Facility (MADF). The facility will be approximately 33,400 square feet and include 48 cells, with 72 beds. Each housing unit will have individual and group counseling rooms, a medical exam room, a day room, and visiting rooms. In addition to the two housing modules, the facility will have large-group programming space to support those programs that are best provided in a larger group setting. The facility's design is evidence-based, with a focus on providing the best therapeutic environment for these offenders. The highest priority target populations for this facility are those awaiting beds at Napa State Hospital for restoration to competency to stand trial, those receiving restoration to competency services locally, and those diagnosed with severe mental illness. The most acute inmates will be moved into the new facility, thereby freeing up general population space at MADF. It will also allow for closure of Unit 301 at the North County Detention Facility (NCDF), resulting in a net increase of eight beds.

The State funds only help finance construction of the new Behavioral Health Unit; the County is responsible for covering the ongoing staffing and operational costs. The facility is anticipated to open in 2020, and hiring of new staff is expected to occur several months prior to allow time for training and onboarding. The Sheriff's Office is actively developing the most optimal and cost-effective staffing model for the new facility. Current annual estimated cost when fully operational is approximately $6.0 million.

Integrated Justice System

The Integrated Justice System (IJS) provides the County justice partners their primary input, view and management for all Criminal, Civil and Juvenile information. This includes information necessary to make decisions such as whether individuals can be searched in the field, whether they can be arrested on a warrant, when to transport for court appearances, when to release them from custody or transfer to another jurisdiction, and how they should be supervised when placed on probation. IJS currently serves over 2,000 active users including the Sheriff's Office, Sheriff's Detention Facilities, District Attorney, Public Defender, Probation, Superior Court, Child Support Services, and city, state and federal law enforcement agencies.

In March, 2015, the Court notified the County that they would no longer be participating in IJS after implementation of Tyler Odyssey Case Management system. The County's Criminal Justice partners' ability to interface with the Court's new system is critical to mitigate voluminous manual data entry of Court data into the County's information systems.

System modernization and ongoing interface development for all justice partners is estimated at approximately $1 million per year. In addition, with the Courts no longer utilizing Information Systems Department (ISD) services, the impact to ISD revenues and the justice partners' budgets would be approximately $725,000 in FY 2019/20. Combined General Fund demand for the Courts' system change is preliminary estimated at $1.7 million. County Administrator's Office and department staff will continue analysis and discussions with our State Courts partners which will likely refine estimates.

FY 2019/20 Budget Development Framework and Timeline
As we begin budget development for FY 2019/20, there remains an estimated $12.8 million funding gap which must be addressed. Staff will be closely monitoring third quarter estimates, timing of advance payments, and how departments manage their appropriations. Also, in order to ensure the County's long-term fiscal sustainability, the following strategies will be undertaken:

a) Aligning General Fund Contributions
Departments had adjusted targets that align revenues and expenditures with previous years' actual experience starting in FY 2018/19. For FY 2019/20, County Administrator staff have estimated General Fund revenue available for budgeting and will be distributing that amount based on average percentage of General Fund contribution, net of anticipated new needs. Distributing targets based on available revenue is another step toward a structurally balanced budget. To accommodate the shift to actuals, no vacancy savings will be required.

b) Service Inventory
The County Administrator's Office will kick off an assessment of services and identify service level mandates. This exercise will begin with Administrative and Fiscal Services and Development Services functional areas in FY 2019/20 with this information being ready for the April budget workshops. The remaining functional areas (Justice Services, Health and Human, and Natural Resources) will complete their service inventory in FY 2020/21. Service level information will assist departments as functional areas to identify collaboration opportunities.

c) General Fund Add Backs
General Fund departments will be adjusting their fully loaded costs to meet a General Fund contribution based on available revenue and most departments may need to make baseline reductions to meet the target. Staff will be working with the departments to develop proposed add backs which will be brought forward as part of the supplemental budget materials for the Board to consider should ongoing revenues come in higher than estimated. Reductions that may need to be made in order to meet targets should be planned to start at the beginning of the second quarter in FY 2019/20 to allow for procedures for any necessary lay-offs to begin after the Board budget hearings. This approach streamlines the budget process to be as closely aligned as possible with real-time revenue estimates to maximize organization capacity.

d) Functional Area Workshops
These Board workshops will be held on April 9-10, 2019. Departments will work together through the County Administrator's Office to present to the Board as functional areas regarding their FY 2019/20 budgets. It is envisioned there will be a couple of leads per functional area that assist in the coordination of information and proposals. Information to be included for the functional area consideration comes from the County's Recovery Framework, mid-year estimates, service level details (for functional areas completing service inventories), updated fees, and revenue targets. The April functional area workshops are intended to provide more timely input by the Board for departmental budget development.

These April workshops will replace department presentations during the FY 2019/20 budget hearings in June. Instead, Board Members will have the opportunity to inform the County Administrator and the Chair of any questions they would like a department to answer. The Board can request information be addressed by department heads no later than April 19, 2019 and community-based organization (CBO) requests are also due by April 19, 2019 (Attachment C).

The tentative budget development activity timeline is as follows, and dates may be subject to change:

January 10	State Budget Released.
February 26	Quarter 2 Consolidated Budget Adjustments, Midyear Estimates, Contingency Update (Consent)
April 9 - 10	Functional Area Workshops
April 19	Deadline for Board/CBOs Requests (Attachment C)
May 14	Fees and Charges Adjustments – Board Public Hearing
May 10	Governor's State May Revise Budget
May 15	Recommended Budget (Electronic Version)
June 1	Supplemental Budget Documents, Budget Hearing Documents
June 12-21	FY 2019/20 Public Budget Hearings

Conclusion

The County has experienced a slow growth in revenues that is outpaced by the growth in expenditures and creates a structural imbalance. In order to achieve the Board policy of a structurally balanced budget, the FY 2019/20 approach aligns expenses to available revenues, General Fund contributions targets based on actual General Fund used, and new collaboration at the functional area level with a focus on services. The County has been able to maintain flexibility in its budgeting approach and an ability to demonstrate planned recovery for reserves.

Prior Board Actions:

June 15, 2018 Adopt FY 2018/19 Budget and Financial Policies
November 13, 2018 Receive 5-Year Budget Improvement Plan

Strategic Plan Alignment Goal 2: Economic and Environmental Stewardship

The achievement of a structurally balanced budget while planning for recovery supports Goal 2: Economic and Environmental Stewardship.

SONOMA COUNTY RECOMMENDED BUDGET

Hearings Begin on June 11, 2019

FY 2019/20 BUDGET INFORMATION REQUEST

Requester's Name: ______________________________

DESCRIPTION OF INFORMATION REQUESTED

Include as much information as possible, and identify the amount and affected department budget.

Requester Signature

Date Received by Clerk of the Board

County of Sonoma Agenda Item Summary Report

Clerk of the Board
575 Administration Drive
Santa Rosa, CA 95403

Agenda Item Number: 58
(This Section for use by Clerk of the Board Only.)

To: Board of Supervisors
Board of Commissioners of the Community Development Commission

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): Sonoma County Community Development Commission

Staff Name and Phone Number: Benjamin Wickham, 707-565-7542

Supervisorial District(s): All

Title: Affordable Housing Funding Package

Recommended Actions:

Board of Commissioners:

1. Approve County Fund for Housing (CFH) funding award recommendations
2. Approve Sonoma County Housing Authority recommendations to award Project-Based Vouchers

Board of Supervisors:

3. Adopt Resolution to approve Fiscal Year 2018-19 (FY 18-19) Action Plan Substantial Amendment
4. Approve resolution to join the California Public Finance Agency (CalPFA) Joint Powers Authority (JPA)
5. Adopt a resolution authorizing the Executive Director of the Commission, or her designee, to enter into, execute, and deliver any and all documents required or deemed necessary or appropriate to evidence the loan of No Place Like Home Program (NPLH) funds for one or more projects in Sonoma County

Executive Summary:

The Board of Supervisors has prioritized the need to expand opportunities for affordable housing in Sonoma County, most recently through the Recovery and Resiliency Framework, but also in prior Board-adopted strategic priorities, including the Housing for All Strategic Priority, the Building HOMES Toolbox, the General Plan Housing Element and its support of the Strategic Sonoma Action Plan. The County faces an acute housing shortage which makes the deployment of federal, state and local funding for affordable housing an incredibly important resource.

The Sonoma County Community Development Commission (Commission) and the Sonoma County Housing Authority (Housing Authority) are now bringing forward a series of actions related to the funding and creation of affordable housing opportunities that, combined, will result in substantial new housing resources for residents of Sonoma County. These actions involve: (1) the award of almost $5 million in federal and local funds to support the development of new affordable housing; (2) the award of Project-Based Vouchers (PBV), an important resource that allows the most vulnerable members of our community to have stable, affordable housing, and which serves to stabilize the economics of new and existing affordable multifamily rental housing; (3) approval to enter into joint exercise of powers agreement that will allow the Commission to partner with CalPFA, a statewide joint powers agency that issues tax exempt bonds to for-profit and non-profit developers for projects that provide public benefits, including income restricted units; and, finally (4) adoption of a resolution authorizing the Commission to enter into contracts with the State Department of Housing and Community Development for any No Place Like Home funds that may be awarded in the current competitive round, as required by the application.

The proposed actions before the Board today will lead to the construction and/or acquisition of over 170 affordable rentals and over 60 affordable single-family homes. The award of PBVs will provide housing for 100 vulnerable households; additionally, by joining CalPFA as an Additional Member, developers can access financing provided through the JPA.

Discussion:

1. ***County Fund for Housing:***

Approval of this portion of the agenda item will accelerate development of desperately needed affordable rental housing by providing $4.2 million in loans for the construction of a total of over 170 new housing units throughout Sonoma County. Funding for the loans will be sourced from the County Fund for Housing, which is funded annually with a combination of County Reinvestment and Revitalization Funds and developer in-lieu fees. (*Note: the Renewal Enterprise District (RED) JPA is not currently anticipated to have oversight of CFH awards. That could change down the road, if the JPA Board desires to go down that road, and if both the County and the City of Santa Rosa agree to that level of shared decision-making.)*

On July 10, 2018, the Commission issued a Notice of Funding Availability (NOFA) in the amount of $3 million. (This amount was later amended to $4.2M as the Commission's fiscal department reconciled actual funds received). The Commission received applications requesting a total of $15.4M for 10 eligible housing development projects. All of the applications received by the Commission are designated for worthwhile housing development and rehabilitation projects, meeting County objectives for the use of CFH funding.

In the weeks following the application submittal due date of August 24, 2018, staff from the Affordable Housing team at the Commission carefully reviewed all applications to ensure they are eligible for CFH funding and to rank projects based on the priorities listed in the NOFA. Staff presented their recommendations to the Community Development Committee on October 17, 2018. The Community Development Committee thoroughly reviewed these recommendations, approving the projects recommended for funding while making an adjustment in the amount of funding allocated to Lantana Homes and Boyd Street Apartments. The four development projects recommended for funding were determined to most robustly meet the priorities highlighted in the NOFA:

1. *Serve the maximum number of people at the lowest income threshold*
2. *Leverage public funds to the greatest extent possible*
3. *Expedite the creation of new housing opportunities*

The projects recommended by the Commission and the Community Development Committee for funding are as follows (see attached PowerPoint for a full list of projects applying for CFH funding in this round):

Project Name	**Units**	**Location**	**Housing Type**	**Recommended Funding**
Lantana Place Homes	48	Santa Rosa	Home ownership	$ 500,000
Roseland Village	75	Santa Rosa	Multi-family Rental	$2,000,000
Boyd Street Apartments	47	Santa Rosa	Multi-family Rental	$1,500,000
Living Room	3	Santa Rosa	Special Needs Housing	$ 200,000
Total	173			$4,200,000

Lantana Place Homes: Lantana Place Homes will provide affordable homeownership opportunities for 48 low and moderate income Sonoma County households. At least 25 homes will be designated for households at 80% AMI or lower and all households will be provided down payment assistance. The 48 unit development, located at 2979 Dutton Meadow in Santa Rosa, will consist of 45 three-bedroom, 2.5 bath, two-story attached homes; and 3, three-bedroom, 2-bath, single-story attached homes. The homes will range in size from 1,210 to 1,311 square feet on lots ranging in size from 1,870 to 3,391 square feet.

- *Key basis for funding recommendation:*
  - Lantana Place will provide home ownership opportunities targeted for households that are low- and moderate-income.
  - This development addresses regional housing needs, particularly in view of the large number of single-family homes lost in the 2017 fires.
  - Burbank Housing has a long record of successful affordable housing projects in Sonoma County.
  - The project provides leveraging of County funds at a ratio of 24:1.
  - The development provides an excellent opportunity for collaboration between the County and the City of Santa Rosa, which has committed over $7M in local funds to Lantana Place.

Roseland Village: Roseland Village will provide desperately needed affordable housing to low and very-low income Sonoma County families. Roseland Village is a mixed-use development that will include affordable housing, market rate housing, a retail development, a civic-use building and a public plaza. The $2M in funding requested will be targeted for predevelopment costs of the 75-unit affordable housing community, including design and engineering.

- *Key basis for funding recommendation::*
  - Roseland Village will create 75 new affordable1-,2- and 3-bedroom apartments
  - The Roseland Village affordable housing development is projected to leverage County funds at a ratio of 28:1.
  - The affordable housing project will include resident services providing homework assistance, literacy development, academic enrichment, computer training, vocational and career development, fitness and health education programs, referrals to social services, and volunteer opportunities and training for individuals and families.
  - The developer, MidPen Housing, has extensive experience with comparable developments throughout Sonoma County and the Bay Area. MidPen Housing has established a regional office in Santa Rosa, providing local full-time staff to support the Roseland Village development and ensuring that it will receive focused attention through project completion.

Boyd Street Apartments: This 100% affordable apartment community will provide housing to moderate, low and very low-income individuals and families in Sonoma County. Th proposed project comprises two buildings: a 47-unit, 42,520 square-foot, two-story apartment building; and a 2,100 square-foot Community Center with Leasing Office, Meeting Room, Kitchen, and Common Laundry. The project as envisioned is proposed at the maximum density allowed for this parcel, per the Santa Rosa General Plan. The apartments will consist of 12 3-bedroom units, 30 2-bedroom units, and 5 1-bedroom units. Electric vehicle charging is proposed for 3% of parking stalls.

- *Key basis for funding recommendation:*
  - Boyd Street Apartments will create 46 new units with deep affordability, ranging from Extremely Low at 30% Area Median Income to Moderate Income at 80% Area Median Income.
  - The development is projected to leverage County funds at a ratio of 15:1.
  - DanCo Communities has extensive experience completing affordable housing development projects. DanCo Communties also combines development and construction under one roof, giving the firm greater control over key project economics and planning elements.

Link Lane: The Living Room, Inc., has purchased a 3-bedroom home for the purpose of providing affordable housing to at least 3 individuals. The applicant has a short term note and deed of trust on the property for $379,000 that will be paid off in part using County funds in order to secure full ownership of the property.

- *Key basis for funding recommendation:*
  - All acquisition financing has been identified.
  - The project would provide new affordable housing unit to immediately house homeless women.
  - This new home would provide housing affordable to residents at or below 50% of Area Median Income.
  - The project would provide an affordable unit of permanent supportive housing, a scarce resource in the County

- The project is turn-key ready and would permit the home to immediately become available by winter of 2018.
- The Living Room, Inc. has a proven track record of successfully providing supportive housing for over 25 years.
- The Living Room, Inc. previously received a CFH award of $190,000 last fiscal year; they used $83,000, returning the remaining allocation to the Commission.

2. ***Action Plan Substantial Amendment:*** The Substantial Amendment to the Action Plan will distribute an $130,338 in un-awarded CDBG funds and $425,269 in un-awarded HOME funds and $40,000 in CDBG program income for the following uses:

Duncan Village: **HOME funding: $334,000**. Habitat for Humanity is planning to build 16 homes on the 1.34-acre parcel at 484 Wall Street, Windsor. These homes will provide affordable homeownership to households with incomes ranging from 50% Area Median Income to 80% Area Median Income. Habitat for Humanity prioritizes green and sustainable building methods. The Duncan Village housing development is located within a half mile of the Windsor Town Green, business district, parks, outdoor events, a farmers market, schools, public transportation, grocery stores and the future Windsor SMART Train station. Habitat for Humanity has executed a contract with an off-site construction builder, Healthy Buildings, based in Napa, to help reduce the construction time significantly. Healthy Buildings partially constructs modular units in their warehouse, delivering them to the site once site infrastructure improvements are complete. This method will expedite the delivery of completed homes at Duncan Village.

- *Key basis for recommendation to provide additional federal funding::*
  - Duncan Village will provide 16 new home ownership opportunities for moderate and low-income households
  - The property as designed features a high walkability score
  - With the addition of these funds, Habitat for Humanity projects full occupancy in 2020
  - The entitlement process is projected to be completed prior to the end of the year.

Altamira Apartments: **HOME funding: $91,269; CDBG funding: $91,338**. Satellite Affordable Housing Associates (SAHA) is moving forward with plans to bring Altamira Family Apartments to 20269 Broadway in the City of Sonoma. Altamira will provide 48 affordable apartments for individuals and families earning between 30% - 60% of Area Median Income. In addition to 1-, 2- and 3-bedroom apartments, this multifamily housing development will offer a community room, youth play area, ample outdoor space and a user-friendly landscape to enhance the beautifully designed buildings. An extensive community engagement process helped to evolve the site plan, driving changes to the number of stories, ingress/egress locations and placement of the community building. The project is stronger today based on these revisions and extensive community interaction. These additional funds will strengthen the project, facilitating the development's ability to garner a 9% Low Income Housing Tax Credit (LIHTC) award in the upcoming competitive round.

- *Key basis for recommendation to provide additional federal funding::*
  - Altamira Apartments will provide 48 new units of affordable housing units to extremely-low, and low-income households.

- SAHA has a proven track records of successfully completing affordable housing projects and providing high quality property management and resident services following project completion.
- SAHA has already received approval of entitlements from the City of Sonoma.
- The City of Sonoma has committed financing in the amount of $1,500,000.

Telephone Survey – Precariously Housed Households: **CDBG Funding: $39,000**
Funds will support a second year's survey of the precariously used population to ensure that the future deployment of homeless services dollars for populations impacted by the October 2017 fires is well-informed.

Winter Shelter Expansion: **CDBG funding: $40,000**
The Commission is requesting that $40,000 that is available in program income be made available to fund needed winter shelter expansions and that the board grant authority to award these funds to subrecipients outside of the annual funding cycle. This will provide the needed flexibility to ensure availability of funds to meet immediate needs of those who are experiencing homelessness and are at risk of exposure to the elements during the cold and rainy winter months.

3. *CalPFA JPA:*

The California Public Finance Agency (CalPFA) was originally formed by the Kings County Board of Supervisors and has grown into an entity that provides statewide assistance. It is supported by outside professional administrators located throughout the Bay Area.

By joining CalPFA as an Additional Member, jurisdictions can facilitate developers having access to financing provided through the JPA. Additional Members are non-charter members that can limit the scope of their membership solely for the financing or refinancing of specific projects. CalPFA will not be permitted to issue bonds or notes for any project without obtaining permission from the Board of Supervisors. Other Northern California members include Rohnert Park, Marin County, Antioch, Vallejo, Redwood City, Santa Cruz, and Sunnyvale.

Authorizing Sonoma County to join CalPFA does not constitute consent or approval of any individual project or site. Project specific information will be presented to the Board of Supervisors as a separate action in the future, if the Board approves joining CalPFA.

4. *Project Based Voucher awards:*

The U.S. Department of Housing and Urban Development (HUD) allows Housing Authorities to attach up to 20% of its Section 8 Housing Choice Voucher program funding to specific housing units by project-basing vouchers. In contrast to the tenant-based voucher program, a housing subsidy will remain connected to the unit after a tenant moves out of the unit. The owner must agree to rent the unit to eligible tenants for the duration of the Housing Assistance Payments (HAP) contract which is often up to twenty years.

The Commission made up to 100 Project-Based Vouchers available to property owners and developers through a competitive process in early October. In response to the Request for Proposals (RFP), seven proposals were received, two of which were deemed ineligible due to lack of adequate site control and/or inadequate documentation of secured financing. A panel of three SCCDC employees and one City of Santa Rosa Housing Authority employee reviewed and ranked the proposals in accordance with the criteria outlined within the RFP. Staff are recommending the Executive Director be authorized to award Project Based Vouchers to five projects, for a total of 93 Project Based Vouchers. Project awards will be contingent upon final California Environmental Quality Act (CEQA) and National Environmental Policy Act (NEPA) clearance as well as confirmation that the projects meet all applicable accessibility requirements. A spreadsheet of all applications received and the recommended award of Project Based Vouchers is included as an attachment to this board item. Each of the projects presented for award meet the overall goal of increasing affordable housing stock in the County, providing affordable housing in areas outside of poverty concentration, and providing housing in areas that are transit oriented. Staff are recommending the Board of Commissioners authorize the Executive Director of the SCCDC to commit project based vouchers, enter into an Agreement to enter into a Housing Authority Payment contract, and a Housing Authority Payment contract for each of the following projects.

5. Resolution to accept No Place Like Home funds

The California Department of Housing and Community Development (HCD) released a Notice of Funding Availability on October 15, 2018, for the first competitive funding round of No Place Like Home (NPLH) program funds. The NPLH Program provides deferred payment loans to Counties applying independently or in partnership with housing developers, to finance the development of Permanent Supportive Housing for persons with a serious mental illness who are Homeless, Chronically Homeless, or At-Risk of Chronic Homelessness. NPLH funds may be used to acquire, design, construct, rehabilitate, or preserve Permanent Supportive Housing and to fund capitalized operating subsidy reserves (reserve funds to protect against unforeseen costs and to ensure the project's long-term sustainability).

A total of $56,632,713 is available for 14 medium sized counties, with populations between 200,000 and 750,000. Of those 14 counties, Sonoma County has approximately 15% of the total homeless population and thus can expect to bring at least $8.5 million to Sonoma County through this competition. Applications are due to HCD by January 30, 2019.

In partnership with the Department of Health Services, Behavioral Health Division, the Commission consulted a comprehensive list of projects currently at a stage of development that would enable them to qualify for competitive NPLH funding, to solicit applications. The Commission looked to projects that applied for local County Fund for Housing dollars, for Project Based Section 8 Vouchers and for CDBG and HOME dollars in the most recent funding cycles. The Commission also consulted a list of affordable housing projects identified and put forward by each Sonoma County city or town as being under development and supported by the jurisdiction, but not yet fully funded.

Funding applications require a resolution from the County’s governing board, with the specific language of the attached resolution, authorizing the Commission to receive enter into contracts with the State Department of Housing and Community Development for any No Place Like Home funds that may be awarded in the current competitive round.

Action Requested: The Commission requests that the Board of Supervisors/Board of Commissioners take the following actions:

1) Approve CFH awards in the amounts recommended herein to the projects detailed above to support the creation of affordable housing.
2) Adopt a resolution approving amendments to the FY 18-19 Action Plan as detailed above to support the creation of affordable housing.
3) Adopt the attached resolution authorizing Sonoma County to join the CalPFA JPA.
4) Approve awards of Project Based Vouchers to the development projects detailed above. Authorize the Executive Director to execute all necessary documents to complete the award of these Project Based Vouchers.
5) Adopt the attached resolution authorizing the Commission to accept NPLH housing development funds that may be awarded through the current competitive funding round.

Prior Board Actions:

1. July 10, 2018 - Approved the FY 2018-2019 Action Plan

Strategic Plan Alignment Goal 1: Safe, Healthy, and Caring Community

These projects support a safe and healthy community by creating the opportunity for development of housing for persons of various income levels. It also supports economic stewardship and investment in the future by facilitating the creation of new housing for our workforce and for vulnerable members of the community.

Fiscal Summary

Expenditures	FY 18-19 Adopted	FY 19-20 Projected	FY 20-21 Projected
Budgeted Expenses	4,795,607	11,202,400	1,202,400
Additional Appropriation Requested			
Total Expenditures	**4,795,607**	**11,202,400**	**1,202,400**
Funding Sources			
General Fund/WA GF	4,200,000		
State/Federal	595,607	11,202,400	1,202,400
Fees/Other			
Use of Fund Balance			
Contingencies			
Total Sources	**4,795,607**	**11,202,400**	**1,202,400**

Narrative Explanation of Fiscal Impacts:

FY18-19 Adopted: Expenditures and funding were already appropriated in FY18-19 for current year County Fund for Housing awards totaling $4.2M. The Action Plan Amendment Resolution also does not require any additional expenditure or funding appropriations. The Action Plan Amendment redirects $170,338 of previously appropriated - but unobligated - CDBG funds for affordable housing development ($130,338) and public services projects ($40,000). The Action Plan Amendment directs $425,269 of previously appropriated HOME funds to affordable housing development *($155,686 unallocated FY 18-19 funds) + ($133,137 in unallocated FY 18-19 CHDO set-aside funds (available for any HOME-eligible project because of the disaster waiver) + ($102,346 in unallocated FY 17-18 CHDO set-aside funds) + ($34,000 in FY 18-19 funds deemed ineligible for the proposed use by HUD)*.

FY19-20 Projected: State of California Department of Housing & Community Development (HCD), No Place Like Home Program (NPLH) competitive grant funding is estimated at $10M. In the NOFA, HCD states its tentative timeline for award announcements is June 2019. Any award would not be received until FY 2019-2020. Based on the overall allocation to 14 medium-sized counties of $56.6 million, of which Sonoma County is the largest and has 15% of the total homeless population, it is reasonable to expect $8-$10 million in awards, if enough high quality and eligible requests are submitted by the deadline of January 30, 2019.

FY19-20 and FY20-21 Projected: The Commission receives roughly $30M annually from the Federal Department of Housing and Urban Development (HUD) to provide rental assistance to households through the Housing Choice Voucher and the Project Based Voucher programs. A portion of these funds, estimated at $1,202,400 (100 vouchers at a value of $1,002 per month) will be used to provide rental assistance subsidies for the project based vouchers being awarded.

County Fund for Housing Recommendations

Lantana Place Homes ($500,000)

- 48 low- to moderate-income households
- Minimum of 25 homes designated for 80% AMI
- High leverage – less than $23,000 per unit of County funds
- Collaborates with City of Santa Rosa -- $5,778,793 of City funds previously committed

Roseland Village ($2,000,000)

- 75 affordable apartments
- Key component of mixed-income, mixed-use master redevelopment project

County Fund for Housing Recommendations

Boyd Street Apartments ($1,500,000)

- 47 new units with deep affordability
- Leveraging of 15:1 for every Commission dollar

Link Lane ($200,000)

- Acquisition of a 3-bedroom home for supportive housing
- Below 50% of AMI Affordability
- All acquisition financing has been identified

Federal Funds
HUD Action Plan Amendment

Duncan Village ($350,000)

- 16 new home ownership opportunities for low-income households
- 50% to 80% AMI
- Full occupancy 2020

Altamira Apartments ($182,607)

- 48 new affordable apartments
- Extremely-low to low-income
- $1,500,000 committed from City of Sonoma

Federal Funds
HUD Action Plan Amendment

Precariously Housed Study ($39,000)

- Telephone survey conducted in February to understand the precariously housed population following the October 2017 fires
- Uptick in need for homeless services, predicting increase in upcoming years

No Place Like Home (NPLH)

NPLH Program

NPLH Source:

California passed legislation in 2016 to spend revenue from Proposition 63 on bonds for homelessness prevention housing. In 2018, Proposition 2 authorized the state to use up to $2B in bond proceeds to invest in the development of permanent supportive housing for persons who are in need of mental health services. The bonds are repaid by funding from the Mental Health Services Act (MHSA).

NPLH Purpose:

To acquire, design, construct, rehabilitate, or preserve permanent supportive housing for persons who are experiencing homelessness, chronic homelessness or who are at risk of chronic homelessness, and who are in need of mental health service. *Counties will be eligible applicants, either solely or with a housing development sponsor. Counties must commit to provide mental health services and help coordinate access to other community-based supportive services.*

NPLH Assistance Type:

Deferred payment loans to counties or their housing development sponsors

No Place Like Home Application

$56,632,713 in Round 1 Competitive Allocation funds are available for 14 medium-sized counties (population ranging from 200K-750K)

Among medium-sized counties, Sonoma County has approximately 15% of the total homeless population—can expect to bring at least **$8.5M** to Sonoma County

Applications are due January 30, 2019

The Commission and Department of Health Services Behavioral Health Division have a comprehensive list of projects that qualify for NPLH funding

No Place Like Home

Sonoma County DHS Commitments

Make mental health services available to the Project's NPLH tenants for a minimum of 20 years

Coordinate the provision or referral to other services, including but not limited to, substance use services

Submit a project-specific supportive services plan developed in partnership with the Project Development Sponsor, supportive service providers, and the property manager

The supportive services plan must describe the services to be made available to NPLH tenants in a manner that is voluntary, flexible, and individualized, so that NPLH tenants may continue to engage with supportive services providers, even as the intensity of services needed may change. Adaptability in the level of services should support tenant engagement and housing retention.

Recommended Actions

Board of Commissioners

1. Approve CFH funding award recommendations
2. Approve Sonoma County Housing Authority recommendations to award Project-Based Vouchers.

Board of Supervisors

1. Adopt Resolution to approve Fiscal Year 2018-19 (FY18-19) Action Plan Substantial Amendment
2. Approve resolution to join the California Public Finance Agency (CalPFA) Joint Powers Authority (JPA)
3. Adopt a resolution authorizing the Executive Director of the Commission, or her designee, to enter into, execute, and deliver any and all documents required or deemed necessary or appropriate to evidence the loan of No Place Like Home Program (NPLH) funds for one or more projects in Sonoma County

Table of Contents

Introduction

The FY 2018-19 Action Plan is part of the 2015 Sonoma County Consolidated Plan covering FY 2015-2016 through FY 2019-2020. The Consolidated Plan and Annual Action Plans are required by the U.S. Department of Housing and Urban Development (HUD) in order to receive certain federal housing, homelessness, and community development funds. Pursuant to a Joint Powers Agreement, the Sonoma County Community Development Commission (Commission) administers these funds on behalf of the HUD-designated Urban County entitlement jurisdiction, consisting of the County of Sonoma, the Town of Windsor, and the cities of Cloverdale, Cotati, Healdsburg, Rohnert Park, Sebastopol, and Sonoma. HUD funds received by the Urban County are Community Development Block Grant (CDBG), HOME Investment Partnerships (HOME), and the Emergency Solutions Grant (ESG) program funds. The projects and programs using these funds will be carried out either directly by the Commission or, more frequently, through funding provided to other governmental or nonprofit agencies, to benefit low-income households by addressing the goals and objectives enumerated in the Consolidated Plan and summarized below.

The administration of HOME, CDBG, ESG and certain local funds for public services projects is guided by funding policies set annually by the Commission with input from its advisory committees. The Commission uses a Community Development Committee, an appointed advisory committee made up of representatives from each supervisorial district, Housing Choice Voucher tenants, and a representative from the Human Services Department, and a Technical Advisory Committee, an advisory committee made up of representatives from all Cities and Towns in the Urban County to set these annual policies.

For FY 2018-2019, the policies set aside funds for administration, and for the Commission’s housing rehabilitation and tenant-based rental assistance programs. Recommendations for how to spend the balance of the allocation were made through competitive processes in which eligible projects and programs applied for funding awards to meet the Consolidated Planning goals. The selection and scoring criteria for how goals would be met were set in the annual policies.

The Commission’s advisory committees made funding recommendations based on staff’s review and analysis of the applicant projects and programs in a series of three public hearings held in February and March 2018. Because the FY 2018-19 allocations were not yet known when these hearings were held, recommendations were made using estimates of CDBG, HOME and ESG funds based on the previous year’s allocations. During each public hearing, the committees made contingency plans to identify how any decreases or increases in funding compared to the previous year would be borne by the each applicant project or program.

Since February and March hearings during which funding recommendations and contingency recommendations were made, there have been three important developments that need to be considered in making final funding recommendations for the FY 2018-19 Action Plan:

A. On April 11, 2018, HUD announced that California would receive $124 million in CDBG-DR for recovery from the October 2017 wildfires and $88 million in CDBG-DR for future disaster mitigation, 80% of which will be spent in the most impacted and distressed areas – which include Sonoma County and City of Santa Rosa as well as Ventura County and some other small areas.

These are one-time funds, a portion of which will be available to Sonoma County and the City of Santa Rosa. Strategically leveraging these dollars to optimize their impact on increasing the housing supply and catalyzing future affordable housing and community development projects will be key to the successful use of this post-disaster infusion of resources. It is anticipated that the Federal Register that provides details on how the CDBG-DR funds can be spent and that gives details about the amount of funds that will be allocated to the County of Sonoma will be released in Fall 2018.

B. On April 12, 2018 HUD approved the Commission's requested regulatory waivers and suspensions providing flexibility for spending CDBG, HOME and ESG funds in response to the October 2017 wildfires.

At the time of the public hearings, the Commission had requested waivers and suspensions from HUD in order to address post-disaster needs, but did not know at that time whether these waivers were granted. Most notably for the purposes of allocating funding in this FY 18-19 Action Plan, the waivers and suspensions include:

- Use of CDBG for new housing construction
- Use of up to 40% of CDBG for Public Services instead of the 15% regulatory cap as long as there is a nexus to the fires for any funds spent over the cap
- Suspension of the 15% set-aside of HOME funds for Community Housing Development Organizations

C. On May 1, 2018, HUD released information on the Final allocations of CDBG, HOME and ESG funds that were substantially higher than the previous year's funding allocation.

The additional allocations resulted in the availability of $160,337.40 in CDBG funds above the amount estimated, $186,822 in HOME funds above the amount estimated, and $3,030 in ESG funds above the amount estimated.

Given these developments, rather than follow the contingency recommendations made during the public hearings, Commission staff is recommending to to advisory committees, the public and the Board of Supervisors, the following distribution plan:

1) Utilize $30,000 of the augmentation of CDBG funds, in combination with the waiver allowing more than 15% of funds to be used for Public Services as long as there is a fire nexus, to achieve minimum coverage of the County's geography in funding shelter in every region of the Urban County. The damage caused by the October 2017 fires further limits housing options available for Sonoma County's population experiencing homelessness countywide. This augmentation to support CDBG-eligible expenses in the homeless services system allow local funds to be allocated more broadly to achieve full geographic coverage in all communities impacted by the fires.
2) Use ESG funds, since the increase was small (only 2% more than estimated), augment the ESG awards recommended by the CD Committee.
3) Other than the $30,000 recommended for use in Public Services to achieve access to shelter throughout the Urban County, hold the additional allocated CDBG funds ($130,338) in reserve for allocation in a Substantial Plan Amendment in the Fall of 2018. In Fall 2018, the Federal Register with details about CDBG-DR funds will be available and more will be known about anticipated State funding that can be used for permanent supportive housing and other housing focused projects and programs for people experiencing homelessness. Reserving unallocated CDBG funds until more is known about both of these funding sources will maximize alignment and ability to best leverage limited resources. It is important to note that CDBG funds are not typically usable for new construction of affordable housing. However, with the waivers granted to the County's regular CDBG allocation, and in anticipation that this waiver will be granted for the CDBG-DR funds, the community has a unique opportunity to leverage these funds to substantially ramp up affordable housing production.
4) Hold additional allocated HOME funds ($155,685.75) in reserve for allocation in a Substantial Plan Amendment in the Fall of 2018 to maximize alignment and leverage with anticipated CDBG-DR hazard mitigation funding and anticipated State funding for homelessness described in #3 above.
5) Hold unspent CHDO funds from FY 17-18 ($102,346) and FY 18-19 ($133,137.15) in reserve for allocation in a Substantial Plan Amendment in the Fall of 2018. The CHDO set-aside has been suspended to maximize the flexibility of HOME dollars to provide housing to persons displaced by the October 2017 fires, so these funds can be awarded to any HOME eligible project. Holding these funds in reserve for allocation in a Substantial Plan amendment in the Fall of 2018 will maximize alignment and leverage with anticipated CDBG-DR hazard mitigation funding and anticipated State funding for homelessness described in #3 above.

Priority Setting

Sonoma County has a longstanding history of being a very expensive housing market, especially in comparison to median household incomes. The impact of the October 2017 fires has only exacerbated the cost of housing in the County. Thus, consistent with earlier Consolidated Plans for the Urban County, rental housing affordability and retaining existing affordable housing stock for both renters and homeowners remain top priorities. Given the unique opportunity presented to use CDBG funds for new housing construction, and the ability to leverage HOME dollars with the anticipated CDBG-DR funds, it is likely that for the remainder of the 2015 Consolidated Planning period, funding the development of permanent affordable housing is likely to be the focus of activity.

Due largely to the disparity in housing rents versus household incomes, Sonoma County has experienced an extremely high rate of homelessness. Despite persistent reductions in homelessness since 2011, in 2017 the Sonoma County Continuum of Care estimated that 5.6 out of every 1,000 residents was homeless at any given time. Even before the fires, this rate appeared to be much higher than in most communities in California and the rest of the nation. The funding of homeless intervention and prevention programs make up a large percentage of the "portfolio" of past performance and remains a top objective.

In the past, the Urban County members have prioritized the use of CDBG funds for Americans with Disabilities Act (ADA) retrofit projects, largely the removal of architectural barriers identified in existing public buildings and infrastructure. This use of CDBG funds is highly effective because ADA retrofit projects can generally be successfully scaled, phased, or both based on funding availability. During the last Consolidated Plan period, July 2010 to June 2015, over $3M aggregate in ADA project funds were awarded to 46 different projects sponsored by the eight participating jurisdictions. During the 2015 Consolidated Plan period to date (July 2015 through June 2018), over $1.9 M in aggregate ADA project funds were awarded to 22 different projects sponsored by the eight participating jurisdictions. These projects include sidewalk "curb cuts" and other path-of-travel retrofit projects along roadsides; library, park, and community center restroom ADA renovations; and community facility ADA retrofit upgrades. There are a number of projects proposed in FY 18-19 that continue to meet the needs for ADA upgrades, but the priority is to use funds for the most pressing community needs of affordable housing development and preservation and homeless intervention and prevention programs.

Summary of Citizen Participation Process

A draft of the FY 18-19 Action Plan will be made available to the public from June 13, 2018 – June 20, 2018. A notice was published in the Press Democrat and public service announcements in English and Spanish were sent to local radio stations to announce its availability. The Draft Plan was distributed via email to a broad list of stakeholders. Copies were made available in three public locations: the Sonoma County Community Development Commission, The Board of Supervisor's office, and the Main Branch of the Sonoma County Library. The draft was also available on the Sonoma County Community Development Commission website. Please note that while the comment period is normally 30 days long, a shortened comment period is allowed pursuant to a disaster waiver granted by HUD.

Citizen participation was present throughout the process of drafting the Action Plan. The Commission's two advisory committees review all project proposals and discuss staff recommendations in widely-publicized and well-attended public hearings. During the hearings, the committees took public comment from all applicants and members of the public. Another opportunity for public comment and input will be the public meeting on June 20, 2018 by the Community Development Committee, which also makes recommendations to the Board of Commissioners regarding the committees' funding recommendations.

Lead & Responsible Agencies

The Sonoma County Community Development Commission is the agency charged with administering CDBG, HOME and ESG funding on behalf of the Urban County, a Joint Powers Agreement partnership consisting of the County of Sonoma, the Town of Windsor and the cities of Cloverdale, Cotati, Healdsburg, Rohnert Park, Sebastopol, and Sonoma.

Consultation

The Sonoma County Community Development Commission (Commission) houses the Sonoma County Housing Authority and administers all affordable housing finance programs for the County of Sonoma. The Commission also hosts and staffs the Sonoma County Continuum of Care and is the largest funder of homeless services county-wide. Under the direction of the Board of Supervisors, which also serves as the Board of Commissioners, the Commission actively participates in various collective action and community initiatives addressing the needs of lower income members of the community including, but not limited to, Health Action and Upstream Investments. Because of these existing roles, the Commission is well-positioned to consult with private and public agencies about Consolidated Plan matters since the appropriate agency-to-agency relations are already in place.

Throughout the past year, the Commission has consulted with its partners in local government, community-based organizations, and its contracted service providers to ensure effective and equitable service delivery. A partial list of consulted entities includes:

City of Cloverdale
City of Healdsburg
City of Petaluma
City of Rohnert Park
City of Santa Rosa
City of Sebastopol
City of Sonoma
Town of Windsor
Health Action Catalyst Team
Lower Russian River Homeless Task Force
Sonoma County Vet Connect, Inc.

Petaluma People Services – SHARE Sonoma County
Social Advocates for Youth
Sonoma Overnight Support
Burbank Housing Development Corporation
California Human Development
Fair Housing Advocates of Northern California

FY 2018-19 Recommended Projects

In FY 2018-2019, Sonoma County will receive $1,858,218 in CDBG funds. CDBG funds will be used for housing, public services, micro-enterprise economic development, public improvements, and public facilities. Federal regulations impose a 15 percent maximum cap on funding to be expended for public service activities. Following the October 2017 Sonoma Complex Fire disaster, HUD authorized expenditure for public services of up to 40 percent of CDBG funds as long as additional resources were spent on disaster recovery. Administrative costs are limited to 20 percent of the total CDBG funding and 20 percent of program income received.

In FY 2018-2019, Sonoma County will receive $887,581 in HOME Program funds. HOME funds will be used for new rental and homeownership unit construction, housing rehabilitation, tenant based rental assistance and operating funds for a Community Development Housing Organization (CHDO) Federal regulations require a minimum of 15 percent of each year’s HOME allocation to be set-aside for projects sponsored by CHDOs. However, this CHDO set-aside was waived following the October 2017 fires for up to two years. Operational support for approved CHDOs is allowed as an eligible activity, limited to 5 percent of the total HOME award or $50,000, whichever is less.

In FY 2018-2019, Sonoma County will receive $152,599 in ESG funds. This year, six proposals are recommended for funding—three for homeless shelters and three for rapid re-housing programs.

Meeting Annual Goals and Objectives

The FY 2018-19 Action Plan and the 2015 Consolidated Plan organize community priorities for the use of CDBG, HOME and ESG funds by the Urban County, following the structure provided by HUD regulations by grouping these priorities into three categories: affordable housing, homelessness, and non-housing community development.

The Urban County's Consolidated Plan contains the following broad goals:

1. Affordable Housing: Increase and preserve the housing stock that is affordable, safe, and accessible for low-, very low-, and extremely low-income families and individuals, including those with special needs and those who are homeless or at imminent risk of homelessness.
2. Homelessness: Promote effective and proven strategies for homelessness prevention and intervention county-wide.
3. Community Development: a) Assist in creating and/or replacing infrastructure systems and public facilities that meet the needs of lower income people, people with disabilities, and other special needs subpopulations county-wide; and b) Promote the well-being and economic integration of lower income persons through non-housing services, self-sufficiency programs, job training, and economic development assistance for micro-enterprises to increase job opportunities in the Urban County.

Goals Summary

All funded projects must contribute to one of these broad goals. A summary of how funds are distributed by goal is provided below:

Sort Order	Goal Name	Start Year	End Year	Category	Geographic Area	Needs Addressed	Funding	Goal Outcome Indicator
1	Affordable Housing	2015	2020	Affordable Housing		Affordable Housing	CDBG: $580,750 HOME: $510,000 ESG: $0 Competitive McKinney-Vento Homeless Assistance Act: $0 Section 8: $32,220,570	Rental units constructed: 48 units Homeowner housing added: 16 units Rental units rehabilitated: 20 units Homeowner housing rehabilitated: 8 household housing units Tenant-based rental assistance/rapid rehousing: 2,836 households assisted Other: CHDO Operating Funds
2	Homelessness	2015	2020	Homeless		Homelessness	CDBG: $214,267 HOME: $0 ESG: $141,154 Competitive McKinney-Vento Homeless Assistance Act: $3,312,364	Public Facility or Infrastructure Activities for Low/Mod Income Housing Benefit: 248 persons assisted

Sort Order	Goal Name	Start Year	End Year	Category	Geographic Area	Needs Addressed	Funding	Goal Outcome Indicator
								Tenant-based Rental Assistance/Rapid Re-Housing: 58 households assisted Homeless Person Overnight Shelter: 1,737 Persons Assisted Other: 2,142 Homeless Households reached through Street Outreach and Engagement, including Day Shelter
3	Non-Housing Community Development	2015	2020	Non-Homeless Special Needs Non-Housing Community Development		Non-Housing Community Development	CDBG: $547,250 HOME: $0 ESG: $0 Competitive McKinney-Vento Homeless Assistance Act: $0 Section 8: $0	Businesses assisted: 12 businesses assisted Public Facility or Infrastructure Activities other than Low/Mod Income Housing Benefit: 72,184 Persons Assisted Public service activities other than Low/Moderate Income Housing Benefit: 50 households assisted

Projects

Below is a detailed list of projects and programs recommended for funding in FY 2018-19.

1	**Project Name**	Satellite Affordable Housing Associates - Altamira Family Apartments
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	HOME: $ 110,500
	Description	Altamira will provide 48 affordable apartments for individuals and families earning between 30%-60% AMI. In addition to 1-, 2- and 3-bedroom apartments, the development will offer 75 parking spaces, a community room, youth play area, ample outdoor space and bay friendly landscape to enhance the beautifully designed buildings. An extensive community engagement process helped to evolve the site plan – making changes to the number of stories, ingress/egress and placement of the community building. The project is stronger today based on the revisions and community interaction.
	Target Date	May 2020
	Estimate the number and type of families that will benefit from the proposed activities	48 rental units affordable to low-income households
	Location Description	20269 Broadway Sonoma, CA
	Planned Activities	Creation of 48 affordable units, 75 parking spaces, community room, youth play area and an amble outdoor space.

2	**Project Name**	Habitat for Humanity - Duncan Village
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	HOME: $ 110,500
	Description	Habitat for Humanity is building 16 homes on the 1.34 acre parcel at 484 Wall Street, Windsor. These homes are designed as low-income, low-cost living, homeownership units. There will be a mix of incomes in the neighborhood (50%AMI to 80% AMI). Habitat for Humanity practices green and sustainable building and will be incorporating significant green methods and materials, up to and including solar paneling and grey-water systems. We will include attached duet and detached homes that benefit families, neighborhoods, and the environment. This property has a very high “walkability” score. It is located within a half mile of the Town Green, business district, parks, outdoor events, farmers market as well as multiple school locations, public transportation, grocery stores and the future SMART Train station.
	Target Date	11/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	16 homeownership units affordable to low-income households
	Location Description	484 Wall Street Windsor, CA
	Planned Activities	Construction of 16 homes, designed as low-cost homeownership units.
3	**Project Name**	Community Housing Sonoma County - HOME Operating Funds
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	HOME: $34,000

	Description	Operating funds will support the CHSC Executive Director in developing existing HOME-funded projects and identifying new opportunities to utilize HOME funds.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	Funds will not directly benefit families. Funds are for operating expenses for Community Housing Sonoma County.
	Location Description	Urban County
	Planned Activities	Production of affordable housing for the most vulnerable and hard to serve populations throughout Sonoma County.
4	**Project Name**	Sonoma County Affordable Homes, Inc. - Riverfield Homes
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG: $197,614
	Description	Sonoma County Affordable Housing Inc., a CHDO and EAH Inc. affiliate is planning interior capital improvements for Riverfield Homes in Healdsburg. The project goal is to preserve the high quality of this 22 year old affordable housing asset for the extended future.
	Target Date	06/30/2020
	Estimate the number and type of families that will benefit from the proposed activities	18 rental units rehabilitated
	Location Description	Riverfield Homes, 1-35 Adeline Way, Healdsburg, CA 95448
	Planned Activities	Interior capital improvements, including kitchen and bathroom rehabilitation, replacing cabinets, appliances, countertops, tubs/showers, toilets and associated fixtures. Unit interiors will be painted and flooring and windows will be replaced.

5	**Project Name**	City of Sebastopol - Park Village
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG: $135,636
	Description	The City owns the Village Park Mobile Home Park to provide local affordable housing. The City has allocated its own funds together with other sources to pay for a general facility upgrade. Included are plans to refurbish 4 apartments on-site; the grant request is for funds to pay for rehabilitation of two apartments.
	Target Date	12/2018
	Estimate the number and type of families that will benefit from the proposed activities	2 rental units rehabilitated
	Location Description	6665 Sebastopol Avenue, Sebastopol, CA 95472
	Planned Activities	Rehabilitation of two apartments at Village Park Mobile Home Park in the City of Sebastopol.
6	**Project Name**	Sonoma County Community Development Commission - Countywide Housing Rehabilitation
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	CDBG $247,500
	Description	Provide low interest loans for housing rehabilitation to legally sited mobile homes, single-family, and multifamily residential properties located within the Urban County
	Target Date	6/30/19
	Estimate the number and type of families that will benefit from the proposed activities	8 homeowner housing units rehabilitated

	Location Description	Urban County
	Planned Activities	CDBG funds will be utilized for low interest loans made for improvements to legally sited owner-occupied or rental mobile homes and single-family properties located within the unincorporated areas of Sonoma County, as well as within the boundaries of the Cites of Cloverdale, Cotati, Healdsburg, Rohnert Park, Sebastopol, Sonoma and the Town of Windsor, and the direct delivery expenses associated with the provision of the housing rehabilitation activities to CDBG-eligible owner-occupants and tenants. All properties must be occupied by income-eligible households. Loans to owner-occupants will either be deferred or amortized, depending on the homeowner's ability to repay. All loans to owners of rental structures will be fully amortized and carry affordability restrictions. The CDBG funds may also be used to provide grants to income-qualified owners of mobile homes for the installation of earthquake resistant bracing systems.
7	**Project Name**	Sonoma County Community Development Commission – Tenant Based Rental Assistance
	Goals Supported	Affordable Housing
	Needs Addressed	Affordable Housing
	Funding	HOME: $255,000
	Description	Tenant-Based Rental Assistance Program
	Target Date	6/30/2022
	Estimate the number and type of families that will benefit from the proposed activities	11 households
	Location Description	Countywide
	Planned Activities	TBRA is administered similar to the Section 8 Housing Choice Voucher Program. Very low-income applicants are eligible. Assistance can be granted to applicants wishing to reside anywhere within the County of Sonoma. Funds will target homeless persons and households identified by the County

		Homeless Outreach Services Team (HOST) or related County and Commission homelessness program initiatives.
8	**Project Name**	Fair Housing Advocates of Sonoma County – Fair Housing Education and Enforcement
	Goals Supported	Non-Housing Community Development
	Needs Addressed	Non-Housing Community Development
	Funding	CDBG: $70,000
	Description	Bilingual intake coordinator, bilingual housing counselor, and attorneys will provide in-depth, quality fair housing services to people across all federally-protected classes, including persons with disabilities, African-Americans, Latinos, and families with children.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	50 low/moderate income households
	Location Description	1314 Lincoln Avenue, Suite A, San Rafael CA and 510 Mendocino Avenue, Santa Rosa CA
	Planned Activities	This program seeks to address the absence of an experienced, enforcement-focused fair housing agency in Sonoma County by conducting complaint-based testing for all protected classes and systemic investigations designed to expand on prior investigations revealing national origin, familial status, and race discrimination.
9	**Project Name**	Sonoma County Regional Parks - Gualala Point ADA Retrofit
	Goals Supported	Non-Housing Community Development
	Needs Addressed	Non-Housing Community Development
	Funding	CDBG: $ 165,000

	Description	Removal of barriers to accessibility for persons with disabilities throughout Gualala Point Regional Park. Improvements to day-use facilities including accessible paths, accessible drinking fountains and picnic tables, renovations to restrooms.
	Target Date	12/31/2019
	Estimate the number and type of families that will benefit from the proposed activities	72,184 persons with disabilities
	Location Description	42401 Coast Hwy 1, Sonoma County
	Planned Activities	Removal of barriers, improvements to day-use facilities
10	**Project Name**	California Human Development - Micro-Enterprise Assistance Program
	Goals Supported	Non-Housing Community Development
	Needs Addressed	Non-Housing Community Development
	Funding	CDBG: $ 156,750
	Description	To provide technical assistance and micro loans to locally based micro-enterprises. Major focus will be on minority owned small general contracting firms, construction, electrical, plumbing, drywall etc. that need assistance with working capital needs, to support the rebuilding effort of the North Bay fire victims' homes and businesses.
	Estimate the number and type of families that will benefit from the proposed activities	12 businesses assisted
	Location Description	Urban County
	Planned Activities	Provide technical assistance and micro loans to minority owned small general contracting firms, construction, electrical, plumbing, drywall etc.
	Project Name	City of Cotati – West School Street Path of Travel Upgrades, Phase 3

11	**Goals Supported**	Non-Housing Community Development
	Needs Addressed	Non-Housing Community Development
	Funding	CDBG: $85,000
	Description	Phase 3 of the path upgrades along W. School Street is to construct approximately 600 feet of the pathway dependent on available funding. The project is to include planning, engineering and construction of ADA pathway upgrades from Clifford Street to Thomas Page School along W. School Street and Richardson Lane
	Target Date	04/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	880 persons with disabilities
	Planned Activities	The project is to include planning, engineering and construction of 600 feet of ADA pathway upgrades from Clifford Street to Thomas Page School along W. School Street and Richardson Lane.
12	**Project Name**	City of Rohnert Park - Senior Center ADA Improvements
	Goals Supported	Non-Housing Community Development
	Needs Addressed	Non-Housing Community Development
	Funding	CDBG: $70,000
	Description	The Rohnert Park Senior Center Accessibility Improvements will remove barriers to accessibility and full usage within the Senior Center building and in the adjacent parking area. The project will remove architectural barriers that create inadequate maneuvering space and path-of-travel problems in the building's program areas, restrooms and corridors; address placement of built-in elements and fixtures that create clearance issues; add compliant signage; and address vertical grades on ADA ramps, parking spaces and path-of-travel from the parking lot to the facility.
	Target Date	07/2019

	Estimate the number and type of families that will benefit from the proposed activities	4,669 elderly persons
	Location Description	6800 Hunter Drive, Rohnert Park, CA 94928
	Planned Activities	Removing of barriers to accessibility and full usage within the Senior Center building and in the adjacent parking area.
13	**Project Name**	Community Action Partnership – Sloan Women's Shelter
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	CDBG: $42,231
	Description	Shelter services with intensive case management services with linkages to address barriers to permanent housing and employment.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	96 women and children
	Location Description	141 Stony Circle, Suite 210, Santa Rosa, CA
	Planned Activities	Shelter services include overnight shelter with intensive case management, motivational interviewing, health and well-being screening, and referrals to community providers such as mental health and substance abuse counseling, job readiness, employment services, and financial literacy.
14	**Project Name**	Community Action Partnership – Harold's House Transitional Housing
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	CDBG: $17,596

	Description	Transitional Housing with intensive case management
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	56 women and children
	Location Description	2602 Giffen Avenue, Santa Rosa, CA
	Planned Activities	Participants receive intensive case management services in a low-cost, safe and sober environment. Case management provides needs assessment, goal planning, referrals, family reunification, credit counseling, financial literacy, and early childhood development with priority to Head Start, alcohol and drug recovery support, parent education and job-seeking skills.
15	**Project Name**	Catholic Charities - Family Support Center
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	CDBG: $119,516
	Description	Families at the 138-bed Family Support Center receive emergency shelter, food, clothing, medical and dental care, and implement action plans to overcome homelessness.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	360 persons in families with children
	Location Description	465 A Street, Santa Rosa, CA
	Planned Activities	Supportive services include: overnight shelter; case management providing a foundation for sustained success; hot meals, housing rental counseling; substance abuse recovery; mental health; integrated

		health care; job readiness and employment search; mainstream public benefits; nutrition and diet; computers, internet, telephones and messages; transportation; mail, laundry, clothing, and toiletries
16	**Project Name**	Catholic Charities – Homeless Service Center
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	CDBG: $25,739
	Description	A multi-service day center providing centralized intake and services for Sonoma County's most vulnerable homeless population.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	1900 persons, primarily single adults
	Location Description	600 Morgan Street, Santa Rosa, CA
	Planned Activities	Daytime drop-in center with showers, mail service, access to Coordinated Entry and housing, and enrollment in other supportive services.
17	**Project Name**	COTS Street Outreach
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	CDBG: $9,185
	Description	Street outreach to unsheltered persons in all regions of Sonoma County.
	Target Date	6/30/2019

	Estimate the number and type of families that will benefit from the proposed activities	242 single adults
	Location Description	900 Hopper Avenue, Petaluma CA
	Planned Activities	Services will be provided to unsheltered and chronically homeless individuals and families, including many whom have serious persistent mental illness and/or substance use disorders. Outreach staff build trust and connect individuals to Coordinated Entry in order to obtain appropriate housing, shelter, and supportive services, and divert clients away from costly jail and emergency medical facilities.
18	**2018 ESG Awards**	2018 ESG Awards
	Goals Supported	Homelessness
	Needs Addressed	Homelessness
	Funding	ESG: $141,154
	Description	Catholic Charities, Rapid Re-Housing: Housing location, housing-focused case management, and rental assistance to help persons experiencing homelessness to re-enter housing. Catholic Charities, Samuel Jones Hall Emergency Shelter: Large housing-focused emergency shelter for up to 190 single adults at any given time. COTS, Mary Isaak Center Emergency Shelter: 100-bed emergency shelter for single adults COTS, Rapid Re-Housing: Housing location, housing-focused case management, and rental assistance to help persons experiencing homelessness to re-enter housing. Social Advocates for Youth, Dream Center Emergency Shelter: Housing-focused emergency shelter for transition-aged youth (18-24 years of age)

		Social Advocates for Youth, Rapid Housing: Housing location, housing-focused case management, and rental assistance to help youth experiencing homelessness to enter housing—often for the first time.
	Target Date	6/30/2019
	Estimate the number and type of families that will benefit from the proposed activities	1283 households Catholic Charities, Rapid Re-Housing: 18 households Catholic Charities, Samuel Jones Hall Emergency Shelter: 600 single adults COTS, Mary Isaak Center Emergency Shelter: 525 single adults COTS, Rapid Re-Housing: 30 households Social Advocates for Youth, Dream Center Emergency Shelter: 100 youth Social Advocates for Youth, Rapid Housing: 10 youth
	Location Description	Catholic Charities, Rapid Re-Housing: 465 A Street, Santa Rosa, CA Catholic Charities, Samuel Jones Hall Emergency Shelter: 4020 Finley Avenue, Santa Rosa CA COTS, Mary Isaak Center Emergency Shelter: 900 Hopper Street, Petaluma, CA COTS, Rapid Re-Housing: 900 Hopper Street, Petaluma, CA Social Advocates for Youth, Dream Center Emergency Shelter: 2447 Summerfield Road, Santa Rosa, CA Social Advocates for Youth, Rapid Housing: 2447 Summerfield Road, Santa Rosa, CA

	Planned Activities	Catholic Charities, Rapid Re-Housing: In combination with $26,723 in local funds as well as approximately $145,000 in State ESG funds, households will be assisted to locate and retain permanent housing. Catholic Charities, Samuel Jones Hall Emergency Shelter: In combination with $24,437 in local funds as well as approximately $135,000 in State ESG funds, Samuel Jones Hall serves the most vulnerable chronically homeless persons, exclusively referred by Coordinated Entry and encampment outreach, and provides housing-focused case management to assist them into housing on a Housing First model. Participants will have access to food, clothing, day services, self-sufficiency training, drug and alcohol counseling, benefits counseling, and other services as needed. Clients may stay up to six (6) months or longer depending on individual need and commitment to achieving goals of finding permanent housing COTS, Mary Isaak Center Emergency Shelter: In combination with approximately $135,000 in State ESG funds, Mary Isaak Center Emergency Shelter will provide overnight accommodations and case management aimed at placing participants in permanent housing. Case management will facilitate participants' ability to find permanent housing and increase income from any source at program exit. Services will provide an array of support including mental health, hot meals, financial management, self-sufficiency training, substance abuse recovery, integrated health care, transportation, and other services as needed. Every effort will be made to place participants in permanent housing as quickly as possible. COTS, Rapid Re-Housing: In combination with approximately $145,000 in State ESG funds, households will be assisted to locate and retain permanent housing. Social Advocates for Youth, Dream Center Emergency Shelter: In combination with $24,187 in local funds and approximately $25,495 in State ESG funding, transition-aged youth will be supported to identify and secure permanent housing through an array of services including counseling, access to food, financial management, self-sufficiency training, and other services as needed. Services address

		emergency needs through client-focused case management with the goal of getting participants housed as rapidly as possible. Social Advocates for Youth, Rapid Housing: In combination with $33,137 in local funds and approximately $ 50,000 in State ESG funds, homeless youthwill be assisted to identify and secure permanent housing opportunities and increase income from any source at program exit. Case management services will include housing location services, counseling, financial assistance, education, and referrals to local agencies that provide housing, benefits, healthcare, and other services as needed.

County of Sonoma
State of California

Date: December 11, 2018

Item Number: ____________

Resolution Number: ____________

☐ 4/5 Vote Required

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, and the Board of Commissioners of the Sonoma County Community Development Commission

Whereas, a condition of receiving housing and community development funds from the U.S. Department of Housing and Urban Development, the Board approved the 2015 Consolidate Plan on May 5, 2015 which describes the community development priorities for the County, and

Whereas, the Board of Commissioners approved the One Year Action Plan for FY 2018-2019 on July 10, 2018 that provides community development funding to be invested in activities that directly support the adopted priorities in the 2015 Consolidated Plan, and

Whereas, The FY 2018-2019 One Year Action Plan intentionally held in reserve $130,338 in Community Development Block Grant (CDBG) funds and $391,269 in Home Investment Partnerships Program (HOME) funds to be awarded under a future substantial amendment, and

Whereas, HUD deemed that $34,000 in HOME funds awarded to Community Housing Sonoma County (CHSC) in the FY 2018-2019 One Year Action Plan was an ineligible use of funds and required that it be reprogrammed, and

Whereas, in the aftermath of the Sonoma Complex Fires, the U.S. Department of Housing and Urban Development has waived certain regulatory requirements for Community Development Block Grant Funds including use of the FY 2017-18, 2018-19 and 2019-20 allocations for new construction, and for the HOME program including a waiver of the set-aside of funds for Community Development Housing Organizations for for FY 2017-18, FY 2018-19, FY 2019-2020, and

Whereas, Habitat for Humanity applied for CDBG & HOME funds in the FY 2018-2019 funding round for Duncan Village homeownership project of 16 homes affordable to low-income households and were not fully funded and would benefit from $334,000 in HOME funds to complete the financing package for the development, and

Whereas, Satellite Affordable Housing Associates applied for CDBG & HOME funds in the FY 2018-2019 funding round for Altamira 47 unit multifamily rental project for extremely low- and very low-income households and were not fully funded and would benefit from $91,338 in CDBG and $91,269 in HOME to complete the financing package for the development, and

Whereas, last year in response to the October 2017 wildfires, the Commission conducted a telephone survey to understand the impacts of the fires on the precariously housed population and potential impacts to the homeless system as part of an enhanced point-in-time Homeless Count, and to continue to track the impacts of the fires, $39,000 in CDBG funds will support a second year's precariously housed study to ensure that the future deployment of homeless services dollars for populations impacted by the fires is well-informed, and

Whereas, on an annual basis the Commission receives and reports on program income from repayment of loans made with Community Development Block Grant Program funds, that in FY 2017-2018 was in the amount of $271,875, and

Whereas, the Commission's annual funding policies direct that fifteen percent (15%) from all CDBG-funded projects will be used for Public Services, as allowed under CDBG regulations, and

Whereas, there is a pressing need for the availability of $40,000 in CDBG to fund a winter shelter expansion to serve people who are experiencing homelessness in Sonoma County who are at risk of exposure during the cold months, and

Now, Therefore, Be It Resolved

The Board of Supervisors of the County of Sonoma and Board of Commissioners of the Sonoma County Community Development Commission approves the proposed FY 2018-19 Amended One Year Action Plan, including the award of $425,269 in previously unawarded FY HOME funds, $130,338 in previously unawarded CDBG funds, and $40,000 in CDBG program income to address recognized affordable housing and homeless system needs.

RESOLUTION NO. ____________

RESOLUTION OF THE COUNCIL OF THE CITY OF SANTA ROSA AUTHORIZING THE CITY TO BECOME AN ADDITIONAL MEMBER OF THE CALIFORNIA PUBLIC FINANCE AUTHORITY

WHEREAS, one of the City’s primary goals is to meet the housing needs of its residents by actively supporting housing for all through protection, preservation and production of housing; and

WHEREAS, by joining the California Public Finance Authority (CalPFA) as an additional member, developers can access tax exempt bonds to obtain financing for affordable housing units; and

WHEREAS, CalPFA is a Joint Powers Authority that funds community public benefit projects throughout the state; and

WHEREAS, in order for a developer to access the financing available from CalPFA, the City must be a member of the organization; and

WHEREAS, subsequent to joining CalPFA, any projects within the City limits that apply to access financing must receive approval from the City Council pursuant to the Internal Revenue Code; and

WHEREAS, the City proposes to become an Additional Member of the Authority pursuant to Section 12 of the Joint Exercise of Powers Agreement (the “Agreement”) relating to the California Public Finance Authority.

NOW, THEREFORE, BE IT RESOLVED that the Council of the City of Santa Rosa hereby authorizes joining CalPFA as an Additional Member for the purpose of obtaining financing or refinancing of specific housing projects.

BE IT FURTHER RESOLVED that Council authorizes the Mayor to execute the Agreement and any associated documents.

Item Number: ________________

Date: December 11, 2018 Resolution Number: ________________

☐ 4/5 Vote Required

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, and The Board of Commissioners Of the Sonoma County Community Development Commission

IN THE MATTER OF: AUTHORIZATION TO PARTICIPATE IN THE NO PLACE LIKE HOME PROGRAM

Whereas, the State of California, Department of Housing and Community Development (“Department”) issued a Notice of Funding Availability, dated October 15, 2018 (“Initial NOFA”), under the No Place Like Home Program (“NPLH” or “Program”) authorized by Government Code section 15463, Part 3.9 of Division 5 (commencing with Section 5849.1) of the Welfare and Institutions Code, and Welfare and Institutions Code section 5890;

Whereas, the Initial NOFA relates to the availability of approximately $400 million in Competitive Allocation funds under the NPLH Program; and

Whereas, The County of Sonoma is a County and an Applicant, as those terms are defined in the NPLH Program Guidelines, dated July 17, 2017 (“Guidelines”).

Now, Therefore, Be It Resolved, that the Board of Supervisors for the County of Sonoma, also acting as the Board of Commissioners of the Sonoma County Community Development Commission, does hereby determine and declare as follows:

SECTION 1. That the Sonoma County Community Development Commission is hereby authorized and directed to apply for and if awarded, accept the NPLH Program funds, as detailed in the Initial NOFA, up to the amount authorized by the Guidelines and applicable state law.

SECTION 2. That Margaret Van Vliet, the Executive Director of the Sonoma County Community Development Commission, or her designee, is hereby authorized and directed to act on behalf of County in connection with an award of NPLH Program funds, and to enter into, execute, and deliver any and all documents required or deemed necessary or appropriate to evidence the loan of NPLH Program funds, the County's obligations related thereto, and the Department's security therefore. These documents may include, but are not limited to, a State of California Standard Agreement ("Standard Agreement"), a regulatory agreement, a promissory note, a deed of trust and security agreement, and any and all other documents required or deemed necessary or appropriate by the Department as security for, evidence of, or pertaining to the NPLH Program funds, and all amendments thereto (collectively, the "NPLH Program Documents").

SECTION 3. That the Sonoma County Community Development Commission shall be subject to the terms and conditions that are specified in the Standard Agreement; that the application in full is incorporated as part of the Standard Agreement; that any and all activities funded, information provided, and timelines represented in the application are enforceable through the Standard Agreement; and that the County of Sonoma and the Sonoma County Community Development Commission will use the NPLH Program funds in accordance with the Guidelines, other applicable rules and laws, the NPLH Program Documents, and any and all NPLH Program requirements.

SECTION 4. That the County of Sonoma will make mental health supportive services available to each project's NPLH tenants for at least 20 years, and will coordinate the provision of or referral to other services (including, but not limited to, substance use services) in accordance with the County's relevant supportive services plan, and as specified in Section 202(n)(1) of the Guidelines.

PASSED AND ADOPTED this 11th day of December, 2018, by the following vote:

(This Section for use by Clerk of the Board Only.)

To: Board of Commissioners of the Community Development Commission

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): Sonoma County Community Development Commission

Staff Name and Phone Number: Benjamin Wickham, 707-565-7542

Supervisorial District(s): 5th District

Title: Approval of Developer Selection Recommendation for the property at 2150 West College Avenue, Santa Rosa.

Recommended Actions:

Authorize the Sonoma County Community Development Commission (Commission) to enter into an Exclusive Right to Negotiate Agreement (ERNA) with USA Properties for development of the 2150 West College (Property)

Executive Summary:

This Board item requests approval of the recommendation by the Sonoma County Community Development Commission staff for selection of a qualified developer for the property located at 2150 West College Avenue, Santa Rosa. The Commission engaged in a comprehensive and competitive process which resulted in a group of well-designed and thoughtful development proposals. Based on the results of the proposal review committee, Commission staff recommends that USA Properties be selected as developer, recognizing their proposal best meets the Commission's and the Board's stated goals for this project. Upon approval, the Commission will enter into an Exclusive Right to Negotiate Agreement (ERNA) with the selected developer. The ERNA will govern the implementation of the predevelopment of the project, including entitlements and environmental review. Once the entitlement process is completed, the two parties will negotiate a mutually acceptable Disposition and Development Agreement (DDA).

Discussion:

Background: In line with guidance received from the Board of Commissioners, the Commission has prioritized the production of high-quality new housing to address the vast housing shortage that currently exists in Sonoma County. Both market-rate and affordable dwellings are necessary to meet the needs of thousands of families in Sonoma County. In line with this direction, the Commission obtained Board approval on June 20, 2017 to proceed with the purchase of the Sonoma County Water Agency property at 2150 West College Avenue, Santa Rosa. The purchase was carried out using a forward allocation of $4.2M in County Fund for Housing Trust Fund dollars for the specific purpose of developing affordable and workforce housing. The Commission noted in its Board Item Summary that acquisition and development of the 2150 West College Avenue site supports County policies related to agricultural and open space preservation and greenhouse emission reduction goals by ensuring city-centered development near transportation and public services. On August 29, 2018 the Commission released a Request for Proposals (RFP) seeking a qualified firm to move forward with development of affordable and workforce housing on the site. Seven development proposals were received by the closing date of the RFP on October 2, 2018. An RFP Selection Committee (comprised of representatives from the City of Santa Rosa, community and private-sector members, and employees of the Commission) reviewed and ranked the seven proposals received based on criteria outlined in the RFP materials.

A very important factor in reviewing proposals designed to meet these stated priorities is the overarching need to delivering new housing to the community as expeditiously as possible. Therefore, the RFP Selection Committee was asked to balance these priorities with the need for an expedited process as they reviewed all proposals.

The Committee unanimously approved the top two finalists. The proposers are listed below in the order they were ranked by the RFP Review Committee.

1. **USA Properties**
2. **Satellite Affordable Housing Associates**
3. MidPen Housing
4. EAH Housing
5. Related California
6. Anton Development
7. Burbank Housing

Finalists: The RFP Committee unanimously agreed on the top two finalists (*see attachment 1, 'West College RFP Finalist Comparison*)

Key Considerations in recommendation:
The top two finalists were interviewed by the Commission's Executive Director, Margaret Van Vliet on October 25, 2018. Both USA Properties and SAHA presented well-crafted proposals. The Commission feels that USA Properties should be chosen as developer for the 2150 West College site due to their ability to robustly meet the following priorities, stated in the RFP as follows:

Innovative Economic Partnerships

Sonoma County and the Commission are interested in pursuing innovative models of housing development on County-owned land that provide long-term economic benefits wherever possible. Examples could include (1) the use of a long-term ground lease that is structured to provide residual receipts payments to the Commission after a period of fifteen years; or (2) partnership structures that grant the Commission residual cash flow and/or a minority equity interest in the property over the long-term; or (3) option agreements structured to provide an opportunity for the County or Commission to consider ownership possibilities at natural recapitalization points, such as 20 or 30 years after commencement of operations.

Proposers are encouraged to develop submissions that give consideration to such alternative economic structures, and to achievement of a substantial number of new rental units affordable to low-income families, seniors, and special needs populations (see Affordability, below).

Affordability

The City of Santa Rosa's inclusionary policy establishes that a minimum of 15% of units must be affordable for a period of 55 years to households earning 80 percent of the area median income (AMI) or less. The Commission views this inclusionary percentage as a minimum and will give priority to proposals that can achieve greater levels of affordability, even on mixed income units that are proposed to not carry deed restrictions, without requiring additional local or state competitive funding.

Submissions should explain how affordability will be achieved, including how the $4.2 million investment made by the Commission in the property will be treated within the project economics; the ways in which development and construction costs will be minimized to allow units that are not rent-restricted to meet current market needs; and the methods by which the development will balance the goal of expeditiously bringing units on line with the objective of driving affordability for lower-wage working families and individuals.

Community Process

The Commission expects the selected developer to pro-actively engage the neighborhood surrounding the property, to promote an open communication process, develop an understanding of neighborhood issues, and develop a final project that responds to any pertinent neighborhood concerns. The developer should provide a narrative that describes the planned outreach process and the experience the developer has with this type of process.

- Innovative Economic Partnerships
  - USA Properties presented an innovative economic structure wherein land residual of $2M from the Commission's land donation will be reinvested into the project as an ownership interest in proportionate share with the other equity funding. USA proposes $9.5M in total equity funding (a combination of USA equity and equity from a 4% tax credit allocation). This $2M will potentially provide the Commission with a 29% interest in the partnership. Assuming a 15-year operating hold period, which is projected in USA's economic model, the Commission would receive approximately $3.3M in cash flow from operations and $10.5M upon sale of the property at the end of the partnership. In addition, USA proposes granting the Commission a first right of refusal to purchase the property at the time of sale at the project's fair market value.
- Affordability
  - USA Properties proposed to restrict 35% of the units (approximately 59 units with restricted rents affordable to households earning 30%, 40%, 50%, 80% and 120% of Area Median Income); however, 100% project affordability is proposed to be achieved through innovative design. The remaining unrestricted units will be offered at a rent that is the lowest price point among other newer market-rate projects in the area. The result will be a mixed-income project that provides desperately needed workforce housing. As a part of this financing strategy, no competitive funding will be required, resulting in a greatly expedited project. Many of the funding structures proposed by the other six development firms (including Community Development Block Grant Disaster Recovery (CDBG-DR) funds, Affordable Housing Sustainable Communities (AHSC) grant funds and 9% Low Income Housing Tax Credit funding) may involve a significant risk of substantial

delays if project funding is not secured during competitive funding rounds. USA's innovative proposal to create housing affordability on 65% of the project using strategic design instead of competitive funding will allow the project to move forward without funding contingencies leading to potential delays in housing delivery.

- Community Process
    - USA Properties has spent considerable time reviewing all previous comments from the community, addressing these in the current proposal. In addition, they are currently managing a property in close proximity to the West College development site, providing familiarity with the community. USA Properties proposes town hall style community informational meetings in collaboration with the Commission to gauge the public's initial reaction to the project and begin the conversation with key stakeholders. During these meetings the community will have the opportunity to share their questions, concerns and ideas. A series of second meetings will be held to discuss changes and improvements to the project recommended by USA Properties based on community input. Throughout the Design Review process USA proposes to remain engaged with those living in the surrounding area of the project site using mailers designed to provide accurate, fact-based information, including direct contact information to the project management team at USA Properties for questions.
- Due Diligence
    - USA Properties has done a significant amount of due diligence to deepen their understanding of project economics, entitlements, construction costs and community dynamics. The USA team participated in a pre-application meeting with City of Santa Rosa staff to review input from City departments on the potential project, allowing them to provide additional insight and details into the entitlement process.

Additionally, USA Properties' proposal comprehensively demonstrated their firm's fulfilment of the capacity and experience required by the Commission as stated in the RFP and noted below:

Capacity

The Commission is seeking a developer with substantial financial capacity, access to credit, and real estate development experience. Interested parties should submit financial statements and other evidence of bank relationships sufficient to demonstrate financial strength. These documents will be considered proprietary and will not be subject to disclosure as part of public records.

Track Record with Quality Development Projects

Developers should provide information and descriptions of past development projects, including photographs, sample project data, examples of financial modeling, and how such past projects or buildings have performed since initial construction. Information that clearly demonstrates the ability to execute quickly on this development opportunity should be provided.

Successful Property Management Experience

The Commission is seeking a developer with experience effectively managing its completed properties, whether in-house or in partnership with a qualified third-party property management company. This includes affirmatively marketing available units to historically under-served and non-English speaking populations, demonstrating a clear commitment to the principals of fair housing, and designing lease requirements to ensure that a peaceful and safe environment is maintained for tenants and neighbors of the property.

- Organizational and Team Capacity
    - USA Properties presented an extremely strong and well-rounded team featuring team members with demonstrated experience in the key areas of development finance, development project management, construction management and property management. USA engages all members of its vertically integrated team to ensure successful planning and execution of the project.
- Track Record with Quality Development Projects
    - USA Properties has delivered over 15,000 affordable units with projects deemed worthy of local subsidy and participation. USA Properties is one of the leading public-private housing developers in California with over 1,000 units under construction and another 800 units under entitlements. USA Properties currently has a 100+ unit apartment community under construction in Rohnert Park.
- Successful Property Management Experience
    - USA Properties manages a large portfolio of housing in California consisting of over 11,000 units across 80 apartment communities. The regional property manager assigned to Sonoma County has over 20 years of management experience and is very familiar with the particular dynamics of properties in the Santa Rosa area.

Working from the ranking provided by the RFP review committee, the Commission carefully weighed all of the above factors in reaching a conclusion.

Note regarding CEQA review: *CEQA review is not required in order for the BOS to approve the Commission's recommended developer selection for the following reasons:*

- *By selecting a developer for the West College property the Commission is not committing to any specific project or course of action, or to necessarily move forward with a project of any kind.*
- *The Commission is seeking BOS approval to enter an Exclusive Right to Negotiate Agreement (ERNA); this Agreement will govern the potential implementation of the predevelopment of the project, including entitlements and environmental review. Once an entitlement process is completed, the Commission and USA Properties will negotiate a mutually acceptable Disposition and Development Agreement (DDA).*
- *The ERNA will give the Commission the explicit option to NOT proceed with a development project at 2150 West College, with such a decision not to proceed resulting in no financial loss to the Commission.*

CEQA review and determination will be carried out as part of the entitlement process to be undertaken with the City of Santa Rosa. Sonoma County will formally agree to the CEQA determination at the time entitlements are complete and a mutually acceptable DDA has been negotiated and is brought before the BOS for review and approval

Action Requested: The Commission seeks Board authorization to enter into an Exclusive Right to Negotiate Agreement (ERNA) with USA Properties for development of the 2150 West College property, according to the terms outlined above. The ERNA will govern the implementation of the predevelopment of the project, including entitlements and environmental review. Once the entitlement process is completed, the two parties will negotiate a mutually acceptable Disposition and Development Agreement (DDA).

Prior Board Actions:

03/20/2018: Reject all proposals for development of 2150 West College Avenue.
06/20/2017: Item #31—Authorize a resolution approving the issuance of a one-year note for $4.2 million for the Community Development Commission to purchase the 2150 West College Avenue property; authorize the Executive Director of the Development Commission to issue a Request for Proposal for the development of mixed-income rental housing on the property once purchased.
5/23/17: Item #41—Approval of County Fund for Housing policy change.
2/9/16: Reject All Bids for Purchase of 2150 West College Avenue.
11/17/15: 15-0469 Resolution rescinding December 4 bid date and setting January 26, 2016 for receipt of bids for public sale.
03/18/14: 14-0093 Resolution declaring the 2150 West College Avenue property as surplus.

Strategic Plan Alignment Goal 1: Safe, Healthy, and Caring Community

The project supports a safe and healthy community by creating the opportunity for the development of housing for various income levels. It also supports economic stewardship and investment in the future by facilitating the creation of new housing units for our workforce and for vulnerable populations.

2150 West College Avenue Developer Selection

Sonoma County Community Development Commission

December 11, 2018

2150 W COLLEGE BACKGROUND

- **Sonoma County Water Agency** acquired 2150 W College (Property) for its operations center in 1981, and occupied and maintained the facility until 2013.
- **Mar 2014**: BOS declared Property as surplus
- **Jun to Nov 2015**: Bids requested for public sale of Property
- **Feb 2016**: BOS rejected all bids for purchase of Property
- **Jun 2017**: BOS authorized a resolution approving the Community Development Commission to purchase the Property for $4.2M using a Treasury Note arrangement with repayment from the County Fund for Housing
- **Nov 2017**: Commission issued RFP for development of Property
- **Mar 2018**: BOS rejected all proposals for development of Property
- **Aug 2018:** Commission re-issued RFP for development of Property

PROPERTY LOCATION

- 7.46 acres in west Santa Rosa zoned R-3-30
- Adjacent to Public Transit Hub, Finley Center

DEVELOPER SELECTION PROCESS

Request For Proposals (RFP) re-issued on August 29, 2018

Key Criteria and Policy Priorities

- Mix of affordable and market-rate housing
- Ability to expedite development
- Demonstrated development experience with project of this scope
- Maximize leveraging of County funds
- Willingness to entertain alternative financing structures that provide economic returns to the County
- Track record of community engagement, quality, on-time construction, ongoing property management

DEVELOPER SELECTION PROCESS

- 7 high quality proposals received by October 2, 2018
- Review Committee consisting of 7 members ranked proposals based on RFP criteria:

1 USA Properties
2 Satellite Affordable Housing Associates
3 MidPen Housing
4 EAH Housing
5 Related California
6 Anton Development
7 Burbank Housing

- Top 2 development firms were interviewed by Commission
- **Notice of Intent to Award issued by Commission on November 27, 2018**

MIXED INCOME COMMUNITY

Proposed total of 168 new rental units in West Santa Rosa

- 59 Units Affordable at 30% to 80% AMI, with deed restrictions
- 109 market-rate units affordable by design at 120% AMI
- Housing opportunities for seniors, veterans, homeless and lower-wage working families and individuals
- USA will partner with Riverside Charitable Corporation and LifeSTEPS to bring social services

PROPERTY MANAGEMENT EXPERIENCE

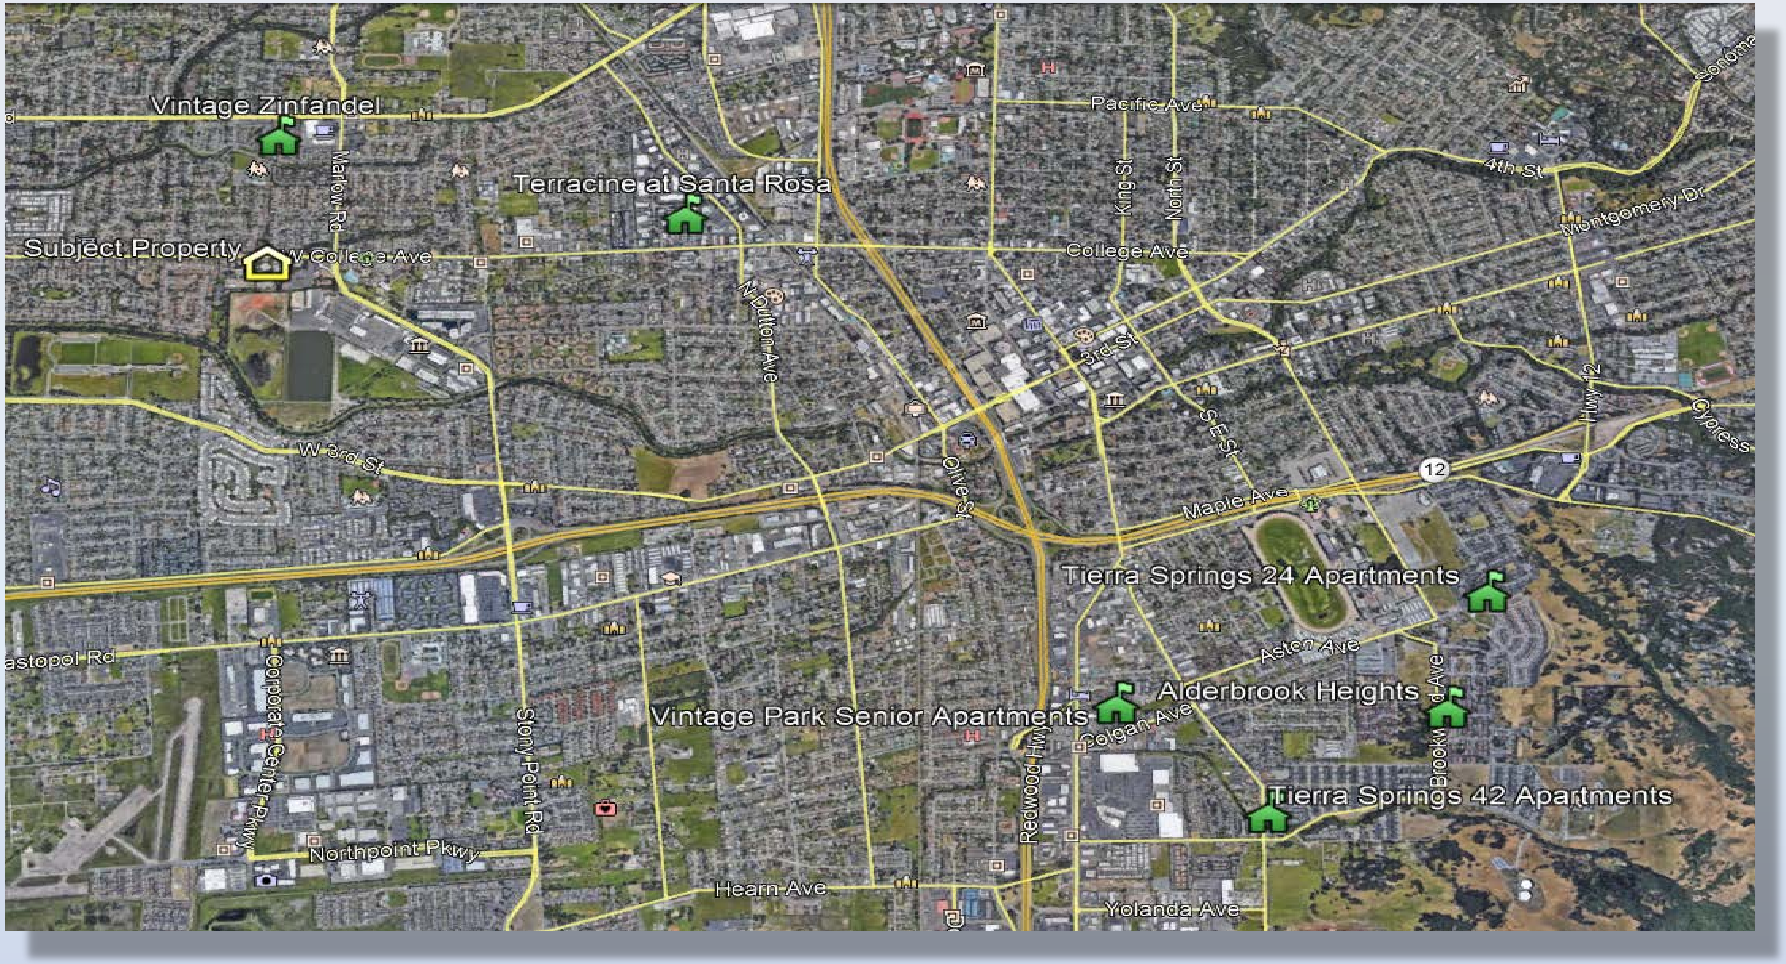
- Provides full-scale professional administration services for USA communities
- Manages all of USA’s projects in Santa Rosa, totaling 446 units
- Employs local management and maintenance crew
- Experience accommodating applicants with housing barriers
- Ability to put a lease-up strategy in place making units available to historically under-served and non-English speaking populations

USA PROJECT IN ROHNERT PARK

Residences at Five Creek, a 135-unit market-rate project under construction in Rohnert Park.

Second phase of 70 units currently being processed.

COMPLETED LOCAL PROJECTS



USA has been a long-term, trusted community partner in Santa Rosa since 1998, currently with 446 units in six apartment communities

PROPOSAL MEETS COUNTY GOALS

USA Properties' Development Concept:

- Maximizes expedited delivery of affordable housing and workforce housing using affordability by design
- Supports collaborative partnership opportunity
- Provides Commission equity opportunity
- Details USA's proven financial capacity
- Demonstrates that USA is a proven community partner
- Includes in-house Property Management team with over 25 years of experience
- Details how vertical integration allows USA to more accurately project development costs and timelines

County of Sonoma Agenda Item Summary Report

Clerk of the Board
575 Administration Drive
Santa Rosa, CA 95403

Agenda Item Number: 60
(This Section for use by Clerk of the Board Only.)

To: Sonoma County Board of Supervisors

Board Agenda Date: December 11, 2018

Vote Requirement: 4/5

Department or Agency Name(s): General Services

Staff Name and Phone Number:

Caroline Judy: 707-565-8058
Marc McDonald: 707-565-3468

Supervisorial District(s):

Countywide

Title: Disposal of the Chanate Campus

Recommended Actions:

A. Adopt a resolution authorizing the issuance of a request for proposals in connection with the possible sale of the Chanate Campus; declaring its intention to consider proposals for the sale of such property and setting a time for a meeting to receive proposals; making certain findings and giving direction to staff.

B. Adopt a resolution authorizing $800,354 from deferred maintenance to provide funds necessary for building hardening, fire watch and security costs (4/5 vote required)

Executive Summary:

On July 11, 2017, the Board adopted Ordinance No. 6205 authorizing the Development and Disposition Agreement ("DDA") to sell land known as the Chanate Campus to Chanate Community Development Partners, LLC as the best option to repurpose the Chanate Campus. On October 16, 2018, the Board rescinded its approval of the DDA in compliance with the Court's finding that the County failed to comply with the California Environmental Quality Act (CEQA) in approving the DDA.

In response to the options and information provided in the October 16, 2018 staff report and public comment regarding the future of the Chanate Campus, the Board directed staff to initiate the process to dispose of the property as surplus and to return to the Board with analysis and options for further consideration.

The California Government Code (the Code) prescribes the process the County must follow to dispose of real property. Section 54220 of the Code requires the County to declare the property as surplus. After the declaration of the property as surplus the County must first offer to sell the property to statutorily designated public agencies or housing sponsors to facilitate the development of affordable housing, parks, or school facilities. If the property is not sold to qualified agencies for purposes described in the Code, then the property may be offered for sale to private parties.

The Board's direction and prior discussions identified three primary objectives for the surplus sale of the Chanate property: 1) Maximize the value of the property sale to enable reinvestment in other County properties, specifically revitalizing the County Government Center; 2) Sell the property expeditiously to reduce the significant ongoing operating costs for security and fire watch; and, 3) Consider means of protecting Parcel J and Rural Cemetery.

The Board further directed staff to return with options and recommendations to structure the sale under two scenarios:

(1) Sale of the Campus to a single purchaser.
(2) Simultaneous sale of the twelve legally defined parcels as illustrated in Attachment 2.

Staff present for Board consideration a third approach:

(3) The simultaneous sale of three defined groups of parcels on the Chanate Campus.

Based upon Board direction a single solicitation will be issued allowing interested parties the opportunity to respond to one or more of the above described alternatives. Staff believes this approach will best support the Board's primary objective to enhance the value received for the sale of the property.

The Board additionally directed staff to explore means to protect Parcel J as open space. In response to Board direction, Parcel J will be excluded from the inventory of properties available for sale as surplus. Recommendations in support of Board direction to protect Parcel J will be brought to the Board for consideration at a later date.

Discussion:

On February 2, 2016, the Board authorized staff to issue a Request for Proposals (RFP) to identify a developer to work with the County and the City of Santa Rosa for the development and sale of the Chanate property. On July 11, 2017, the Board adopted Ordinance No. 6205 authorizing the Development and Disposition Agreement ("DDA") to sell the Chanate Campus to Chanate Community Development Partners, LLC as the best option to repurpose the Chanate Campus.

On July 20, 2018, the Court sustained a challenge to adoption of the Ordinance No. 6205 and ordered the Board to vacate its adoption of the Ordinance on that basis that the County failed to conduct environmental review of the site before approving the DDA and, therefore failed to comply with CEQA.

In compliance with the Court's order the Board voted to vacate Ordinance No. 6205 on October 9, 2018. On October 23, 2018 the Board adopted Ordinance No. 6246 which formally rescinded Ordinance No. 6205. The Board further directed staff to dispose of the property as surplus following California Government Code Section 54220, which prescribes the process for disposal of government surplus property.

Under Government Code 54220, following a declaration of property as surplus the County is required to make an initial offering of the property for sale to: (1) government agencies and nonprofits for the

purpose of developing low to moderate-income housing; (2) government agencies for open-space purposes; and, (3) local school districts for school facilities construction or open-space purposes.
In partnership with the County's Community Development Commission, the General Services Department has established a list of agencies and nonprofits engaged in the development of low to moderate income housing. Staff will send a Notice of Availability of Surplus Land to statutorily designated public agencies and housing sponsors engaged in the development of affordable housing, parks, and schools. The notice will request offers for acquisition of the Chanate Campus.

If no suitable offers are received from the agencies described above, then the property may be offered for sale to private individuals and companies. The County will have no obligation to accept any offer and will reserve the right to reject all offers that it considers unsatisfactory.

Property Value

Staff have proceeded based upon the direction that the Board's objective is to maximize the value to the taxpayer for the sale of the property. Property value is dependent upon many factors including property physical characteristics, access, easements or encumbrances, available infrastructure, market demand, comparable sales, risks associated with the future entitlement processes, use of the property, re-use potential of existing structures or alternatively the costs to demolish the same, and anticipated community support or opposition to possible uses.

Property appraisals use different types of valuation analysis methodologies to determine valuation. The County has conducted two prior property appraisals, the first in 2014 and another in 2016. Both appraisals considered "as improved" valuations with assumptions about the possible number of units, mix of housing types, sizes and quality, in addition to estimated costs to demolish the Chanate Hospital. Additionally, market conditions have changed. Relatively low interest rates, national economic recovery, and pressing needs to replace housing stock lost in the fires will likely influence values for developable land at the Chanate site.

Staff has contracted with an appraisal firm to provide an updated estimate of value for the Chanate property. Delivery of the new appraisal is anticipated in late January. The appraiser has been asked to provide estimates of value for the "Highest and Best Use" of the whole property in its current condition. Staff have provided no assumptions regarding housing unit mix and types. No assumptions regarding demolition costs have been provided. With this information, staff believe the anticipated appraisal will indicate a value that reflects an estimate of the amount the development community would be willing to pay for the whole property, excluding Parcel J. The appraiser was not given instructions to provide estimates of value based on alternate sales strategies.

Other Property Considerations

The Board also directed staff to explore ways to protect Parcel J, a 9.96 acre parcel of undeveloped land as an open space resource situated between Parcel N the Sonoma County Water Authority flood control facility (APN 180-090-007) and Parcel O dedicated to the Sonoma County Agricultural Preservation and Open Space District (APN 180-020-010). County staff, Agriculture Preservation and Open Space staff, and City staff are in discussions regarding models to address Parcel maintenance, and will bring an update to the Board at a later date.

Community and Board comments at the meeting of October 16, 2018 recognized the complexity of the Chanate campus. Total acreage of the site exceeds 80 acres. While significant areas of the property are suitable for development, portions of the property are devoted to flood control, open space and burial grounds. Infrastructure and improvements, many of which were built in the first half of the 20th Century, are in poor condition.

Surplus Sale Strategies

The Board directed staff to dispose of the Chanate property to meet the following goals: 1) Maximize the value of the property sale to enable reinvestment in other County properties, specifically revitalizing the County Government Center; 2) Sell the property expeditiously to reduce the significant ongoing operating costs for security; 3) Consider means of protecting Parcel J and Rural Cemetery.

The Board further directed staff to explore surplus sale strategies ranging from surplus sale of each parcel as a separate transaction to individual purchasers to a surplus sale of the campus as a single transaction to a single developer. Each proposal and each strategy has strengths as well as weaknesses, as discussed more fully below. The Board has the discretion to accept or reject proposals and to determine whether these have met the Board's primary objectives.

(1) Individual Parcels

Staff considers separate sale of each of the twelve Chanate parcels a high risk approach to disposal of the Chanate Campus that will lead to valuations below appraised value. The Chanate property contains twelve parcels. At least two parcels, Parcel 8 and Parcel 9, are not accessible via an existing right of way. The lack of access to these properties will severely affect the development potential for these properties, resulting in low values and potentially no offers for the properties. Other properties are similarly impacted with potentially impaired access to utilities as well as right of way. Staff does not recommend sale of individual parcels.

(2) Single Transaction

Surplus sale of the campus as a single transaction to a single developer is likely to yield the appraised value. The transaction structure will be familiar to the development community. Prospective bidders will be able to employ industry-standard models that reflect the values of affordable housing developers as well as those of the market rate developers. As a result this form of sale will likely yield offers similar to the appraised value.

(3) Parcel Bundles

Given prior Board feedback, staff also recommend surplus sale of the campus in three bundles. Each bundle would be comprised of adjacent parcels consolidated into a unit. Bundle One would be the 20+ acre portion of the Chanate Campus north of Chanate Road. Bundle Two would be the 30+ acre Southeast portion of the Chanate Campus containing the Cemetery and various improvements, including the Norton Center and two wood office buildings. Bundle Three would be the 20+ acre Southwest portion of the Chanate Campus, containing the foundations of the original hospital and various buildings. Interested parties could submit proposals for one or more bundle.

The bundles on the South side of Chanate Road are likely to yield values similar to appraised values. There is a possibility that their relatively smaller size of twenty acres may invite competition from a wider variety of developers, potentially leading to offers above appraised value. The parcels on the North side of the Campus are substantially improved. The substantially improved state of the property, consisting of installed utility infrastructure and buildings with potential for re-use could be considered desirable features of the property. Staff recommends the Board review and potentially accept proposals from developers to purchase the Chanate Campus as three bundled properties.

Parcels excluded from Sale

In all instances parcels excluded from sale will be:

(1) APN 180-090-007 consisting of 26+ acres owned by Sonoma County Water Agency. This parcel is a critical part of the County's flood control infrastructure. Exclusion of this parcel dedicated to flood control from sale will have no impact on potential value.

(2) APN 180-820-010 consisting of 7+ acres owned by Sonoma County Open Space District. This parcel has been deeded to the citizens of the County of Sonoma as a wildlife corridor as a support element of the flood control infrastructure. Exclusion of this parcel dedicated to flood control will have no impact on potential value.

(3) APN 180-020-009 consisting of 1 acre owned by Sonoma County Open Space District. This parcel has been deeded to the citizens of the County of Sonoma in support of flood control and as a wildlife corridor. Exclusion of this parcel dedicated to flood control will have no impact on potential value.

(4) APN 180-090-016 consisting of about 9.96 acres of land owned by Sonoma County and designated as Parcel J. This parcel will be dedicated for public access and use. Exclusion of this parcel dedicated to flood control will have no impact on potential value.

Additional Limitations

The County currently occupies a portion of the Administrative Building in Parcel A as the site for the Public Health Lab and a portion of Parcel G for the County Morgue. These facilities provide a critical service for the Bay Area and must remain operational until a suitable replacement is identified. Purchasers will be required to take possession of the parcel subject to the County's retention of exclusive access to and control of the facilities.

The Public Health Lab is a secure, critical Bay Area facility that is integrated into the current 18,071 square foot Department of Health Services Administration Building. Purchasers will be required to take possession of the parcel subject to the County's retention of exclusive access to and control of the Public

Health Lab in exchange for Fair Market Rent for a term sufficient to allow the County to design and build a replacement facility.

The County Morgue is a 7,550 square foot special use facility operated by the Sheriff's Department. Staff recommends that the successful purchaser be required to take possession of the parcel subject to the County's retention of exclusive access to and control of the County Morgue in exchange for Fair Market Rent for a term sufficient to allow the County to design and build a replacement facility.

Security and Property Maintenance

The County has posted "No Trespassing" signs on the campus and has authorized the City of Santa Rosa Police to arrest trespassers. There have been arrests and convictions as a result of these actions. The fire alarm and suppression systems in the former hospital are not operational due to vandalism. As a community-wide safety measure, the Santa Rosa Fire Department has required the County to maintain a 24 hour 7 day a week Fire Watch on the campus at a cost of $19,000 per month or $228,000 per year. The current monthly cost for the contract security, separate from the Fire Watch program, is $14,000 per month, and covers a limited portion of the campus.

Costs to harden the Hospital and the Chanate Office Building against vandalism have totaled $63,000 to date. Ongoing property management expenses associated with reducing vegetation using goat herds is expected to cost $100,415 per season for Parcels J, E and F, and utilities within all of the vacant buildings are anticipated to cost $73,620 per year.

The departure of the remaining County Department of Health Services operations is scheduled for February 2019. Beginning as early as March, County buildings with the exception of the DHS Administration Building and the Morgue are anticipated to be unoccupied. The loss of County presence on the site has potential to increase the risk of vandalism and consequently security expenses. Beginning in March 2019, contract security costs will double to $28,000 per month to cover the expanded area.

Management of this risk may be mitigated by installing metal mesh over all windows and chain link over doors to deter access by vandals. The metal mesh barrier has successfully deterred vandalism at Chanate Hall. Additionally, fencing needs to be installed at choke points to deter vehicular access to the building. The total cost for hardening of this facility was $63,000. County staff anticipates a need to similarly harden the newly vacant buildings on the South Campus at an additional cost of $287,910 to cover penetrations and $10,000 for fencing at critical access points to deter vehicular access for a total of $297,910. The buildings that need to be hardened include the Family Practice Center, DHS Fiscal, Norton Center, Norton Annex, the old Public Health Clinic and Annex and the Wellness Center.

Staff recommends this investment as it has proven successful in protecting Chanate Hall from vandalism. Staff also recommends extending contract security obligations to newly vacant areas beginning March 2019. The expenses incurred to date and anticipated are summarized in the Fiscal section below.

Current Tenants

Although most of the non-profit tenants of the Chanate properties have relocated two tenants remain; Community Action Partnership and the Bird Rescue Center.

Community Action Partnership (CAP) occupies approximately 21,580 square feet according to terms of a ground lease that expires on January 31, 2023. Upon expiration of the term CAP may remain on the premises on a month-to-month basis terminable by either party on thirty days advance notice. During the hold-over period CAP will be required to pay monthly rent of two-thousand dollars ($2,000). CAP occupancy of approximately one-half acre of land on the Chanate campus will likely impair the Chanate campus sale value. Staff recommends sale of the property subject to the terms and conditions of the current lease.

Bird Rescue Center occupies buildings and one-half acre of land according to the terms of License Agreement that expires on February 15, 2019. The property occupied by Bird Rescue is part of a larger legally defined parcel. Bird rescue pays for utilities, but pays no rent under a license that expires on February 15, 2019. County staff have made significant efforts over the past two years to identify an alternative location. None of the available properties has been satisfactory to Bird Rescue. There is a lack of resources for further support of Bird Rescue's search for alternative space. Bird Rescue occupancy of approximately one-half acre of land on the Chanate campus will likely impair the Chanate campus sale value. Staff recommends this License expire without renewal or extension.

Summary

California Government Code Section 54220 and following prescribes the process for disposal of government surplus property. Following a declaration of property as surplus the County is required to offer the property for sale to: (1) government agencies and nonprofits for the purpose of development of affordable housing; (2) government agencies for open-space purposes; and, (3) local school districts for school facilities construction or open-space purposes. If no offers are received from the agencies described above, then the property can then be offered for sale to private individuals and companies.

Staff will send a Notice of Availability of Surplus land to each agency and non-profit requesting their expression of interest in the acquisition of the surplus property and requesting the submittal of an offer of consideration for the property.

If no suitable offers are received from the agencies described above, then the property may be offered for sale to private individuals and companies.

Staff will evaluate and rank all responses from government agencies and nonprofits for the above described governmental purposes, and, if the property is not sold then a solicitation will be issued to private individuals and companies with the goal of maximizing the dollar value received.

All responses will be evaluated based on the dollar value of proposed consideration, demonstrated ability to deliver full cash value at closing, and experience of the respondent in development of properties for purposes described in the Code.

Responses from agencies and nonprofits are projected to be received in July. Staff will return to the Board after review and evaluation of responses with recommendations to award in September.

Following sale of the property the County will have no role in the planning, permitting and development process. The successful respondent(s) will work with the City of Santa Rosa and the community for visioning, permitting and realization of the long term development and use of the Chanate campus.

Recommendation

Authorize staff to commence the process to dispose of the property as surplus in accordance with State law as prescribed at Section 54220 of the California Government Code under alternative scenarios of: sale of the campus to a single purchaser; or simultaneous sale of three bundles of parcels.

Prior Board Actions:

October 16, 2018: the Board adopted an Ordinance to rescind its approval of the Disposition and Development Agreement with Chanate Community Development Partners, LLC.

July 11, 2017: the Board adopted Ordinance No. 6205 authorizing the Development and Disposition Agreement ("DDA") to sell land known as the Chanate Campus to Chanate Community Development Partners, LLC.

February 2, 2016: the Board authorized staff to issue an RFP to identify a developer to work with the County and the City of Santa Rosa for the development of the Chanate property.

August 11, 2015: the Board directed Staff to develop a Request for Proposals (RFP) to solicit a master developer to work with the County to plan for development of the property.

Strategic Plan Alignment	Goal 3: Invest in the Future

Fiscal Summary

Expenditures	FY 18-19 Adopted	FY 19-20 Projected	FY 20-21 Projected
Budgeted Expenses	$12,556	$362, 035	$0
Additional Appropriation Requested	$800,354		
Total Expenditures	**$812,910**	**$1,362,035**	
Funding Sources			
General Fund/WA GF	$12,556	$0	$0
State/Federal			
Fees/Other			
Use of Fund Balance	$800,354	$362,035	$0
Contingencies			
Total Sources	**$812,910**	**$362,035**	**$0**

Narrative Explanation of Fiscal Impacts:

Based on experience with the closed Chanate Hospital, staff recommends the County invest in additional measures to secure and protect the Chanate campus from vandalism through the anticipated sale of the property in the fall of 2020. Measures recommended range from hardening buildings through blocking vehicular access and establishment of routine fire and safety patrols. These measures and their fiscal impacts are described further below.

County staff anticipates a need to harden newly vacant buildings on the South Campus at a cost of $287,910 to cover penetrations and $10,000 for fencing at critical access points to deter vehicular access, as described above. The buildings that would be hardened in the fashion would be the Family Practice Center, DHS Fiscal, Norton Center, Norton Annex, the old Public Health Clinic and Annex and the Wellness Center. Staff recommends this investment as it has proven successful in protecting Chanate Hall from vandalism.

As outlined in the table below, the County has incurred $195,000 in building hardening, fire watch, and security costs-to-date. Fire Watch expenses have been incurred at the direction of the City of Santa Rosa Fire Department. These services are required for the safety of the community when building fire alarm systems are inoperable. Staff estimates an additional $617,910 in costs for the remainder of the fiscal year to maintain safety and security at Chanate property. Staff will continue working on vegetation management strategies in the current fiscal year, therefore these potential expenses are not included. Staff recommends the use of available Deferred Maintenance fund balance to fund these expenses.

Staff estimates a cost of $362,035 in FY 19-20 to cover fire watch, security, utilities, and property management expenses through October 2019.

Depending on the selected option for surplus, the FY 19-20 estimates may change and if so, General Services will return to the Board during the FY 19-20 budget.

Action	To Date	Remaining 18-19	FY 19-20 (July-Oct)
Building Hardening	$63,000	$297,910	NA
Fire Watch	$76,000	$152,000	$76,000
Security	$56,000	$168,000	$112,000
Utilities	NA	NA	$73,620
Property Management	NA	TBD	$100,415
Total	**$195,000**	**$617,910**	**$362,035**

Date: December 11, 2018

Resolution Number: ________________

☐ 4/5 Vote Required

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, AUTHORIZING THE ISSUANCE OF A REQUEST FOR PROPOSALS IN CONNECTION WITH THE POSSIBLE SALE OF THE CHANATE CAMPUS; DECLARING ITS INTENTION TO CONSIDER PROPOSALS FOR THE SALE OF SUCH PROPERTY AND SETTING A TIME FOR A MEETING TO RECEIVE PROPOSALS; MAKING CERTAIN FINDINGS AND GIVING DIRECTION TO STAFF

Whereas, the County of Sonoma currently owns the parcels collectively known and commonly referred to as the Chanate Campus located in Santa Rosa; and

Whereas, the County is authorized to undertake a surplus sale of the Chanate Campus pursuant to Government Code section 54220 *et al.*; and

Whereas, the Board of Supervisors has directed the General Services Director to initiate the surplus property procedures regarding the possible sale of the Chanate Campus; and

Whereas, a notice of surplus government property sale (“Surplus Property Sale Notice”) has been prepared for Board’s consideration; and

Whereas, the Surplus Property Sale Notice sets out the County’s goals for the simultaneous sale of all parcels referred to as the Chanate Campus and maximizing the monetary return for the sale of the property such that said return can be leveraged to consolidate County programs for efficiency of operations and to reduce the number “doors” for public access to services; and

Whereas, responses received to the solicitation of proposals will assist the County in determining whether the sale of the property is feasible and consistent with the County’s goals;

Now, Therefore, Be It Resolved

1. *Truth of Recitals.* The foregoing recitations are true and correct.

2. *Solicitation of Proposals.* Staff shall release the Surplus Property Sale Notice by February 11, 2019, and shall post of copy of the Surplus Property Sale Notice on the Department of General Services website and purchasing portal. Statements of Proposals in response to the Surplus Property Sale Notice shall be due on or before 2:00 pm PST on May 10, 2019.

3. *California Environmental Quality Act ("CEQA").* The sale of property pursuant to the surplus procedures set forth in Government Code section 54220 *et al.* is categorically exempt from CEQA unless the property proposed for sale is located in an "area of statewide, regional, or areawide concern identified in CEQA Guidelines section 15206(b)(4). The Chanate campus is not located in in a critical environmentally sensitive area of statewide, regional, or areawide concern, as identified in said Section 15206(b)(4). Nor do any of general exceptions enumerated in CEQA Guidelines section 15300.2 apply to the proposed surplus sale. Further, the proposed surplus sale does not commit the County to a particular course of action regarding the development of the Chanate campus; rather, the surplus sale procedures offers a process that will help the County determine whether a straightforward surplus sale of the Chanate property is feasible to dispose of this underutilized asset. Thus, the issuance of the Surplus Property Notice soliciting offers to dispose of the Chanate campus does not constitute a "project under CEQA and is excluded from the requirements of CEQA pursuant to CEQA Guidelines sections 15061(b)(3), 15352, and 15378. The Board hereby directs staff to post a notice of exemption.

4. *Declaration of Intent to Accept Proposals.* Pursuant to Government Code Section 54222, the Board declares its intention to consider proposals for the purchase and sale of the Chanate property to the entities and for the purposes described in Sections 54220 and following of the Government Code.

5. *Reservation of Rights.* The Board reserves all rights available to it under applicable law, including without limitation, with or without cause and with or with notice, the right to modify or discontinue the Surplus Property Sale Notice at any time.

Disposal of the Chanate Campus

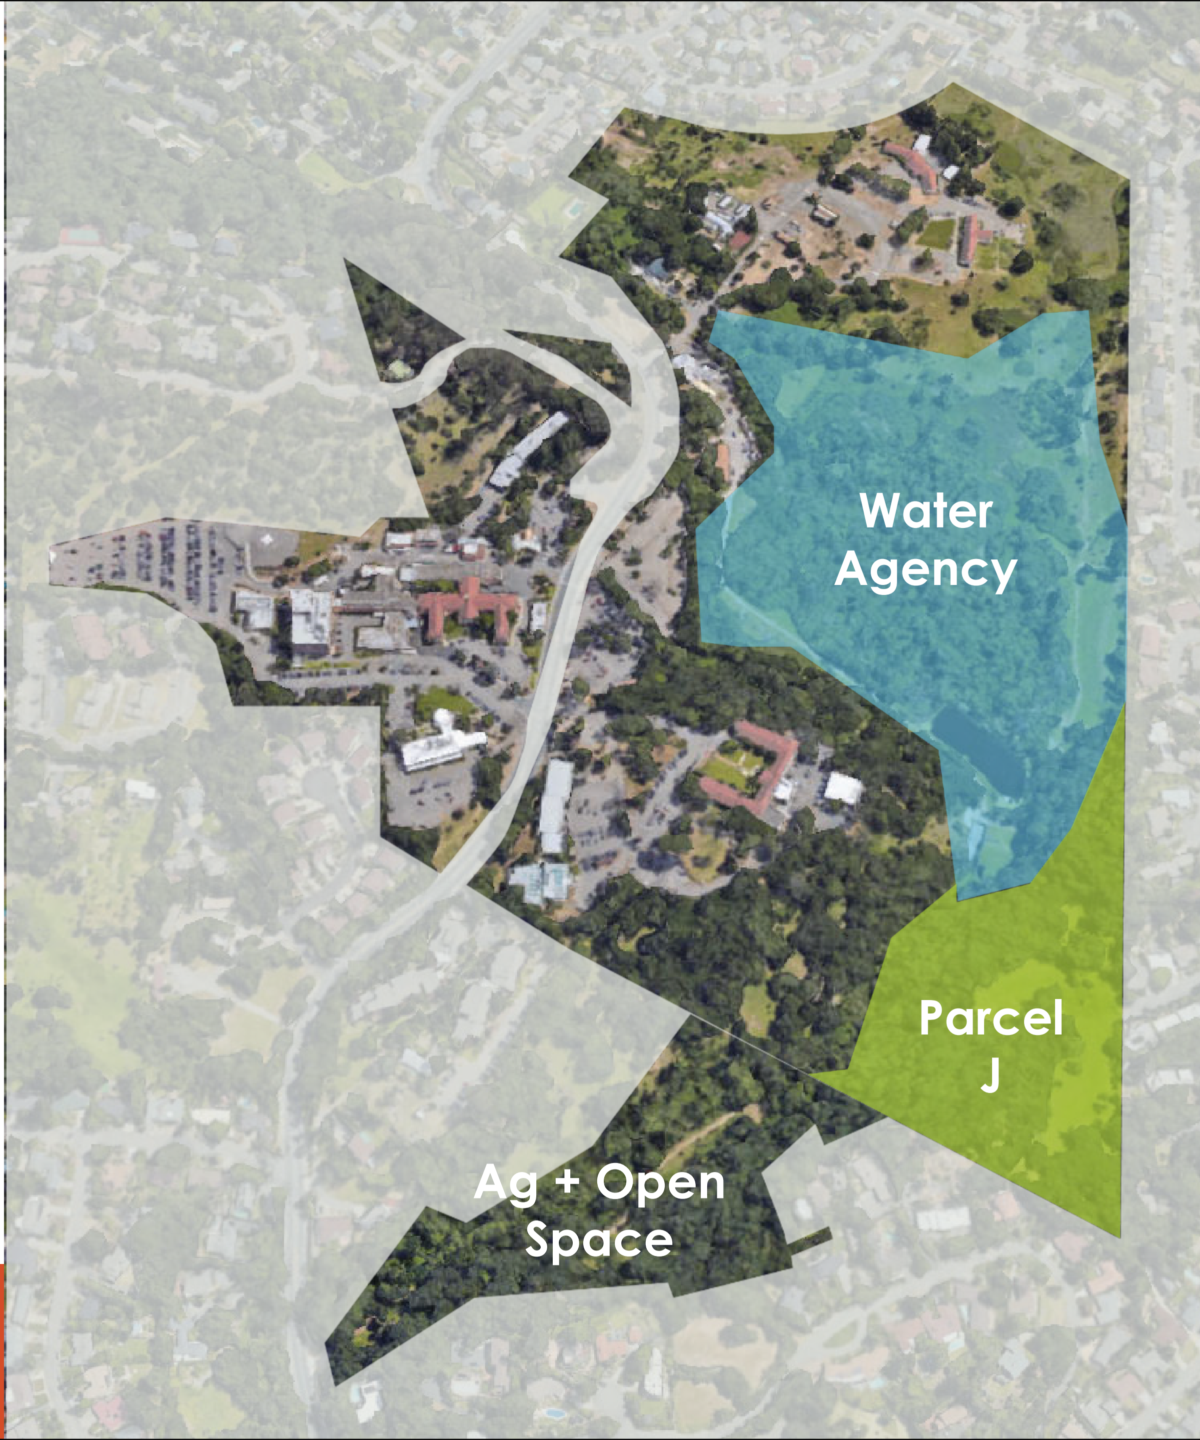
December 11, 2018

CAROLINE JUDY, GENERAL SERVICES DEPARTMENT

SONOMA COUNTY CALIFORNIA 1850

Chanate Property

- 82 acres total
- 12 parcels
- County Morgue and Public Health Lab
- 2 remaining non-profit tenants
- Rural cemetery



Timeline

2014

- **October 25** – Sutter Health turns campus back over to the County
- **2014 through 2017** – Tenants noticed and staff begin to assist with relocation

2015

- **August 11** – Staff presented BOS assessment of Chanate Campus
- **October 14** – Community meeting held to define objectives for property use

2016

- **February 2** – Board authorized staff to issue a Request for Proposals (RFP)
- **July 11** - Board authorized selling the Chanate Campus to Chanate Community Development Partners, LLC

2017

- **2017** – Staff continue to assist tenants with relocation

2018

- **July 20** – Court decision
- **October 23** – Board rescinded DDA and directs staff to surplus

Board Direction

Disposal

Occupants

Protected

Security

Objectives

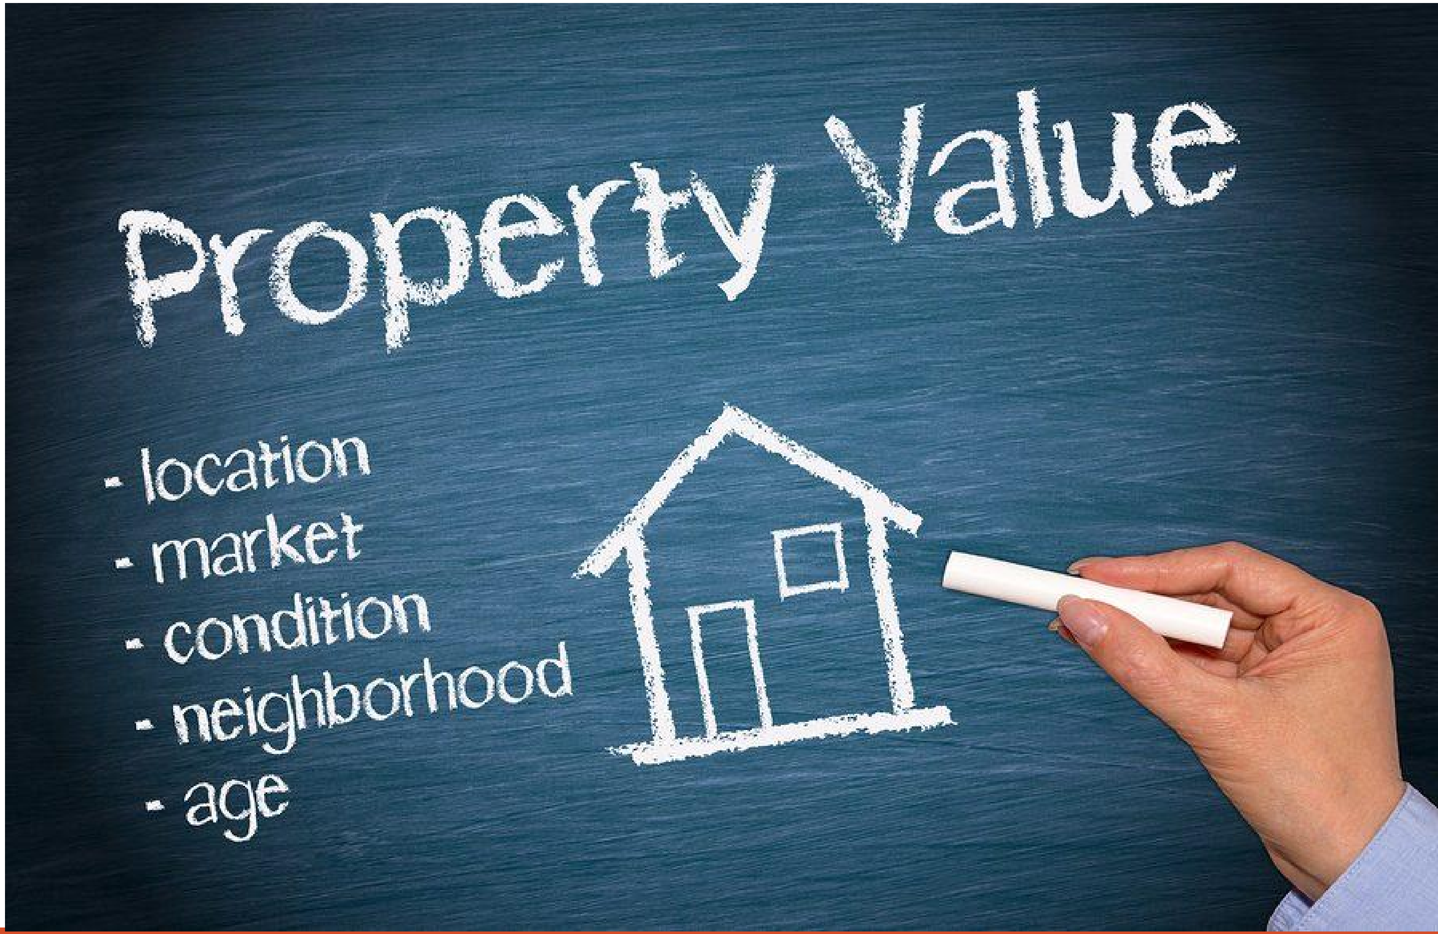
- Maximize value to reinvest in County properties
- Sell Quickly – reduce costs to operate
- Identify potential solutions for current occupants
- Follow Surplus Process CA GC 54220

Surplus Process

1. BOS approves notice, staff advertises
2. Notice sent to designated entities (City, affordable housing providers, schools, and parks)
3. Evaluate submitted designated entities' proposals
4. Bid selection at Board discretion, no obligation to accept any proposals from designated entities
5. If none are satisfactory, notice private parties
6. Evaluation of private proposals and financial abilities
7. Escrow process

Components Driving Value

- Location
- Market
- Unknown conditions
- Neighborhood
- Age
- Access
- Permitting processes
- Etc.



Surplus Disposal Solutions

- Options for Surplus Solutions
  - Single Transaction
  - Twelve Parcels
  - Bundled Parcels

- Structure of surplus solution affects ability to meet Board objectives

Single Transaction

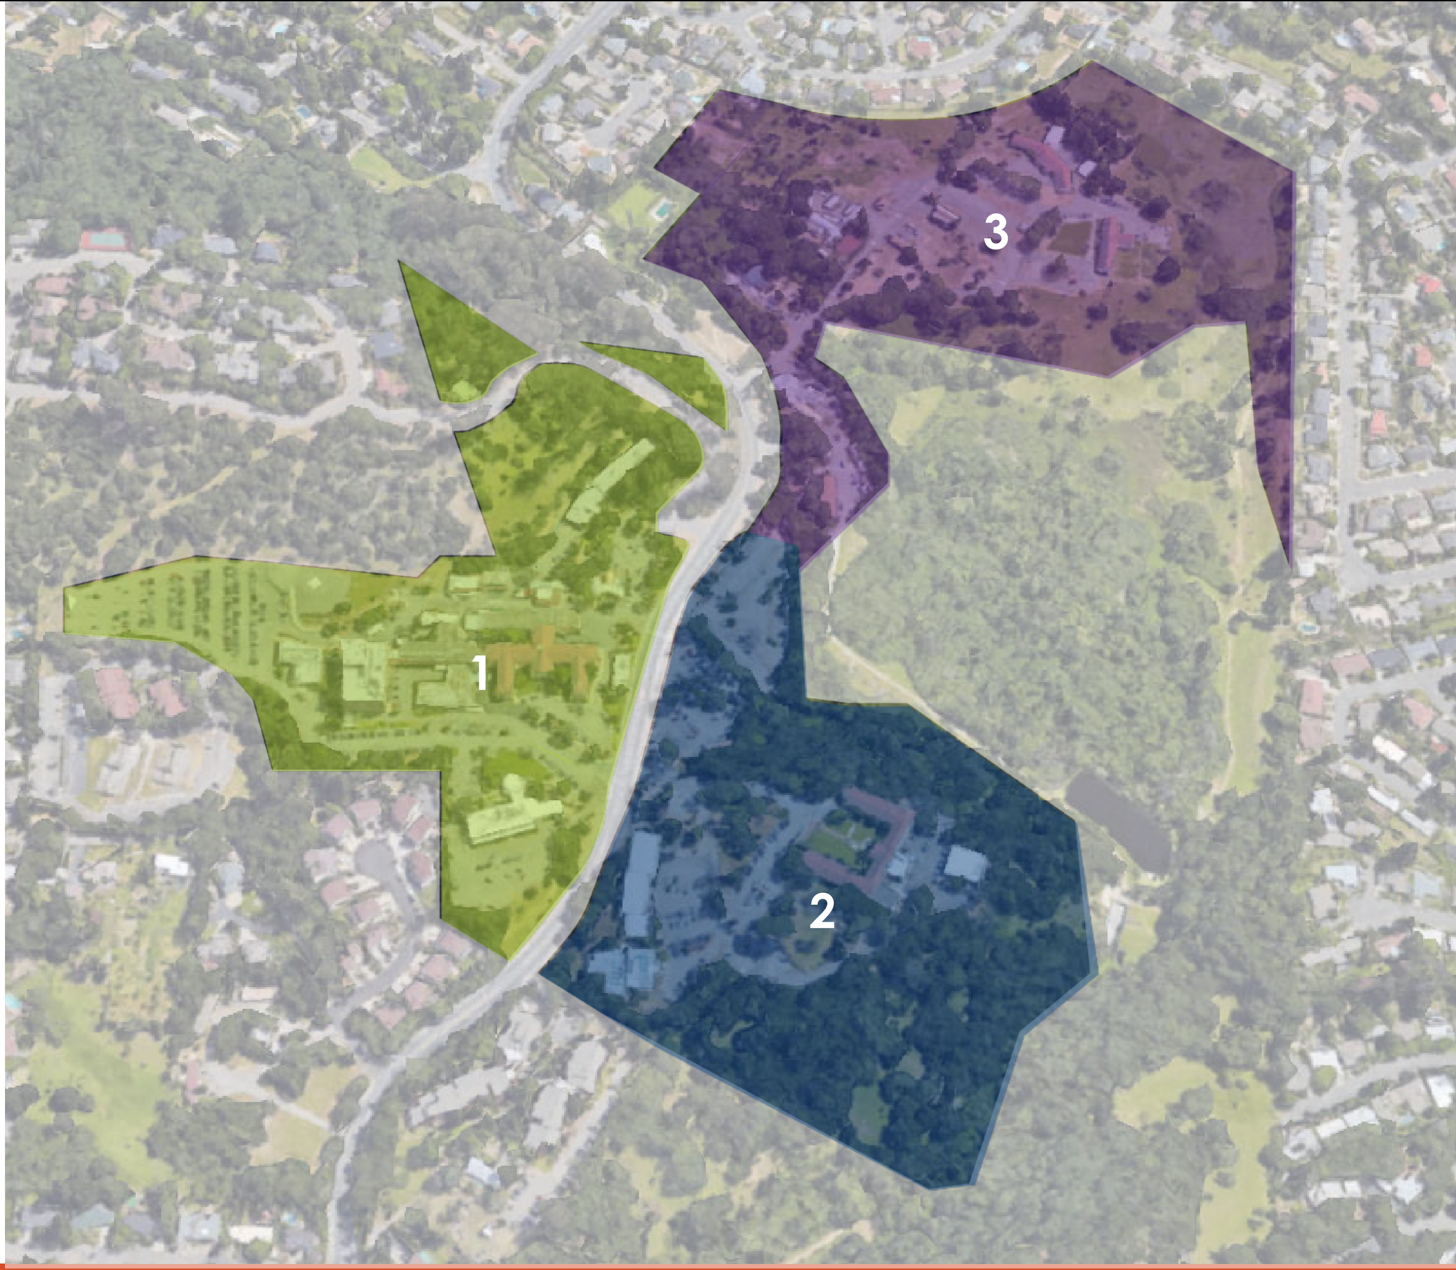
- **Value** – Fewer unknowns, resale potential may offset costs.
- **Speed** – One transaction to negotiate and complete
- **Participation** – Likely limited buyers with financial capability

Twelve Parcels

- **Value** – Several unknowns and risks for developers including recording easements, CEQA
- **Speed** – Up to 12 contracts to negotiate, time to complete CEQA
- **Participation** – May increase participation of smaller qualified buyers

Bundled Parcels

- **Value** – Fewer unknowns, all parcels have access
- **Speed** – Fewer buyers means faster process
- **Participation** – May be more feasible for some qualified buyers



Risks to the County

- Uncertainty and delays reduce value
- Delayed sale process increases ongoing cost of operations
- Partial sale increases likelihood of no sale on north side
- Protracted process requires more staff time and resources

Existing Occupants

- **County Morgue and Public Health Lab**
  - Sell with lease and eventually relocate
- **Community Action Partnership of Sonoma County (CAP)**
  - Unique parcel now, sell with existing lease
- **Bird Rescue**
  - License expires Feb. 2019
  - Opportunity exists to co-locate with Wildlife Rescue

Parcel J

- 9.96 acre parcel of undeveloped land as an open space resource
- Parcel J will be excluded from the sale
- Record conservation easement
- Explore ongoing maintenance options

Rural Cemetery

- Unique parcel currently not protected under State or Federal Historic Site

- Explore ongoing maintenance options

Board Direction Needed:

- **Include in sale with condition to protect cemetery?**

Interim Uses

- **Current:** PG&E staging area for rebuilding
- **Considerations for Potential Future Uses:**
  - No funding to improve infrastructure
  - Uses requiring infrastructure improvements will trigger environmental review
  - Use triggers future relocation benefit
  - Time and resources required to implement

Expenses Spent-To-Date (FY 18-19)

Building Hardening – restrict entrance		$ 63,000
Fire Watch – necessary due to vandalism	(monthly $19,000) x 4	$ 76,000
Security – patrols	(monthly $14,000) x 4	$ 56,000
Total Spent-To-Date		**$ 195,000**

Additional Expenses Anticipated (FY 18-19)

One time expenses		
Additional Building Hardening		$297,910
On-going expenses		
Fire Watch	(monthly $19,000) x 8	$ 152,000
Security	(monthly $14,000) x 4	$ 56,000
	(monthly $28,000) x 4	$ 112,000
	Total Security (8 months)	$ 168,000
Total Ongoing-Costs		$ 320,000
Total Anticipated Costs (One-Time + Ongoing)		**$ 617,910**
Total FY 18-19 Cost (Spent-To-Date + Anticipated)		**$ 812,910**

Staff Recommendation(s)

Disposal Option(s)

- Bundled Parcels
- Single transaction

Sale Conditions

- Lease CAP (2023)
- Lease County Morgue and Public Health Lab
- Include Cemetery

Remove from Sale

- Preserve Parcel J
- Continue to work to identify responsible party for maintenance

Board Request

A. Adopt a resolution authorizing the issuance of a request for proposals in connection with the possible sale of the Chanate Campus; declaring its intention to consider proposals for the sale of such property and setting a time for a meeting to receive proposals; making certain findings and giving direction to staff.

B. Adopt a resolution appropriating $800,354 from available deferred maintenance funds to supplement the FY 2018-19 budget of $12,556 (for a total of $812,910) to complete building hardening, and continue providing fire watch and security costs for existing and newly vacated buildings. Title: Recovery and Resiliency Framework Approval and Recovery Ad Hoc Committee

Recommended Actions:

1. Approve the Recovery and Resiliency Framework
2. Create and appoint a Recovery Ad Hoc Committee to provide input on Recovery and Resiliency Framework implementation

Executive Summary:

On December 19, 2017, your Board established the Office of Recovery and Resiliency (Office) with the mission to develop a strategy that addresses the immediate and long-term recovery and resiliency efforts needed to help Sonoma County rebuild and recover from the October 2017 wildfires. The Recovery and Resiliency Framework (Framework) represents the County's long-term vision for a resilient future. A draft of the Framework was presented to your Board on September 25, 2018. This item requests the Board approve the final revised Framework.

This item also requests the Board create a Recovery Ad Hoc Committee to provide input on Framework implementation and appoint two Board members to serve on the Recovery Ad Hoc Committee.

Discussion:

Recovery and Resiliency Framework

The Recovery and Resiliency Framework (Framework) represents the County's long-term vision for a resilient future. It is a foundation for integration of public, private, and non-governmental recovery efforts county-wide, and is informed by community partners and other jurisdictions in the County. The Framework draws from the National Disaster Recovery Framework. It describes core principles for recovery planning and includes key recovery roles and responsibilities for the whole community. Goals and proposed actions that were developed through extensive community and partner engagement are structured around five strategic areas of recovery and resiliency: Community Preparedness and Infrastructure, Housing, Economy, Safety Net Services, and Natural Resources.

Public Comment. Public comment was received on the draft Framework at the September 25, 2018 Board meeting. The draft Framework was then posted for a 30-day period of public review and comment through October 26, 2018. Nineteen emails from community members and organizations were received, reviewed, and incorporated appropriately in the Framework. In addition, Office staff met with community groups and fire survivors to hear their input on the draft Framework. A summary of input received is included as Attachment C.

Summary of High Level Changes. Below is a summary of high level changes made to the draft Framework since the September 25, 2018 Board presentation. A more detailed list is included as Attachment D.

General

- Social Equity has been added as a Core Principle for Recovery and Resiliency Planning.
- A definition of Social Equity is included in the Framework.
- Throughout the Framework, the term “vulnerable populations” was replaced with “individuals with disabilities and others with access and functional needs.”
- Implementation timelines for proposed actions were adjusted in all sections.
- Framework narrative has been revised and edited to simplify language, minimize technical terminology, and generally improve readability.
- A brief Executive Summary was added.
- A Recovery Roles and Responsibilities section was added to identify the different roles that government, nonprofits, private sector, and community members play in recovery.

Community Preparedness

- Added proposed action regarding animals in disaster (training, permitting, evacuation, and food supply)
- Added proposed action related to a countywide Disaster Preparedness Day
- Added proposed action for development of materials/trainings regarding individual, personal emergency preparedness
- Added proposed action related to including undocumented residents
- Added proposed action to identify, catalog, and confirm services needed in a Local Assistance Center
- Added proposed actions to encourage and support local energy systems and microgrids
- Added proposed action to work with remote communities to map housing locations
- Added proposed action to train County workers on federal procurement capabilities and requirements

Housing

- Added narrative regarding implicit bias in the housing industry that tends to keep people of color at a substantial disadvantage in the housing market
- Added and SB35 Regional Housing Needs Assessment targets met by Sonoma County

Economy

- Added proposed actions related to expanding workforce development services and job fairs

- Added creation of "green jobs" focused on vegetation management with Sonoma County Youth Ecology Corps partnership

Safety Net

- Added proposed action to create a plan to ensure resources and services at evacuation centers are accessible to non-English speakers and undocumented residents
- Added proposed actions to address food services needs and coordination during disasters
- Added description of the need for a "one-stop shop" resource

Natural Resources

- Revised opportunities and challenges section to reflect recent legislative changes, ongoing studies, regional organization networking, and funding programs
- In the description of goals, incorporated more explicit reference to burned watersheds' recovery needs
- Updated actions completed to-date including activities recently initiated or completed by various county agencies and partners

Final Framework Documents. The final Framework in English and Spanish are attached to this item as Attachment A. Appendices to the Framework, including public input received at community meetings, a list of community partners, and a list of recovery grant applications submitted, are described in the final Framework document. Framework appendices will be posted to the Office of Recovery and Resiliency website at www.sonomacounty.ca.gov/ORR.

Staff requests the Board's approval of the final Recovery and Resiliency Framework.

Next Steps

Implementation of Key Projects. The Framework Potential Actions List (Appendix A of the Framework) is attached to this item as Attachment A. The list of potential recovery actions is a range of potential future actions that, if implemented, could advance the County toward resilience. They reflect the input received during the County Community Meetings, Board of Supervisors workshops, working group and task force collaboration discussions, and partner convenings.

The County Administrator and Department Heads reviewed the Potential Actions List with Office of Recovery and Resiliency staff to identify key projects. Office of Recovery and Resiliency staff also held three meetings with six fire survivors (block captains) representing supervisor districts directly impacted by the fires. The meetings were organized to provide block captains the opportunity to share their thoughts on the list of projects and to provide their input. One lesson learned through the Framework development process was that community engagement, actively soliciting different perspectives from different segments of the community, should be an ongoing priority throughout recovery. Office staff will continue to reach out to the community as projects in the Framework are implemented.

In addition to potential actions, the Potential Actions List identifies key projects, implementation status, funding status, the primary agency responsible for the proposed action, and the County's role in implementing each action. Of the over 200 potential actions and activities in the Framework, many are completed or underway as part of currently funded County operations. Most are unfunded. Although grant applications have been submitted for some projects and actions, funding is still uncertain for most.

Staff has identified the following as some of the key priority projects/actions:

1) Alert and warning system. A comprehensive program that communicates alerts over many platforms and across all potential sensory, language, and cultural barriers, including tests, assessments, and public outreach campaigns. This project will ensure the County is able to communicate warnings and alerts to all members of the community using every feasible method, to include community members who have sensory, language and/or cultural barriers.

2) Community Preparedness. Programs to empower communities, neighborhoods, and individuals to be better prepared for a disaster. These programs will address a community's unique assets, hazards, and mitigation measures and public education and outreach strategies will ensure the community and individual residents are aware of the available resources, programs and services.

3) Vegetation Management. Modifications to the County fire ordinance that enhance the Vegetation Management Program with incentives, inspection and abatement protocols, and appropriate funding. More effective vegetation management will contribute to lower wildfire hazards to communities and sensitive habitats.

4) 2-1-1. An information and referral service that is available any time of day or night. Expanded 2-1-1 capabilities will be an essential resource during times of disaster to allow timely updates, advisories, and recovery resources. Sonoma County's 2-1-1 model could include client navigation and care coordination across multiple service providers utilizing a shared data system to track service type utilization, follow up services and client outcomes.

With the Board's approval of the Framework and direction on key projects, Department Leads and the Office of Recovery and Resiliency will begin implementation planning with a goal to bring more detailed implementation plans and cost estimates to the Board for consideration in April 2019.

Office of Recovery and Resiliency. During the next phase of work, the Office will further develop a Framework project implementation approach. The approach will establish a shared understanding about how projects will be considered and what criteria will be used to help prioritize projects. It will also describe generally when and by what process these should come forward for Board consideration.

Working with department and project leads to track progress, ensure data collection, identify appropriate systems for tracking activities, and grant administration compliance will also be a focus. The Office will also begin supporting the development of key performance indicators to propose to the Board. Key indicators and metrics will enable the County to measure progress towards recovery and resilience goals. These will be important for reporting progress to the Board and the community and communicating the status of actions to the public.

Ad Hoc Committee

Staff recommends the creation of a Recovery Ad Hoc Committee of two Board members to provide input and guidance to Office staff on Framework implementation during 2019. At its discretion, the Recovery Ad Hoc could seek input from fire survivors and other community groups on implementation, including input on metrics and indicators that measure implementation progress and progress towards recovery and resiliency goals. The Recovery Ad Hoc would provide regular updates to the full Board. The Recovery Ad Hoc Committee would exist for a limited time through December 31, 2019.

Prior Board Actions:

September 25, 2018 - Draft Recovery and Resiliency Framework Update.
June 13, 2018 – Received presentation on Draft Framework.
February 6, 2018 – Established the Office of Recovery & Resiliency staffing; authorized appropriations of $2 million to the Disaster Response & Recovery Fund.
December 19, 2017 – Disaster fiscal update and creation of Sonoma County Office of Recovery and Resiliency.

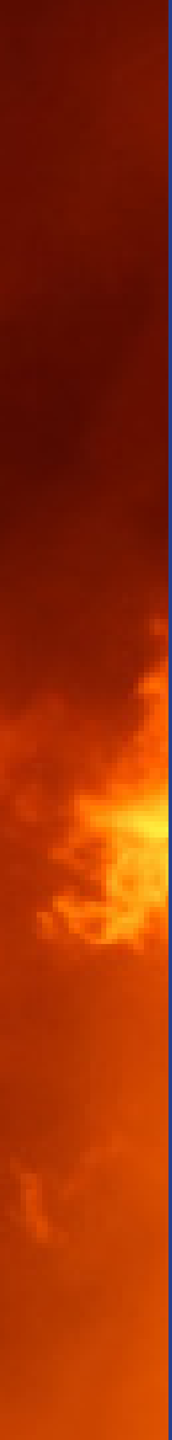
Recovery & Resiliency Framework



Acknowledgements

The County of Sonoma Recovery and Resiliency Framework is the culmination of the dedication, hard work, and expertise of many individuals representing multiple organizations, agencies, jurisdictions and communities in the state and County. Their leadership and participation through various working groups, coordination committees, and task forces were invaluable in shaping the Recovery and Resiliency Framework, a first step in formulating plans for implementation.

The County is especially grateful to the hundreds of community members who participated in the community meetings and surveys and shared many thoughtful and creative ideas.

Board of Supervisors' Statement

California is experiencing one of the most challenging years in its history, as it battles devastating wildfires across the state. The October 2017 Sonoma Complex Fires event had a profound impact on the Sonoma County community. As we rebuild and heal, we are mindful that even as we focus on future planning in the aftermath of our own fire event, our neighboring counties are dealing with fire containment and response, the displacement of community members, and the reality that recovery will be a long and difficult process.

While we as a County and our people and communities work to rebuild, we are resolved to bounce back from the fires better than before. We have a lot of work to do, but we are committed to becoming stronger and more resilient to future disasters—whatever they may be.

The Recovery and Resiliency Framework represents the County's long-term vision in a resilient future. The Framework also represents a call to action and partnership. Community support and collaboration following the wildfires was a Sonoma County strength. We need to continue proactive, ongoing collaboration before the next disaster strikes, so that we leverage our resources, understand the challenges from many perspectives, effectively manage risks, and capitalize on the many planning efforts already underway.

Our first step to institutionalize this level of collaboration was to establish the Office of Recovery and Resiliency in December 2017. This Office will work with County department heads to lead and coordinate all recovery efforts in the County with a long-term, strategic approach. Under the leadership of the County Administrator, Office of Recovery and Resiliency staff will be focused on ensuring that the County views the work we do to recover through a unified resilience lens.

With the approval of this Recovery and Resiliency Framework, the Office will continue to coordinate with partners to implement prioritized recovery efforts over the next five years. Together, we will create a stronger and more resilient community—one that is ready to adapt to, withstand, and rapidly recover from whatever disaster lies ahead.

Sincerely,

Sonoma County Board of Supervisors

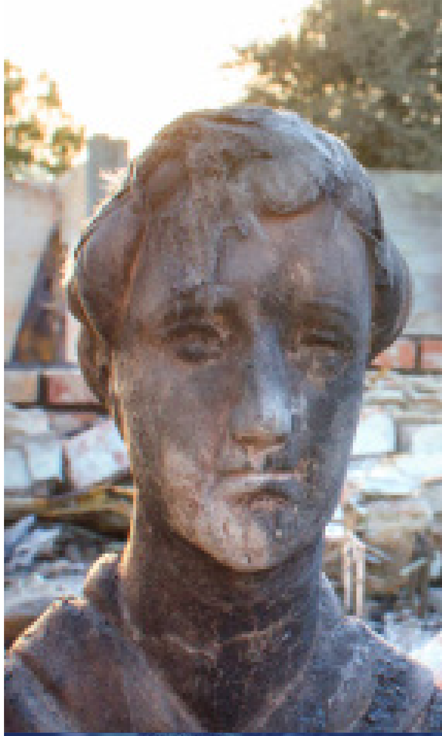
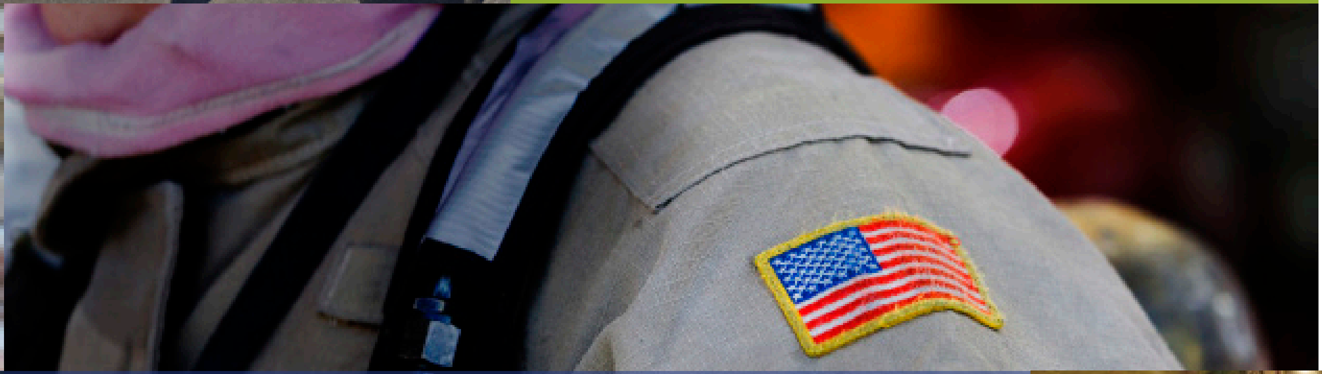
FOREWORD

On October 8, 2017, one of the most destructive wildfires in California history raged through Sonoma County. The fires devastated lives, homes, livelihoods, and the natural landscape and challenged our community's sense of safety and security. The emotional trauma was severe and will continue to have long-lasting effects. But even during those initial days of uncertainty, our community rallied to protect our neighbors, support first responders, safeguard our natural resources, and meet residents' most basic needs. Throughout the fires, we learned that our community is resourceful, strong, and resolute.



> **“It is vital that our whole community continues to talk to each other and find ways to recover together.”**
>
> —COMMUNITY MEMBER

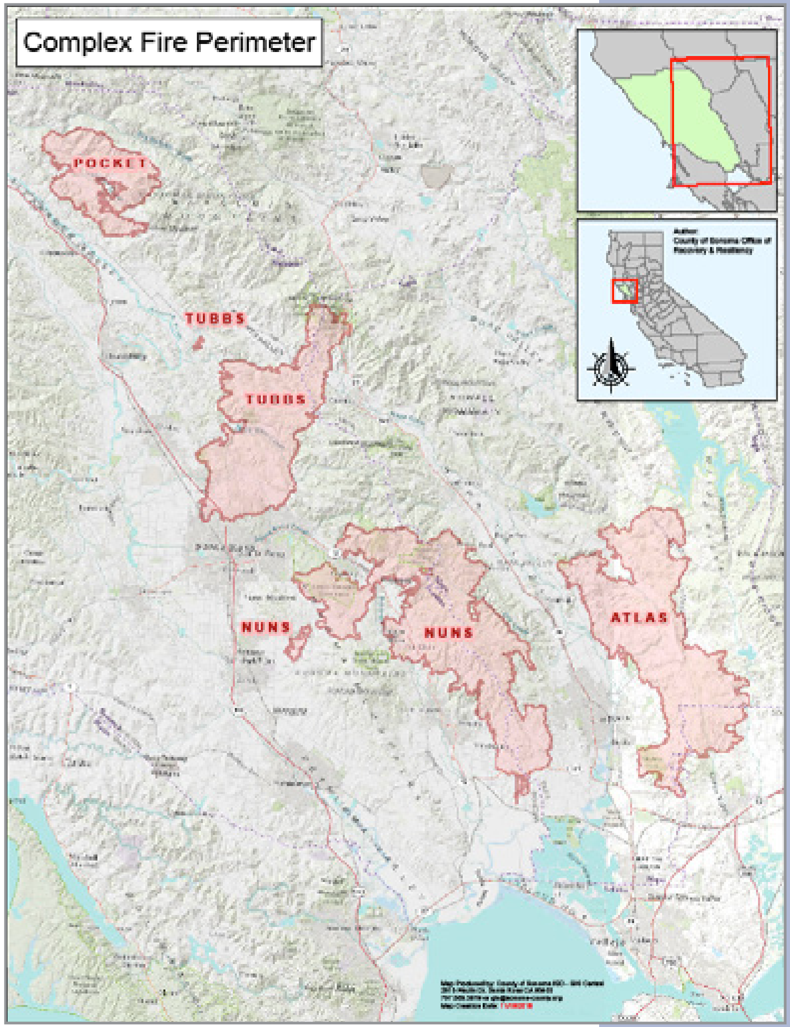
On October 8, 2017, one of the most destructive wildfires **in California history** raged through Sonoma County.



LONG-LASTING EFFECTS

Over a year later, the community continues to heal. Signs of recovery are visible, though there are formidable challenges ahead. County government leaders are committed to improving our ability to ensure access to and delivery of services during future disasters. Disasters are inevitable and we must be prepared the next time disaster strikes. With the help of community partners, we will take actions to recover and become more resilient. Our success depends on our ability to recover from setbacks, adapt to change, and emerge better and stronger than before.

The Sonoma Complex Fires



EXECUTIVE SUMMARY

In December 2017, the County Board of Supervisors established the Office of Recovery and Resiliency to work with County department heads to lead and coordinate recovery efforts in the County. The Office was tasked with taking a long-term, strategic approach, and to develop an integrated framework for recovery that incorporates a long-term vision for a more resilient future.

ABOUT THE FRAMEWORK

The Recovery and Resiliency Framework is a vision for how the County will recover from the October 2017 wildfires, a vision for a resilient future, and an approach to achieve it. It capitalizes on our County's strengths and identifies the investments we need to keep Sonoma strong. The Framework is a foundation for integration of recovery efforts County-wide, and is informed by residents, community partners, County departments, cities and other jurisdictions in the County.

The Framework draws from the structure, functions, roles, and principles in the Federal Emergency Management Agency's *National Disaster Recovery Framework* (NDRF). Like the NDRF, our Framework serves as a platform and forum for the ways the County and community build and sustain recovery capabilities. A focus of the Framework is planning and preparedness before a disaster occurs. That includes coordination with partners, risk mitigation, continuity planning, identifying resources and developing capacity to manage the recovery process.

The Framework is structured around recovery efforts in five strategic areas – Community Preparedness & Infrastructure, Housing, Economy, Safety Net Services, and Natural Resources. Proposed actions are included for each strategic area, though many actions and goals involve multiple areas.

CORE PRINCIPLES FOR RECOVERY & RESILIENCY PLANNING

The ways that we plan for the next disaster, incorporate input, collaborate to build the right capabilities, mitigate threats, care for our citizens, and implement the goals and actions in this Framework are guided by the following core principles:

- Social Equity
- Pre-Disaster Recovery Planning
- Leadership and Local Primacy
- Engaged Partnerships
- Timeliness and Flexibility
- Resilience and Sustainability
- Unity of Effort
- Psychological and Emotional Recovery

RECOVERY ROLES & RESPONSIBILITIES

Successful recovery from a disaster of the magnitude of Sonoma Complex Fires will not be achieved by any one entity. Coordination involving many recovery partners will be needed to optimize resources, improve partnerships, and take advantage of available opportunities. Key roles and responsibilities during recovery include the following:

- Individuals and Households
- Private Sector
- Nonprofit Sector
- Local Government
- State Government
- Federal Government

COMMUNITY ENGAGEMENT

Throughout 2018, the Office of Recovery and Resiliency has engaged the community in a variety of ways to listen to residents' concerns, ideas and suggestions. The Office will continue to engage the community by sharing information, resources, and updates, and will continue to gather community input on the direction and priority of recovery activities. Key strategies used to gather community input into the Framework are: Board workshops; community groups and stakeholder meetings; recovery planning community meetings; an online survey; and input collected by email and through other community surveys.

STRATEGIC AREAS OF RECOVERY & RESILIENCY

Disaster preparedness is a shared responsibility. How we recover and whether we become more resilient depends on the contributions of the whole community. To be prepared, we must identify and prevent threats, protect our citizens, mitigate risks, and build capacity to respond quickly and effectively. The five strategic areas of recovery and resiliency are: Community Preparedness & Infrastructure, Housing, Economy, Safety Net Services, and Natural Resources. This Framework offers a vision and goals for each area, and identifies potential priority actions. The full list of possible actions, including suggestions from the community and community partners, is posted on the Office of Recovery and Resiliency website at www.sonomacounty.ca.gov/ORR.

COMMUNITY PREPAREDNESS & INFRASTRUCTURE

As a result of the devastating fires, individuals, organizations, and communities have come together and strengthened their resolve to make Sonoma County more prepared. There are many challenges, but also many opportunities to build on the collaboration among individuals, community groups, nonprofits, and governmental agencies during the fire response to help further preparedness goals.

Vision: The vision for this area, which is informed by the significant input received from community members of is that Sonoma County residents, communities, and public and non-governmental agencies are prepared to adapt and recover when disaster strikes. This includes having effective warning systems that send emergency notifications to the entire community; ensuring critical infrastructure is protected and operational; and activating situational awareness and systems for decision-making.

Goals: The proposed actions for priority implementation include establishing a first-class comprehensive warning program with innovative technology and state of the art situational awareness; meeting future challenges by redesigning the County Emergency Management Program, providing additional resources, and recommitting to the County's public safety missions; leading, supporting and training community liaisons to build and sustain individual and neighborhood preparedness, including underserved populations; and making County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology.

HOUSING

The October 2017 wildfires exacerbated the already severe housing shortage in the County. Post-fire, displaced fire survivors, both homeowners and renters, continue to experience significant housing challenges.

Vision: Sonoma County envisions a housing market that is in balance; is resilient and climate smart at the regional, neighborhood, and homeowner scale; is affordable to area workers and individuals with access and functional needs; is where communities of color and other historically disadvantaged groups, including individuals with limited or no English proficiency and immigrants, have equal and fair access; respects designated community separators and urban growth boundaries; has a diversity of homes located near transit, jobs and services; and is where the economy is vital. To achieve this vision, the County is embracing a new regional approach to produce 30,000 new housing units by 2023.

Goals: Over the next several years, the County will focus on attracting new and expanded sources of capital to incentivize the creation of housing for all income levels; increasing regulatory certainty by changing the County's business model and actively seek opportunities to deepen regional cooperation; supporting rebuilding fire destroyed homes; and exploring the use of County-owned property to attract housing development that aligns with County goals.

ECONOMY

Almost every business that participated in a survey conducted by the County Economic Development Board reported adverse impacts from the fires. Businesses reported direct physical loss, loss of sales, disruptions to power and broadband services, and dislocated workers. Local business leaders provided valuable input into the County's vision that Sonoma County actively partners with local employers to become a resilient, inclusive, and economically diverse community.

Vision: Through public-private partnerships, Sonoma County businesses and residents emerge with greater capacity to address persistent local challenges and are resilient to future disasters.

Goals: The County will continue to focus its efforts on developing and supporting a variety of workforce development efforts that contribute to rebuild efforts, resiliency and long-term economic vitality in Sonoma County. It will also continue to support local businesses to thrive by ensuring access to resources, developing partnerships, and providing entrepreneurial support.

SAFETY NET SERVICES

Safety Net Services refers to services such as behavioral health, assistance with obtaining food and medical benefits, financial assistance, animal services and protection. The need for these services intensified during wildfire response and will continue to be high throughout the long recovery process.

Vision: The vision for this strategic area is that Sonoma County will restore and improve resiliency of health and social services systems, networks, and capabilities to promote equity, independence, and well-being for the whole community.

Goals: Projects proposed to enhance safety net capabilities will aim to enhance core County service capacity to address long-term recovery needs and prepare for future disasters; ensure the post-fire mental health and resiliency needs of the community are met; and build capacity with cross sector partners and community members to improve coordination and communication.

NATURAL RESOURCES

In addition to the tragic loss of life and the destruction of homes, businesses, and public infrastructure from the October 2017 fires, wildlands and working landscapes were also burned. New collaborative efforts are underway during recovery.

Vision: The vision for this strategic area is that Sonoma County's natural resources are healthy and productive. They are managed to support community and watershed resiliency and protect public health and safety, and contribute to enhanced recreational opportunities and economic vitality.

Goals: The primary natural resource goals informed by meaningful collaboration with community partners and agencies are to: reduce forest fuel loads strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects; protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity; and build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

NEXT STEPS

The collaboration between the community, partners, other agencies and the County during the development of the Framework was an important first step to set all of us on a path to recovery and resiliency. In the next phase, under the leadership of the Board of Supervisors, the Office of Recovery and Resiliency will oversee the implementation of proposed actions, pursue project funding, and develop key indicators to track recovery and resiliency. A list of the proposed actions captured during the development of the Framework is posted at www.sonomacounty.ca.gov/ORR.

THE EVENT

THE SONOMA COMPLEX FIRES

Wildfires erupted across Sonoma County the night of October 8, 2017, eventually sweeping into Santa Rosa. More than 5,300 homes and businesses were destroyed, 24 people died and 110,000 acres burned. Thousands of homes across Sonoma County were incinerated in a matter of hours. Tens of thousands of terrified residents fled for their lives, many with just the clothes on their backs. The blazes officially became known as the **Sonoma Complex Fires**.

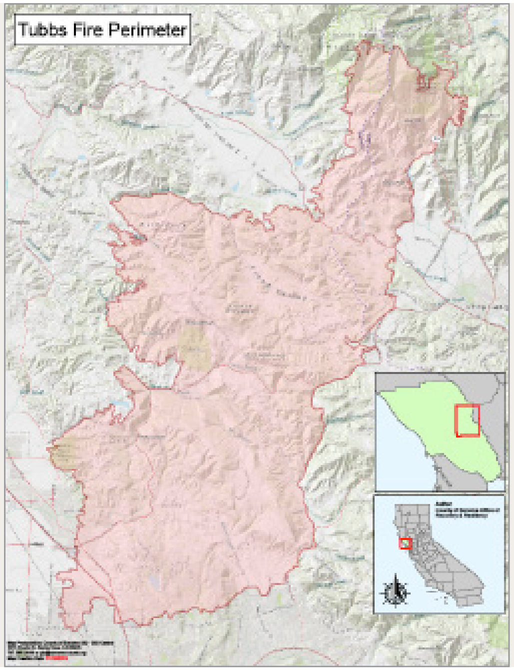
THE SONOMA COMPLEX FIRES

The **Tubbs Fire** was the most destructive in terms of the number of homes destroyed and lives lost. It started near Calistoga and roared west, through the Mark West Springs and Larkfield/Wikiup areas, then raged through Fountaingrove and finally jumped Highway 101 and devastated Coffey Park in northern Santa Rosa. Twenty-two people died and 4,658 homes were destroyed. Five percent of Santa Rosa's housing stock was gone overnight. Nearly 37,000 acres burned. The speed and ferocity of the Tubbs Fire stunned residents and officials. The scenes of utter destruction shocked the state and nation.

Tubbs Fire Overview

MANAGEMENT	ACRES BURNED
Private Ownership	30,160
Non-Profit – Conservation	2,796
State Agency	1,513
Regional Park District	801
County Agency	799
Non-Profit – Land Trust	614
City Agency	50
Federal Agency	41
Water District	33
TOTAL	36,807

The Tubbs Fire



THE SONOMA COMPLEX FIRES

About the same time as the Tubbs Fire, a handful of fires north of the City of Sonoma—the Nuns, Adobe, Norrbom, Partrick, Pressley and Oakmont blazes—erupted. They later combined to become known collectively as the **Nuns Fire**, which burned 56,556 acres in and around the Sonoma Valley, including the communities of Kenwood, Glen Ellen, and Oakmont. The Nuns Fire eventually raced through Trione-Annadel State Park, the Bennett Ridge area and threatened Rohnert Park, destroying 639 homes.

The **Pocket Fire** northeast of Geyserville burned 17,000 acres and three homes.

A vast majority of the area burned was private land. The area burned covered steep mountains, to gentle rolling hills, to flat valley bottoms in urban areas, to urban areas.

Given the swiftness of the fires, entire communities were left without much time to collect their belongings, or plan any kind of strategy to save their property.

Returning home to the destruction was also difficult, because basic things like water, clean air, or power took days to weeks to return.

Nuns Fire Overview

MANAGEMENT	ACRES BURNED
Private Ownership	44,841
State Agency	6,755
County Agency	1,753
Special District	1,457
Non-Profit	1,354
Federal Agency	396
TOTAL	56,556

Pocket Fire Overview

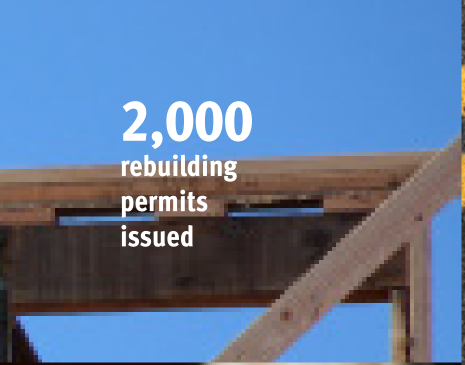
MANAGEMENT	ACRES BURNED
Private Ownership	17,255
Federal	70
State Agency	20
TOTAL	17,345

THE SONOMA COMPLEX FIRES

24 lives were lost and the fire consumed 110,000 acres.

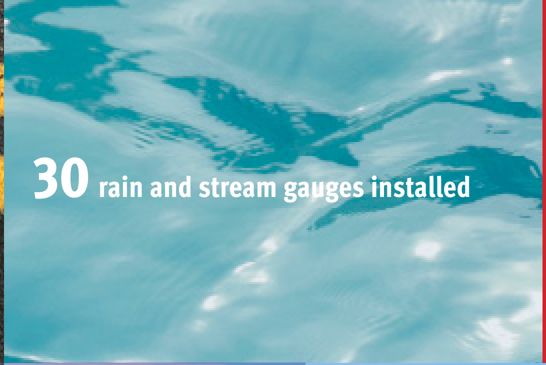
Overall, some 7,000 structures, including homes, commercial buildings, and outbuildings, were destroyed in Sonoma County. Two major hospitals were evacuated and damaged. More than 100,000 residents were evacuated, some for weeks. Thousands of firefighters from across the United States, Canada, and Australia arrived to help local crews battle the blazes on multiple fronts. The fires were finally contained by October 31.

Even as the fires burned, recovery efforts began. The immense task of quickly and safely removing fire debris from over 5,300 properties resulted in more than 2 million tons of debris being hauled away, the largest such operation since the 1906 earthquake in San Francisco.



2,000
rebuilding permits issued

90 miles
of roads cleared



30 rain and stream gauges installed

Over $1.4M
in Disaster CalFresh benefits issued

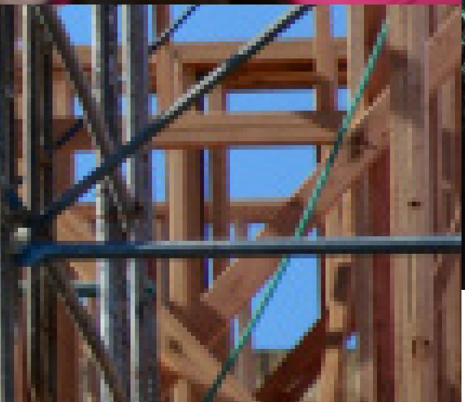
14,022
calls received by Animal Services

43 miles
of wattles placed

2 million
tons of debris removed

4,162
evacuees cared for

21,000+
received counseling from California HOPE



STRONGER TOGETHER

COUNTY & COMMUNITY RESPONSE

Over 950 fire departments and agencies from around the world ultimately responded to the fires. County workers, local police, fire, medical professionals, and volunteers collaborated to evacuate neighborhoods, coordinate shelters, and get food, clothing, supplies and information to displaced residents.

4,162 **evacuees cared for in 43 shelters**

52,372 **callers helped via emergency hotline**

10,000 **masks, 2,562 cots, 2,300 sheets and 1,850 pillows distributed in first 72 hours**

11,204 **residents served at the Local Assistance Centers**

Our community united

41 **County-led community meetings held in first 4 weeks to keep public informed**

4,000+ **replacement documents issued to victims of wildfires**

21,000+ **in-person contacts by California Hope counselors**

14,000+ **calls received by Animal Services to help locate displaced animals**

2 million **tons of fire debris removed through government-sponsored Consolidated Debris Removal program**

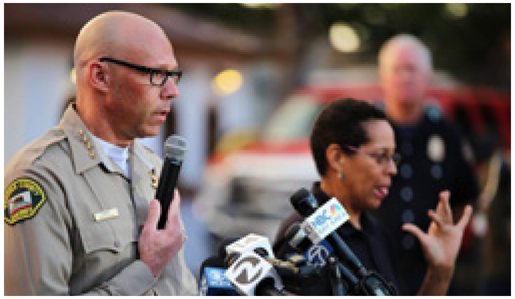
Additional Activities

4,700 people whose income or employment was impacted by fires assisted in filing for disaster unemployment insurance

2,000 rebuilding permits issued by Sonoma County and the City of Santa Rosa as of November 28, 2018

43 miles of wattles ('fiber roll' erosion and sediment control material) placed in burn areas to prevent erosion and protect watersheds

30 rain and stream gauges installed in high-risk areas to predict potential debris flows or flash floods



90 miles of County roads cleared of burned trees and hazardous vegetation

Adopted urgency ordinances to support immediate housing needs, including residential use of recreational vehicles and rental of guest houses

Transitioned recovery support for local companies from the Local Assistance Center to the U.S. Small Business Administration Business Recovery Center

$1.4M+ in Disaster CalFresh benefits for food assistance issued

Multi-agency Watershed Task Force created a Flood Prevention Post-Fire Hazard Assessment map to keep community safe from potential post-fire flooding and debris flows

Formed an inter-departmental Disaster Finance Team to lead the Federal Emergency Management Agency Public Assistance program for the County, coordinating on legal, compliance, and resource issues

FRAMEWORK OVERVIEW

OFFICE OF RECOVERY & RESILIENCY

In December 2017, the County Board of Supervisors established the Office of Recovery and Resiliency to work with County department heads to lead and coordinate all recovery efforts in the County with a long-term, strategic approach, and to develop an integrated framework for recovery from the 2017 wildfires that incorporates a long-term vision for a more resilient future.

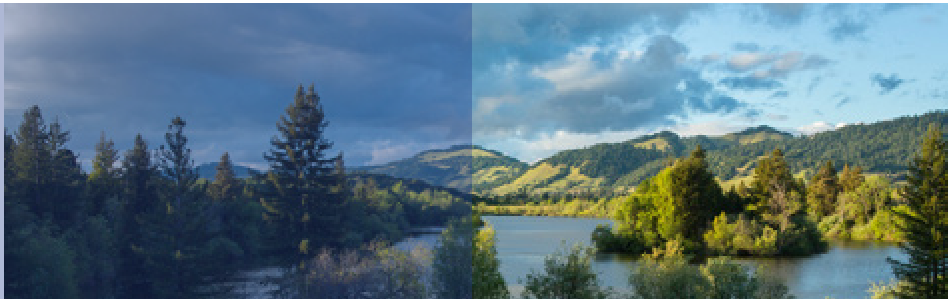
A priority of the Office of Recovery and Resiliency is to develop and leverage relationships with community organizations, private sector leaders, local city and regional leaders, community members, and many others, to work collectively towards recovery and resiliency together. Following the development of this Framework, the Office will work on detailed implementation planning and performance monitoring to ensure accountability.

PURPOSE OF THIS FRAMEWORK

The Recovery and Resiliency Framework represents the Board of Supervisors' call to action. It reflects the community's vision for a resilient future and presents an approach to achieve it. It capitalizes on our County's strengths and identifies the investments we need to keep Sonoma County strong. The Framework is a foundation for integration of public, private, and non-governmental recovery efforts County-wide, and is informed by residents, community partners, County departments, cities, and other jurisdictions in the County.

Our ability to live safely and securely in Sonoma County depends on both County recovery efforts and forward-thinking resiliency measures. The goals and actions outlined here will provide guidance to the County as it makes difficult decisions regarding the use of limited resources, and as it pursues crucially-needed external funding.

The Framework is structured around recovery efforts in five critical strategic areas: Community Preparedness and Infrastructure, Housing, Economy, Safety Net Services, and Natural Resources. These strategic areas are in line with the Recovery Support Functions identified in the Federal Emergency Management Agency's *National Disaster Recovery Framework* and were adopted locally by the Sonoma County Board of Supervisors on December 19, 2017. Each area has its own vision, goals, and proposed actions. Planning includes coordination with partners, risk mitigation, continuity planning, identifying resources and developing capacity to manage the recovery process.



PURPOSE OF THIS FRAMEWORK

The Framework:

- Affirms the County vision for recovery and resilience.
- Outlines a process to engage stakeholders.
- Describes how the Office of Recovery and Resiliency will work with County leaders.
- Explains the relationship between recovery efforts and other strategic planning efforts.
- Promotes inclusive coordination, planning, and proactive communication.
- Encourages the whole community to increase resilience.

The Framework is not:

- A single, exhaustive list of every action needed for the County to achieve resilience.
- Static—what we learn as we review our approach and processes may change our next steps.
- A detailed plan with steps for implementation.
- A replacement for or modification of other related County strategic plans.
- Legally binding on future County actions.

Committed
to the future

A NOTE ABOUT CEQA

The Framework reflects a vision for a resilient future for Sonoma County and all its communities. It incorporates a range of potential future actions that, if implemented, could advance the County toward resilience. However, nothing in the Framework legally binds future County decisions or actions. The Board of Supervisors' approval of the Framework is not a commitment to any particular course of action, and is not a decision to approve, adopt, or fund any of the potential actions identified in this document. For these reasons, approval of the Framework is exempt from California Environmental Quality Act (CEQA) review pursuant to Section 15262 of the CEQA Guidelines.[1]

Whether a particular Framework recommendation is implemented in the future depends on a variety of factors. Each proposed action that is advanced for consideration will be reviewed in accordance with normal internal and public processes, including CEQA review, if applicable. Some identified actions may ultimately be rejected or modified through those review processes. Any recommended action that involves amendments to local ordinances would undergo the normal processes required for legislative actions, including but not limited to CEQA review, opportunity for public review and comment, and public hearings. Similarly, while the Framework will likely inform the upcoming General Plan Update process, the new General Plan will be crafted through an entirely separate process that includes comprehensive CEQA review and a robust public process.

> "Resilience is the chief characteristic of sustainability. Which is the moral and strategic imperative of our time."
>
> —COMMUNITY MEMBER

---

[1] Cal. Code Regs., tit. 14, § 15262 provides as follows: A project involving only feasibility or planning studies for possible future actions which the agency, board, or commission has not approved, adopted, or funded does not require the preparation of an EIR or Negative Declaration but does require consideration of environmental factors. This section does not apply to the adoption of a plan that will have a legally binding effect on later activities.

RELATIONSHIP TO OTHER PLANS

Sonoma County's Recovery Framework does not replace or modify existing County plans and strategies. It complements existing plans and builds upon existing state and national recovery frameworks and the significant strategic planning work that was already underway across the County prior to the October 2017 wildfires. The Recovery Framework also builds upon planning efforts initiated during and immediately following the wildfires. Collectively, these plans inform post-disaster recovery and the Recovery Framework. This integrated approach ensures that long-term recovery and resiliency goals are considered through implementation of current and future plan actions, especially when plan actions overlap.

The graphic (right) shows the relationship between existing and ongoing plans and strategies and the post-disaster Framework. Existing and ongoing planning efforts inform development of the Framework and the County's recovery priorities and actions. As proposed actions in the Framework are completed, some ongoing plans and strategies may need to be updated to reflect progress towards recovery goals. The outer arrows represent more than updates to specific actions. They represent the continuous and active coordination, collaboration, and alignment that will position the County to achieve its resilience goals.

Ultimately, the Framework serves as a guide for County leaders as they seek to prioritize actions, identify and allocate resources, and maximize opportunities to achieve recovery and resiliency goals not in isolation, but in conjunction with other County plans and planning efforts.

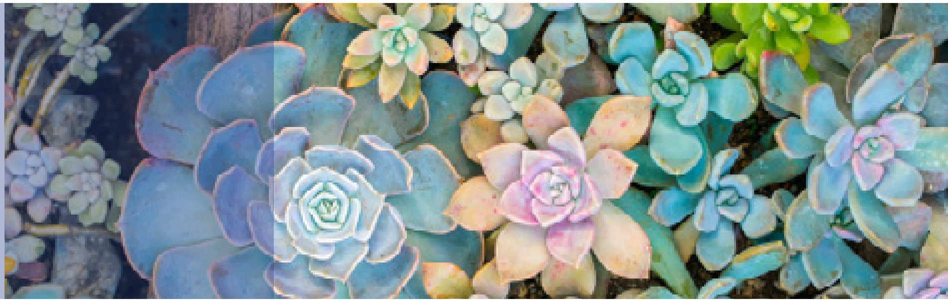
Relationships Among Plans and Strategies

RECOVERY ROLES & RESPONSIBILITIES

Successful recovery from a disaster as significant as the Sonoma Complex Fires will not be obtained by any one entity. Defining roles and responsibilities for recovery partners allows better coordination of opportunities, increased partnerships, and optimized resources. The following roles and responsibilities are adapted from FEMA's *National Disaster Recovery Framework:*

Individuals and Households: Individuals and families need to plan and be prepared to sustain themselves in the immediate aftermath of a disaster. Disaster preparation includes having adequate insurance and maintaining essential levels of supplies, such as medication, food, and water. Resources to help individuals and families prepare are available through websites and publications of various organizations that are active in disasters, including local, State, and Federal agencies.

Private Sector: The private sector plays a critical role in establishing public confidence immediately after a disaster. When the private sector is operational, the community recovers more quickly by retaining and providing jobs and a stable tax base. When local leaders and the business community work together pre-disaster and develop a conceptual recovery plan, the public is more likely to be optimistic about the community's ability to recover post-disaster. For example, local banks can continue to offer accessible loan opportunities to individuals and businesses impacted by the fires. Insurance companies also play a role in preparedness. They can assist in educating community members on risks and reach out to underserved populations to find ways to provide coverage.



Nonprofit Sector: Nonprofits play a significant role in recovery. Nonprofits include voluntary, faith-based and community organizations, charities, foundations and philanthropic groups, as well as professional associations and educational institutions. Nonprofits serve in recovery by providing case management services, volunteer coordination, behavioral health and psychological and emotional support, technical and financial support, and housing repair and construction that meets accessibility and universal design standards. Nonprofits directly supplement and fill gaps where government authority and resources can't, such as through fundraisers and distribution of funds to those in need.

Nonprofit organizations are critical for ensuring participation and inclusion of all members of the impacted community. Many nonprofits act as advocates for a wide range of members of the community such as individuals with disabilities and others with access and functional needs, children, seniors, individuals with limited English proficiency and other underserved populations.

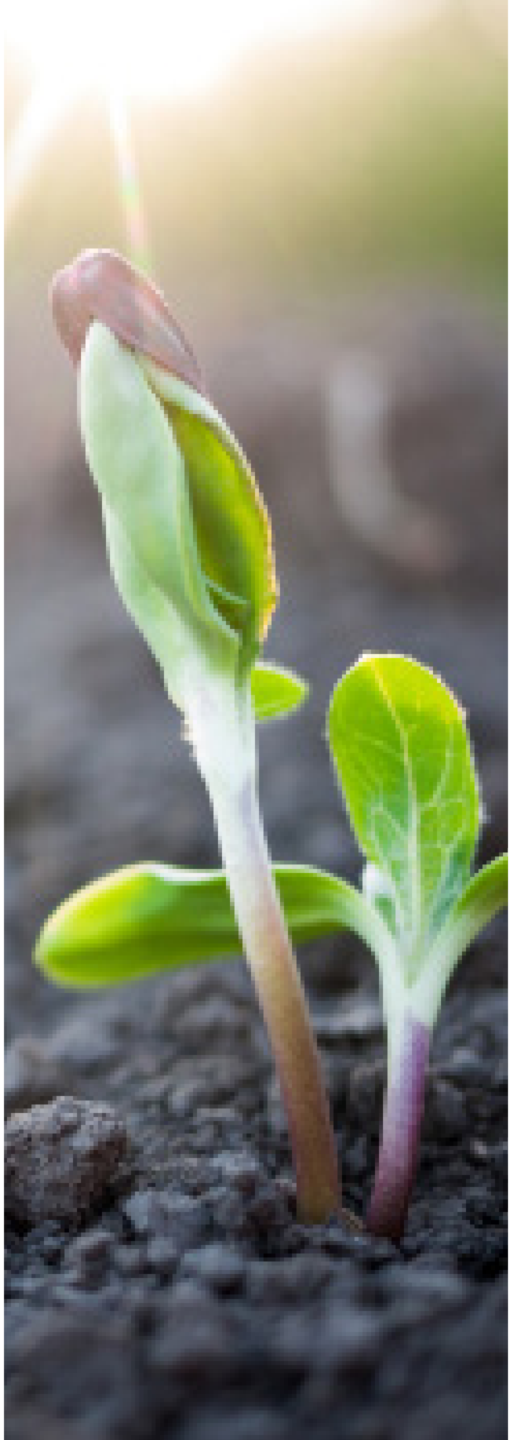
Local Government: Local government has the primary role of planning and managing all aspects of the community's recovery. Since the Sonoma Complex Fires, the County of Sonoma and the City of Santa Rosa have worked closely to coordinate some recovery activities. The City of Santa Rosa is the largest of nine cities within the County of Sonoma, and the City was most affected by the fires.

Local governments lead the community in preparing hazard mitigation and recovery plans, raising hazard awareness and educating the public about available tools and resources to enhance future resilience.

State Government: States lead, manage and drive the overall recovery process and play the central role in coordinating recovery activities that include providing financial and technical support. The State of California oversees regional coordination of recovery, sets priorities and directs assistance where needed. In addition to managing Federally-provided resources, the State may develop programs or secure funding that can help finance and implement recovery projects.

The State of California plays an important role in keeping the public informed through strategic messaging and working with all other stakeholders to provide an information distribution process.

Federal Government: The Federal Government plays a significant facilitative role in the development of urban and rural communities and their social infrastructures, and can leverage needed resources to build and rehabilitate many communities so that they are more disaster resistant and resilient. The Federal Government also plays an important role in providing accessible information to the public and all stakeholders involved in recovery, including information about Federal grants and loans with potential applications to recovery. In coordination with local and State government, the Federal Government is responsible for ensuring that information distributed as well as understood, so that the public, Congress, the private sector and all stakeholders are aware of the process and have realistic expectations of recovery.



CORE PRINCIPLES

The ways that we plan for the next disaster, incorporate input, collaborate to build the right capabilities, mitigate threats, care for our citizens, and implement the goals and actions in this Framework are guided by a set of core principles outlined largely in the *National Disaster Recovery Framework*. Establishing and adhering to these core principles will help ensure that our recovery efforts are consistent with Federal and State recovery partners and best practices in recovery management. The core principles guide the strategies we pursue, our decision-making, processes and practices. In practice, they maximize the opportunity for achieving recovery success. Their more specific definitions have been informed by input from County leadership, partners, and our community.

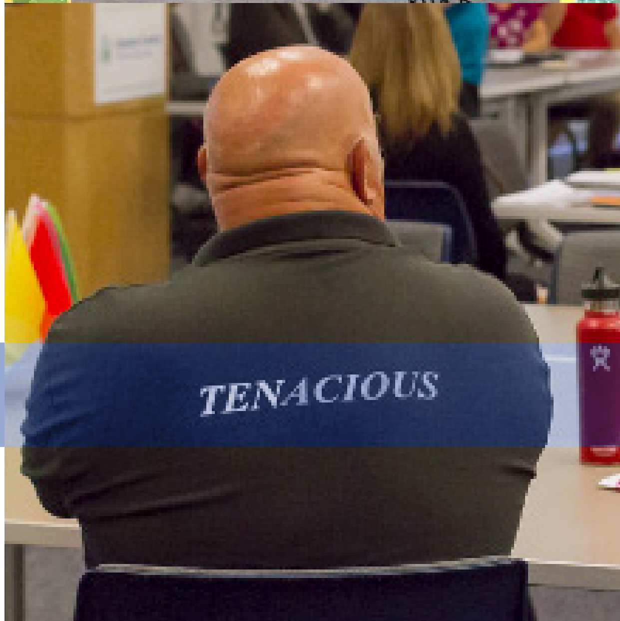
SOCIAL EQUITY

All community members who have suffered or will suffer losses have equal voice in informing recovery efforts. Efforts address historic social and institutional barriers to equitable receipt of services and benefits. All individuals have access to resources that equitably address both their physical losses and psychological health needs.

Dear Police Officer

Thank you for your service to protect our world, city, town, country and state. I pray for you every night. I belivand tust in you Keep going.

Love,



Outcomes reflect our values

While all community members will have access to services needed for recovery and preparedness, we also recognize that individuals with disabilities and others with access and functional needs are disproportionally impacted during a disaster. These include individuals with developmental or intellectual disabilities; vision impairment; hearing impairment; mobility impairments; injuries; and chronic conditions. They may also include older adults or children; those living in institutionalized settings; those who are low income or homeless; individuals with limited English proficiency or who are non-English speaking; undocumented immigrants; and individuals with transportation challenges. To achieve equity, the County will identify and meet the needs of these populations before, during, and after disasters and integrate their needs and input in the recovery planning process.

PRE-DISASTER RECOVERY PLANNING

Recovery is more effective when planning occurs before a disaster. Engaging community partners in the planning process creates common understanding of recovery actions and roles. It builds capacity to lead, plan, and manage future recovery operations. Innovative pre-disaster planning can generate tools and resources that will minimize disaster impacts and support recovery.

LEADERSHIP AND LOCAL PRIMACY

The County plays an important role in planning for and managing aspects of the community's recovery. Cities within the County are important partners and play a role in recovery, though each jurisdiction has unique attributes and needs. Coordinated leadership across all levels of government and sectors of the community is essential throughout the recovery process. The State, regional, and Federal governments support the County and all local governments to reinforce local resources and abilities to promote recovery goals. Businesses also play lead roles in recovery planning. The private sector owns and operates most of the critical infrastructure systems, such as electric power, financial, and telecommunications systems.

Equity is an outcome whereby you can't tell the difference in critical markers of health, wellbeing, and wealth by race or ethnicity, and a process whereby we explicitly value people of color and low-income communities to achieve that outcome.

Adapted from a quote by Yanique Redwood, DC, "What the Heck Does 'Equity' Mean?," Stanford Social Innovation Review (Sep. 15, 2016), available online at the Stanford Social Innovation Review website.

CORE PRINCIPLES

ENGAGED PARTNERSHIPS AND INCLUSIVENESS

Private and nonprofit partners play a critical role in meeting local recovery needs. Engaged partnerships ensure that parties with deployable resources and a role in recovery have a voice in recovery planning. Collaboration helps the County anticipate needs, and understand how to access available resources during and after a disaster. Recovery leaders share clear, effective, accessible, and culturally appropriate communication with partners.

TIMELINESS AND FLEXIBILITY

Timeliness and flexibility are key to minimizing delays and lost opportunities in implementing recovery efforts. Recovery plans, programs, policies, and practices are adaptable to meet unforeseen, unmet, and evolving recovery needs.

RESILIENCE AND SUSTAINABILITY

Pre- and post-disaster planning offers opportunities to reduce risk and contribute to a more sustainable community. This includes assessing and understanding risks that threaten recovery efforts. Resilience is the ability to prepare for and adapt to changing conditions and to withstand and recover rapidly from a disaster. Pre- and post- disaster planning ensures that steps are taken to avoid or reduce risk during the recovery process and that recovery efforts can be leveraged to increase community resilience.

Opportunities exist during rebuilding to promote sustainability like making smart energy choices, improving economic competitiveness, expanding energy-efficient housing choices, and enhancing healthy, safe, and walkable neighborhoods.

CORE PRINCIPLES

UNITY OF EFFORT

Coordinated effort is central to efficient, effective, timely and successful recovery. Coordination allows recovery leaders to identify needs and priorities more effectively, reallocate existing resources, engage community partners, and identify other resources. Unity of effort respects the authority and expertise of participating organizations while coordinating support of common recovery priorities and objectives.

PSYCHOLOGICAL AND EMOTIONAL RECOVERY

Successful recovery addresses the psychological, emotional, and behavioral health needs associated with the disaster and resulting recovery. Behavioral health support provided in recovery includes informing and educating the community about available services, basic psychological support and crisis counseling, assessment, and referral to treatment when needed for more serious mental health issues. Successful recovery acknowledges the linkages between the recovery of individuals, families, social networks, and communities.

COMMUNITY ENGAGEMENT

OVERVIEW

The October 2017 fires reshaped our community both physically and emotionally. As we rebuild and restore our identity as a County, community input on recovery is a County priority. Throughout 2018, the Office of Recovery and Resiliency has engaged the community in a variety of ways to listen to residents' concerns, ideas and suggestions on the five strategic areas of recovery and resiliency. The Office will continue to engage the community by sharing information, resources, and updates. We will continue to gather community input on the direction and priority of recovery activities.

Key strategies used to gather input into the Framework:

Board Workshops: The Board of Supervisors conducted Recovery Workshops to provide pertinent information to the Board and receive initial direction on the Framework. Community stakeholders were invited to attend and provide input.

Workshops Conducted by the Board of Supervisors

February 6	**Housing**
February 13	**Natural Resources & Economic Development**
February 27	**Community Preparedness & Infrastructure**
August 7	**Safety Net Services**

Community Groups and Stakeholder Meetings: The Office met with over 80 community groups and stakeholders to provide updates on progress and gather input on the Framework. Several community groups provided recommendations on behalf of their organizations. Submitted input is available on the Office of Recovery and Resiliency's website at www.sonomacounty.ca.gov/ORR.

Recovery Planning Community Meetings: The County hosted a series of community meetings to share a draft of the Framework that was presented to the Board of Supervisors in June 2018. The goal was to get community feedback on the vision, goals, and proposed actions for each strategic area. Members of the public participated in facilitated, small group discussions and provided input. A total of 306 community members attended these meetings.

Recovery Planning Community Meetings

LOCATION	CITY	DATE	COMMUNITY MEMBERS
Sonoma County Office of Education	Santa Rosa	July 10	65
Sebastopol Center for the Arts	Sebastopol	July 11	60
Petaluma Community Center	Petaluma	July 25	40
Finley Community Center	Santa Rosa	August 2	70
Sonoma Veterans Building	Sonoma	August 8	28
Lawrence Cook Middle School (in Spanish)	Santa Rosa	August 28	40
La Luz Center (in Spanish)	Sonoma	September 5	3

Online Survey: The Office conducted an online survey for community members to provide input into the Framework. A total of 115 responses were submitted.

Email: Since early 2018, community members have been encouraged to submit input to recoveryinfo@sonoma-county.org. Emailed input was considered and reviewed.

Community Surveys: Many organizations and community groups conducted recovery-related surveys since the fires. These efforts inform the County's understanding of community needs, interests and opinions. The Office will continue to compile and analyze surveys and assessments that are relevant to recovery. Survey results are available on the Office of Recovery and Resiliency's website at www.sonomacounty.ca.gov/ORR.

OUTREACH

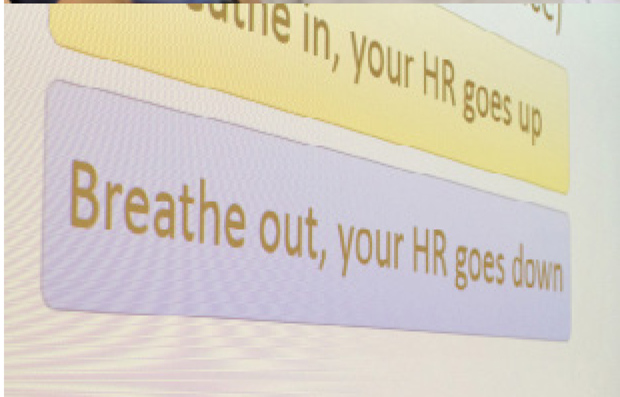
The County engaged in extensive outreach efforts to inform the public of opportunities to provide input on the draft Framework. Outreach was designed to expand participation to a broad cross-section of the community and to seek out diverse voices and perspectives. The Office conducted traditional and grassroots outreach to encourage residents to share their ideas and priorities and worked with community partners to utilize existing structures to broaden our reach, strengthen relationships and improve communication and collaboration. For example, the Office built on the Watershed Collaborative network, a representative group of more than 60 organizations focused on working and natural lands in Sonoma County, by continuing to hold meetings of the collaborative to address recovery issues and solutions to achieve resiliency. A list of the groups engaged during the outreach period is included as Appendix C.

> “The first priority has to be restoring what we lost in order to rebuild our community.”
>
> —COMMUNITY MEMBER

RECOVERY PLANNING: COMMUNITY MEETING FORMAT

The deepest engagement and discussions of the Framework came during the Recovery Planning Community Meetings. County staff worked with community leaders to recruit residents from different segments of the community including individuals with disabilities and others with access and functional needs, including non-English speakers, to ensure all points of view were heard. Over 300 residents participated. The materials and meetings were provided in both English and Spanish. Translation services were provided at every meeting.

> “We should all support local businesses, who chipped in so much during the crisis.”
>
> —COMMUNITY MEMBER



More than 300 residents participated in community meetings.

COMMUNITY INPUT

The County heard consistently from community members that they appreciated opportunities to share their ideas with County staff. The compiled data of all public input from the Recovery Planning Community Meetings and online survey are available on the Office of Recovery and Resiliency's website. In partnership with county departments, Office staff reviewed and analyzed all of the input gathered during stakeholder meetings and submitted via email.

The ideas and concerns expressed by the community in many ways validated the vision and goals in the initial draft Framework. Community members also offered a number of new and innovative approaches to recovery that were incorporated. Each critical recovery area section of this Framework includes a summary of the key themes conveyed by the community. A list of the key themes is included as Appendix D-1. Submitted input is also available on the Office of Recovery and Resiliency's website.

> **"I want to underscore the importance of embedding equity at the beginning of the Framework and connecting it with environmental justice and access to resources, so that those themes are carried across the Framework."**
>
> **—COMMUNITY MEMBER**

Here's What We Heard From the Community

"Make sure we are **bold in our plan** and we talk about **equity**."

"I want to encourage us all to realize that these 4-5 themes in this Framework are **all woven together**."

"Obviously, 'fast tracking' approvals for housing. Be careful not to lose sight, in the short term, of **environmental impacts** in the long term ... don't forget CEQA."

"Regular **controlled burns** in some areas. Manual **fuel reduction** in other areas."

"I am a huge fan of **sirens** as an alert for major emergencies. ... Siren systems were widely used for decades with great success."

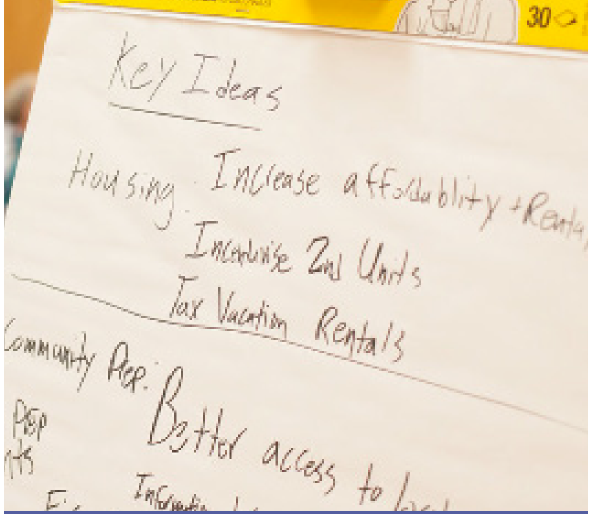
"I urge the City and the County to put together a **'Vulnerable Population Plan'** for future emergencies."

"Smaller groups **(communities)** need to take responsibility for communications."

"Lower fees. **Approve more housing** more quickly."

ONGOING DIALOGUE

Our engagement with the community doesn't stop with the community meetings or the printing of this Framework. The County will continue an ongoing dialogue as recovery continues. Potential engagement opportunities include an online portal to solicit input, as well as more traditional methods, such as community meetings. Community members are always encouraged to share public input at Board of Supervisors' meetings during public comment period.



> **I wish I had been more aware of which of my neighbors needed help evacuating.**
>
> —COMMUNITY MEMBER

Specific opportunities to engage will be shared at: www.sonomacounty.ca.gov/ORR

Communication

What to Do for the Elderly

Clean Water

> **Why don't they have those old metal sirens on posts? It's not fancy, but they work, right?**
>
> —COMMUNITY MEMBER

Community input can be submitted on an ongoing basis by emailing comments to: recoveryinfo@sonoma-county.org

STRATEGIC AREAS OF RECOVERY & RESILIENCY

Strategy Area 1

COMMUNITY PREPAREDNESS & INFRASTRUCTURE

County-wide awareness, infrastructure, systems

Strategy Area 2

HOUSING

Diverse, affordable, accessible places to live

Strategy Area 3

ECONOMY

New jobs, businesses, opportunities

Strategy Area 4

SAFETY NET SERVICES

Care for people who need extra help

Strategy Area 5

NATURAL RESOURCES

Healthy and well-managed land and water

OVERVIEW

Disaster preparedness is a shared responsibility. How we recover and whether we become more resilient depends on the contributions of the whole community. To be prepared, we must identify and prevent threats, protect our citizens, mitigate risks, and build our capacity to respond quickly and effectively.

In this section, we describe five strategic areas of recovery and resiliency, which are critical elements to being prepared. They align with the core capabilities of the *National Disaster Recovery Framework*. While each has its own focus, the five strategic areas of recovery and resiliency – Community Preparedness and Infrastructure, Housing, Economy, Safety Net Services, and Natural Resources – are interdependent. Coordination across strategic areas is required to prevent duplication, share technology, improve training and communication, leverage resources, promote innovation, increase capacity, and resolve challenges.

The County, in collaboration with its many partners, has taken the first steps to define the important linkages across the strategic areas of recovery and resiliency. They are a critical part of the Framework, though there is a lot more work to be done to understand and define how they affect implementation of the proposed actions in this Framework.

Many partners that play a role in achieving the recovery and resiliency vision may participate in varying capacities to implement the proposed actions included in this Framework. The list below shows the range of possible partner roles during implementation. Key partners for all proposed actions will be identified during the implementation planning phase.

ROLE	ROLE EXAMPLES
Lead	Leader, Director, Manager, Administrator, Executive, Principal
Partner	Co-Leader, Task or Phase Manager, Team Member, Planning/Steering Committee Member
Sponsor	Funder, Grantor, Donor, Promoter
Supporter	Data Source, Data Exchange, Data Repository, Technology/Communications Support
Stakeholder	Technical or Policy Advisor, Outside Reviewer, Coach, Beneficiary, User

NOTE ON TIMELINES

2019: Actions have begun or will be completed before the end of 2019

2020: Actions will be completed before the end of 2020

2021+: Actions will be completed no sooner than 2021

Strategy Area 1

COMMUNITY PREPAREDNESS & INFRASTRUCTURE

VISION

Sonoma County residents, communities, public and non-governmental entities are prepared to adapt and recover in a coordinated response when disaster strikes. Effective warning programs and systems provide emergency notifications to the whole community. Sonoma County ensures the safety and security of critical infrastructure, the continuity of financial and other information technology systems and ability to activate situational awareness programs and systems to support decision-making through disaster conditions.

ADAPT

Warning System Testing
September 10th & 12th

Allocated **$500,000** to enhance the County's vegetation management program

Approved **$1.7 million** for improving information technology resiliency

RECOVER

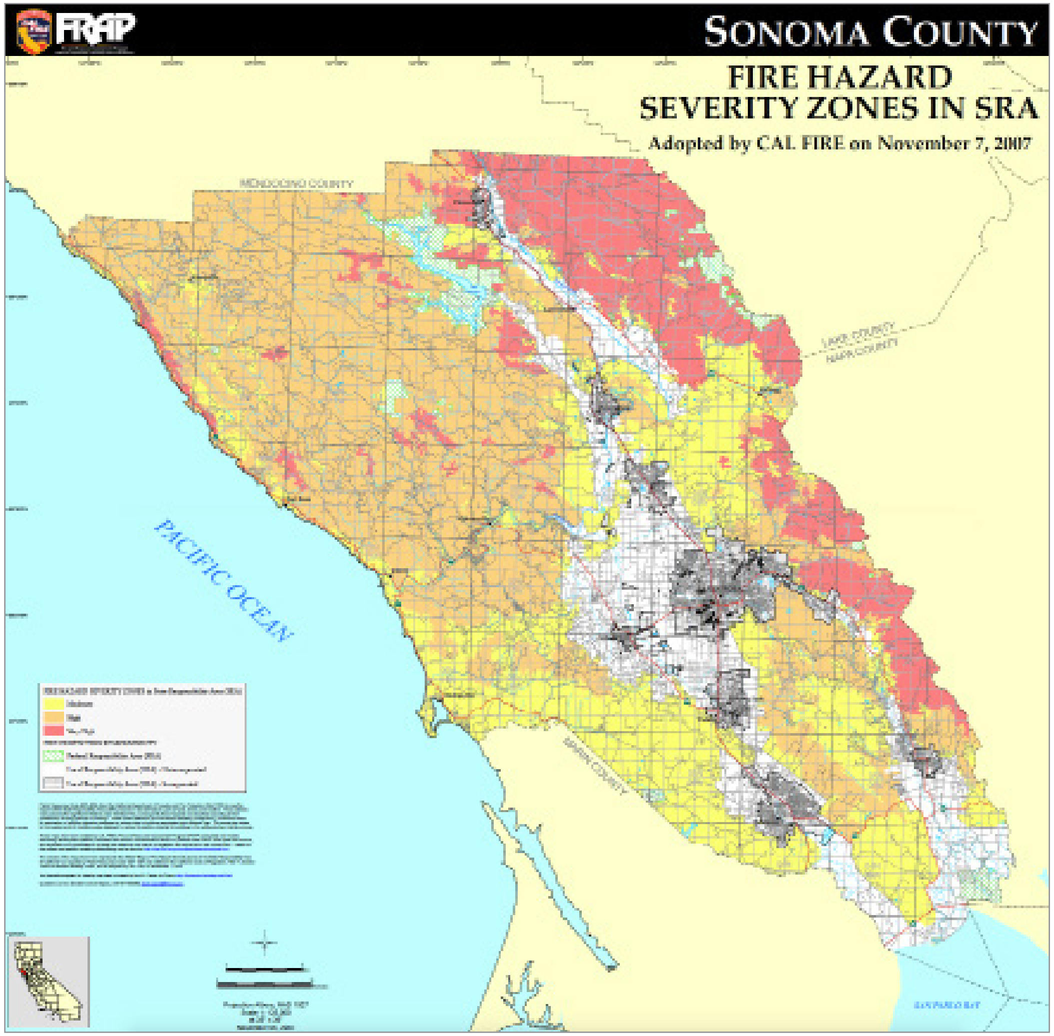
Provided **Chipper Service** prioritized for burn areas

BACKGROUND

The Fire Hazard Severity Zone map (right) identifies very high fire hazard areas, and also breaks down responsibility areas. The designation of the severity zones is based on methods which assessed vegetation, topography, fire history, weather patterns and factors such as the impact of flames, heat, and flying embers. The majority of land in Sonoma County is located in State Responsibility Areas, where CalFire has the responsibility to provide fire protection. CalFire's Fire Prevention Program includes wildland pre-fire engineering, vegetation management, fire planning, education and law enforcement.

The County frequently conducts response and recovery operations for weather and flooding events that endanger local

Fire Hazard Severity Zones



infrastructure, such as public utilities and transportation networks. County emergency personnel manage these events from the Sonoma County Emergency Operations Center (EOC). The EOC provides the communications infrastructure to coordinate response and recovery operations, including public information and warning. Since 2005, the County has activated the EOC for ten events.

During past emergency response activities, the County's technology infrastructure was able to support normal County business operations and systems were able to handle the temporary growth in data volume and demand.

The Board of Supervisors allocated over $14 million to repaving projects through the 2019 construction season and Sonoma County Transportation & Public Works (TPW) was making progress on the Sonoma County Long Term Road Plan. Due to the federally declared winter storm disasters in January and February 2017, resources were re-directed to focus on repairing infrastructure that was damaged or destroyed.

The County partnered with CalFire on a pilot project to perform defensible space inspections in selected high fire risk areas.

The County did not have a comprehensive animal emergency response plan and Animal Services was assigned to Health Services' Department Operations Center.

> **“I grew up in the Midwest and we had a test siren that went off at noon every day. They're loud—they wake you up.”**
>
> —COMMUNITY MEMBER

BACKGROUND

Impact of Fires on Emergency Response Infrastructure. The 2017 wildfires spread rapidly and destroyed essential communications infrastructure. Sonoma County EOC managers struggled to maintain accurate situational awareness. The need for reliable communications systems became more urgent as the fires advanced through heavily populated areas. With 77 cell sites destroyed or damaged and other communications systems not operating, the 9-1-1 system quickly became overwhelmed. It was challenging to alert residents of the fire threat and to evacuate communities in the fire's path.

Although the County's information technology systems were at risk given the proximity of the fire to the County campus, no systems were destroyed. However, the fire challenged a number of our information technology systems. For example, the County's call center and telephone system were inundated with calls far exceeding normal levels. The public-facing websites were overwhelmed by high traffic loads. Geographical mapping systems were unable to process increased network demands.

County roads, and associated signage and traffic signaling, in and around the burn areas were severely damaged, and power and water systems were incapacitated after the floods and fires.

The command center at Animal Services lacked alternate power, and radio malfunction impacted communications and operations during the fires. Response for animal services was hindered by the lack of formal emergency response plans and trained responders. In addition, Animal Services was not in direct communications with the EOC during the fires.

Post-Fire Response. By October 20, 2017, the fires were mostly contained and the County began transitioning from response efforts to the recovery phase. Some recovery operations were transitioned to non-governmental organizations and specialized task forces. The County then began an "after action review" focused on Emergency Operations Center processes and procedures.[2] The County also requested that the California Governor's Office of Emergency Services (Cal OES) review the emergency notification process and response.[3] On February 27, 2018, the Board of Supervisors held a Recovery Workshop on Infrastructure covering emergency alert systems, fire safety, preparing for a more resilient county, fire impacts on infrastructure, and public information and warning.[4]

Within 12 days of the start of the fires, 91 miles (of 116) County roads were re-opened, slopes were stabilized to prevent slides and erosion, and fire-damaged road signs and traffic signal infrastructure were replaced to restore services and access to County roads. Fire-damaged trees along approximately 90 miles of public roads were evaluated and assessed, and those identified as "extreme" or "high" risk in the public right-of-way are being removed. Despite the re-direction of resources to focus on repairing flood-damaged infrastructure, the Sonoma County Transportation & Public Works Department successfully caught up with the pavement preservation projects in 2018.

The County established a multi-departmental Disaster Finance Team to lead the County's FEMA Public Assistance program, which seeks reimbursement for response and recovery costs associated with the fire. The Disaster Finance Team works with FEMA and Cal OES to maximize these reimbursements and comply with federal funding requirements. The County also established a Grant Steering Committee to coordinate County-wide pursuits of external funding for recovery and resiliency goals.

[2] Sonoma County Fire & Emergency Services EOC After-Action Report, June 11, 2018.

[3] California Governor's Office of Emergency Services, "Public Alert and Warning Program Assessment for Sonoma County," February 26, 2018.

[4] Board of Supervisors' meeting, February 27, 2018, item 22. Item materials found at: www.sonoma-county.granicus.com/GeneratedAgendaViewer.php?view_id=2&clip_id=771

BACKGROUND

Following the fire, Animal Services, the Fairgrounds, and non-governmental agencies have begun to develop formal protocols for animal disaster response, including alternate animal evacuation sites.

In January 2018, the California Public Utilities Commission approved a fire map (right), which identifies much of Northern California at an elevated risk of fire danger.[5] The map is the most current published assessment of fire risk in the State. Sonoma County saw a significant increase in the areas designated as high fire risk. Actions taken by the Commission include requiring utilities to implement new wildlife safety regulations.

CPUC Threat Map

5 California Public Utilities Commission, adoption January 19, 2018, CPUC Fire-Threat Map found at http://cpuc.ca.gov/general.aspx?id=6442454972

⚠ CHALLENGES & OPPORTUNITIES

The proposed actions for this strategic area focus on opportunities to strengthen disaster preparedness, prevention, and recovery. These include improving public education, enhancing situational awareness, updating County emergency management and recovery finance policies, processes and procedures, securing County information technology, and maintaining roadways for better evacuation and first responder access.

As a result of the devastating fires, individuals, organizations, and communities have come together and strengthened their resolve to make Sonoma County more prepared. Relationships have been forged that create a deep sense of connection and community. Statistics have shown that the leading indicator for communities recovering quickly from a disaster is how cohesive a neighborhood is, and the degree to which neighbors know neighbors. As the County works to facilitate individual and neighborhood preparedness, the commitment that Sonoma County residents have to each other will prove invaluable. The collaboration among individuals, community groups, nonprofits, and governmental agencies will break down silos and further the goal of prepared communities.

Public alert and warning has become a topic of urgent interest and action among emergency management programs and associations across the country. Public expectations for local government alert and warning services have escalated significantly beyond current industry practices. The County has the opportunity to move forward and serve as a state and national leader in the ongoing conversation regarding alert and warning programs. By developing a truly comprehensive, integrated, and sustainable Community Alert & Warning Program, the County can meet the increasing expectations and challenges of this vital public safety mission for its residents, communities, and visitors.

Several jurisdictions in Sonoma County have developed forms of community notification and warning systems. The potential benefits for consolidating these efforts are significant. Consolidation into one program (or system of systems) would increase responsiveness, reduce operational redundancy, improve adherence to standards, and generate cost savings in procurement

Neighbors who know each other look out for each other

79% of people who use an online forum to connect with their neighbors also **talk to them in person** at least once a month.

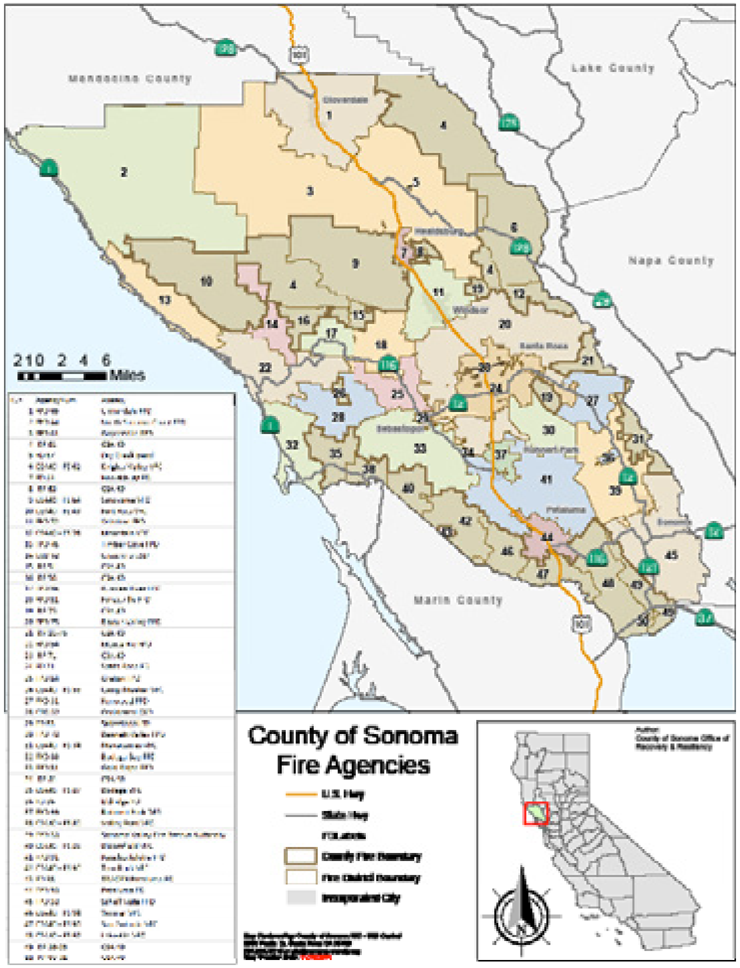
67%+ of homeowners **feel safer** when they know their neighbors.

35% of people **who know their neighbors** reported they've shared information about safety with them.

Source: Pewinternet.com/2009/Reports/18-Social-Isolation-and-New-Technology and administration. The County currently uses CodeRed as its warning software. A more capable and more readily usable software platform would enable faster and more effective delivery of emergency warnings to the public as well as allow for integration of social media systems.

On June 14, 2018, the Board of Supervisors approved additional funding and staffing for emergency management and community preparedness. This will support enhanced resiliency measures including community preparedness programs like community emergency response teams (CERTs), auxiliary communications services, and neighborhood and individual preparedness programs. Additional funding will also support planning and training exercises, and reinforce capacities to coordinate emergency public warning, incident response and recovery. The October 2017 fires gave urgency to the countywide Fire Service Project, creating opportunities for quicker action, but also challenges for increased funding.[6] The fires gave urgency to the countywide Fire Services Project, creating opportunities for more efficiencies, but also challenges for increased funding. The map here (right) shows the many fire districts that exist in Sonoma County.

Sonoma County Fire Districts



---

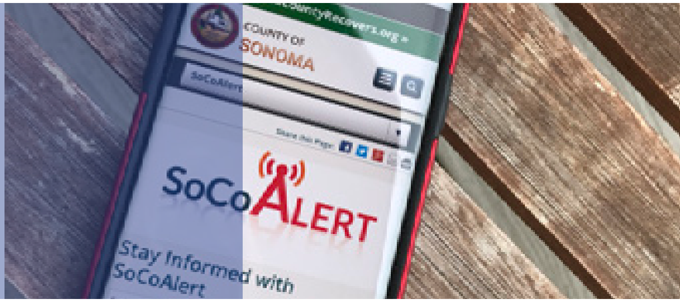
[6] In 2016, the Board of Supervisors established a Fire Services Advisory Council to address fire services in the County, particularly in unincorporated areas, for a more efficient, effective and sustainable fire services system. On August 14, 2018, the Board received a report and recommendations, abolished the Fire Services Advisory Council, moved to implement phases of the recommended plan, and directed staff to pursue funding opportunities to support the plan.

⚠ COMMUNITY INPUT

Community members overwhelmingly agreed with the goals and objectives identified in the draft Framework. Warnings, communication, evacuation, vegetation management, education, and preparedness generated the most comments. Many requested that the County coordinate and work closely with all cities within the County on an alert system and preparedness program. Actions that have been incorporated into the Framework include evacuation and care of large animals in a disaster, hosting an annual Disaster Preparedness Day, and incorporating personal preparedness into the community preparedness program. Many in the community requested objective, measurable metrics be incorporated into any plans that are developed and for status reports to be provided to the Board of Supervisors on a regular basis.

Other jurisdictions within the County expressed a strong desire for greater collaboration on an alert and warning system and training exercises. Joint training exercises could include City-County drills and “all cities” exercises, and possible cross-training for Emergency Operations Center assistance. There were requests for assistance with establishing evacuation routes, a more comprehensive vegetation management program, and advocacy to Cal Fire and CalTrans to increase vegetation management on their properties.

> **“We need something that reaches and wakes everyone. And regular emergency evacuation practice drills... with special preparations for vulnerable populations.”**
>
> **—COMMUNITY MEMBER**



GOALS

1. Establish a first-class, comprehensive warning program with innovative technology and state-of-the-art situational awareness.

2. Meet future challenges by redesigning the County Emergency Management Program, providing additional resources, enhancing external funding capabilities, and recommitting to the County's public safety missions.

3. Lead, support, and train community liaisons to build and sustain individual and neighborhood preparedness, to include individuals with disabilities and others with access and functional needs, and individuals with limited English proficiency or non-English speaking.

4. Make County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology.

GOAL C1

Establish a first-class, comprehensive warning program with innovative technology and state-of-the-art situational awareness.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Develop a warning system that communicates alerts over many communication systems and to individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking. Conduct trainings and tests of the system.	🟧		
Establish an online portal that consolidates critical first responders' and community partner information that is accessible to all emergency responders ("Common Operating Picture").	🟧		
Develop protocols and partnerships for communicating critical information to elected officials, government and community leaders, and the public during a disaster so they are fully informed, to include individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking.	🟧		

GOAL C1

Establish a first-class, comprehensive warning program with innovative technology and state-of-the-art situational awareness.

ACTIONS COMPLETED:

- ✓ Completed After Action Report summarizing the Emergency Operations Center (EOC) strengths and challenges during the response phase and initial recovery from the fires, which documents and recommends actions needed to strengthen EOC capabilities and resources.
- ✓ Approved $2.5 million to Fire & Emergency Services Department to support the development and implementation of an enhanced Community Alert & Warning Program, Community Preparedness Program, and Emergency Management Program.
- ✓ Applied for funds through the Hazard Mitigation Grant Program to create a fire early warning camera system by installing fire monitoring cameras at strategic locations throughout the County with associated microwave/tower systems.
- ✓ Sonoma County Water Agency partnered with the University of Nevada, Reno and UC San Diego to install eight fire cameras in Sonoma County in 2018.
- ✓ Applied for funds through the Hazard Mitigation Grant Program to design and install warning sirens in selected locations in the County, and to develop operating, testing and maintenance procedures.
- ✓ Trained County staff in new Integrated Public Alert Warning System.
- ✓ Created 90 character limit Wireless Emergency Alert (WEA) message templates to assist in getting alerts issued faster.
- ✓ Revised policy regarding the use of WEA in life-safety hazard incidents.
- ✓ Created and recorded evacuation messages using SoCoAlert templates for probable community instructions in an emergency.
- ✓ Conducted Alert and Warning System tests on September 10 and 12, 2018.

GOAL C2

Meet future challenges by redesigning the County Emergency Management Program, providing additional resources, enhancing external funding capabilities, and recommitting to the County's public safety missions.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Assess and update overall County emergency procedures, programs, organization, authorities, infrastructure, staffing, equipping, and processes to determine structural changes that would best fit the capacity and needs of the County in a future disaster.	🟧		
Assess and review administrative and functional placement of the Emergency Management Program to inform any recommended changes to the County Emergency Operations Center and/or the County Emergency Management Operations.	🟧		
Expand trainings and drills for countywide emergency managers, mutual aid partners, elected officials, and County staff.	🟧		
Increase the County's capacity and capabilities to pursue and support available grants and external funding opportunities related to disaster recovery, emergency preparedness, hazard mitigation, resiliency, and homeland security.	🟧	🟧	
Facilitate the review and potential reorganization of the Sonoma County Operational Area Emergency Council.	🟧	🟧	

GOAL C2

Meet future challenges by redesigning the County Emergency Management Program, providing additional resources, enhancing external funding capabilities, and recommitting to the County's public safety missions.

ACTIONS COMPLETED:

- ✓ Approved structure and staffing for County's Emergency Management Program and emergency preparedness.[7]
- ✓ Formed a Grants Steering Committee to review all external funding opportunities and coordinated the submission of 22 FEMA Hazard Mitigation Grant Program (HMGP) applications, for a total amount of over $40 million. Through the work of the new committee, the County has designed projects to address identified strategic priorities, and enhanced collaboration across departments and externally.
- ✓ Formed a Disaster Finance Team to maximize federal reimbursements for response and recovery operations through the FEMA Public Assistance program.
- ✓ The Emergency Council developed a committee to conduct an initial assessment of its mission, explore best practices, and provide recommendations to the full Council at its December 2018 meeting.

---

[7] See August 14, 2018 Board of Supervisors meeting, Item No. 44.

GOAL C3

Lead, support, and train community liaisons to build and sustain individual and neighborhood preparedness, to include individuals with disabilities and others with access and functional needs, and individuals with limited English proficiency or non-English speaking.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Collaborate with volunteer, nonprofit and private organizations to establish community working groups to serve as community and neighborhood liaisons.	▨		
Work with community/neighborhood liaisons to identify hazards, risks, mitigation strategies, including evacuation routes.	▨	▨	▨
Develop a Community Response Team Program.	▨		
Update the County fire ordinance to enhance the Vegetation Management Program with incentives, inspection and abatement protocols, and appropriate funding.	▨		
Develop disaster preparedness protocols for pets and livestock safety.	▨		

GOAL C3

Lead, support, and train community liaisons to build and sustain individual and neighborhood preparedness, to include individuals with disabilities and others with access and functional needs, and individuals with limited English proficiency or non-English speaking.

ACTIONS COMPLETED:

✓ Provided chipper services, prioritized for those in burn areas, and to address access routes and defensible space.

✓ Created three additional positions, two dedicated to the County's emergency management program and one dedicated to community preparedness.

✓ Allocated $500,000 to enhance the County's vegetation management program.

GOAL C4

Make County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Identify essential infrastructure, services and resources necessary during a disaster and, to the extent possible, have contracts and/or Memorandum of Understandings in place.	■		
Pre-stage critical equipment (i.e. shelter materials, roads equipment, etc.) at strategic, designated sites throughout the County.	■	▨	
Update the County's Continuity of Operations Plan (COOP) assuming that the County will need to function effectively and independently without state or federal resources for at least 72 hours.	■		
Protect County information, data, and communication infrastructure.	■	▨	
Work with federal, state, local, tribal, community and/or private partners to identify, assess, and modify or repair essential transportation infrastructure for critical County response.	■		
Work with private utility providers to identify solutions to harden infrastructure and cope with destroyed utilities in a disaster.	■		

GOAL C4

Make County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology.

ACTIONS COMPLETED:

- ✓ Removed thousands of burned trees along County roads that pose risk to safety.
- ✓ Awarded a $1,082,969 grant from CalFire to Transportation and Public Works to assess fire fuel risks and tree mortality within the public right of way on 83 miles of roads in northwestern Sonoma County, and subsequently treat 30 miles of the highest priority areas.
- ✓ Applied for a Hazard Mitigation Grant to purchase and install an onsite generator for the roads.
- ✓ Mapped 4,952 fire-damaged properties, validated parcel data to expedite the Right of Entry process for debris removal, and collected field data to track progress of clearing.
- ✓ With Health Services and Human Services, completed phase one of Access Sonoma data integration project to enable the coordinated delivery of services to displaced fire victims.
- ✓ Implemented new cloud-based public website for emergency information designed for high traffic and optimized for mobile devices, www.SoCoEmergency.org.

GOAL C4

Make County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology.

ACTIONS COMPLETED (continued):

✓ Improved data protection:

- Approved a memorandum of understanding with Alameda County to share data center space for connectivity equipment to enhance offsite protection of data backups and use site for potential recovery operations
- Approved $1.7 million to improve information technology resiliency and operational capability.
- Established connections to cloud providers and implementing daily replication of critical data.
- Prepared and submitted Hazard Mitigation Grant application to fund improved power infrastructure for County primary data center supporting essential services.

Strategy Area 2

HOUSING

VISION

Sonoma County envisions a housing market that is in balance; is resilient and climate smart at the regional, neighborhood, and homeowner scale; is affordable to area workers and individuals with access and functional needs; is where communities of color and other historically disadvantaged groups, including individuals with limited or no English proficiency and immigrants, have equal and fair access; respects designated community separators and urban growth boundaries; has a diversity of homes located near transit, jobs and services; and is where the economy is vital. To achieve this vision, the County is embracing a new regional approach to produce 30,000 new housing units by 2023.

EQUAL ACCESS

BACKGROUND

Despite a lack of housing prior to the fires, the strength of the community was clear: neighborhoods had strong social ties, and people came together to support each other after the fires. Rebuilding quickly and building new affordable housing couldn't be more urgent to restore our community.

Impact of Fires on Housing. The October 2017 fires destroyed approximately 5,143 homes throughout Sonoma County, making this one of the most destructive fires in California history. The housing shortage, already critical before the fires, has become unsustainable. More housing was lost in one night than had been built in the County over the prior seven years.

Those who lost their homes in the fires face many challenges. In addition to their community and individual losses, they must overcome many obstacles as they rebuild their lives. These include: settling into new living arrangements; navigating insurance claims; finding architects; construction planning; obtaining permits; and facing uncertainty about contractor availability. They must determine whether it is possible to rebuild at the same location, size, and quality as the pre-fire home, how to meet new code requirements within available funds, and much more.

Meanwhile, those with insurance worry that their temporary housing funds will run out before their homes are rebuilt. In one survey related to the 2017 fires, 53% of the respondents reported not having settled the dwelling portion of their claim and 66% reported being underinsured on the dwelling portion.[8]

The fires affected 1,596 renter households, and approximately 2,200 renters were directly displaced. The fires also created a secondary wave of displacement through disaster-related market pressures. Renters have also been impacted by the rebuild process. They are often left with little hope of the home they were living in being rebuilt or rented to them at an affordable rate.

---

[8] United Policyholders Six Month Survey

BACKGROUND

Before the fires, many of those seeking new housing could neither find nor afford a decent place to live. The County already had very low vacancy rates—1.8% for rentals and 1% for homeowners[9]—and a housing market study released in April 2018 using pre-fire data estimated that Sonoma County needed 14,634 affordable rental units to meet demand. It also suggested that more than half of Sonoma County renters pay more than what is affordable for housing and that nearly a third spent more than 50% of their income on rent.[10]

The housing shortage also contributed to an increase in the number of people experiencing homelessness. After seven years of declining rates, the 2018 Homeless Count shows a 6% increase in homelessness over 2017. This rate is likely to rise into 2019.

The Homeless Count also shows that an estimated 21,482 people are unstably housed. About half of these individuals report that they are living doubled up, couch surfing, or with no formal lease because of the fires. Roughly 2,363 people are secondarily displaced by the fires because owners whose homes burned in the fires and who now must occupy their rental properties, due to post-fire rent increases, or because of fire-related job loss. Of those who became unstably housed following the fires, 43% were over the age of 55.

Of the 16,666 people who registered for FEMA benefits in Sonoma County, 29% were 65 or older. Many older people are on fixed incomes and will struggle financially to rebuild their homes or find alternative housing in the current rental market.

---

[9] Sonoma County Economic Development Board, County Profile 2017

[10] California Housing Partnership Corporation, Sonoma County's Housing Emergency and Proposed Solutions, April 2018

BACKGROUND

After the fires, home prices in Sonoma County became increasingly out of reach for many potential homebuyers. Median home values reached $681,333, up from $604,380 in the previous twelve months.[11] This is an annual increase of 11%. Rents for undamaged units also rose at an annualized rate of 9.9% in the six months following the fires.[12]

At the same time, Sonoma County employers are finding it increasingly difficult to attract or retain workers due to high housing costs. A recent study found that 8,143 new housing units are needed by 2020 to keep up with projected household employment through that date.[13]

Post-Fire Response. As the County moved from response to recovery, a permitting office to expedite fire rebuilds was quickly put in place. The Resiliency Permit Center provides a "one-stop-shop," with streamlined processes for residential permits related to the 2,264 homes lost in the unincorporated County. The City of Santa Rosa has a similar permit office processing residential permits for the 2,879 homes lost in the city limits.

As of November 13, 2018, 920 housing units have been submitted for review to the County. Of these, 679 units are permitted, 222 are in the review process, and the remainder are completed. In the City of Santa Rosa, 1,365 housing units have been submitted. Of these, 1,073 are permitted, 241 are being reviewed, and the remainder are completed. Combined, the 2,285 housing unit permits issued, under review, and already completed are 44% of the 5,143 housing units lost in the fires countywide.

Building new market-rate and affordable housing countywide has even greater urgency as the County has not kept up with housing demand over the last decade. As this building begins, proper location is an important consideration and there has

[13] April 2018 Beacon Economics

been a long-standing countywide commitment to avoid sprawl with new development. This has led to the creation of Urban Growth Boundaries and the identification of Priority Development Areas (PDAs) throughout Sonoma County in which most new housing is to occur.

The County's recovery efforts have centered on creating the conditions that attract private-sector developers to rebuild and build new housing for a range of income levels. They have also focused on ensuring that the County and its local government partners have the policies and practices in place to expedite planning, development, and construction.

Examples of these efforts include ensuring stronger coordination between the County and the nine cities to confirm the most appropriate housing locations; identifying County-owned land that can be used for housing and strategically preparing to partner with the development community; identifying changes to land use regulations, processes and procedures to enhance opportunities for innovative and nontraditional housing to encourage a wide range of development; and organizing local sources of financing for maximum incentive and leverage.

> “**AFFORDABILITY. Rental prices have skyrocketed after the fires. The ripple effect of the fires and loss of homes has forced many people out in order to afford a place to live.**”
>
> **—COMMUNITY MEMBER**

CHALLENGES & OPPORTUNITIES

Regional, state, and national political leaders have a strong interest in helping with fire recovery. Similarly, financial institutions, philanthropists, and businesses want to help make a positive difference in the long-term recovery. Positioning the County to work collaboratively with these groups for this common purpose is a chance to dramatically remake the housing landscape.

The greatest opportunity is public, private, and civic sectors sharing the same vision and working in concert to achieve this shared goal. This does not happen by chance or overnight. Instead, it is by the efforts of many working together that the goal will be achieved.

One of the County's challenges is the aspirational goal to build 30,000 housing units countywide. Concerns have been raised about the size of the goal, the location of potential units, and the timing of the delivery of the units. Some believe that this is too many units coming in too quickly, while others believe it is too few units coming in too slowly. Others have concerns about the particulars of the housing units, including how quickly the rebuild units are progressing, how many of the units will be affordable, and whether the units will be located in urban areas near transit, jobs, and other services.

CHALLENGES & OPPORTUNITIES

Within currently approved General Plans countywide, there are roughly 46,000 housing units of capacity, if units are built to full plan capacity. Approximately 16,500 housing units are currently within the development process pipeline countywide. Early analysis shows that after accounting for the 16,500 housing units in the pipeline, the remaining 8,200 new housing units could, in theory, be accommodated within the Priority Development Areas (PDAs) and still leave additional capacity within the PDAs in the County.

A bright spot in the housing data is that Sonoma County is one of only twenty-two jurisdictions statewide to meet its regional housing need targets as assigned by the State. More than 500 other jurisdictions that do not meet Regional Housing Needs Assessment (RHNA) targets are subject to SB35 streamlining requirements. However, the County is still taking the necessary steps to streamline approval processes for infill projects when appropriate. Infill projects are important to reduce climate and service impacts and increase opportunities for workforce housing and other affordable housing, but respect established Urban Growth Boundaries.

The fires affected individuals and households within every socioeconomic status. The devastation did not distinguish by age, race, ethnicity, income, language, employment, education, or living conditions. Yet access to recovery resources, whether financial, physical and emotional, information and guidance, can differ because of individual or household characteristics. Challenges to rebuilding include historic and institutional biases that tend to direct housing resources primarily to white citizens. Implicit bias in the housing industry tends to keep people of color at a substantial disadvantage in the housing market.

Housing reconstruction and new housing construction will require a tremendous increase in the pace of permitting and it is likely that some neighborhoods may oppose any new development near them. Navigating the many opportunities and challenges will require an intentional and thoughtful approach that is balanced yet advances the County's vison for housing.

COMMUNITY INPUT

Housing affordability and availability for both renters and owners was the theme of community input. This was the most common concern. Other concerns included making it easier to rebuild, providing recovery assistance for those in need, having the right location and product type for housing, maintaining or developing higher standards for housing being built, especially the need for housing to be resilient to future disasters, using public land for housing, and creating the ability to have more community engagement around housing issues.

Some key strategies the public identified as important for achieving our housing vision include identifying already entitled housing projects that are not moving forward and finding solutions to get them built, integrating housing strategies across all jurisdictions countywide, incorporating resiliency goals into the General Plan update, providing rental assistance and renter rights information regarding rising rental costs for Spanish speakers, and providing more resources to support the rebuilding efforts for those who lost their homes, both owner occupied and rental occupied.

Many housing-related agencies and service providers and the cities and other governmental jurisdictions also provided input. They identified three key strategies to meet housing needs countywide including taking a focused and unified approach to housing at regional/cross-jurisdictional level, developing risk mitigation funding pools that can provide housing developers with the certainty of funds throughout the full land development process, and sharing resources and data regionally.

The County has heard concerns regarding the gap between the temporary housing arrangements for those displaced by the fires and their permanent housing. This gap cuts across all housing types and incomes. Those displaced by the fires need additional resources to remain housed between now and when permanent housing is available. When insurance funding for additional living expenses and FEMA funding for temporary housing run out, and if new housing units are not yet available, there will be a second wave of crisis for those who lost their housing due to the fires.

COMMUNITY INPUT

The ability of fire survivors to bridge the response to recovery period is critical to the success of our long-term housing solutions. Success requires regional cooperation with public and nonprofit housing agencies, grants and philanthropic organizations, and a sustained disaster case management program for all fire survivors.

Community engagement around housing will continue and increase as required by the use of federal and state funds, and as it relates to the County's Fair Housing and Civil Rights obligations.

> "Housing is NOT affordable for young workers. Younger families are moving to other states to be able to afford to live and enjoy life."
>
> —COMMUNITY MEMBER

GOALS

1. Attract new and expanded sources of capital to incentivize the creation of housing for all income levels.
2. Increase regulatory certainty by changing the County's business model and actively seek opportunities to deepen regional cooperation.
3. Support building and development standards with improved local hazard resiliency and reduced climate impacts.
4. Support rebuilding fire destroyed homes.
5. Explore use of County-owned property to attract housing development that aligns with County goals.

GOAL H1

Attract new and expanded sources of capital to incentivize the creation of housing for all income levels.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Form a Renewal Enterprise District (RED) as a Joint Powers Authority (JPA) to ensure coordination and facilitate pooled financing that supports a regional, shared housing vision.	■	■	
Execute Joint Powers Authority Agreement with the City of Santa Rosa as a two-year pilot.	■		
Coordinate funding and financing strategies with all municipalities seeking to encourage affordable housing.	■		
Pursue legislation to enhance effectiveness of RED JPA and garner State financial support.	■	■	
Engage financial institutions to develop new, more targeted debt and equity projects.	■	■	■
Engage developers to discern true capital needs and tailor available County and City funds to promote quality projects.	■	■	■
Continue to convene an array of institutions to develop new capital structures that mitigate financing risks and incentivize quality projects.	■		
Join the California Public Finance Authority JPA and utilize its available financing tools.	■		
Develop financing tool for ADUs.	■		

GOAL H1

Attract new and expanded sources of capital to incentivize the creation of housing for all income levels.

PROPOSED ACTIONS (continued):	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Secure the maximum amount of federal and state affordable housing funds.	■	■	■
Support California Housing and Community Development Department's Unmet Needs Analysis and Action Plan for deployment of CDBG-DR.	■		
Support passage of local and state housing bonds.	■		
Conduct a robust Assessment of Fair Housing to document needs and opportunities, and ensure findings and recommended actions are incorporated into housing plans going forward.	■		
Engage the business community to consider options for employers to support and invest in new housing.	■	■	■
Deepen relationships with all relevant State agencies, including CalHFA, Strategic Growth Council, and the Tax Credit Allocating Committee.	■	■	■
Assist EDB and Santa Rosa Metro Chamber to organize an Employer Housing Council, as called for in the *Strategic Sonoma* plan.	■	■	■

GOAL H1

Attract new and expanded sources of capital to incentivize the creation of housing for all income levels.

ACTIONS COMPLETED:

✓ City of Santa Rosa and Board of Supervisors have agreed in concept to form the RED JPA.

✓ Federal Reserve Bank of San Francisco convened lenders/financial institutions with the goal of increasing availability of capital for housing development.

✓ Secured $250,000 capacity building funding from Tipping Point to enhance the effectiveness of the County's Community Development Commission.

✓ Secured $1,000,000 start-up funding from Hewlett Foundation for RED JPA.

✓ Received targeted disaster waivers from U.S. Department of Housing and Urban Development that increased flexibility for various housing assistance programs administered by CDC.

✓ Continue to use qualified national consulting firm to assist and position the County to receive CDBG-DR funds, and strategically utilize the funds for unmet needs.

GOAL H2

Increase regulatory certainty by changing the County's business model and actively seek opportunities to deepen regional cooperation.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Identify potential changes to land use regulations, processes and procedures that could reduce the time to complete processes, decrease uncertainty in the approval process and reduce the cost of housing development, including fire recovery permits.	■	■	■
Evaluate and bring forward for consideration multi-family standards, workforce housing combining zone standards near jobs, and other housing initiatives.	■		
Update Specific Plans, fee studies, and other planning documents to support meeting regional housing needs.	■	■	■
Inform the General Plan Update process regarding issues related to housing location and standards, hazard mitigation, and resiliency.	■	■	■
Consider opportunities for modernization and standardization of permitting to make it easier for developers to submit applications countywide.		■	■
Enhance opportunities for innovative and non-traditional building types for a wide range of housing developments.	■	■	■
Develop for consideration additional housing initiatives that may become apparent after the current round of initiatives has been implemented; recurring cycles of regulatory updates allows the regulations to evolve with the needs of the community and market.		■	■
Support regional responses to the need for more and affordable housing that has exacerbated since the fires, including building of new housing units in Priority Development Areas in incorporated cities and coordinating with the Renewal Enterprise District (RED) and the Economic Development Board.	■	■	■

GOAL H2

Increase regulatory certainty by changing the County's business model and actively seek opportunities to deepen regional cooperation.

ACTIONS COMPLETED:

✓ Increased the maximum size of accessory dwelling units (ADUs) to 1,200 square feet.

✓ Reduced fees on smaller ADUs to encourage smaller units that are affordable by design.

✓ Increased the allowable residential floor area in mixed-use projects from 50 percent to 80 percent.

✓ Delayed collection of fees until near occupancy, rather than at permitting.

✓ Allowed small single room occupancy (SRO) projects as a permitted use and removed the existing 30-room limit for larger SRO projects.

✓ Allowed transitional and supportive housing in all zoning districts that allow single-family dwellings.

✓ Analyzed roughly 16,000 possible housing units in the development pipeline countywide. This is being utilized to identify roadblocks and develop solutions where possible.

GOAL H3

Support building and development standards with improved local hazard resiliency and reduced climate impacts.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Build/Rebuild better homes and improve existing homes in Wildland Urban Interfaces (WUI) and other high-risk hazard locations with greater local hazard resiliency.	▨	▨	▨
Facilitate construction hardening techniques appropriate for wildfire/urban interfaces and seismic retrofits for building/rebuilding and existing homes through education and grant programs.	▨	▨	▨
Help property owners navigate vegetation management opportunities through partnership with Fire Safe Sonoma and similar programs.	▨	▨	▨
Advocate for funding opportunities for private property vegetation management to complement creating safe zones around homes in high risk areas.	▨	▨	▨
Build/Rebuild better homes and improve existing homes with improved efficiency and reduced operating costs.	▨	▨	▨
Facilitate climate positive construction techniques for building/rebuilding homes through consultation and project planning assistance from the Energy and Sustainability Division of General Services.	▨	▨	▨
Facilitate rebuilding housing with clean energy improvements for firestorm rebuilds through Sonoma Clean Power grant.	▨		

GOAL H3

Support building and development standards with improved local hazard resiliency and reduced climate impacts.

ACTIONS COMPLETED:

✓ Applied for FEMA Hazard Mitigation Grant Program Home Fire Mitigation grant through CalOES to help perform inspections for compliance to defensible space regulations and identification of structural vulnerabilities which may increase risk of wildfire ignitions; provide cost share incentives to help and inspire property owners to reduce vegetation and mitigate vulnerable building elements that pose risk for wildfire ignition; and provide critical education to the public about wildfire loss prevention and preparedness.

✓ Applied for FEMA Hazard Mitigation Grant Program Seismic Retrofits grant through CalOES to implement permanent improvements to structures at high risk of damage from seismic activities, with a specific focus on soft story buildings where the first story that lacks adequate strength or stiffness to prevent leaning or collapse in an earthquake.

GOAL H4

Support rebuilding fire destroyed homes.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Facilitate expedited permitting process for rebuilding homes destroyed by fires.	■	■	■
Continue to operate Resiliency Permit Center.	■	■	
Explore and develop funding options to assist the rebuilding of homes destroyed in the fires.	■	■	■
Continue to advocate for assistance with insurance issues with the State, as may be appropriate.	■	■	■
Seek Federal, State, and other funding to assist rebuilding gaps for those seeking to rebuild after the fires.	■	■	■
Facilitate and support rebuild navigation to assist those seeking to rebuild homes destroyed in the fires.	■	■	■
Facilitate navigation assistance, including financial advising, insurance claims and rebuilding, for those seeking to rebuild from the fires in partnership with the ROC Sonoma County Recovery Center and with the Health and Human Services Departments (Safety Net).	■	■	■

GOAL H4

Support rebuilding fire destroyed homes.

ACTIONS COMPLETED:

✓ Opened Resiliency Permit Center in February 2018 to expedite rebuild permits.

✓ Permitted more than 650 homes through the Resiliency Permit Center through October 2018

✓ Advocated for insurance reform at the State.

GOAL H5

Explore use of County-owned property to attract housing development that aligns with County goals.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Continue process to evaluate and develop housing on already identified County-owned properties for housing development.	■	■	■
Evaluate the need for construction worker housing and whether opportunities exist on County-owned properties.	■	■	■
Continue Request for Proposal process to develop housing at 2150 West College Avenue.	■	■	
Continue process to develop housing at Roseland Village.	■	■	
Continue efforts to repurpose/sell the Chanate Campus in support of housing goals.	■	■	
Identify and evaluate other potential opportunities for housing on County-owned land not yet identified.	■	■	■
Explore the potential for housing as part of a mixed-use development on the County Administration Center property.	■	■	■
Continue to identify possible housing opportunities on other County-owned land.	■	■	■

GOAL H5

Explore use of County-owned property to attract housing development that aligns with County goals.

ACTIONS COMPLETED:

- ✓ A Request for Proposals (RFP) has been issued by the Community Development Commission for the 2150 West College property.
- ✓ The Community Development Commission has completed a two-part RFP process to identify a master developer to develop Roseland Village for affordable and market-rate housing, and is moving forward with development processes.
- ✓ The County of Sonoma and City of Santa Rosa have issued an informational survey and questionnaire regarding the market viability of the County Administration Center campus or other county-owned sites and/or the downtown City Hall Campus for possible development concepts, including office space, government buildings, mixed-use retail, and housing.

Strategy Area 3

ECONOMY

VISION

Sonoma County actively partners with local employers to become a resilient, inclusive, and economically diverse community. Through public-private partnerships, Sonoma County businesses and residents emerge with greater capacity to address persistent local challenges and are resilient to future disasters.

INCLUSIVE

PUBLIC-PRIVATE PARTNERSHIPS

Outreach encouraging employers to apply for SBA loans

Prompted residents and visitors to #GoSoCo by shopping local to support businesses

LOCAL

BACKGROUND

Sonoma County is home to over 500,000 residents. It has 20,000 businesses employing over 250,000 workers. With an unemployment rate of just 3%, the labor market is effectively at full employment. As such, growth potential of the local economy has become severely constrained by little or no growth in the labor force, partly because of the high cost of housing. The fires have exacerbated the reality that Sonoma County has one of the tightest labor markets in a decade and a severe housing shortage.

Prior to the fires, Sonoma County Economic Development Board (EDB) had begun work on a five-year comprehensive economic development strategy, *Strategic Sonoma*. EDB was completing the research phase of this strategy, which included economic analysis, stakeholder input, and a strengths, weaknesses, opportunities, and threats (SWOT) analysis. A 30-member *Strategic Sonoma* Advisory Group was in place to guide the planning process. The group had participated in workshops to begin forming a strategy. When the fires hit, this effort shifted immediately to begin focusing on recovery needs of the community.

Impact of Fires on the Local Economy. Recognizing the urgent needs of the community after the fires, Sonoma County EDB redirected the work of *Strategic Sonoma* towards creation of the Sonoma County Economic Recovery Plan. Because EDB already had a 30-member *Strategic Sonoma* Advisory Group in place, it was able to transition quickly to focus on recovery.

EDB conducted a survey with local businesses to identify impacts of the fires. The 194 businesses that participated in the Economic Recovery Plan survey shared both good and bad news. Almost every business stated that they had been adversely affected by the fires. Businesses reported direct physical loss, loss of sales, disruptions to power and broadband services, and dislocated workers. Many businesses expressed concerns that the fires worsened challenges like housing, affordability, workforce, transportation, and environmental sustainability.

BACKGROUND

Housing remains a critical concern for the business community. As discussed in the previous section, Sonoma County will need to make significant progress in building development to replace lost housing and meet demands. Forecasts suggest that tax revenues and employment should remain strong following the fires. Continued underbuilding of housing will constrain future job, income, and tax revenue growth.

Post-Fire Situation/Ongoing Efforts. Even before the fires were fully contained, EDB staff started working with partners to ensure that the community received disaster-related benefits from the local, state, and federal government. The department created a temporary Business Recovery Center and continues to serve impacted businesses by providing needed services. This includes assistance with accessing available funding to rebuild, cover payroll, tax credits and incentives, and to help with filing claims. In collaboration with the City of Santa Rosa, the EDB created a Business Recovery Guide featuring a comprehensive list of resources for businesses affected by the fires. The EDB also helped link qualified businesses and workers with available benefits like Disaster Unemployment and Small Business Administration Loans. The City of Santa Rosa, the EDB, and the Santa Rosa Metro Chamber of Commerce formed an outreach team to support the area’s largest employers. The team assisted with workforce issues resulting from the fires and provided customized workshops.

To support small businesses in the weeks after the wildfires and in the run-up to the holiday shopping season, the EDB and the City of Santa Rosa launched the Shop Local campaign “#GoSoCo – All You Need is Local.” The campaign included participation from chambers of commerce countywide and won both a statewide award from the California Association of Local Economic Development and a national award from the International Economic Development Association.

County stakeholders agree with the desire to recover as a more resilient community. The research obtained through the *Strategic Sonoma* process provided a deep understanding of other dynamics at play in the County economy. Issues like housing, workforce, environmental sustainability, and infrastructure emerged as top priorities.

CHALLENGES & OPPORTUNITIES

The wildfires have highlighted the need for EDB to continue its role in countywide economic and workforce development. EDB must also support and prioritize the businesses, employees, and neighborhoods most impacted by the fires. Shortly after the fires, EDB realigned its *Strategic Sonoma* initiative to focus on development of a short-term economic recovery plan. The plan identifies the economic development efforts that will provide the greatest opportunity for the County to recover. The economic recovery plan informs the larger *Strategic Sonoma Action Plan*, which outlines economic development strategies to pursue over the next few years to support local business and creative communities as they work to rebuild and brings back jobs lost going forward.

The challenges before the wildfires, including the tightest labor market in decades and a severe housing shortage, were worsened by the wildfires. The challenge is to ensure that the hundreds of businesses that applied for financial assistance in the wake of the disaster are able to secure technical and financial assistance necessary to rebuild and recover. According to FEMA's past experience with business recovery after a disaster, 40-60% of businesses that close as a result of a disaster never reopen.

COMMUNITY INPUT

Economic recovery was often discussed at the community meetings organized to get input on the Framework. The main themes expressed include support for workforce housing; the need to build sustainable career pathways for employees with a focus on construction; support for local businesses impacted by the fires; and ongoing promotion and advertising of Sonoma County as a tourist destination.

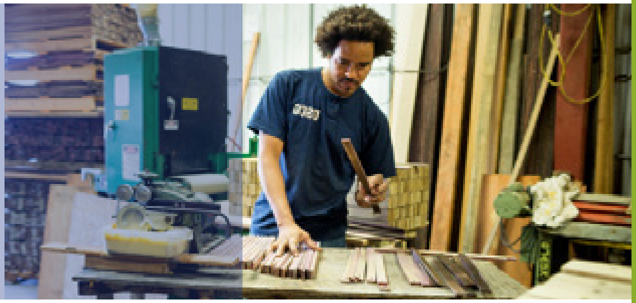
Community members consistently pointed out that the two critical areas of recovery, Housing and the Economy, are intricately linked. It is difficult to envision a healthy and thriving workforce without places for employees to live. Some suggested that leaders from different disciplines work together to create increased housing opportunities for residents in jobs that strengthen the economy. In addition, housing is needed for the local student population.

Community members expressed support for building career pathways and aiding employees in the workforce. One way to address this need is to expand partnerships with educational institutions, including middle schools and high schools, to improve education and training for trade and vocational programs, especially in the construction industry. Participants suggested apprenticeship opportunities, loans, grants, and free educational opportunities as steps to support students. Participants also said that workplace safety and affordable child care were important ways to support the workforce.

Community members support efforts to diversify and expand local business to create jobs and boost the local economy. One suggestion is to expand the economy beyond tourism and the wine industry and to foster and attract new manufacturing and technology companies. Supporting the cannabis industry was also noted as a way to achieve job growth. Some community members stated a need for increased wages given the high cost of living in Sonoma County. Others said that providing better and more affordable transportation options would be a good way to support workers and their families. Community feedback suggested that expanded broadband infrastructure would support local businesses.

The community also discussed strategies for bolstering tourism including advertising to let potential tourists know that Sonoma County is open for business. To house tourists, community members urge hotels to be rebuilt quickly. Rebuilding hotels will also increase job opportunities, especially for those that may have been previously employed by businesses that burned down. Community members also suggest encouraging residents and visitors to shop local, including using local contractors to rebuild.

> “We should reward employers for creating local jobs that pay well enough for employees to buy homes and apartments.”
>
> —COMMUNITY MEMBER



STRATEGY AREA 3

Economy

GOALS

1. Develop and support a high quality and equitable local workforce that contributes to rebuild efforts, resiliency, and long-term economic vitality in Sonoma County.
2. Support local businesses to thrive by ensuring access to resources, developing partnerships, and providing entrepreneurial support.

GOAL E1

Develop and support a high quality and equitable local workforce that contributes to rebuild efforts, resiliency, and long-term economic vitality in Sonoma County.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Create a Sonoma County Cooperative Education Program that combines classroom-based learning with structured work experience to develop a pipeline of skilled graduates into local firms.	🟩		
Establish a Talent Alignment Council comprised of private employers, government bodies, and educational institutions to evaluate current and forecasted talent shortages, as well as strategies for addressing needs and connecting career pathways.	🟩		
Develop a plan to train and recruit new construction workers that includes collaborating with the North Bay Construction Corps, a five-month after school training program for high school seniors interested in construction and the trades.	🟩		
Utilize grant funding from the California Employment Development Department to help train residents for in-demand construction jobs and promote opportunities in both English and Spanish.	🟩	🟩	
Support an Employer Housing Council, to encourage a variety of workforce housing solutions by collaborating with private sector employers and the Renewal Enterprise District to support opportunities for increased workforce housing, especially for construction and associated trade workers.	🟩	🟩	🟩
Continue to partner with and expand the Sonoma County Youth Ecology Corps to potentially include "green jobs" focused on vegetation management.	🟩	🟩	🟩
Establish a formal construction skills training center to support North Bay Construction Corps programming.	🟩	🟩	🟩
Improve transportation options for residents to connect with employers and essential services.	🟩	🟩	

Economy

GOAL E1

Develop and support a high quality and equitable local workforce that contributes to rebuild efforts, resiliency, and long-term economic vitality in Sonoma County.

ACTIONS COMPLETED:

✓ Received $3.2 million in Emergency Additional Assistance grant funding from the California Employment Development Department to assist Dislocated Workers affected by the October wildfires. Grant funding will serve approximately 700 individuals with individualized career services and an additional 200 dislocated workers with reemployment assistance.

GOAL E2

Support local businesses to thrive by ensuring access to resources, developing partnerships, and providing entrepreneurial support.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Assist public and private organizations in Sonoma County in accessing economic recovery loans and work with state and federal agencies, local banks, credit unions, and alternative lenders to support business lending and grants to qualified businesses and provide information in English and Spanish.	🟩		
Support "Open for Business" marketing effort and other targeted marketing efforts to let residents and visitors know that the County is up and running.	🟩	🟩	
Partner with Sonoma County Tourism and other partners to implement an economic recovery marketing campaign.	🟩	🟩	
Expand the GoSoCo campaign and support other shopping local shopping marketing efforts to increase public awareness of the economic benefits of shopping local.	🟩	🟩	
Collaborate closely with the agricultural community to identify specific economic recovery needs and programs.	🟩	🟩	🟩
Expand broadband infrastructure across the county.	🟩	🟩	🟩
Create Sonoma County AgTech Innovation and Manufacturing Alliance initiatives to facilitate local businesses as they work to address common issues.	🟩	🟩	🟩

GOAL E2

Support local businesses to thrive by ensuring access to resources, developing partnerships, and providing entrepreneurial support.

ACTIONS COMPLETED:

- ✓ Outreached to encourage employers to apply for SBA loans to recoup physical and economic damage.
- ✓ Continue to monitor additional resources that come available during recovery, such as the California IBank Disaster/Loan Guaranty Programs, EDA Revolving Loan Funds, and HUD funding and encourage employers to apply.
- ✓ Applied for Economic Development Administration grant to complete the design/engineering for broadband in specific unserved rural areas of the County. This project was developed with the Office of Recovery and Resiliency, Department of Transportation and Public Works, and Information Systems Department. The submitted application is for $605,500 to complete the design, engineering, and feasibility analysis of broadband in select locations.

Strategy Area 4

SAFETY NET SERVICES

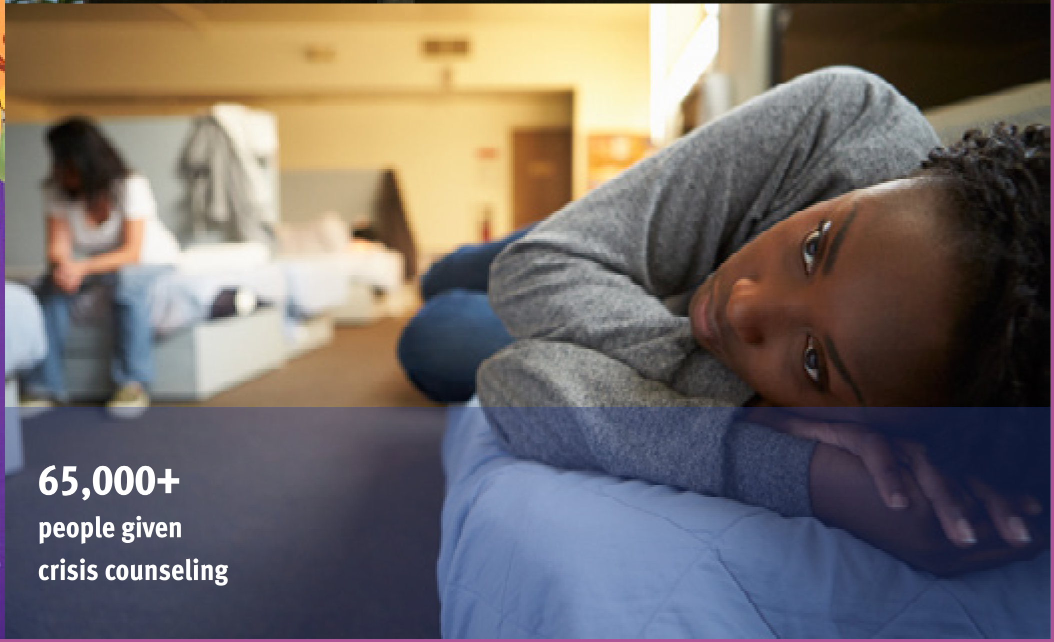
VISION

Sonoma County will restore and improve resiliency of health and social services systems, networks, and capabilities to promote equity, independence, and well-being for the community.

EQUITY

INDEPENDENCE

HEALING



65,000+
people given
crisis counseling

BACKGROUND

Sonoma County departments work together to provide services to meet community needs, especially those of individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking. Safety Net Services refers to services such as behavioral health, assistance with obtaining food and medical benefits, financial assistance, animal services and protection. Safety net service departments provide programs that help the community at-large while providing specialized services for seniors, children and youth, families, people with disabilities, and individuals who are low-income, and the homeless. Safety net services are provided in partnership with community organizations. Prior to the fires, safety net service departments were providing services with lean staffing and resources.

Sonoma County safety net services departments include the Human Services Department, Department of Health Services, Department of Child Support Services, Community Development Commission, Sheriff's Office, Probation Department, Public Defender, and the District Attorney's Office.

Impact of Fires on Safety Net Services. The October 2017 wildfires increased community demand for Safety Net Services staff and resource assistance. To respond to the immediate needs of the community in the wake of the fire, County safety net departments provided a range of services.

Safety net service departments oversaw the management of 41 shelters across the county to shelter displaced individuals and families. Mandatory evacuations during the fires resulted in over 100,000 individuals being displaced from their homes and local shelters served over 4,000 evacuees. Nurses, social workers, and behavioral health professionals from safety net departments provided medical, emotional, and social support to displaced residents and offered extended sheltering services for individuals unable to find housing after fire containment. Emergency Medical Services, within the Department of Health Services, provided response coordination, including assisting with evacuations, medical and health resources in shelters, and repopulating medical facilities. Staff also distributed supplies for displaced children, including diapers and formula to shelters and community organizations to help evacuees in need of these supplies. To support dislocated animals during the fires, Animal Services coordinated large animal sheltering in collaboration with the Sonoma County Fairgrounds and managed over 14,000 calls to aid residents locating displaced animals.

Safety net departments provided services to meet the needs of children, seniors, individuals with disabilities, individuals needing unemployment benefits, and undocumented residents. Safety net department staff coordinated safe and supportive housing for all children who were evacuated from Valley of the Moon Children's home, overseen by the Human Services Department, within one week from the start of the fires. Staff contacted at-risk In-Home Supportive Services recipients, Probation Department clients, and other clients to determine their circumstances and needs and provide them with necessary support. Departments ensured court services continued throughout the response period, including immigration defense services, despite courthouse evacuations. Staff assisted 4,700 individuals with disaster unemployment insurance through JobLink to support individuals whose employment and income were impacted during the fires.

To protect residents, staff investigated over 250 price gouging complaints and prepared to prosecute as needed. Safety net staff also opened two emergency childcare centers for emergency response workers and other community members to allow these individuals to continue working and help with disaster relief efforts.

Throughout the fires, community members were in need of up-to-date information. Safety net service department staff largely helped over 53,000 callers get information through the Emergency Hotline. To support local organizations and service providers serving community members and families, safety net department staff prepared information on impacts of trauma in families and children and shared these critical resources throughout the county. Safety net departments also coordinated the preparation of critical safety information to help evacuees who were returning home.

BACKGROUND

To support property owners who lost their homes to the fires, the Department of Health Services Environmental Health division collected and processed over 4,500 applications for the government sponsored Consolidated Debris Removal program.

In addition to these fire-related services, safety net departments continued to provide core, mandated services while managing full caseloads.

Community-based organizations also played a critical role. Local nonprofits coordinated food collection and distribution, managed donations, and coordinated volunteers. They were key in identifying and meeting the needs of undocumented community members, individuals with disabilities and others with access and functional needs, and individuals with limited English proficiency or non-English speaking.

Post-Fire Situation/Ongoing Efforts. People over 65 years of age and those with physical disabilities were disproportionately represented among the fire fatalities. The fires have increased demands from residents for safety net services, especially within underserved communities.

The Office of Recovery and Resiliency and the Departments of Health and Human Services engaged Harder+Company Community Research to talk to community organizations about post-fire health and human services. Harder+Company set out to identify recovery efforts and opportunities to strengthen partnerships. This information will be used to inform recovery planning and strengthen the network of safety net service providers.

Feedback obtained through these conversations also helped to inform the vision, goals, and activities of the Safety Net Services Recovery Framework.

CHALLENGES & OPPORTUNITIES

It is challenging for safety net service departments to meet the increased demand for services with current staffing levels. These departments will continue to search for opportunities to expand services through innovative funding by partnering with other departments and community organizations.

Harder + Company identified a number of opportunities and challenges to meet community recovery needs. One opportunity is to enhance the 2-1-1 system. The 2-1-1 system was strained by the number of calls it received during the fires. There were not enough call takers to meet demand and up-to-date information was not always available. Other 2-1-1 system models will be evaluated to identify opportunities to improve our local system. This will look at capacity and streamlined access to resources and services during and after a disaster.

Participants also identified the need for a centralized “one-stop-shop” for residents to receive updated information regarding recovery updates and services. This Framework identifies ways to partner with existing resources to expand services to meet community needs. Participants want to see the County work more closely with community-based organizations during recovery planning and to build greater trust and authentic relationships. In developing this Framework, the Office of Recovery and Resiliency met with over 80 community groups and plans to continue expanding that list to foster partnerships.

COMMUNITY INPUT

Acknowledging that many residents continue to struggle with emotional trauma from fires, community members shared the ongoing need to ensure the post-fire mental health and resiliency needs of the community are met. Free mental health services should be expanded, including trauma informed care. Animals and pets could be used for therapy. Creating spaces for healing could help serve mental health needs.

Building partnerships and improving coordination is essential to meeting the safety net services needs of the community. Working together is critical and every organization has a role to play in recovery. They also recommended improving the management of donations, goods, and matching volunteers to organizations looking for help. Participants suggested hosting more community workshops and events to bring people together and increase communication.

Community members also think it is essential to serve individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking, in recovery and disaster preparedness. Individuals who have historically experienced social inequities, including low-income individuals, individuals with disabilities, seniors, and non-English speakers need more attention and services, especially at evacuation shelters. Resources and information need to be culturally sensitive and available in Spanish.

> “We should give priorities to emergencies, so our Latino community has access to resources. So that these resources can be here during time of crisis.”
>
> —COMMUNITY MEMBER

GOALS

1. Enhance core County service capacity to address long-term recovery needs and prepare for future disasters.
2. Ensure the post-fire mental health and resiliency needs of the community are met.
3. Build capacity with cross sector partners and community members to improve coordination and communication.
4. Understand and address social inequities to advance opportunities for all.

GOAL S1

Enhance core County service capacity to address long-term recovery needs and prepare for future disasters.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Enhance capacity to manage disaster shelters with increased training opportunities and collaboration with community volunteer partners and jurisdictions.	■		
Develop a plan to ensure available resources and services at disaster shelter are accessible to non-English speaking and/or undocumented residents.	■		
Explore creation of contingency contracts with eligible food providers to provide healthy and nutritious food services during a disaster.	■		
Consider development of a contingency contract for coordination of food providers during an emergency, including an inventory and mapping of local food resources available throughout the county and nationally during disasters.	■		
Provide re-employment assistance for workers who have lost their jobs because employers' businesses were destroyed or impacted by fires.	■		
Develop a plan to set up emergency childcare facilities to allow emergency responders and community members to continue critical work needs.	■	■	
Continue housing related programs in Health & Human Services, including applying for appropriate housing grants.	■	■	■
Pursue education and outreach opportunities to inform residents about how to prepare for disasters, with a focus on individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking.	■	■	■

GOAL S1

Enhance core County service capacity to address long-term recovery needs and prepare for future disasters.

ACTIONS COMPLETED:

- ✓ The Sonoma County Workforce Investment Board (WIB) applied for and was awarded an Emergency Dislocated Worker Additional Assistance Grant from the California Employment Development Department for 18 months beginning March 1, 2018. This $3.2 million grant allows the WIB and Job Link to provide business-focused assistance in response to layoffs and/or businesses closing, including layoff prevention; and re-employment assistance for workers who have lost their jobs due to the fires.
- ✓ Developed an Urban Shield exercise to test sheltering capabilities on September 6, 2018 to provide hands-on opportunity for staff to set up a shelter, including a special medical needs area.

GOAL S2

Ensure the post-fire mental health and resiliency needs of the community are met.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Continue to provide crisis counseling, available county-wide through California HOPE, for residents affected by the fires.	■	■	
Partner with mental health professional associations, healthcare providers, funders, and nonprofits, to ensure continuity of services.	■	■	
Create a plan that addresses the short- and long-term integration of trauma-informed care in the community throughout various institutions, including schools, behavioral health services, and case management.	■	■	
Create communal healing spaces that open the conversation and destigmatize trauma, including town halls, healing clinics, or community events.	■	■	■

GOAL S2

Ensure the post-fire mental health and resiliency needs of the community are met.

ACTIONS COMPLETED:

- ✓ Received $1 million Initial Services Program grant from the State of California Department of Health Care Services to provide crisis counseling services in the shelters, at home site re-entry, at school re-entry, at the Local Area Assistance Center, and at community Town Halls.
- ✓ The California Department of Health Care Services committed $3.35 million to provide ongoing crisis counseling services (California HOPE).
- ✓ Received $1 million grant from Kaiser Permanente Northern California Community Benefit to continue the California Helping Outreach Possibilities Empowering (HOPE) program, which delivers mental health services targeting those affected by the wildfires in 2017.

GOAL S3

Build capacity with cross sector partners and community members to improve coordination and communication.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Expand “one-stop-shop” opportunities for residents to receive updated information and resources needed for recovery, which includes navigation assistance for financial advising, insurance claims, and rebuilding for those seeking to rebuild from the fires.	■		
Enhance services and capacity of 2-1-1 Sonoma County.	■	■	
Partner with community assessments and surveys and utilize existing community data to inform ongoing recovery priorities.	■	■	
Partner with community providers (hospitals, clinics, skilled nursing facilities, nonprofits, faith-based organizations, etc.) to develop collaborative disaster planning and preparedness efforts.	■	■	
Identify roles and responsibilities of community partners and the County as they relate to recovery activities.	■	■	
Strengthen Accessing Coordinated Care & Empowering Self Sufficiency (ACCESS) Sonoma County Initiative’s capacity to coordinate care delivery.	■	■	■
Develop a technology tool to enable cross-departmental coordination and assessment of improvements in the health, well-being and self-sufficiency of high needs clients as part of the ACCESS Sonoma County Initiative.	■	■	■
Ensure timely access to updates and services for residents who do not speak English by providing translation services and dedicate outreach staff to these communities during a disaster.	■	■	■

GOAL S3

Build capacity with cross sector partners and community members to improve coordination and communication.

ACTIONS COMPLETED:

- ✓ Created ACCESS Sonoma County Initiative to coordinate care delivery. ACCESS consists of a rapid-response, interdepartmental, multi-disciplinary Team (IMDT).
- ✓ Partnered with IBM to develop a multi-departmental database to support the work of ACCESS Sonoma County to identify target populations in need of services and track data metrics for success.
- ✓ Initiated discussions with key community partners including Rebuilding Our Community (ROC) Sonoma County to collaborate on One-Stop-Shop opportunities.

GOAL S4

Understand and address social inequities to advance opportunities for all.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Develop principles and guidelines to launch implementation of performance-based contracting to increase efficiency and effectiveness of safety net service delivery.	■		
Create a comprehensive community needs assessment using a vulnerability methodology that assesses disparities and needs related to health, well-being and self-sufficiency to direct investments, resources, and policy to address unmet needs.	■	■	
Leverage and utilize tools offered by the Government Alliance on Race and Equity (GARE) network to achieve racial equity and advance opportunities for all.[14]	■	■	■

---

[14] The Government Alliance on Race and Equity (GARE) is a national network of government working to achieve racial equity and advance opportunities for all. The Alliance is a joint project of the new Race Forward.

GOAL S4

Understand and address social inequities to advance opportunities for all.

ACTIONS COMPLETED:

✓ Gathered initial feedback from community partners towards development of contracting principles to improve community outcomes, reduce costs, strengthen accountability and create strategies that better incorporate evidence and outcomes into the contracting process.

Strategy Area 5

NATURAL RESOURCES

VISION

Sonoma County’s natural resources and working lands (i.e. soils, streams, groundwater, agricultural and biological resources) are healthy and productive. They are managed to support watershed and community resiliency and protect public health and safety, and contribute to enhanced ecological values, recreational opportunities, and economic vitality.

BALANCED ECOSYSTEMS

Cleared away burned debris and trees in combination with grazing and thinning projects

VITALITY

Rehabilitated over **2,000 acres** of land burned during the fires

HEALTHY GROUND WATER

BACKGROUND

The diverse ecosystems of our landscape continue to attract and shape resident and visitor experiences and support the local economy. The variety of our natural assets and the outstanding scenic beauty of our landscape provide sustenance and resources, and prompt tourism. Still, they also pose challenges and hazards.

Recent trends in rainfall, streamflow, and soil moisture, as well as fire occurrence and patterns, have identified vulnerabilities to our natural resources and communities. These have highlighted the importance of wildfire mitigation, flood prediction, and surface and groundwater supply reliability.

Various local plans, policies, programs and regulations are already in place to minimize exposure of communities, people, and property to hazards. The County Strategic Priority 'Healthy Watersheds' effort was initiated to improve natural resources and watershed conditions. Local Hazard Mitigation Plans for the County and Sonoma County Water Agency

WILDLAND-URBAN INTERFACE (WUI) are areas where homes are built near or among lands prone to wildland fire. The WUI is not a place, per se, but an area that meets a set of conditions.

(Sonoma Water) are in place. The Sonoma County General Plan 2020 Land Use Element recognized limitations to development in areas that are constrained by the natural limitations of the land. The Sonoma County Code on fire safe standards was enhanced to include reduction of hazardous vegetation and combustible material. The Community Wildland fire Protection Plan (CWPP) identified reduction priorities related to Wildland/Urban Interface (WUI) wildfire issues. Fire Safe Sonoma (FSS) worked with the community on education and preparedness efforts. County review and decisions regarding new development and remodels allowed site and structural hazards to be assessed, avoided, or mitigated. These efforts continue to strengthen our communities and prioritize preparedness and resiliency against natural and human-caused hazards in the future.

Impact of Fires on Natural Resources. In addition to the tragic loss of life and the destruction of homes, businesses, and public infrastructure from the October 2017 fires, wildlands and working landscapes were also burned. Several short-term adverse impacts occurred and some potential long-term changes may result, although natural systems often recover adequately with limited assistance.

State agencies formed a Watershed Emergency Response Team (WERT) to conduct an initial rapid assessment of post-fire geologic and hydrologic hazards to life-safety and property (collectively known as Values at Risk or VARS). The immediate focus was on protection of life and property, along with damage that would affect the flow of water, increase erosion and sedimentation and/or the potential for landslides, debris flows, and mudflows. The WERT reports identified over 200 VAR locations within the perimeters of the Nuns and Tubbs fires. Additional VARs were identified and assessed by technical specialists from the California Department of Fish and Wildlife, the California Department of Water Resources, and the North Coast and San Francisco Bay Regional Water Quality Control Boards working in conjunction with local agencies and Cal Fire. This group of technical specialists also evaluated the potential imminent threat to water quality.

BACKGROUND

Wildfire can have profound effects on watershed processes, and may modify the rainfall and runoff factors influencing erosion and sedimentation and stream channels for several years. Wildland fires may have long-term impacts on the biological environment, but there are complex relationships and interactions that make it difficult to predict and understand all effects. Some benefits to fire-adapted or fire-dependent plant species may occur, particularly from low-intensity, frequent burns. Severe, catastrophic fires may result in a complete alteration of the plant species and community. The direct or indirect effects on special status biological species have not been predicted.

Post-Fire Situation/Ongoing Efforts. Lands damaged by the fires and fire suppression efforts will adjust and respond through natural processes. Some areas will need physical rehabilitation and restoration, active management, monitoring and follow-up measures. Such efforts would be targeted to prevent runoff of toxic materials and sediments into drinking water supplies and sensitive habitats; to minimize the threat of flooding, landslides, and other safety hazards; and to facilitate ecosystem recovery that trends toward an improved, more resilient condition.

Sonoma County has been leading the local recovery effort, working closely with other local, State, and Federal agencies to address the overall impacts of the fires, including those to natural resources. The County has been co-leading the Local Agencies Watershed Task Force (WTF), with representation from several County agencies and departments, including Sonoma Water, the Agricultural Preservation and Open Space District (Ag + Open Space), Permit Sonoma, and Sonoma County Regional Parks (Regional Parks).

Ag + Open Space performed and supported response and recovery on their owned lands and easements. It is conducting several fire recovery and resiliency research and planning studies and has integrated these considerations into its programs. Ag + Open Space also provides technical input to winter storm hazard analysis and forest management and stream system condition targets. Ag + Open Space and Sonoma Water fund the Natural Resources specialist working in the Office of Recovery and Resiliency.

BACKGROUND

Sonoma Water coordinated with numerous local state, and federal agencies during response and early recovery, interacting with the Federal Emergency Management Agency (FEMA), leading a study (in partnership with Pepperwood, Ag+Open Space and ORR) conducted by the USGS to characterize post-fire soil conditions, and the National Weather Service (NWS) to improve storm hazard forecasting and alerts. They prepared cautionary signage and mailings during the first post-fire winter. Sonoma Water field staff also worked with Cal Fire during early recovery efforts to removed severely damaged vegetation along public roadways.

Permit Sonoma has overseen storm water quality throughout fire response and as rebuilding proceeds, to support protection of water quality consistent with the MS4 permit. In coordination with other partners in the Watershed Task Force, they have been educating landowners, homeowners and contractors about their responsibilities and the resources and options to help protect streams and water resources.

The Department of Agriculture/Weights & Measures (Agricultural Commissioner) helped secure permission and facilitate special logistics to allow access for essential functions on working lands during the fire evacuations.

University of California Cooperative Extension (UCCE) provided oversight and evaluation of temporary livestock sheltering and performed fire damage assessments related to FSA claims. UCCE immediately initiated and is continuing to research several key post-fire public health, agricultural, and ecosystem concerns.

CHALLENGES & OPPORTUNITIES

Sonoma County has the opportunity to identify and target priority areas for active management of vegetative structure and fuel loadings to address potential wildfire behavior, reduce wildfire losses, ensure firefighter and public safety, and improve landscape resilience to fire, flood, and drought. These efforts will build upon our past investments in data collection, scientific studies, and advanced technology applications. Effective and efficient fuel load reduction and natural lands management that make wise use of financial and human resources requires a clear and objective understanding of forest[15] management issues and priority locations. Active management of public and private land holdings in high priority areas would be key to reducing hazardous fuels in and around communities.

Science-based outreach and education about forest health and forest management will be needed to develop and implement solutions, particularly since the forest lands in Sonoma County are primarily under private ownership. Many private landowners are unaware of the techniques and the resources to implement forest health protection measures. Treatment

WILDLAND-URBAN INTERFACE

The Federal Register provides guiding definitions of various types of Wildland-Urban-Interface (WUI). In general, WUI conditions are where people and their development meet wildland fuels.

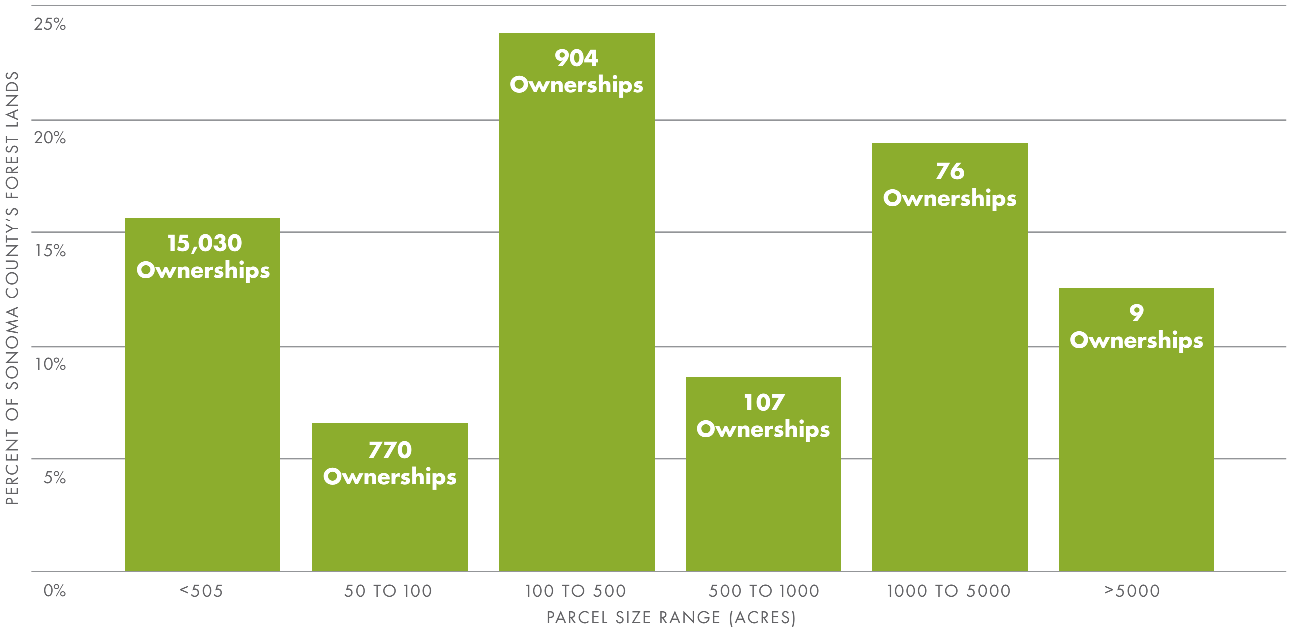
INTERFACE WUI is where the developed community has a clear edge, there are more than three structures per acre and population densities are over 250 people per square mile.

INTERMIX WUI are lands with structures scattered across wildland areas, as few as one per 40 acres, and population densities are low (less than 250 people per square mile).

---

15 Throughout this document, the term “Forest” is used to refer to all woody vegetation types in our vicinity including forests, woodlands, savannas, and shrub land.

methods include combinations of wood product harvesting, mechanical thinning, and grazing, invasive species removal and prescribed burning. Many of these 'private' forested lands are within the 'State Responsibility Area' (see map in Community Preparedness section) where Cal Fire has primary financial responsibility for preventing and suppressing fires. Cal Fire can engage in cooperative projects with private landowners. The County does not have National Forest lands, which limits our options to enter agreements with the federal government to jointly accomplish watershed work.



*Forest lands are defined as those with conifer, mixed-conifer-hardwood, or hardwood forest in the Sonoma County fine-scale vegetation map.

CHALLENGES & OPPORTUNITIES

Sonoma County has large land-holdings, small parcels, home sites, and lots—all of which need to be dealt with differently. While there are many opportunities, "there are no simple solutions to creating a resilient forest, and tradeoffs accompany every form of fuels treatment... There will be needs to identify and make policy and regulatory changes to streamline implementation of the Forest Carbon Plan."[16]

Substantial obstacles to removal of small-diameter trees and brush that are part of excess fuel loads include a lack of economic uses and infrastructure in the region. However, recent actions at the State level are strengthening policy, regulation, and funding support for improved forest health and wildfire prevention within the context of climate change. A Governor's Forest Management Task Force was established in 2018 of state, local, tribal, and federal agencies working in partnership to increase the rate of forest treatments and expand wood product markets by region. They are seeking ways to do this in alignment with the California Forest Carbon Plan. Recent legislation also provides funding for forest health, fire prevention, and fuel reduction over the next five years, reduces barriers for non-industrial fuel treatments related to defensible space, and prompts policy and regulation changes that will support land use decisions forming and maintaining fuel breaks and greenbelts.

There are no simple solutions to creating a resilient forest, and tradeoffs accompany every form of fuels treatment. There will be needs to identify and make policy and regulatory changes to streamline implementation of the Forest Carbon Plan.[16]

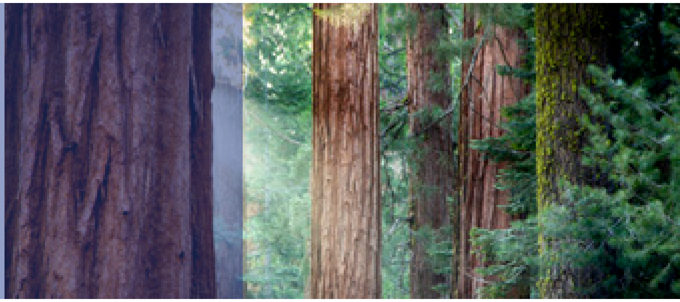
[16] Forest Climate Action Team. May 2018. California Forest Carbon Plan: Managing Our Forest Landscapes in a Changing Climate. Sacramento, CA. 178p

COMMUNITY INPUT

The Natural Resources area of the Framework has benefited greatly from outreach from local non-governmental organizations and interest groups. It has also benefited from feedback from the general public. The input received has helped shape our vison statement and focus on key high-level goals. Community comments have been consistent with and supportive of the general goals and proposed actions. The forest fuel load reduction goal was rated very important and the community expressed a desire for effective, science-based decisions and prioritization of actions. The community also supported the need for education on the importance of vegetation management on public and private lands. The public also requested focused outreach in WUIs, use of tribal knowledge, building public trust, and supporting landowner actions. The public also rated stream system enhancements very important. The range of ideas and suggestions included the need to protect and monitor natural and working lands; potential changes to stream setbacks or buffers; desires to link science with land use policies and patterns; engagement with volunteers, community groups, and NGOs in planning and implementation; and financial and regulatory assistance for riparian landowners. Feedback also included a strong desire that science-based public information and education inform decision-making about land use, fuel load reduction, and watershed management. Several suggested phasing such programs in to reduce burden on survivors of the 2017 fires.

> “Sonoma County has large land-holdings, small parcels, home sites, and lots—all of which need to be dealt with differently.”
>
> —COMMUNITY MEMBER



GOALS

1. Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.
2. Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.
3. Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

GOAL N1

Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Develop strategic, proactive fuel load reduction and landscape resiliency priorities using key criteria (e.g., wildfire risk, public health and safety, water supply needs, economic impacts, and ecosystem sensitivity) using decision-support tools with objective data and expert advisors.	🟦	🟦	
Evaluate options for active management of forests, woodlands and shrub lands on public and private lands for fuel and fire breaks that decrease risks to developed communities.	🟦	🟦	
Strengthen regional forest stewardship to improve leadership, oversight, training, and funding of fuel reduction projects, improve data resources and sharing to support environmental protections and facilitate effective fuel reduction opportunities for landowner and community-based projects.			🟦

GOAL N1

Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.

ACTIONS COMPLETED:

- ✓ Various County agencies and organizations have begun ongoing efforts to support more sustainable local and regional forest management, including:
  - Participating in the Governor's Forest Management Task Force (FMTF), the Rural County Representatives of California (RCRC), and the North Coast Resource Partnership (NCRP). Our participation will elevate our profile, keep us up-to-date on regulatory, funding, and policy issues, and capitalize on lessons learned elsewhere.
  - Engaging independent experts to identify and evaluate organizing options and economic strategies that create and maintain resilient natural and working lands effectively, especially given the high percentage of private forest land ownership in the County.
  - Joining collaborative efforts of local, state, tribal and federal agencies with landowners and community groups to train, test, and implement fuel reduction using a wide range of treatment methods.
- ✓ The Ag + Open Space District initiated several monitoring, research, and preparedness improvement efforts, including a priority focus on fuels reduction for all properties, that build upon existing grazing operations, and is participating in vegetation management discussions throughout the county. They were awarded a National Aeronautics and Space Administration (NASA) grant to evaluate the response of working and natural lands to the fires, including burn severity correlated to vegetation cover type.

GOAL N1

Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.

ACTIONS COMPLETED (continued):

- ✓ Sonoma Water has incorporated consideration of fuel load reduction benefits into the multi-benefit ratings within Storm Water Resource Plans that prioritize potential projects for state funding requests.
- ✓ Regional Parks has expedited grazing and thinning projects to reduce fuel loads, is collaborating with the Mayacama Golf Club on a fuel break, and pursuing funding to allow: improvements to grazing infrastructure; retrofitting to improve fire protection of facilities and emergency access; and, adding fire management in the stewardship plans for each park.
- ✓ The Agricultural Commissioner continues to support invasive species control and management on private lands disturbed by the fires and/or firefighting efforts. It is conducting outreach with pest control businesses to ensure compliance with applicable pesticide regulations within the fire areas during rebuilding and vegetation recovery.
- ✓ UCCE convened several workshops focused on forest and land management strategies to ensure a resilient rural landscape including discussions on potential prescribed fire and grazing programs and specific fire preparedness for home sites and large working parcels. The UC Master Gardeners are partnering with other agencies to apply fire and drought research to our local setting, offer trainings, and facilitate implementation of resilient landscaping principles as the fire-damaged areas recover.

GOAL N1

Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.

ACTIONS COMPLETED (continued):

- ✓ UCCE has pursued studies and funding regarding the influence of varied land management practices on burn severity and fire recovery, and conducted surveys about grazing management, fire science, ecosystem services valuations, and the healthy soil initiative.
- ✓ Easements and acquisition efforts by Ag + Open Space since the 2017 fires included burned parcels within the WUI that have appropriate ecosystem and fire hazard reduction benefits.
- ✓ Under a recently awarded Cal Fire grant, TPW and FES will undertake a project to assess fuel risks and tree mortality along 83 miles of public right of way in northwest Sonoma County, treat 30 high priority miles, and provide chipper services for fuels reduction by private parties.

GOAL N2

Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.

PROPOSED ACTIONS:	**0-1 YEAR THROUGH 2019**	**2-3 YEARS 2020-2021**	**3+ YEARS 2022+**
Assess Mark West Creek and other priority burned watersheds to analytically identify and rank recovery and rehabilitation needs and prepare for possible secondary hazards over the next few winters.	■	■	■
Incorporate fire, flood and drought resiliency considerations in land use decisions involving riparian zones and functional riparian zone protection or enhancement incentives and regulations.		■	■
Prioritize improved resilience of Wildland Urban Interface (WUI) areas to fire and/or other natural hazards in open space land protection acquisitions and easements as well as in community separator designations.		■	■
Improve stream corridor conditions via outreach, training, and voluntary actions modeled on successful stream maintenance and habitat restoration programs, based on scientific studies.	■	■	■

GOAL N2

Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.

ACTIONS COMPLETED:

✓ The ORR has worked directly with quasi-government and nonprofit partners to assist private property owners with containment BMPs to minimize the risk of debris and toxic material runoff to streams and rivers in early 2018. Efforts with erosion and sediment control BMP installations and maintenance have continued as the 2018/19 rainy season approaches.

✓ Ag + Open Space actively assessed, secured, managed and rehabilitated over 2,000 acres of lands it owns that burned. They removed burned structures, infrastructure and hazard trees, replaced burned culverts, and took measures to prevent toxic runoff and protect public safety. They continue to work with easement landowners to support their recovery.

✓ Ag + Open Space is conducting a countywide evaluation of functional riparian corridors that will support analyses of post-fire landslide and flooding potential, the Vital Lands Initiative, and serve as input to groundwater management and salmonid recovery.

✓ Burned debris, hazards, and sediment were removed within the Sonoma Water right of way, and deployed erosion and sediment best management practices (BMPs), performed stream gauging and water quality sampling during the initial rainy season after the fires.

GOAL N2

Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.

ACTIONS COMPLETED (continued):

- ✓ Permit Sonoma is overseeing storm water quality through storm water protection programs for rebuilding areas and areas in the burned zones where construction has not yet begun. They are coordinating with the Regional Boards, receiving and investigating citizen complaints, providing information regarding BMP installation methods to property owners and contractors, and doing water quality testing.
- ✓ Regional Parks cleared burned debris to re-open 33.4 miles of trail for public access, removed 488 hazard trees, repaired scores of damaged culverts, bridges and retaining walls, and installed erosion and sedimentation BMPs including 7,500 feet of wattles and log erosion barriers in the immediate aftermath of the fires. They have stabilized slopes and promoted revegetation in locations vulnerable to catastrophic debris flow.
- ✓ In the immediate aftermath of the fires and during rebuilding, TPW removed fire-damaged drainage infrastructure, including culverts, and installed and maintained temporary BMPs to protect against flooding, erosion and sedimentation.
- ✓ Sonoma Water, Regional Parks, Ag + Open Space have participated as part of the Watershed Task Force to conduct supplemental, post-fire assessments in key stream corridors prior to the onset of the 2018/19 rainy season. The assessments will establish baseline conditions to help us identify priority locations for storm patrols and sites that need BMP installations or maintenance.

GOAL N2

Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.

ACTIONS COMPLETED (continued):

- ✓ Regional Parks is pursuing funding for stabilizing and re-vegetation of Hood Mountain sites that burned or were fire and damaged by fire suppression efforts to prevent flooding, erosion, and debris flows that could damage areas downstream.
- ✓ TPW, Sonoma Water and other members of the Watershed Task Force are working to assess the technical, permitting, and financial feasibility of reusing some of the hazardous burned trees along public right of ways as beneficial large wood components in aquatic habitat restoration projects.
- ✓ The many County family departments, other public agencies, and community partners in the Watershed Task Force and Watershed Collaborative continue to coordinate and implement mitigation, monitoring, rehabilitation and restoration that protects water quality and other natural resources in and downstream of areas burned in the October 2017 fires.
- ✓ Fire-damaged hillsides and stream corridors, along with firefighting scars, are being assessed for their vulnerability to potential secondary fire hazards such as flooding, erosion, and sedimentation. These types of post-fire concerns often worsen during the second or third year after an event. Information to guide landowner preparedness, protect storm water during rebuild, inform storm patrols and support adaptive response is being developed, updated, and distributed widely.

GOAL N3

Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

PROPOSED ACTIONS:	0-1 YEAR THROUGH 2019	2-3 YEARS 2020-2021	3+ YEARS 2022+
Nurture community awareness and understanding of our fire-adapted landscape and the value of becoming a resilient fire-adapted community using results of post-fire monitoring and research.		■	■
Continue to collect best available scientific information to inform policy development and county investments that protect watersheds and developed communities from natural disasters.	■	■	■
Consider scientific data about the condition, fire vulnerability, and relative impacts of the 2017 fires on natural and working lands during updates to land use policies, plans, and regulations.		■	■
Improve natural resources hazards and resiliency data management and accessibility between governments, educational institutions, other organizations and the public.	■	■	■

GOAL N3

Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

ACTIONS COMPLETED:

- ✓ The Watershed Collaborative, a group of over 60 organizations, convened to collectively capture initial recovery and resiliency priorities, issues, and data needs. As a result of these discussions, Ag + Open Space generated a report *Living in a Fire Adapted Landscape: Priorities for Resilience, Sonoma County Natural and Working Lands.*
- ✓ Ag + Open Space is actively partnering with other County agencies, non-governmental organizations, resource conservation districts and academic organizations on various research projects and funding requests to evaluate factors affecting fire damages and recovery success.
- ✓ Sonoma Water expanded the stream gauge and precipitation monitoring network and led the development of the "One-Rain" web interface. Access to real-time data improves our ability to assist various jurisdictions as we coordinate storm tracking and monitor potential secondary hazards. Sonoma Water is funded to install one X-Band radar, and has applied for HMGP support to additional X-Band radar to improve storm and flood forecasting. These can be linked to other improvements in meteorological data networks that help address permitting conditions for vegetation management via prescribed burning.

GOAL N3

Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

ACTIONS COMPLETED (continued):

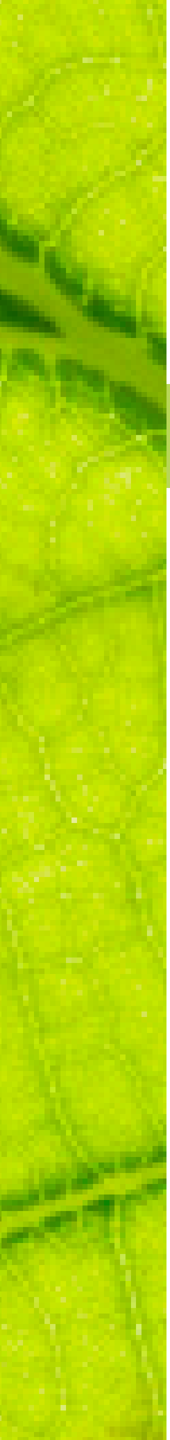
- ✓ Sonoma Water has expanded the water quality monitoring programs (with the U.S. Geological Survey and the Lawrence Livermore National Laboratory) to include research on the risks of potential fire-related toxics and/or impairment filtration naturally provided by the river bed. They are leading studies of post-fire soil, runoff and debris flow hazard changes working with the U.S. Geological Survey, Pepperwood Preserve, California State Parks, and Regional Parks.
- ✓ Sonoma Water started pilot programs such as the FireSmart Lake Sonoma project to gather data, conduct outreach and education, and support landowners with fuel reduction and forest management planning and implementation. These programs, in conjunction with the initial fire camera network, the UCCE prescribed fire and grazing workshops, and potential CWPP development to help protect Lake Sonoma, a critical water source watershed.
- ✓ Regional Parks is pursuing CALFIRE Fire Prevention grant funding to support a comprehensive fire planning effort for all parks and open space preserves in the county.
- ✓ Permit Sonoma has applied for HMGP funding to conduct planning studies and update hazard maps, including site specific studies of the Rodgers Creek Fault zone that will be integrated in the Sonoma County LHMP.

GOAL N3

Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.

ACTIONS COMPLETED (continued):

- ✓ Regional Parks has provided public access and interpretation tours of burned landscapes, including the Nature Heals series for mental health and community learning. They have installed a fire interpretive trail at Shiloh Ranch Regional Park and are facilitating new monitoring, research and post-fire ecological studies at various sites.
- ✓ The Agricultural Commissioner has gathered agricultural disaster information about the effects of fire on agricultural production and the resilience of agricultural lands. This information will improve our understanding of the role of various land cover and conditions, and potential recovery and rehabilitation needs working lands damaged by the fires.
- ✓ UCCE collaborated with researchers and organized citizen-science projects to verify the safety of backyard garden produce, eggs, and related air-quality during and immediately following the fires. They also quickly developed and distributed several science-based technical guides for landowners and community members potentially affected by the fires.
- ✓ The recent Cal Fire grant award for fuels assessment and reduction in northwest Sonoma County will also support FireSafe Sonoma participation to lead landowner engagement, outreach and coordination in those communities.



NEXT STEPS

OVERVIEW

The collaboration between the community, partners, other agencies and the County during the development of the Framework was an important first step to set all of us on a path to recovery and resiliency. In the next phase, under the leadership of the Board of Supervisors, the Office of Recovery and Resiliency will oversee the implementation of proposed actions. A compiled list of all the proposed actions captured during the development of the Framework is posted on the Office of Recovery and Resiliency website in Appendix A.

FUNDING

Like other local governments, the County faces ongoing funding challenges to maintain the level and quality of basic services provided to County residents. The cost of response activities to ensure public safety and continuity of services during and immediately after the October 2017 fires strained resources further. Federal aid is available and anticipated to at least partially reimburse County general funds for response activities. However, funding for most of the recovery efforts including the intermediate and long-term actions described in this Framework is still to be determined.

With the Presidential Disaster Declaration issued on October 10, 2017, the County of Sonoma became eligible for federal disaster assistance funding through the Federal Emergency Management Agency Public Assistance and Hazard Mitigation Grant Programs, and the U.S. Department of Housing and Urban Development Community Development Block Grant Disaster Recovery program. Some of the actions in the Recovery and Resiliency Framework will be funded by these programs.
The County is also pursuing other disaster recovery funding available through Economic Development Administration, an agency within the U.S. Department of Commerce, and the California Climate Investments Fire Prevention Grant.

Grants Steering Committee. A Grants Steering Committee represented by County departments and County Administrator's Office staff was formed to identify and prioritize projects that are eligible for federal grant funding. A charter to define the purpose of the Grants Steering Committee for disaster recovery grants and other grants is being developed so that there is a clear understanding of the Committee's long-term scope and role.

Departments submitted federal grant pre-applications and a subset of these were deemed eligible for funding. With input from the Board of Supervisors, the Grants Steering Committee is moving forward to apply for funds based on a variety of factors, some that are out of the County's control. One factor is the County's capacity to handle multiple applications and projects given available resources to dedicate to grant efforts. A number of applications for federal funding were submitted prior to publication of this Recovery and Resiliency Framework. Federal grant processes are lengthy and complicated and will take place over the next few years. The Office of Recovery and Resiliency will continue to coordinate federal grant activity with County departments and manage and monitor efforts in different departments to meet key federal grant deadlines and to seek reimbursement when appropriate.

The Office of Recovery and Resiliency will continually investigate funding opportunities and work to leverage available resources to support actions in this Framework. The Office of Recovery and Resiliency has the primary responsibility for tracking and reporting all recovery grant activity to the Board of Supervisors. A grants tracking worksheet will be updated on a regular basis and shared with County leadership. The worksheet will be posted on the Office of Recovery and Resiliency website for public accessibility.

IMPLEMENTATION APPROACH

Board Approval. The Board's approval of the Framework does not authorize appropriations or represent project approval of the proposed actions in the Framework. Like County Capital Improvement Plan projects, proposed recovery projects will be brought to the Board of Supervisors for consideration as part of the annual County budget approval process. Some recovery project requests may occur off cycle, such as those with timelines tied to other sources of funding, like external grants, or those that do not require General Fund appropriations.

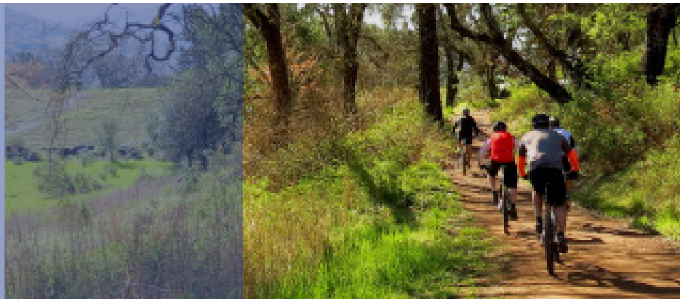
Implementation Planning. Upon the Board's approval of proposed recovery actions, Office of Recovery and Resiliency staff will work closely with department leaders to support the development of more detailed implementation plans. County department leaders will have the most critical role in fully defining and implementing the actions. Many actions will need to be implemented in phases and coordinated with other actions. Some actions will require CEQA review. Timelines will be based on many factors including partner and community input, workforce capacity and availability, funding availability, funding process timelines, and effective coordination with County partners.

NEXT STEPS

Ongoing Coordination. The Office of Recovery and Resiliency and County department leads will set regular, ongoing coordination meetings to ensure continued engagement and alignment with recovery goals. This level of coordination will allow Office of Recovery and Resiliency staff to be informed of project status and any changing circumstances. It will also ensure ongoing coordination with community partners, other agencies, and city leaders by continuing to build relationships and developing a formal plan for optimal, effective interaction. The plan will define where coordination is needed, who should participate, and in what ways coordination is most relevant and productive.

Data Tracking. The Office of Recovery and Resiliency will also partner with department and project leads to track progress, ensure data collection especially for grant reporting compliance, and continually assess workload capacity and other factors critical to project success. In cases where pertinent data is collected by outside organizations, the Office will work with the organization to gain access.

Performance Indicators. Establishing key performance indicators to enable the County to measure progress towards recovery and resilience goals will be a focus in the next phase of Framework development. Some work has already been completed in this area, though some may need to be re-evaluated to apply a resiliency lens. Key indicators and metrics will be used to report progress to the Board of Supervisors and the community.



NEXT STEPS

Reporting on Recovery Action Progress. Communicating the status of actions to the public, Board of Supervisors, and community partners is an important part of ongoing engagement with stakeholders. Proactive reporting also promotes government accountability and transparency. The Office of Recovery and Resiliency will continue to provide updates to the Board of Supervisors at regular Board meetings on the status of recovery efforts and implementation of prioritized actions. These updates will also be posted on the Office of Recovery and Resiliency website. The updates will note key milestones, and highlight unanticipated issues and dependencies, grant and funding information, and organizational effectiveness.

Annually, a more formal progress report on actions will be presented to the Board for review. The report will generally be issued following the County's annual budget process in June to allow the report to reflect new funding approved for Recovery Framework actions. The report will provide a County-wide, cross-department view of progress towards resiliency goals. Changes in risks and challenges will be reflected especially if common issues across departments and projects are observed that suggest changes in policy or strategies.

Updates to the Recovery Framework. The Framework is a living document. As actions are completed and new ideas, constraints, or funding opportunities emerge, the list of Proposed Actions will be updated as needed. When revisions to the list of proposed actions are necessary, Office of Recovery and Resiliency staff will work with departments and other partners to re-prioritize, add or revise actions based on changing dynamics. Once a year and initially after several projects are implemented, the Office of Recovery and Resiliency will jointly review the effectiveness of the implementation process and may recommend improvements to the overall Framework.

The Grants Steering Committee was formed to identify and prioritize projects that are eligible for federal grant funding

APPENDICES

APPENDIX A: POTENTIAL ACTIONS

Visit www.sonomacounty.ca.gov/ORR for the list of potential recovery actions. This list is a range of potential future actions that, if implemented, could advance the County toward resilience. They reflect the input received during the County Community Meetings, Board of Supervisors workshops, working group and task force collaboration discussions, and partner convenings. Implementation of any potential actions may require additional formal review processes.

APPENDIX B: COMPILED & ANALYZED COMMUNITY SURVEYS & NEEDS ASSESSMENTS

Many organizations and community groups conducted recovery-related surveys since the October 2017 wildfires. The data collected through these efforts augments the County's understanding of the community's needs, interests and opinions. Below is a list of surveys and needs assessments that were references for Recovery and Resiliency Framework development.

First 5 Needs Assessment

Wildfires and Health Outcomes Survey

APPENDIX C: COMMUNITY & OTHER PARTNERS

Many community and other partners provided support and initial input to the Recovery and Resiliency Framework development process. Since early June 2018, the Office of Recovery and Resiliency began tracking the list of groups, businesses, nonprofit organizations, stakeholders and outside agencies and public entities that Office staff have engaged directly. From these discussions, future coordination and collaboration is planned to promote community preparedness and resilience. The list below will be updated at www.sonomacounty.ca.gov/ORR.

COMMUNITY PREPAREDNESS & INFRASTRUCTURE

Response on importance of goals in this area
(1 = Not Important; 5 = Very Important):
Establish a comprehensive warning program: **4.6**
Redesign emergency management program: **4.2**
Build/sustain community preparedness programs: **4.9**
Provide continued County services in a disaster: **4.8**

Theme comments (in order of number of responses):

Warning Systems

- Publicize how community gets warnings
- Sirens, vibrations, multiple languages
- Warnings not using tech equipment (sirens, phone trees, door-to-door, bullhorns)
- Use social media and expand Nixle
- Streamline notifications
- Take responsibility away from County
- Alarm telemetry

Communication During a Disaster

- One-stop resource
- Ensure there are sources for people without technical resources
- Ensure communication in multiple languages, to people with disabilities, and underserved populations
- Work with radio stations
- Publicize where public should go for information
- Use HAM radios

Evacuation Routes

- Multiple routes pre-identified for each address
- Public education and trainings
- Keep established routes clear of vegetation and vehicles
- More traffic controllers in an emergency
- Require developers to provide multiple routes

Vegetation Management

- Enhance County ordinance
- Work across jurisdictions
- Increase enforcement and inspections
- Provide hardened landscape options and funding for property owners to comply
- Require landscape plans for regulatory review

Educate the Public

- Conduct public workshops on what emergency papers will be necessary in a disaster
- Better protected and back-up power supplies
- Shelter locations
- Home inventories
- Differentiate response for different disasters
- How to live in fire hazard area
- How to be self-reliant

Community Emergency Preparedness

- Prepare/coordinate plans/trainings for schools, government, hospitals, and business staff
- Work across jurisdictions and languages
- Work with senior centers, youth groups, schools, churches
- Provide emergency kits to low income residents
- Sponsor neighborhood events and preparedness packages
- Provide training to neighborhood response teams/CERT/ICS
- Provide information and training on COPE/Neighborhood Watch/Know Your Neighbor/Get Ready preparedness programs
- Conduct drills of neighborhoods

Shelters

- Need medical services
- Crisis communication coordinator (one position for all shelters)
- Establish locations pre-disaster
- Need additional facilities
- Pre-disaster locations, staffing, MOUs
- Plans for elderly and people who are ill
- Multiple languages, animal sheltering

Miscellaneous

- Modernize/fully fund EOC, clearly defined roles
- More cell towers
- Archive information on lessons learned from 10/18
- Annually review Recovery Plan
- Link Recovery Plan to County's Hazardous Mitigation Plan
- Designate staff to agencies involved in response/recovery
- More information to outer areas of the County (Sonoma Valley, north of Healdsburg)

HOUSING

Response on importance of goals in this area
(1 = Not Important; 5 = Very Important):
Attract new and expanded funding: **4.29**
Reduce permit processing times for housing construction: **4.27**
Utilize County-owned public property to support appropriate infill development: **4.8**

Theme comments (in order of number of responses):

Affordability/Availability

- Provide more housing/housing availability
- Create affordable housing
- Provide workforce, low-income, and senior housing
- More farmworker housing
- Build student housing
- Find housing projects that are not moving forward and find solutions to what is keeping them from being built
- Concerns that the marketplace won't achieve affordable housing
- Regional communication and collaboration countywide
- Concerns about price gouging
- Concerns about people being dislocated as a secondary effect of the fires
- Provide temporary housing while the fire-damaged homes are rebuilt
- Integrate housing strategies across all jurisdictions countywide
- Provide affordable rental housing, both multi-family and single family
- Concerns about achieving 30,000 units in five years being impractical

Right Location/Right Product

- Build housing based on the already approved General Plans countywide
- Use the General Plan update process to help meet resiliency goals
- Allow smaller housing types
- Provide a range of multi-family housing types
- Convert existing buildings to provide more housing
- Locate housing in urban areas and near transit
- Automobile independence by design
- Locate housing away from fire impacted areas and using that to create job opportunities in other areas of the County
- Consider building smaller homes
- Build housing within city centers
- A balanced approach to housing that is thoughtful
- Build green housing that is climate smart
- Build more ADUs that can be rented
- Allow large lot areas to have in-fill housing in all jurisdictions
- Concerns that there would not be adequate infrastructure such as water and roads for 30,000 units

Lower Cost/Ease to Rebuild

- Having policies that lower housing costs
- Having faster, simpler permitting
- Being more permissive with key housing issues
- Control cost of construction in all jurisdictions
- CEQA reform needed
- Reduce the code standards and “red tape” for disaster recovery rebuilds
- Lowering fees for housing
- Allow tiny homes on wheels
- Concerns about conflicting “safe landscaping” requirements

Maintaining Standards/Higher Standards

- Address key housing issues through stricter regulations
- Increase fees to pay for affordable housing was a strategy
- Maintain CEQA where appropriate
- Regulate vacant housing to create greater occupancies countywide
- Use rent control as a way to achieve affordable housing
- Require insurance to pay 100% of the rebuild cost
- Keep greenbelt separators between communities

HOUSING (continued)

Safety

- Fire and other disaster safety concerns with additional housing
- Rebuilding in WUI concerns for future fires
- Prioritize "fire safe" housing projects
- Gated communities and garage doors where the gates won't open if the power is out is a safety concern

Assistance for those in Need

- Provide rebuilding incentives for low-income people
- Provide more resources to support the rebuilding efforts for those who lost their homes, both owner occupied and rental occupied
- Specifically from the Spanish language sessions, providing rental assistance and renter rights information regarding rising rental costs for Spanish speakers
- Providing rebuilding incentives for homeowners
- Allowing RV parking for affordable housing
- Insurance gap concerns

Capital/Incentives

- Provide new building incentives for a variety of housing types
- Use local financial institutions to raise capital for housing
- Increase homeownership through low interest loans
- Use State funds to provide more housing
- Have the County become an equity partner in housing developments in order to achieve affordable housing
- Use incentives to build fire resilient housing
- Give more incentives to home builders
- Use tourism taxes as a way to achieve affordable housing
- Require the winegrowers to provide affordable housing
- Reconsider holding a County housing bond
- Build "land trust model housing"
- Help with low interest loans for rebuilding for the "missing middle"

Using Public Land

- Identify County-owned land for housing development
- Use County-owned land for different types of housing
- Use the County administration center as a priority before building housing near the airport

Builders/Workforce

- Use small, local builders and local workforce to rebuild
- Work with the highest quality builders who have the best track records
- Create a workforce "RV camp" for rebuild workers on County-owned land

Community Engagement

- Obtain meaningful community input and interaction
- Concerns about NIMBY-ism as a barrier to providing housing
- Educate neighborhoods about the need for housing
- Communicate directly with fire survivors about the rebuilding process
- Work with vulnerable communities and individuals
- The "missing middle" needs advocacy and a voice: they are a population in need
- The community needs to know how to participate in the CDGB-DR process regarding the action plan and State allocation of funds
- Ongoing advocacy for insurance reform

ECONOMY

Support Workforce Housing Solutions

- Housing and the economy are intricately linked; need more housing for the workforce and for students
- Work jointly with housing efforts
- Incentivize people to stay living here by providing tax breaks

Support the Workforce and Build Sustainable Career Pathways

- Partner with educational institutions and increase education/training opportunities for trades/construction/vocational training, including in middle and high school
- Create apprenticeship opportunities
- Provide loans, grants, free educational opportunities
- Ensure safety in workplace – training, proper equipment, etc.

Support Local Businesses

- Diversify the economy (not just tourism/wine)
- Foster the manufacturing industry
- Strengthen wages – it's expensive to live in Sonoma County
- Improve transportation options and make them affordable and accessible to non-English speakers
- Expand and support the cannabis industry, increases job growth
- Expand the local job market
- Encourage manufacturers to move into Sonoma County
- Childcare workers displaced – rebuild childcare facilities quickly to provide jobs and meet needs of children
- Provide more affordable childcare to support workforce
- Create a task force solely to recruit light industry or tech companies that can bring high-paying jobs to this area
- Build broadband infrastructure

Promote Sonoma County and Shop Local

- Use tourism campaign to let people know "Sonoma County is open"
- Rebuild hotels that were burned down to create jobs again
- Encourage residents and visitors to shop local, including using local contractors for rebuilding
- Better communicate the economic impacts of the fires to the community

---

SAFETY NET SERVICES

Ensure the Post-Fire Mental Health and Resiliency Needs of the Community Are Met

- Community members continue to struggle with emotional trauma from fires; expand free mental health services, including trauma informed care
- Use animals for therapy
- Create spaces for healing

Build Partnerships and Coordination Across Sectors

- Strengthen partnerships and coordination with community groups, churches, local/state/federal government, etc.; work together towards recovery – it's not just the County's job
- Improve donation management, volunteers, and communication
- Host more community workshops and events to bring people together
- Create a one-stop shop available to all fire survivors; the LAC is recognized as a great success and could serve as a model for the one-stop shop
- Address animal rescue in recovery plan, including how people manage pets in recovery (for example some people who are renting cannot have their pet with them); keep people with their pets at shelters

Support Needs of Vulnerable Communities

- Underserved communities need more attention and services, including at the evacuation shelters (seniors, language barriers, homeless, undocumented residents, etc.)
- Resources and information need to be available in Spanish and culturally sensitive
- Support students who were displaced
- Make sure masks are widely available, including children's size
- Increase Transient Occupancy Tax (TOT) and use funding for housing and homeless services

NATURAL RESOURCES

Overall/Vision

- Simplify language of vision and imperatives statements for laypersons
- Put forest fuel reduction "separate" and under the preparedness, not in Natural Resources
- Add recreation to the natural resources vision
- Make Framework clearly address interconnectedness and relationships between strategy area issues, e.g. support and express links between land use planning policies, housing, natural resources or fire/climate change, drought, economy
- No specific requests for other major goals or objectives
- "Protect the watershed against the community / Protect the community against the watershed"

Forest Management (rated very important)

- Many contrasting opinions about "forest fuel load management": concerns about potential for ill-informed, widespread clearing of trees and/or loss of habitat, folks that want wildland to stay wild, desire for science-informed decisions and priorities; but, also concerns about how to lower various regulations and barriers to vegetation management and recognition that historic suppression has created large load and much effort is needed
- Lots of comments for better education and outreach about importance and value of vegetation management using all means (from forest product extraction (including lumber and biomass and net carbon storage), mechanical thinning, grazing/browsing by livestock including goats, and prescribed fire) – but some concerns about "logging" as adverse, etc.
- Requests for demonstrations/pilot projects with prescribed fire to improve public confidence/trust
- Request for focused/strategic outreach programs for Wildlife Urban Interfaces
- Increased implementation of prescribed burns, raising the funding of forest rangers, adding duties for veg clearing to sheriff/rangers, using jail crews for labor
- More funding to enforce defensible space, and also noting opportunity to grow local workforce/jobs in related trades
- Emphasis for public-private combination efforts; need for collectives/neighborhood groups, also better fed-state-local government partnerships and interaction with science information
- Concerns that parks/open space are not managing their own vegetation fuel loads and that vacant lots are not being managed
- Concerns about need to clear remaining burned trees in 2017 zones (unsure if about ROW or other areas); worried that replanting will use other species that burn (like the 1960s use of knobcone pine plantings); also, concerns that replanting of forests is needed
- Assess landscape regrowth and "decide" what plant communities we want to encourage and maintain
- Use grant funded support for landowner fuel load management, but also tax structure and even deed restrictions to improve vegetation removal (defensible space) compliance; make sure people know they are responsible for defensible space/tree removals
- Use tribal communities' knowledge on working with fire for healthy ecosystem
- Clarify requirements for landscaping around homes: defensible space (moist and herbaceous?) vs. water conservation (drought tolerant shrubs) and vs. energy conservation (shade trees) suggestions
- Concerns about protecting air quality while doing fuel load reductions; need information on wind, etc.

Stream System Enhancement (rated very important)

- Wording may be confusing in this imperative, some wondered about the connection of water supply/demands and water for firefighting. The connection of stream systems to the other fire related issues isn't clear to some
- Preference on natural controls on erosion, etc. versus hardscape/constructed
- Concerns about burned areas and water quality protection during the next winter season
- Likely need to increase riparian setbacks and natural easements; also to restore and manage parks

NATURAL RESOURCES (continued)

Stream System Enhancement (rated very important, continued)

- Concerns that science guidance would be overwhelmed by political or economic decisions – that stream habitat would be jeopardized; requests for many NGOs to be engaged in policy updates
- Desire to hold growth/community boundaries, limit sprawl and focus densely developed areas
- Range of ideas about greenbelts, open space… requests to maintain and increase protected spaces and decrease conversion of farms to development, but also some uncertainty about quality of vegetation management on open spaces that are "owned" by public agencies
- Potential for working lands (vineyards, grazing pastures as fuel breaks)
- Concern that agricultural diversity is needed for resiliency
- Financial and regulatory assistance needed for stream-side conservation/restoration, especially for small property owners
- Ideas to use volunteers and community groups and adopt-a-stream type efforts for implementation – Youth Corps, Conservation Corps, have school programs for credit too
- Liked the connection to Vital Lands Initiative
- Links to economy noted (as for forest management) for connections to education, job training, and workforce growth in natural/ecological resource management
- Protect and monitor watersheds!

Leveraging Investments (rated very important, but fewer ratings)

- Want potential policies, regulations, funds to better anticipate and reduce the pressure to rebuild (again) housing in path of repeat fire zones, using development transfers or other means set up in advance (realizing we should not further impact recent fire survivors)
- "Limit building within forested areas"
- Similarly, want science-based corridors/breaks across landscape; could this be phased in over time to reduce burden on current owners?
- We need to publicly state the economic benefits of healthy land and water!
- Work with NGOs and community on cooperative natural resource management, with schools too
- Use policy/incentives to protect open space and decrease exposure to fire risks
- Need to identify fire protective corridors in land-use plans
- Use all hazard information to inform land use zoning for "do and don't" housing – build up and not out
- Critical to pull science into decisions and priorities for fuels management in forests and streams
- Ideas that link watershed education in schools about resources, hazards, and preparedness
- Get and use data from other disasters to learn from experience and adopt best practices
- Requests for more education and communication about "disasters"
- Desire to use "Ag + Open Space" funds for fire prevention
- Desire to use MORE/ALL of TOT for infrastructure improvements
- Improve data collection for open space
- Follow through on 2020 General Plan and ordinance/regulation implementation – concerns that there are few consequences for delays and follow-through, but also requests to strengthen land use guidance relative to hazards in the 2030 Gen Plan
- Be sure to use the ideas in the "Living in a fire-adapted landscape" report

Additional

- Concerns about soils impacts from fire
- Concerns about water conservation – requests for metering for ALL (including farms) – wanting to ensure adequate flows in streams and sediment transport
- Ideas to improve water conservation and reuse – to use grey water and recycled water – to return reclaimed water to forest (not streams, "…the ocean doesn't need water")
- Concerns about water allocations and realities in the face of drought and growth.
- Concerns that vineyards, wineries and cannabis use too much water and our sources of pollutants
- Get Chinese Firefighting Robots
- Adopt ordinance to underground power lines in all fire-prone areas of the County

APPENDIX E: ACRONYM GLOSSARY

ABAG: Association of Bay Area Governments

ADU: Accessory Dwelling Units

BMP: Best Management Practices

BRIC: Building Resilient and Inclusive Communities Finance Tool

F: GUIDE TO RECOVERY & RESILIENCY FRAMEWORK DOCUMENTS ONLINE

This Guide is a list of the documents that are appendices to the Recovery and Resiliency Framework. All documents are posted on the Office of Recovery and Resiliency's website at www.sonomacounty.ca.gov/ORR in pdf format in English and Spanish.

Appendix A: Potential Actions

This list of potential recovery actions is a range of potential future actions that, if implemented, could advance the County toward resilience. They reflect the input received during the County Community Meetings, Board of Supervisors workshops, working group and task force collaboration discussions, and partner convenings.

Appendix B: Compiled & Analyzed Community Surveys & Needs Assessments

Many organizations and community groups conducted recovery-related surveys since the October 2017 wildfires that are listed in Appendix B. The data collected through these efforts augments the County's understanding of the community's needs, interests and opinions.

Appendix C: Community & Other Partners

This appendix is a list of the many community and other partners that provided support and initial input to the Framework development process. Since early June 2018, the Office began tracking the list of groups, businesses, nonprofit organizations, stakeholders, outside agencies, and public entities that Office staff has engaged directly.

Appendix D-1: Community Input Themes

The community's input on the initial draft Framework was received in multiple ways and formats. Community members completed either an online survey, shared written notes at community or stakeholder meetings, or sent comments and input via email or regular mail to the County Administrator's Office. All input and comments were compiled. From the compiled community input, the Office of Recovery and Resiliency generated key themes for each strategic area of recovery and resiliency.

Appendix D-2: Community Meeting Notes from Breakout Group Flipcharts

Table facilitator notes from the recovery planning community meetings were collected and transcribed in table format.

Appendix D-3: Community Worksheet Input

Community worksheets completed by individuals at the Community Meetings or mailed to the County Administrator's Office were captured in table format.

Appendix D-4: Responses to County's Online Survey

Reports based on individual responses to the Survey Monkey questionnaire designed to gather input on the initial draft of the Recovery and Resiliency Framework are included as pdf documents.

Appendix G: Grant Applications Submitted

The most current list of federal, state, and other grant applications submitted for recovery projects.

As a living document, this Framework is a starting point for actions and partnerships surrounding recovery and resiliency.

The shared vision reflected here is a result of the time, dedication, and contributions of many community members, agencies and organizations.

Moving forward, it is imperative that we all continue to work together to become more resilient, and stronger than we were before the fires.

CONDADO DE SONOMA

Marco de Recuperación y Resiliencia

Reconocimientos

El Marco de Recuperación y Resiliencia del Condado de Sonoma es la culminación de la dedicación, el arduo trabajo y la experiencia de muchas personas que representan a múltiples organizaciones, agencias, jurisdicciones y comunidades en el estado y el Condado. Su liderazgo y participación a través de varios grupos de trabajo, comités de coordinación y fuerzas operativas fueron de gran valor para dar forma al Marco de Recuperación y Resiliencia, un primer paso en la formulación de planes para Implementación.

El condado está especialmente agradecido a los cientos de miembros de la comunidad que participaron en las reuniones y encuestas comunitarias y compartieron muchas ideas reflexivas y creativas.

VISTA GENERAL DEL MARCO

COMPROMISO COMUNITARIO

ÁREAS ESTRATÉGICAS DE RECUPERACIÓN Y RESILIENCIA

PASOS SIGUIENTES

APÉNDICES

Declaración de la Junta de Supervisores

California está experimentando uno de los años más desafiantes en su historia mientras combate los devastadores incendios en todo el estado. Los Incendios del Complejo de Sonoma de octubre de 2017 tuvieron un profundo impacto en la comunidad del Condado de Sonoma. Mientras que reconstruimos y sanamos, estamos conscientes de que aun enfocándonos en la planificación futura después de nuestro propio evento de incendios, nuestros condados vecinos están lidiando con la contención del fuego y la respuesta, el desplazamiento de los miembros de la comunidad, y la realidad de que la recuperación será un proceso largo y difícil. Mientras que nosotros como Condado, nuestra gente y comunidades, trabajamos para reconstruir, estamos resueltos a recuperarnos de los incendios mejor que antes. Tenemos mucho trabajo que hacer, pero estamos comprometidos a ser más fuertes y más resilientes para futuros desastres, sean como fueren.

El Marco de Recuperación y Resiliencia representa la visión a largo plazo del Condado en un futuro resiliente. El Marco también representa un llamado a la acción y asociación. El apoyo y la colaboración comunitaria posterior a los incendios forestales fue una fortaleza del Condado de Sonoma. Necesitamos continuar la colaboración proactiva y continua antes de que ocurra el próximo desastre para que podamos aprovechar nuestros recursos, comprender los desafíos desde muchas perspectivas, gestionar eficazmente los riesgos y capitalizar los muchos esfuerzos de planificación ya en marcha.

JUNTA DE SUPERVISORES DEL
CONDADO DE SONOMA
575 Administration Drive
Room 100A
Santa Rosa, California 95403

Fax (707) 565-3778

MIEMBROS DE LA JUNTA
James Gore, Chair
David Rabbit, Vice Chair
Susan Gorin
Shirlee Zane
Lynda Hopkins

Nuestro primer paso para institucionalizar este nivel de colaboración fue establecer la Oficina de Recuperación y Resiliencia en diciembre de 2017. Esta Oficina trabajará con los jefes de departamentos del Condado para liderar y coordinar todos los esfuerzos de recuperación en el Condado con un enfoque estratégico a largo plazo. Bajo el liderazgo del Administrador del Condado, el personal de la Oficina de Recuperación y Resiliencia se concentrará en garantizar que el Condado vea el trabajo que realizamos para recuperarnos a través de un lente de resiliencia unificada. Con la aprobación de este Marco de Recuperación y Resiliencia, la Oficina continuará coordinando con los socios para implementar esfuerzos de recuperación priorizados durante los próximos cinco años. Juntos, crearemos una comunidad más fuerte y más resiliente, una que esté lista para adaptarse, resistir y recuperarse rápidamente de cualquier desastre que esté por delante.

Sinceramente,

Junta de Supervisores del Condado de Sonoma

REENVIAR

El 8 de octubre de 2017, uno de los incendios forestales más destructivos en la historia de California arrasaron a través del Condado de Sonoma. Los incendios devastaron vidas, hogares, medios de subsistencia y el paisaje natural y desafió el sentido de seguridad de nuestra comunidad. El trauma emocional fue severo y seguirá teniendo efectos duraderos. Pero incluso durante esos días iniciales de incertidumbre, nuestra comunidad actuó para proteger a nuestros vecinos, apoyar a los primeros en responder, salvaguardar nuestros recursos naturales y satisfacer las necesidades más básicas de los residentes. A lo largo de los incendios, aprendimos que nuestra comunidad es ingeniosa, fuerte y resuelta.

> “Es vital que toda nuestra comunidad continúe hablando entre ellos y encuentre maneras de recuperarse juntos.”
>
> —MIEMBRO DE LA COMUNIDAD

El 8 de octubre de 2017, uno de los incendios más destructores

en la historia de California

arrasó el Condado de Sonoma.

EFECTOS DURADEROS

Más de un año después, la comunidad sigue sanando. Los signos de recuperación son visibles, aunque hay desafíos formidables por delante. Los líderes del gobierno del Condado están comprometidos a mejorar nuestra capacidad de asegurar acceso y entrega de servicios durante futuros desastres. Los desastres son inevitables y debemos estar preparados la próxima vez que ocurra un desastre. Con la ayuda de socios comunitarios, tomaremos acciones para recuperarnos y volvernos más resistentes. Nuestro éxito depende de nuestra capacidad para recuperarnos de los reveses, adaptarnos al cambio, y emerger mejores y más fuertes que antes.

Los incendios complejos de Sonoma

SUMARIO EJECUTIVO

En diciembre de 2017, la Junta de Supervisores del Condado estableció la Oficina de Recuperación y Resiliencia para trabajar con los jefes de departamentos del Condado para liderar y coordinar los esfuerzos de recuperación en el Condado. A la Oficina se le encomendó tomar un enfoque estratégico a largo plazo y desarrollar un Marco integrado para la recuperación que incorpore una visión a largo plazo para un futuro más resiliente.

ACERCA DEL MARCO DE TRABAJO

El Marco de recuperación y resiliencia es una visión de cómo el Condado se recuperará de los incendios forestales de octubre de 2017, una visión para un futuro resiliente, y un enfoque para lograrlo. Capitaliza las fortalezas de nuestro Condado e identifica las inversiones que necesitamos para mantener a Sonoma fuerte. El Marco es una base para la integración de esfuerzos de recuperación en todo el Condado, y es informado por residentes, socios comunitarios, departamentos del Condado, ciudades y otras jurisdicciones en el Condado.

El Marco se basa en la estructura, funciones, roles y principios *Marco Nacional de Recuperación ante Desastres* (NDRF) de la Agencia Federal de Gestión de Emergencias. Al igual que el NDRF, el Marco sirve como plataforma y foro para las maneras en que el condado y la comunidad construyen y sustentan capacidades de recuperación. Un enfoque del Marco es la planificación y la preparación antes de que ocurra un desastre. La planificación incluye la coordinación con los socios, la mitigación de riesgos, la planificación de continuidad, la identificación de recursos y el desarrollo de capacidad para gestionar el proceso de recuperación.

El Marco se estructura en torno a los esfuerzos de recuperación en cinco áreas estratégicas – Preparación e infraestructura de la comunidad, Vivienda, Economía, Servicios de red de seguridad, y Recursos naturales. Las acciones propuestas se incluyen para cada área estratégica, aunque muchas metas de acciones cruzan más que una sola área.

PRINCIPIOS BÁSICOS PARA LA PLANIFICACIÓN DE RECUPERACIÓN Y RESILIENCIA

Las formas que planeamos para el próximo desastre, incorporar aportaciones, colaborar para construir las capacidades correctas, mitigar las amenazas, cuidar a nuestros ciudadanos, e implementar las metas y acciones en este Marco, se guían por el siguiente conjunto de principios básicos:

- Equidad social
- Planificación de la recuperación previa al desastre
- Liderazgo y primacía local
- Sociedades logradas
- Puntualidad y flexibilidad
- Resiliencia y sostenibilidad
- Unidad de esfuerzo
- Recuperación psicológica y emocional

ROLES Y RESPONSABILIDADES DE RECUPERACIÓN

Una recuperación exitosa de un desastre tan importante como los Incendios del Complejo de Sonoma no se logrará por una sola entidad. La coordinación entre muchos socios de recuperación será necesaria para optimizar los recursos, mejorar las sociedades y aprovechar las oportunidades disponibles. Los roles y responsabilidades clave durante la recuperación incluyen los siguientes:

- Personas y hogares
- Sector privado
- Sector sin fines de lucro
- Gobierno local
- Gobierno estatal
- Gobierno Federal

PARTICIPACIÓN DE LA COMUNIDAD

A lo largo de 2018, la Oficina de Recuperación y Resiliencia ha involucrado a la comunidad de diversas maneras para escuchar las inquietudes, ideas y sugerencias de los residentes. La Oficina continuará involucrando a la comunidad compartiendo información, recursos y actualizaciones, y continuará recabando aportaciones comunitarias sobre la dirección y la prioridad de las actividades de recuperación. Las estrategias clave utilizadas para reunir los aportes comunitarios en el Marco son: Talleres de la Junta; reuniones de grupos comunitarios y de partes interesadas; reuniones comunitarias de planificación de la recuperación; encuesta en línea; y aportaciones recolectadas por correo electrónico y a través de otras encuestas comunitarias.

ÁREAS ESTRATÉGICAS DE RECUPERACIÓN Y RESILIENCIA

La preparación para desastres es una responsabilidad compartida. Cómo nos recuperemos y si nos volvemos más resilientes depende de las contribuciones de toda la comunidad. Para estar preparados, debemos identificar y prevenir las amenazas, proteger a nuestros ciudadanos, mitigar los riesgos y crear capacidad para responder rápida y eficazmente. Las cinco áreas estratégicas de recuperación y resiliencia son: Preparación e infraestructura de la comunidad, Vivienda, Economía, Servicios de red de seguridad y Recursos naturales. Este Marco ofrece una visión y metas para cada área, e identifica acciones potenciales de prioridad. La lista completa de posibles acciones, incluyendo sugerencias de la comunidad y socios comunitarios, es publicada en el sitio web de la Oficina de Recuperación y Resiliencia en www.sonomacounty.ca.gov/ORR.

PREPARACIÓN E INFRAESTRUCTURA DE LA COMUNIDAD

Como resultado de los devastadores incendios, personas, organizaciones y comunidades se han unido y fortalecido su determinación de hacer que el Condado de Sonoma esté más preparado. Hay muchos desafíos, pero también muchas oportunidades para apoyarse en la colaboración entre personas, grupos comunitarios, organizaciones sin fines de lucro y agencias gubernamentales durante la respuesta al incendio para ayudar a seguir con las metas de preparación.

Visión: La visión para esta área, que es informada por las aportaciones significativas recibidas de los miembros comunitarios de la Comunidad, es: Los residentes del Condado de Sonoma, las comunidades, las agencias públicas y no gubernamentales están preparados para adaptarse y recuperarse después de que ocurra un desastre. Esto incluye contar con sistemas de alerta eficaces que envíen notificaciones de emergencia a toda la comunidad. Incluye asegurar que la infraestructura crítica esté protegida y operativa. También implica la activación de la conciencia situacional y de los sistemas de toma de decisiones.

Metas: Las acciones propuestas para la implementación prioritaria incluyen establecer un programa de alerta integral de primera clase con tecnología innovadora y conciencia situacional de vanguardia; resolver desafíos futuros rediseñando el Programa de Gestión de Emergencias del Condado, proporcionando recursos adicionales, y comprometiéndose con las misiones de seguridad pública del Condado; liderando, apoyando y capacitando a los enlaces comunitarios para construir y sostener la preparación individual y vecinal, incluyendo a las poblaciones marginadas; y hacer el gobierno del Condado más adaptable para proporcionar servicios continuos en desastres con la planificación integral, una fuerza laboral más empoderada, e instalaciones y tecnología mejoradas.

VIVIENDA

Los incendios forestales de octubre de 2017 exacerbaron la ya severa escasez de vivienda en el Condado. Los sobrevivientes desplazados por los incendios, tanto los propietarios como los inquilinos, continúan experimentando importantes desafíos de vivienda.

Visión: El Condado de Sonoma prevé un mercado de la vivienda que esté en equilibrio; es resistente y climáticamente inteligente en la escala regional, vecinal y de propietarios; que sea asequible para los trabajadores de la zona y las personas con necesidades de acceso y funcionales; que sea donde las comunidades de color y otros grupos históricamente desfavorecidos, incluyendo personas con dominio limitado o no inglés e inmigrantes, tengan un acceso igual y justo; que respete los separadores comunitarios designados y los límites de crecimiento urbano; que tenga una diversidad de casas ubicadas cerca del transporte, empleos y servicios; y que sea donde la economía es vital. Para lograr esta visión, el Condado está adoptando un nuevo enfoque regional para producir 30,000 nuevas unidades de vivienda para 2023.

Metas: Durante los próximos años, el condado se centrará en atraer nuevas y expandidas fuentes de capital para incentivar la creación of viviendas para todos los niveles de ingresos; aumentar la certeza regulatoria al cambiar el modelo de negocio del Condado y buscar activamente oportunidades para profundizar la cooperación regional; apoyar la reconstrucción de las casas destruidas por los incendios; y explorar el uso de propiedades del Condado para atraer el desarrollo de la vivienda que se alinea con las metas del condado.

ECONOMÍA

Casi todos los negocios que participaron en una encuesta realizada por la Junta de Desarrollo Económico del Condado informaron impactos adversos de los incendios. Negocios informaron pérdida física directa, pérdida de ventas, interrupciones a los servicios de electricidad y banda ancha y trabajadores desplazados. Los líderes locales de negocios proporcionaron valiosas opiniones en la visión del condado que el Condado de Sonoma activamente se asocie con empleadores locales para convertirse en una comunidad resiliente, inclusiva y económicamente diversa.

Visión: A través de alianzas públicas y privadas, los negocios y residentes del Condado de Sonoma emergen con mayor capacidad para abordar los desafíos locales persistentes y son resilientes a futuros desastres.

Metas: El Condado continuará centrando sus esfuerzos en desarrollar y apoyar una variedad de esfuerzos de desarrollo de la fuerza laboral que contribuyan a los esfuerzos de reconstrucción, resiliencia y vitalidad económica a largo plazo en el Condado de Sonoma. También seguirá apoyando a los negocios locales para prosperar al asegurar el acceso a los recursos, desarrollar asociaciones y proporcionar apoyo empresarial.

SERVICIOS DE RED DE SEGURIDAD

Servicios de red de seguridad se refiere a servicios como salud conductual, asistencia para obtener beneficios alimenticios y médicos, asistencia financiera, servicios y protección de los animales. La necesidad de estos servicios se intensificó durante la respuesta a los incendios forestales y seguirá siendo elevada durante el largo proceso de recuperación.

Visión: La visión de esta estrategia es que Condado de Sonoma restaurará y mejorará la resiliencia de los sistemas, redes de servicios de la salud y sociales y las capacidades para promover la equidad, la independencia y el bienestar de toda la comunidad.

Metas: Los proyectos propuestos para mejorar las capacidades de red de seguridad apuntarán hacia mejorar la capacidad de los servicios básicos del Condado para abordar las necesidades de recuperación a largo plazo y prepararse para futuros desastres; garantizar que se satisfagan las necesidades de salud mental y de resiliencia de la comunidad posteriores a los incendios; y crear capacidad con socios intersectoriales y miembros de la comunidad para mejorar la coordinación y la comunicación.

RECURSOS NATURALES

Además de la trágica pérdida de vidas y la destrucción de casas, negocios y la infraestructura pública de los incendios de octubre de 2017, las tierras silvestres y los paisajes de trabajo también se quemaron. Durante la recuperación se están realizando nuevos esfuerzos de colaboración.

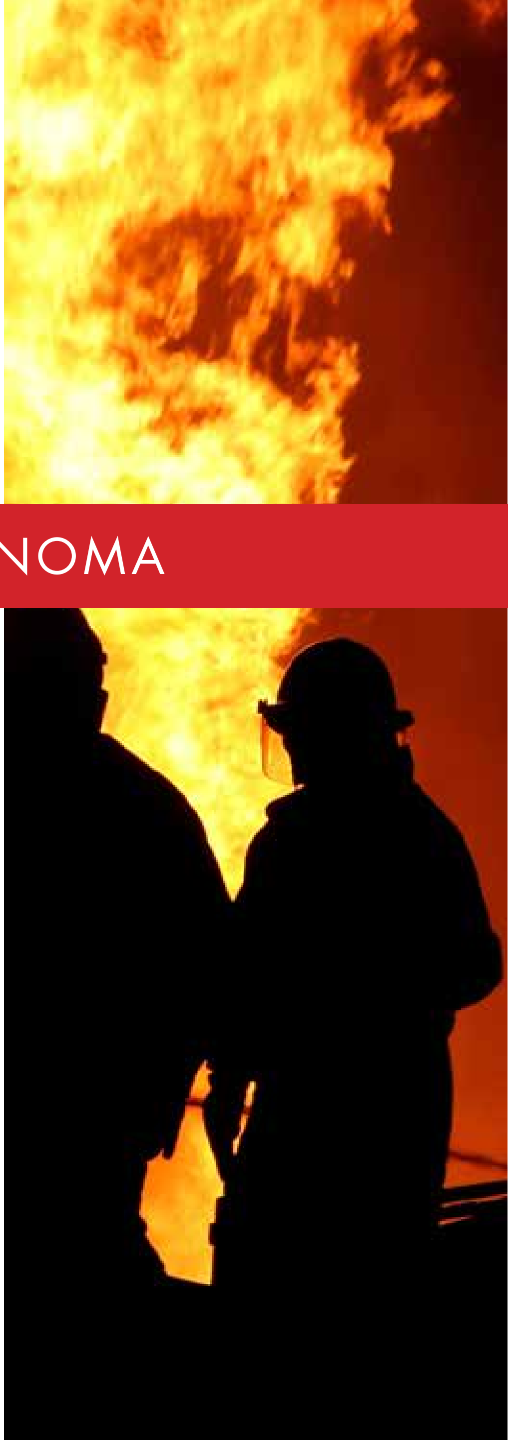
Visión: La visión de esta área estratégica es que Los recursos naturales del Condado de Sonoma sean saludables y productivos. Se administran para apoyar la resiliencia comunitaria y de cuencas y protegen la salud y la seguridad públicas, y contribuyen a mejorar las oportunidades recreativas y la vitalidad económica.”

Metas: TLas metas primarias de recursos naturales informadas por una colaboración significativa con los socios y agencias comunitarias son: reducir estratégicamente las cargas de combustible forestal para reducir los peligros de incendios forestales para las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, las enfermedades y los insectos; proteger y mejorar los sistemas de arroyos para reducir el peligro de incendios forestales para las comunidades, apoyar el suministro de agua y tolerancia a la sequía, y proporcionar la atenuación de inundación a la vez de sostener funciones ecológicas y diversidad biológica; y edificar sobre inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y asociaciones para integrar la mejor ciencia disponible en los esfuerzos de alcance, desarrollo de políticas, reglamentos, incentivos y decisiones de planificación del uso de la tierra.

PRÓXIMOS PASOS

La colaboración entre la comunidad, los socios, otras agencias y el Condado durante el desarrollo del Marco fue un primer paso importante para colocar a todos nosotros en un camino hacia la recuperación y la resiliencia. En la siguiente fase, bajo el liderazgo de la Junta de Supervisores, la Oficina de Recuperación y Resiliencia supervisará las implementación de las acciones propuestas, buscará la financiación de proyectos y desarrollará indicadores clave para rastrear la recuperación y la resiliencia. Una lista recopilada de todas las acciones propuestas captadas durante el desarrollo del Marco se publica en el sitio web de la Oficina de Recuperación y Resiliencia en www.sonomacounty.ca.gov/ORR.

EL EVENTO



INCENDIOS DEL COMPLEJO DE SONOMA

Los incendios forestales se desataron en el Condado de Sonoma la noche del 8 de octubre de 2017, eventualmente arrasando en Santa Rosa. Más de 5,300 casas y negocios fueron destruidos, 24 personas murieron y 110,000 acres se quemaron. Miles de casas en el Condado de Sonoma fueron incineradas en cuestión de horas. Decenas de miles de residentes aterrorizados huyeron por sus vidas, muchos de ellos con solo la ropa puesta. Las llamas se conocieron oficialmente como los **Incendios del Complejo de Sonoma**.

INCENDIOS DEL COMPLEJO DE SONOMA

El **Incendio de Tubbs** fue el más destructivo en términos del número de casas destruidas y vidas perdidas. Comenzó cerca de Calistoga y rugió al oeste, a través de las áreas de Mark West Springs y Larkfield/Wikiup, luego se arrasó a través Fountaingrove y por último saltó la Carretera 101 y devastó Coffey Park en la zona norte de Santa Rosa. Veintidós personas murieron y 4,658 casas fueron destruidas. El cinco por ciento del conjunto de viviendas de Santa Rosa desapareció de la noche a la mañana. Casi 37,000 acres se quemaron. La velocidad y la ferocidad del Incendio de Tubbs aturdió a los residentes y funcionarios. Las escenas de destrucción total escandalizaron al estado y a la nación.

Vista general del incendio de Tubbs

GESTIÓN	ACRES QUEMADOS
Propiedad privada	30,160
Sin lucro – Conservaciones	2,796
Agencia estatal	1,513
Distrito de parques regionales	801
Agencia del condado	799
Sin lucro – Fideicomiso de tierras	614
Agencia de la ciudad	50
Agencia federal	41
Distrito de aguas	33

Map Creation Date: 11/19/2018

INCENDIOS DEL COMPLEJO DE SONOMA

Aproximadamente al mismo tiempo que el Incendio de Tubbs, un puñado de incendios al norte de la Ciudad de Sonoma—los incendios de Nuns, Adobe, Norrbom, Patrick, Pressley y Oakmont—se desataron. Más tarde se combinaron para convertirse en lo conocido colectivamente como el Incendio de Nuns, que quemó 56,556 acres en el Valle de Sonoma, incluyendo las comunidades de Kenwood, Glen Ellen y Oakmont. El Incendio de Nuns eventualmente arrasó por el Parque Regional Trione-Annadel, el área de Bennett Ridge y amenazó a Rohnert Park, destruyendo 639 casas.

El **Incendio de Pocket** al noreste de Geyserville quemó 17,000 acres y tres casas.

La gran mayoría del área quemada era tierra privada. El área quemada cubrió montañas escarpadas, a suaves colinas, a fondos de valles en áreas urbanas, a áreas urbanas.

Dada la rapidez de la devastación, comunidades enteras se quedaron sin mucho tiempo para recolectar sus pertenencias, o planear cualquier tipo de estrategia para salvar su propiedad.

Volver a la destrucción de la casa también fue difícil, porque cosas básicas como el agua, el aire puro o la energía demoraban de varias semanas en volver.

INCENDIOS DEL COMPLEJO DE SONOMA

24 vidas se perdieron y el incendio consumió 110,000 acres.

En general, unas 7,000 estructuras, incluyendo casas y dependencias, fueron destruidas en el Condado de Sonoma. Dos hospitales principales fueron evacuados y quedaron dañados. Más de 100,000 residentes fueron evacuados, algunos durante semanas. Miles de bomberos de todo Estados Unidos, Canadá, y Australia Llegaron para ayudar a las cuadrillas locales a combatir las llamas en múltiples frentes. Los incendios fueron finalmente contenidos para el 31 de octubre.

Incluso mientras que los incendios ardían, comenzaron los esfuerzos de recuperación. La inmensa tarea de eliminar de forma rápida y segura los escombros de los incendios de más de 5,300 propiedades resultaron en más de 2 millones de toneladas de escombros que fueron retirados, la operación más grande de su tipo desde el terremoto de 1906 en San Francisco.

de zarzos colocadas

4,162
evacuados atendidos

2 millones
de toneladas de escombros retirados

21,000+
recibieron consejería de parte de California HOPE

MÁS FUERTES JUNTOS

RESPUESTA DEL CONDADO Y DE LA COMUNIDAD

Más de 950 departamentos de bomberos y agencias de todo el mundo finalmente respondieron a los incendios en el Condado de Sonoma. Trabajadores del Condado, policía local, bomberos, profesionales médicos y voluntarios colaboraron para evacuar vecindarios, coordinar refugios, y obtener alimentos, ropa, suministros e información para los residentes desplazados.

4,162 evacuados atendidos en 43 refugios

52,372 llamantes recibieron ayuda vía línea de emergencia

10,000 máscaras, 2,562 camas portátiles, 2,300 sábanas y 1,850 almohadas se distribuyeron en las primeras 72 horas

11,204 residentes atendidos en los Centros de Asistencia Locales

Our community united

41 reuniones comunitarias conducidas por el Condado celebradas en las primeras 4 semanas para mantener informado al público

4,000+ documentos de reemplazo emitidos a las víctimas de los incendios forestales

21,000+ contactos en persona por los consejeros de California Hope

14,000+ llamadas recibidas por los Servicios para Animales para ayudar a Localizar animales desplazados

2 million de toneladas de escombros de incendio retiradas a través del programa patrocinado por el gobierno de Eliminación de Desechos Consolidada

Actividades adicionales

4,700 personas cuyos ingresos o empleos fueron impactados por los incendios recibieron asistencia en solicitar el seguro de desempleo por desastre

2,000 permisos de reconstrucción emitidos por el Condado de Sonoma y la Ciudad de Santa Rosa a partir de noviembre de 2018

43 millas de zarzos (material de control de erosión y sedimentos de "rollos de fibra") colocados en áreas de incendio para prevenir la erosión y proteger las cuencas

30 medidores de lluvia y corrientes instalados en áreas de alto riesgo para predecir posibles flujos de escombros o inundaciones repentinas

90 millas de caminos del Condado despejados de árboles quemados y vegetación peligrosa

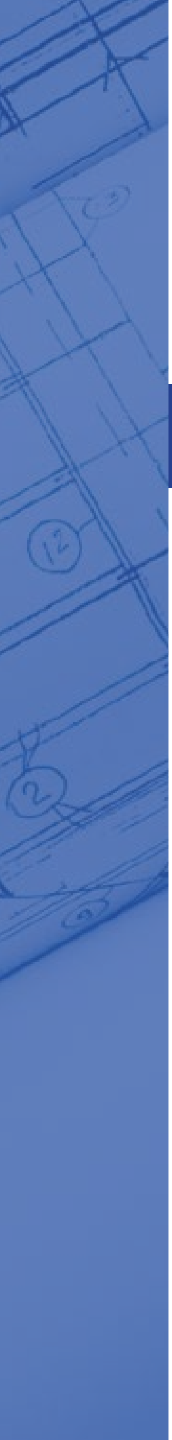
Se adoptó ordenanzas de urgencia para el apoyo de necesidades de vivienda inmediata, incluyendo el uso residencial de vehículos recreacionales y alquiler de casas de huéspedes

Apoyo de recuperación en transición para empresas locales del Centro de Asistencia Local al Centro de Recuperación de Negocios de la Administración de Pequeñas Empresas de Estados Unidos

$1.4 millones+ emitidos en beneficios de Desastres de CalFresh para la asistencia alimentaria

La Fuerza Operativa de Múltiples Agencias de Cuencas creó un mapa de Evaluación de Prevención de Peligros de Inundación Posteriores a los Incendios para mantener a la comunidad a salvo de posibles inundaciones y flujos de escombros después del incendio

Se formó un Equipo intradepartamental de Finanzas de Desastres para liderar el programa de Asistencia Pública de la Agencia Federal de Gestión de Emergencias para el Condado, coordinando asuntos legales, de cumplimiento y de recursos



VISTA GENERAL DEL MARCO

OFICINA DE RECUPERACIÓN Y RESILIENCIA

En diciembre de 2017, la Junta de Supervisores del Condado estableció la Oficina de Recuperación y Resiliencia para trabajar con los jefes del Departamento del Condado para liderar y coordinar todos los esfuerzos de recuperación en el Condado con un enfoque estratégico a largo plazo, y para desarrollar un Marco integrado para la recuperación de los incendios forestales de 2017 que incorpora una visión a largo plazo para un futuro más resiliente.

Una prioridad de la Oficina de Recuperación y Resiliencia es desarrollar y apalancar las relaciones con organizaciones comunitarias, líderes del sector privado, líderes de ciudades locales y regionales, miembros de la comunidad y muchos otros, para trabajar colectivamente hacia la recuperación y resiliencia juntos. Tras el desarrollo de este Marco, la Oficina trabajará en la planificación detallada de la implementación y la supervisión del desempeño para garantizar la rendición de cuentas.

PROPÓSITO DEL ESTE MARCO

El Marco de Recuperación y Resiliencia Marco Representa el llamado a la acción por la Junta de Supervisores. Refleja la visión de la comunidad para un futuro resiliente y presenta un enfoque para lograrlo. Capitaliza nuestras fortalezas e identifica las inversiones que necesitamos para mantener el Condado de Sonoma fuerte. El Marco es una base para la integración de los esfuerzos de recuperación pública, privada y no gubernamental en todo el Condado, y es informado por residentes, socios comunitarios, departamentos del Condado, ciudades y otras jurisdicciones en el Condado.

Nuestra capacidad de vivir con seguridad y de manera segura en el Condado de Sonoma depende tanto de los esfuerzos normales de recuperación del Condado como de las medidas de resiliencia de pensamiento hacia el futuro. Las metas y acciones esbozadas aquí proporcionarán dirección al Condado mientras que toma decisiones difíciles con respecto al uso de recursos limitados, y mientras que persigue financiación externa crucialmente necesaria.

El Marco se estructura en torno a los esfuerzos de recuperación en cinco áreas estratégicas de Preparación e Infraestructura de la Comunidad, Vivienda, Economía, Servicios de Red de Seguridad y Recursos Naturales. Estas áreas estratégicas están alineadas con las Funciones de Apoyo de Recuperación identificadas en el *Marco Nacional de Recuperación ante Desastres* de la Agencia Federal de Gestión de Emergencias y fueron adoptadas localmente por la Junta de Supervisores del Condado de Sonoma el 19 de diciembre de 2017. Cada área tiene su propia visión, metas y acciones propuestas. La planificación incluye la coordinación con socios, mitigación de riesgos, planificación de continuidad, identificación de recursos y desarrollo de la capacidad para administrar el proceso de recuperación.

PROPÓSITO DE ESTE MARCO

El marco:

- Afirma la visión del Condado para la recuperación y la resiliencia.
- Esboza un proceso para involucrar a las partes interesadas.
- Describe cómo funcionará la Oficina de Recuperación y Resiliencia con los líderes del Condado.
- Explica la relación entre los esfuerzos de recuperación y otros esfuerzos de planificación estratégica.
- Promueve la coordinación inclusiva, la planificación, y la comunicación proactiva.
- Alienta a toda la comunidad a incrementar la resiliencia.

El marco no es:

- Una sola lista exhaustiva de todas las acciones necesarias para que el Condado logre la resiliencia.
- Estático—lo que aprendemos cuando revisamos nuestro enfoque y procesos puede cambiar.
- Un plan detallado con pasos para la implementación.
- Un reemplazo o modificación de otros planes estratégicos relacionados del Condado.
- Legalmente vinculante para futuras acciones del Condado.

Comprometidos con el futuro

UNA NOTA ACERCA DE CEQA

El Marco refleja una visión para un futuro resiliente para el Condado de Sonoma y todas sus comunidades. Incorpora una serie de posibles acciones futuras que, si se implementan, podrían hacer avanzar al Condado hacia la resiliencia. Sin embargo, nada en el Marco vincula legalmente las decisiones o acciones futuras del Condado. La aprobación del Marco por la Junta de Supervisores no es un compromiso para ningún curso de acción en particular, y no es una decisión de aprobar, adoptar o financiar ninguna de las acciones potenciales identificadas en este documento. Por estas razones, la aprobación del Marco está exenta de la revisión de la Ley de Calidad Ambiental de California (CEQA) de acuerdo con la Sección 15262 de las Directrices de la CEQA.[1]

Si en el futuro se implementa una recomendación particular del Marco depende de una variedad de factores. Cada acción propuesta que se avance para su consideración será revisada de acuerdo con los procesos internos y públicos normales, incluyendo la revisión de la CEQA, si corresponde. Algunas acciones identificadas pueden ser rechazadas o modificadas en última instancia a través de esos procesos de revisión. Cualquier acción recomendada que implique enmiendas a las ordenanzas locales se sometería a los procesos normales requeridos para las acciones legislativas, incluyendo pero no limitado a la revisión de la CEQA, oportunidad para la revisión pública y comentarios, y audiencias públicas. Del mismo modo, si bien el Marco probablemente informará el próximo proceso de Actualización del Plan General, el nuevo Plan General se elaborará a través de un proceso completamente separado que incluye una revisión integral de la CEQA y un proceso público sólido.

> “La resiliencia es la característica principal de la sostenibilidad. Lo cual es la imperativa moral y estratégica de nuestro tiempo.”
>
> —TRATHEN HECKMAN, EXECUTIVE DIRECTOR, DAILY ACTS

---

[1] Reglamentos del Código de California, Título 14, § 15262 dispone lo siguiente: Un proyecto que implique solamente estudios de viabilidad o planificación para posibles acciones futuras que la agencia, junta o comisión no haya aprobado, adoptado o financiado no requiere la preparación de un EIR o Declaración Negativa, pero sí requiere consideración de factores ambientales. Esta sección no se aplica a la adopción de un plan que tendrá un efecto legalmente vinculante en las actividades posteriores.

RELACIÓN CON OTROS PLANES

El Marco de Recuperación del Condado de Sonoma no sustituye ni modifica los planes y estrategias existentes del Condado. Complementa los planes existentes y se basa en los marcos de recuperación estatales y nacionales existentes y el trabajo significativo de planificación estratégica que ya estaba en marcha en todo el Condado antes de los incendios de octubre de 2017. El Marco de Recuperación también se basa en los esfuerzos de planificación Iniciados durante e inmediatamente después de los incendios forestales. Colectivamente, estos planes informan la recuperación posterior al desastre y el Marco de Recuperación. Este enfoque integrado garantiza que las metas de recuperación y resiliencia a largo plazo se consideran a través de la implementación de las acciones actuales y futuras del plan, especialmente cuando las acciones del plan se superponen.

El gráfico (a la derecha) muestra la relación entre los planes y estrategias existentes y en curso y el Marco posterior al desastre. Los esfuerzos de planificación existentes y en curso informan el desarrollo del Marco y las prioridades y acciones de recuperación del Condado. Mientras se completan las acciones propuestas en el Marco, es posible que sea necesario actualizar algunos planes y estrategias en curso para reflejar el progreso hacia las metas de recuperación. Las flechas externas representan más que las actualizaciones de acciones específicas. Representan la continua y activa coordinación, colaboración y alineación que posicionará al Condado para lograr sus metas de resiliencia.

En última instancia, el Marco sirve de guía para los líderes del Condado a medida que buscan priorizar las acciones, identificar y asignar recursos y maximizar las oportunidades para lograr las metas de recuperación y resiliencia no aisladas, sino en conjunción con otros planes y esfuerzos de planificación del Condado.

Relación entre los planes y las estrategias

ROLES Y RESPONSABILIDADES DE RECUPERACIÓN

La recuperación exitosa de un desastre tan importante como los Incendios del Complejo de Sonoma no será obtenida por una entidad sola. La definición de roles y responsabilidades para los socios de recuperación permite una mejor coordinación de oportunidades, aumento de sociedades y recursos optimizados. Los siguientes roles y responsabilidades se adaptan del *Marco Nacional de Recuperación ante Desastres de la FEMA:*

Personas y hogares: Las personas y las familias necesitan planificar y estar preparadas para mantenerse a sí mismas inmediatamente después de un desastre. La preparación para desastres incluye tener un seguro adecuado y mantener los niveles esenciales de suministros, como medicamentos, alimentos y agua. Los recursos para ayudar a las personas y las familias a prepararse están disponibles a través de sitios web y publicaciones de varias organizaciones que están activas en desastres, incluyendo agencias locales, estatales y federales.

Sector privado: El sector privado desempeña un rol crítico en el establecimiento de la confianza pública inmediatamente después de un desastre. Cuando el sector privado está operativo, la comunidad se recupera más rápidamente reteniendo y proporcionando puestos de trabajo y una base tributaria estable. Cuando los líderes locales y la comunidad empresarial trabajan juntos antes del desastre y desarrollan un plan de recuperación conceptual, es más probable que el público sea optimista acerca de la capacidad de la comunidad para recuperarse después del desastre. Por ejemplo, los bancos locales pueden seguir ofreciendo oportunidades de préstamos accesibles a personas y empresas afectadas por los incendios. Las compañías de seguros también desempeñan un rol en la preparación. Pueden ayudar en la educación de los miembros de la comunidad sobre los riesgos y llegar a las poblaciones desatendidas para encontrar maneras de proporcionar cobertura.

Sector sin fines de lucro: Las organizaciones sin fines de lucro juegan un papel importante en la recuperación. Las organizaciones sin fines de lucro incluyen la organización voluntaria, basada en la fe y la comunidad, organizaciones benéficas, fundaciones y grupos filantrópicos, así como asociaciones profesionales e instituciones educativas. Las organizaciones sin fines de lucro sirven en recuperación proporcionando servicios de gestión de casos, coordinación de voluntarios, salud conductual y apoyo psicológico y emocional, apoyo técnico y financiero, y reparación y construcción de viviendas que cumplen con los estándares de accesibilidad y diseño universal. Las organizaciones sin fines de lucro suplementan directamente y llenan las brechas donde la autoridad y los recursos gubernamentales no pueden, por ejemplo a través de recaudación de fondos y la distribución de fondos a los necesitados.

Las organizaciones sin fines de lucro son críticas para asegurar la participación e inclusión de todos los miembros de la comunidad afectada. Muchas organizaciones sin fines de lucro actúan como defensoras de una amplia gama de miembros de la comunidad, tales como personas con discapacidades y otras con necesidades de acceso y funcionales, niños, personas de la tercera edad, personas con dominio limitado del inglés y otras poblaciones marginadas.

Gobierno local: El gobierno local tiene el rol primordial de planificar y gestionar todos los aspectos de la recuperación de la comunidad. Desde los Incendios del Complejo de Sonoma, el Condado de Sonoma y la Ciudad de Santa Rosa han trabajado estrechamente para coordinar algunas actividades de recuperación. La Ciudad de Santa Rosa es la más grande de nueve ciudades dentro del Condado de Sonoma, y la Ciudad fue la más afectada por los incendios.

Los gobiernos locales dirigen a la comunidad en la preparación de planes de mitigación y recuperación de peligros, aumentando la consciencia y educando al público sobre herramientas y recursos disponibles para mejorar la resiliencia futura.

ROLES Y RESPONSABILIDADES DE RECUPERACIÓN

Gobierno estatal: Los Estados dirigen, administran e impulsan el proceso general de recuperación y desempeñan el rol central en la coordinación de las actividades de recuperación que incluyen la prestación de apoyo financiero y técnico. El Estado de California supervisa la coordinación regional de la recuperación, fija prioridades y dirige la asistencia donde sea necesario. Además de gestionar los recursos proporcionados federalmente, el Estado puede desarrollar programas o asegurar fondos que puedan ayudar a financiar e implementar proyectos de recuperación.

El Estado de California desempeña un rol importante en mantener al público informado a través de la mensajería estratégica y trabajar con todas las demás partes interesadas para proporcionar un proceso de distribución de la información.

Gobierno Federal: El Gobierno Federal desempeña un importante rol facilitador en el desarrollo de las comunidades urbanas y rurales y sus infraestructuras sociales, y puede aprovechar los recursos necesarios para construir y rehabilitar muchas comunidades para que sean más resistentes a los desastres y resilientes. El Gobierno Federal también desempeña un rol importante en proporcionar información accesible al público y a todas las partes interesadas involucradas en la recuperación, incluyendo información sobre subvenciones federales y préstamos con posibles aplicaciones a la recuperación. En coordinación con el gobierno local y estatal, el gobierno federal es responsable de garantizar que la información sea distribuida, así como entendida, de modo que el público, el Congreso, el sector privado y todas las partes interesadas sean conscientes del proceso y tengan expectativas realistas de recuperación.

PRINCIPIOS CENTRALES

Las maneras en que planificamos para el próximo desastre, incorporar las aportaciones, colaborar para crear las capacidades correctas, mitigar las amenazas, cuidar a nuestros ciudadanos, e implementar las metas y acciones en este Marco, se guían por un conjunto de principios básicos esbozados en gran parte en el *Marco Nacional de Recuperación ante Desastres*. Establecer y adherirse a estos principios básicos ayudará a garantizar que nuestros esfuerzos de recuperación sean coherentes con los socios de recuperación federal y estatal y las mejores prácticas en la gestión de la recuperación. Los principios básicos guían las estrategias que perseguimos, nuestra toma de decisiones, procesos y prácticas. En la práctica, maximizan la oportunidad de lograr el éxito de recuperación. Sus definiciones más específicas han sido informadas por aportaciones del liderazgo del Condado, los socios y nuestra comunidad.

EQUIDAD SOCIAL

Todos los miembros de la comunidad que tienen o sufrirán pérdidas tienen igual voz en informar los esfuerzos de recuperación. Los esfuerzos abordan las barreras sociales e institucionales históricas a la recepción equitativa de servicios y beneficios. Todas las personas tienen acceso a los recursos que abordan equitativamente tanto sus pérdidas físicas como sus necesidades de salud psicológica.

Si bien todos los miembros de la comunidad tendrán acceso a los servicios necesarios para la recuperación y la preparación, también reconocemos que las personas con discapacidades

Nuestros resultados reflejan nuestros valores

Dear Police Officer

Thank you for your service to protect our world, city, town, country and state. I pray for you every night. I belivand trust in you Keep going.

Love,

y otras con necesidades de acceso y funcionales están desproporcionadamente afectadas durante un desastre. Estas incluyen personas con discapacidades del desarrollo o intelectuales; deterioro de la visión; deterioro de la audición; impedimentos de movilidad; lesiones y condiciones crónicas. Pueden También incluir adultos mayores o niños; los que viven en entornos institucionalizados; los que son de bajos ingresos o sin hogar; personas con dominio limitado del inglés o que no hablan inglés; inmigrantes indocumentados; y personas con desafíos del transporte. Para lograr la equidad, el Condado Identificará y satisfará las necesidades de estas poblaciones antes, durante, y después de desastres e Integrará sus necesidades y aportes en el proceso de planificación de la recuperación.

PLANIFICACIÓN DE LA RECUPERACIÓN PREVIA AL DESASTRE

La recuperación es más eficaz la planificación ocurre antes de un desastre. Involucrar a los socios comunitarios en el proceso de planificación crea un entendimiento común de las acciones y roles de la recuperación. Crea capacidad para liderar, planificar y gestionar futuras operaciones de recuperación. La planificación innovadora previa a los desastres puede generar herramientas y recursos que minimizarán los impactos del desastre y el apoyo a la recuperación.

LIDERAZGO Y PRIMACÍA LOCAL

El Condado juega un importante papel en la planificación y gestión de los aspectos de la recuperación de la comunidad. Las ciudades dentro del Condado son socios importantes y juegan un papel en la recuperación también, aunque cada jurisdicción tiene atributos y necesidades únicas. El liderazgo coordinado en todos los niveles de gobierno y sectores de la comunidad es esencial durante todo el proceso de recuperación. El gobierno estatal, regional, y federal apoyan al Condado y a todos los gobiernos locales para reforzar recursos y habilidades locales para promover metas de recuperación. Empresas también desempeñan roles de liderazgo en la planificación de la recuperación. El sector privado es propietario y opera la mayoría de los sistemas de infraestructura críticos del Condado, como los sistemas de energía eléctrica, financieros y de telecomunicaciones.

> **La equidad** es un **resultado** por el cual uno no puede distinguir la diferencia en los marcadores críticos de salud, bienestar y riqueza por raza o etnia, y un **proceso** por el cual valoramos explícitamente a las personas de color y las comunidades de bajos ingresos para lograr ese resultado.

Adaptado de una cita por Yanique Redwood, DC, "¿Qué rayos significa 'Equidad'?," Revisión de la innovación social de Stanford (15 de septiembre de 2016), disponible en línea en el sitio web de Revisión de la innovación social de Stanford.

PRINCIPIOS CENTRALES

SOCIEDADES INVOLUCRADAS

Los socios privados y sin fines de lucro juegan un papel fundamental en satisfacer las necesidades locales de recuperación. Las sociedades involucradas garantizan que las partes con recursos desplegables y un rol en la recuperación tienen una voz en la planificación de recuperación. La colaboración ayuda al condado anticipar las necesidades, y comprender cómo acceder a los recursos disponibles durante y después de un desastre. Los líderes de recuperación comparten una comunicación clara, eficaz, accesible y culturalmente apropiada con los socios.

PUNTUALIDAD Y FLEXIBILIDAD

La puntualidad y la flexibilidad son clave para minimizar retrasos y oportunidades perdidas en la implementación de esfuerzos de recuperación. Los planes, programas, políticas y prácticas son adaptables para satisfacer las necesidades de recuperación imprevistas, insatisfechas y en evolución.

RESILIENCIA Y SOSTENIBILIDAD

La planificación antes y después de desastres ofrecen oportunidades para reducir el riesgo y contribuir a una comunidad más sostenible. Esto incluye evaluar y comprender los riesgos que amenazan a los esfuerzos de recuperación. Resiliencia es la capacidad de prepararse y adaptarse a las condiciones cambiantes y resistir y recuperarse rápidamente de un desastre. La planificación antes y después de desastres garantiza que se tomen pasos para evitar o reducir el riesgo durante el proceso de recuperación y que se pueden aprovechar los esfuerzos de recuperación para aumentar la resiliencia de la comunidad.

Existen oportunidades durante la reconstrucción para promover la sostenibilidad como tomar decisiones de energía inteligentes, mejorar la competitividad económica, expandir las elecciones de vivienda con eficiencia de energía, y mejorar los vecindarios sanos, seguros y transitables.

UNIDAD DE ESFUERZO

El esfuerzo coordinado es central para una recuperación eficiente, eficaz, oportuna y exitosa. La coordinación permite a los líderes de recuperación identificar las necesidades y prioridades con mayor eficacia, reasignar los recursos existentes, comprometer a los socios comunitarios e identificar otros recursos. La unidad de esfuerzo respeta la autoridad y la pericia de las organizaciones participantes mientras coordina el apoyo a las prioridades y objetivos comunes de recuperación.

RECUPERACIÓN PSICOLÓGICA Y EMOCIONAL

La recuperación exitosa aborda las necesidades psicológicas, emocionales y de salud conductual asociadas con el desastre y la recuperación resultante. El apoyo a la salud conductual proporcionado en la recuperación incluye informar y educar a la comunidad sobre los servicios disponibles, apoyo psicológico básico y consejería de crisis, evaluación y remisión al tratamiento cuando sea necesario para problemas de salud mental más graves. La recuperación exitosa reconoce los vínculos entre la recuperación de las personas, las familias, las redes sociales y las comunidades.

COMPROMISO COMUNITARIO

VISTA GENERAL

Los incendios de octubre de 2017 transformaron nuestra comunidad tanto física como emocionalmente. A medida que reconstruimos y restauramos nuestra identidad como Condado, el aporte comunitario sobre la recuperación es una prioridad para el Condado. A lo largo del año 2018, la Oficina de Recuperación y Resiliencia ha involucrado a la comunidad de una variedad de formas para escuchar las inquietudes, ideas y sugerencias de los residentes acerca de las cinco áreas estratégicas de la recuperación y resiliencia. La Oficina continuará involucrando a la comunidad mediante el intercambio de información, recursos y actualizaciones. Continuaremos recopilando los aportes de los miembros de la comunidad en cuanto a la dirección y la prioridad que se les asignará a las actividades de recuperación.

Las principales estrategias usadas para recopilar los aportes de la comunidad para este Marco son:

Talleres de la Junta: La Junta de Supervisores llevó a cabo Talleres de Recuperación para brindar información pertinente a la Junta y para recibir orientación inicial en cuánto a este Marco. Se invitó a las partes interesadas de la comunidad a asistir y aportar sus ideas en las siguientes fechas.

Estrategias clave usadas para recolectar aportaciones en el Marco de trabajo

6 de febrero	**Vivienda**
13 de febrero	**Recursos naturales y desarrollo económico**
27 de febrero	**Preparación comunitaria e Infraestructura**
7 de agosto	**Servicios de red de seguridad**

Reuniones con grupos comunitarios y partes interesadas: La Oficina se reunió con más de 80 grupos comunitarios y partes interesadas para brindar actualizaciones sobre el progreso y solicitar sus aportes sobre este Marco. Varios grupos comunitarios hicieron recomendaciones a nombre de sus organizaciones. Los aportes entregados están disponibles en el sitio web de la Oficina de Recuperación y Resiliencia en www.sonomacounty.ca.gov/ORR.

Reuniones comunitarias de planificación de recuperación: El Condado organizó una serie de reuniones comunitarias para compartir un borrador del Marco que se presentó a la Junta de Supervisores en junio de 2018. El objetivo fue obtener comentarios de parte de la comunidad sobre la visión, los objetivos y las acciones propuestas para cada área estratégica. Los miembros del público participaron en discusiones facilitadas en grupos pequeños y dieron sus aportes. Un total de 306 miembros de la comunidad asistieron a estas reuniones.

Reuniones comunitarias de planificación de recuperación

UBICACIÓN	CIUDAD	FECHA	MIEMBROS DE LA COMUNIDAD
Oficina de Educación del Condado de Sonoma	Santa Rosa	10 de julio	65
Centro para las Artes de Sebastopol	Sebastopol	11 de julio	60
Centro Comunitario de Petaluma	Petaluma	25 de julio	40
Centro Comunitario de Finley	Santa Rosa	2 de agosto	70
Edificio de Veteranos de Sonoma	Sonoma	8 de agosto	28
Escuela Lawrence Cook Middle School (en español)	Santa Rosa	28 de agosto	40
Centro La Luz (en español)	Sonoma	5 de septiembre	3

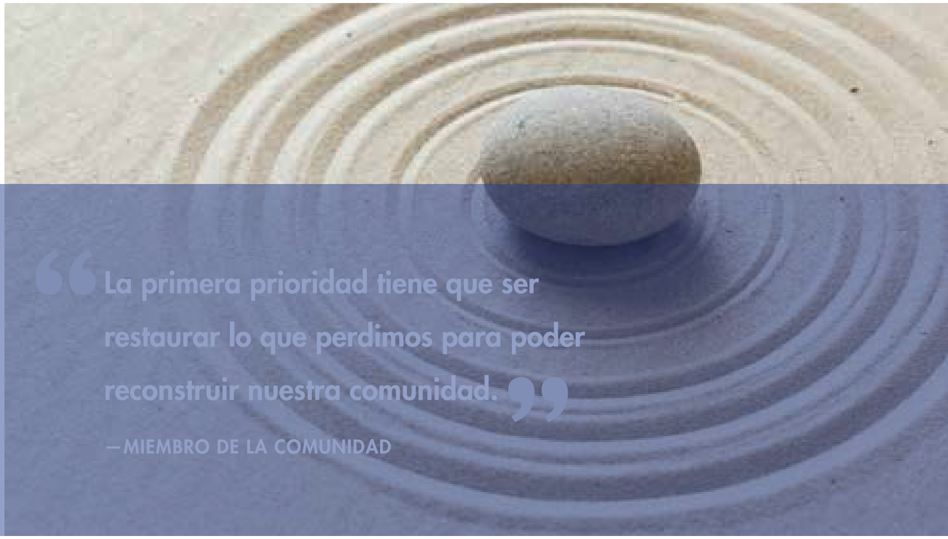
Encuesta en línea: La Oficina llevó a cabo una encuesta por Internet para que los miembros de la comunidad dieran sus aportes acerca del Marco. Se recibieron un total de 115 respuestas.

Correo electrónico: SDesde inicios de 2018, se ha animado a los miembros de la comunidad a que enviaran sus aportes al correo recoveryinfo@sonoma-county.org. Los aportes recibidos por correo electrónico fueron revisados y considerados.

Encuestas comunitarias: Numerosas organizaciones y grupos comunitarios han llevado a cabo encuestas relacionadas con la recuperación posterior a los incendios. Estos esfuerzos informan la comprensión del Condado de las necesidades, intereses y opiniones de la comunidad. La Oficina continuará recopilando y analizando las encuestas y evaluaciones que sean pertinentes para la recuperación. Los resultados de la encuesta están disponibles en el sitio web de la Oficina de Recuperación y Resiliencia en www.sonomacounty.ca.gov/ORR.

ALCANCE

El Condado participó en un extenso esfuerzo de acercamiento comunitario para informarle al público sobre las oportunidades de brindar sus aportes sobre el borrador del Marco. El acercamiento fue diseñado para aumentar la participación a una amplia sección transversal de la comunidad y para buscar las diversas voces y perspectivas. La Oficina llevó a cabo un amplio acercamiento tradicional y tipo grassroots para alentar a los residentes a que compartieran sus ideas y prioridades y trabajó con los socios comunitarios para aprovechar las estructuras existentes a fin de ampliar nuestro alcance, fortalecer las relaciones y mejorar la comunicación y la colaboración. Por ejemplo, la Oficina construyó sobre la Cooperativa de Cuencas Hidrográficas, un grupo representativo de 60 organizaciones enfocadas en las tierras productivas y naturales del Condado de Sonoma, al seguir llevando a cabo reuniones de la Cooperativa para abordar las cuestiones de recuperación y soluciones para lograr la resiliencia. Una lista de los grupos participantes durante este período de acercamiento comunitario se incluye en el Apéndice C.



> “La primera prioridad tiene que ser restaurar lo que perdimos para poder reconstruir nuestra comunidad.”
>
> —MIEMBRO DE LA COMUNIDAD

PLANIFICACIÓN DE LA RECUPERACIÓN: FORMATO DE LA REUNIÓN DE LA COMUNIDAD

El compromiso más fuerte y las discusiones más profundas sobre el Marco se produjeron durante las Reuniones Comunitarias de Planificación de Recuperación. El personal del Condado trabajó con los líderes comunitarios para reclutar residentes de diferentes segmentos de la comunidad, incluyendo a individuos con discapacidades y otros con necesidades de acceso y funcionales, tal como las personas que no hablan inglés, para asegurar que se tomaran en cuenta todos los puntos de vista. Más de 300 residentes participaron en las sesiones. Los materiales y las reuniones se llevaron a cabo tanto en inglés como en español y se ofrecieron servicios de interpretación en todas las reuniones.

> “Todos debemos apoyar a los negocios locales, los cuales contribuyeron tanto durante la crisis.”
>
> —MIEMBRO DE LA COMUNIDAD

APORTES RECIBIDOS

El Condado escuchó de forma constante de los miembros de la comunidad que agradecieron las oportunidades de compartir sus ideas con el personal del Condado. Los datos recopilados de todos los aportes públicos hechos en las reuniones comunitarias de planificación de recuperación y por medio de la encuesta en línea están disponibles en el sitio web de la Oficina de Recuperación y Resiliencia. En colaboración con los departamentos del Condado, el personal de la Oficina revisó y analizó tanto los aportes recopilados durante las reuniones con las partes interesadas como los aportes enviados por email.

Las ideas y las inquietudes expresadas por la comunidad de muchas maneras validaron la visión y los objetivos expresados en el borrador inicial del Marco; sin embargo, los miembros de la comunidad ofrecieron una serie de enfoques nuevos e innovadores hacia la recuperación que también fueron incorporados. Cada sección de un área de recuperación crítica de este Marco incluye un resumen de los temas clave transmitidos por la comunidad. Una lista de los temas clave se incluye en el Apéndice D-1. Los aportes entregados también están disponibles en el sitio web de la Oficina de Recuperación y Resiliencia.

> **Quiero subrayar la importancia de incorporar la equidad al principio del Marco de trabajo y conectarla con la justicia ambiental y el acceso a los recursos, para que esos temas se incluyan en todo el Marco de trabajo. ”**
>
> **—MIEMBRO DE LA COMUNIDAD**

He aquí lo que oímos de parte de la comunidad

"Asegurémonos de ser **audaces en nuestro plan** y hablemos de la **equidad**."

"Quiero animarnos a todos a darnos cuenta de que estos 4-5 temas en este marco de **trabajo se entrelacen todos**."

"Obviamente, dar 'seguimiento rápido' a las aprobaciones de vivienda. Tengan cuidado de no perder de vista, a corto plazo, los **impactos ambientales** a largo plazo... no olvidar CEQA."

"Quemas regulares controladas en algunas áreas. **Reducción manual de combustibles** en otras áreas."

"Soy un gran fanático de las **sirenas** como una alerta para emergencias mayores. ... Los sistemas de sirena fueron ampliamente utilizados por décadas con gran éxito."

"Insto a la Ciudad y al Condado a elaborar un **'Plan de Población Vulnerable'** para futuras emergencias."

"Los grupos más pequeños **(comunidades)** deben asumir la responsabilidad de las comunicaciones."

"Tarifas más bajas. **Aprobar más viviendas** más rápidamente."

DIÁLOGO EN CURSO

Nuestro compromiso con la comunidad no termina con las reuniones comunitarias ni con la impresión de este Marco. El Condado llevará a cabo un diálogo continuo a medida que continúe la recuperación. Posibles oportunidades de participación incluyen un portal de participación en línea para solicitar comentarios, así como métodos de participación más tradicionales, como reuniones comunitarias. Siempre se alienta a los miembros de la comunidad a que compartan sus comentarios en las reuniones de la Junta de Supervisores durante el período de comentarios públicos.

> **“Quisiera haber estado más consciente de cuáles de mis vecinos necesitaban ayuda para evacuar.”**
>

ÁREAS ESTRATÉGICAS DE RECUPERACIÓN Y RESILIENCIA

Área estratégica 1

PREPARACIÓN E INFRAESTRUCTURA DE LA COMUNIDAD

Concientización en todo el condado, infraestructura, sistemas

Área estratégica 2

VIVIENDA

Diversos, asequibles, lugares accesibles para vivir

Área estratégica 3

ECONOMÍA

Nuevos empleos, negocios, oportunidades

Área estratégica 4

SERVICIOS DE RED DE SEGURIDAD

Atención a personas que necesitan ayuda extra

Área estratégica 5

RECURSOS NATURALES

Tierra y agua salubres y bien gestionadas

VISTA GENERAL

La preparación ante los desastres es una responsabilidad compartida. La forma en que nos recuperamos y si nos volvemos más resistentes o no ante futuros desastres depende de las contribuciones de toda la comunidad. Para estar preparados, debemos identificar y prevenir las amenazas, proteger a nuestros ciudadanos, mitigar los riesgos y desarrollar nuestra capacidad de responder de forma rápida y efectiva.

En esta sección, describimos las cinco áreas estratégicas de recuperación y resiliencia, las cuales son elementos fundamentales para lograr la preparación. Se alinean con las capacidades básicas del *Marco Nacional de Recuperación ante Desastres*. Si bien cada uno tiene su propio enfoque, las cinco áreas estratégicas de recuperación y resiliencia (Preparación de la comunidad e infraestructura, Vivienda, Economía, Servicios de la red de protección social y Recursos naturales) son interdependientes. Se requiere la coordinación entre las áreas estratégicas para prevenir la duplicación de esfuerzos, compartir la capacidad tecnológica, mejorar la capacitación y la comunicación, aprovechar los recursos, promover la innovación, aumentar la capacidad y resolver los desafíos.

El Condado, en colaboración con sus socios, ha dado los primeros pasos para identificar los vínculos importantes entre las áreas estratégicas de recuperación y resiliencia. Forman una parte fundamental de este Marco, aunque queda mucho más trabajo por hacer para comprender y definir cómo afectarán la implementación de las acciones propuestas en el mismo.

Muchos de los socios que desempeñan un papel para lograr la visión de recuperación y resiliencia pueden participar de diversas capacidades para implementar las acciones propuestas e incluidas en este Marco. La lista a continuación muestra el rango de posibles roles que asumirán los socios durante la implementación. Los socios clave para todas las acciones propuestas se identificarán durante la fase de planificación de la implementación.

PAPEL	EJEMPLOS
Líder	Líder, Director, Gerente, Administrador, Ejecutivo, Jefe
Socio	Líder conjunto, Gerente de tarea o fase, Miembro del equipo, Miembro del Comité Directivo o de Planificación
Patrocinador	Financiador, Benefactor, Donante, Promotor
Respaldo	Fuente de datos, Intercambio de datos, Almacén de datos, Apoyo tecnológico y de comunicaciones
Parte interesada	Asesor técnico o en políticas, Revisor externo, Entrenador, Beneficiario, Usuario

NOTA SOBRE PLAZOS DE TIEMPO

2019: Las acciones han comenzado o se completarán antes de finales de 2019

2020: Las acciones se completarán antes de finales de 2020

2021+: Las acciones se completarán no antes del 2021

Área estratégica 1

PREPARACIÓN E INFRAESTRUCTURA DE LA COMUNIDAD

VISIÓN

Los residentes, las comunidades y las entidades públicas y no gubernamentales del Condado de Sonoma están preparados para adaptarse y recuperarse en una respuesta coordinada ante cualquier desastre. Programas y sistemas de alerta eficaces permiten enviar notificaciones de emergencia a toda la comunidad. El Condado de Sonoma asegura la seguridad y la protección de la infraestructura crítica, la continuidad de los sistemas financieros y de tecnología de la información y la capacidad de activar programas y sistemas de consciencia situacional para apoyar la toma de decisiones a través del desastre.

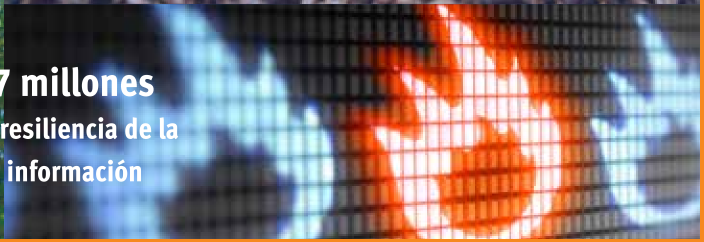
ADAPTARSE

Pruebas del sistema de **alertas**
10 y 12 de septiembre

RECUPERARSE

Se adjudicó **$500,000** para mejorar el programa de gestión de la vegetación del Condado

Se proporcionó **Servicio de Astilladora** priorizado para las áreas de quemado



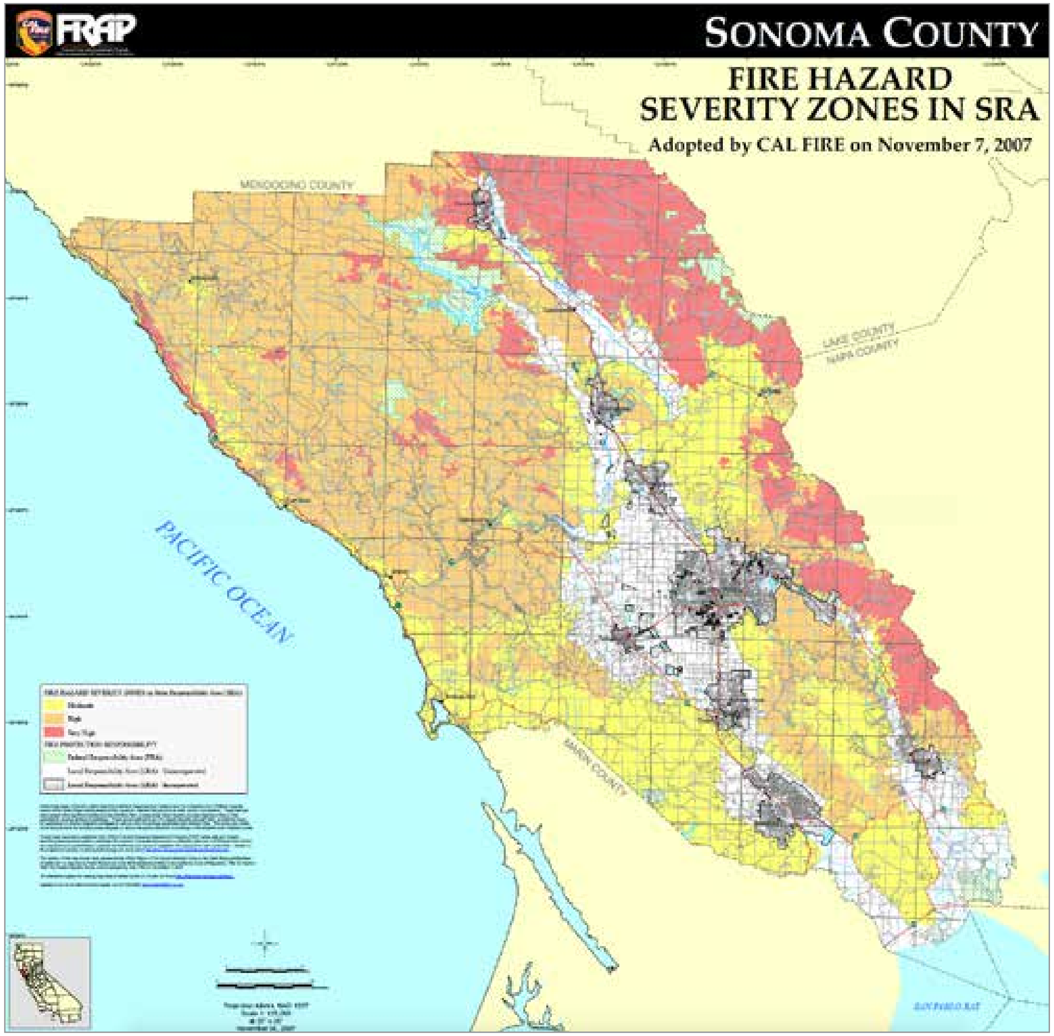
Se aprobó **$1.7 millones** para mejorar la resiliencia de la tecnología de la información

ANTECEDENTES

El mapa de Zonas de Severidad del Riesgo de Incendio (derecha) identifica las áreas de muy alto riesgo de incendio y desglosa las áreas de responsabilidad. La designación de las zonas de severidad se basa en métodos que evaluaron la vegetación, la topografía, el historial de incendios, los patrones climáticos y factores tales como el impacto de las llamas, el calor y las brasas voladoras. La mayoría de las tierras del Condado de Sonoma se encuentran en Áreas de Responsabilidad del Estado, donde CalFire tiene la responsabilidad de proporcionar protección contra incendios. El Programa de Prevención de Incendios de CalFire incluye la ingeniería forestal previa al incendio, el manejo de la vegetación, la planificación para incendios, la educación y el cumplimiento de la ley.

De forma frecuente, el Condado de Sonoma lleva a cabo operaciones de respuesta y recuperación ante eventos climáticos e inundaciones que ponen en riesgo la

Zonas de severidad de peligros de incendio



infraestructura local, tales como los servicios públicos y las redes de transporte. El personal de manejo de emergencias del Condado gestiona estos eventos desde el Centro de Operaciones de Emergencia del Condado de Sonoma (EOC, por sus siglas en inglés). El EOC proporciona la infraestructura de comunicaciones necesaria para coordinar las operaciones de respuesta y recuperación, incluyendo las alertas e información públicas. Desde el año 2005, el Condado ha activado el EOC para diez eventos.

Durante las actividades de respuesta de emergencia anteriores, la infraestructura tecnológica del Condado pudo soportar las operaciones comerciales normales del Condado y los sistemas pudieron manejar el crecimiento temporal en el volumen de datos y demanda.

La Junta de Supervisores asignó más de $14 millones para proyectos de pavimentación hasta finales de la temporada de construcción de 2019 y el Departamento de Transporte y Obras Públicas del Condado de Sonoma (TPW) estaba avanzando en el Plan de Carreteras a Largo Plazo del Condado de Sonoma. Debido a los desastres por tormentas de invierno declarados por el gobierno federal en enero y febrero de 2017, los recursos fueron redirigidos para enfocarse en reparar la infraestructura dañada o destruida.

El Condado se asoció con CalFire en un proyecto piloto para llevar a cabo inspecciones del espacio defendible en ciertas áreas de alto riesgo de incendio.

El Condado no tenía contemplado un plan integral de respuesta de emergencia para animales y Servicios para Animales fue asignado al Centro de Operaciones del Departamento de Servicios de Salud.

> **“Crecí en el medio oeste y teníamos una sirena de prueba que se activaba al mediodía todos los días. Son ruidosas, te despiertan.”**
>
> —MIEMBRO DE LA COMUNIDAD

ANTECEDENTES

Impacto de los incendios en la respuesta de emergencia e infraestructura. Los incendios forestales de 2017 se extendieron rápidamente y destruyeron la infraestructura de comunicaciones esencial. Los gerentes del EOC del Condado de Sonoma lucharon por mantener una consciencia precisa de la situación. La necesidad de sistemas de comunicaciones confiables se hizo más urgente a medida que los incendios avanzaban a través de áreas densamente pobladas. Con la destrucción o el daño de 77 sitios celulares y otros sistemas de comunicaciones inoperables, el sistema 9-1-1 se inundó rápidamente. Fue un desafío alertar a los residentes al riesgo de incendio y evacuar las comunidades en la trayectoria del incendio.

Aunque los sistemas de tecnología de la información del Condado estaban en riesgo dada la proximidad del incendio al campus del Condado, no se destruyó ningún sistema. Sin embargo, el evento de incendio desafió varios de nuestros sistemas de tecnología de la información. Por ejemplo, el centro de llamadas del Condado y el sistema telefónico fueron inundados con llamadas que excedieron los niveles normales. Los sitios web públicos se vieron abrumados por las altas cargas de tráfico. Los sistemas de mapeo geográfico no pudieron procesar las crecientes demandas de la red.

Las calles del Condado y la señalización y los semáforos asociados dentro y alrededor de las áreas quemadas se vieron afectados de forma severa y los sistemas de energía y agua quedaron incapacitados después de las inundaciones y los incendios.

El centro de comando en Servicios para Animales carecía de energía alternativa y el mal funcionamiento de la radio afectó las comunicaciones y las operaciones durante los incendios. La respuesta de servicios para animales se vio obstaculizada por la falta de planes formales de respuesta de emergencia y personal de respuesta capacitado. Además, Servicios para Animales no estuvo en comunicación directa con el EOC durante los incendios.

ANTECEDENTES

Repuesta posterior al incendio. BPara el 20 de octubre de 2017, los incendios fueron contenidos en su mayoría y el Condado comenzó a hacer la transición de los esfuerzos de respuesta a la fase de recuperación. Algunas operaciones de recuperación fueron transferidas a organizaciones no gubernamentales y grupos de trabajo especializados. Posteriormente, el Condado comenzó una “revisión posterior a la acción” enfocada en los procesos y los procedimientos del Centro de Operaciones de Emergencia.[2] Además, el Condado solicitó que la Oficina de Servicios de Emergencia del Gobernador de California (Cal OES, por sus siglas in inglés) revisara el proceso de notificación y respuesta de emergencia.[3] El día 27 de febrero de 2018, la Junta de Supervisores llevó a cabo un Taller de Recuperación sobre la infraestructura que abordó temas como los sistemas de alerta de emergencia, la seguridad en caso de incendio, la preparación para un condado más resiliente, el impacto de los incendios en la infraestructura y las alertas e información públicas.[4]

A los doce días del inicio de los incendios, se reabrieron 91 millas de las 116 carreteras del Condado, se estabilizaron las laderas para evitar los deslizamientos y la erosión y se reemplazó la señalización y la infraestructura de semáforos dañada por el incendio para restaurar los servicios y el acceso a las carreteras del Condado. Los árboles dañados por los incendios a lo largo de aproximadamente 90 millas de carreteras fueron evaluados y aquellos identificados como de riesgo “extremo” o “alto” en el derecho de paso público están siendo eliminados. A pesar de la reasignación de los recursos para enfocarse en la reparación de la infraestructura dañada por las inundaciones, el Departamento de Transporte y Obras Públicas del Condado de Sonoma se puso al día con los proyectos de preservación del pavimento en el año 2018.

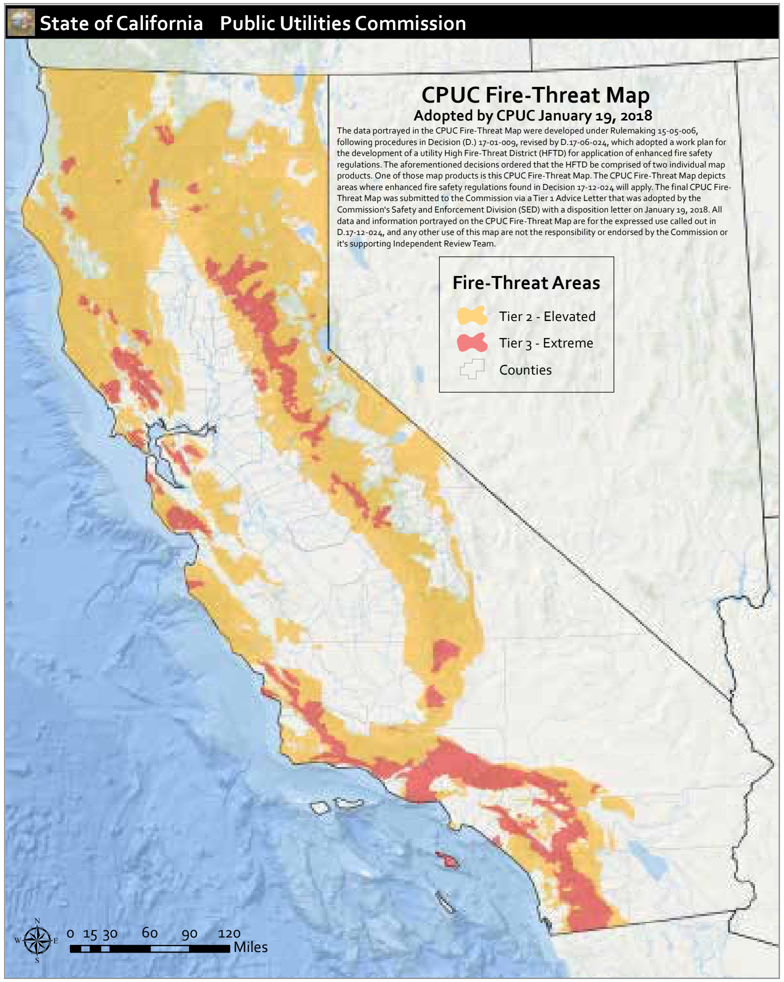
ANTECEDENTES

El Condado estableció un Equipo de Finanzas para Desastres con la participación de múltiples departamentos para dirigir el programa de Asistencia Pública de FEMA del Condado, que busca el reembolso de los costos de respuesta y recuperación asociados con el incendio. El Equipo de Finanzas para Desastres trabaja con FEMA y Cal OES para maximizar estos reembolsos y cumplir con los requisitos de fondos federales. Además, el Condado formó un Comité Directivo de Subvenciones para coordinar la búsqueda de financiamiento externo en todo el Condado para las metas de recuperación y resiliencia.

Following the fire, Animal Services, the Fairgrounds, and non-governmental agencies have begun to develop formal protocols for animal disaster response, including alternate animal evacuation sites.

En enero de 2018, la Comisión de Servicios Públicos de California aprobó un mapa de incendios (derecha) que identifica una gran parte del norte de California con un elevado riesgo de incendio. El mapa representa la evaluación más reciente de las áreas de riesgo de incendio en el Estado. El Condado de Sonoma vio un aumento significativo en las áreas designadas como de alto riesgo de incendio. Las medidas adoptadas por la Comisión incluyen requerir que las empresas de servicios públicos implementen nuevas normas de seguridad contra incendios forestales.

Mapa de amenazas CPUC



State of California   Public Utilities Commission

CPUC Fire-Threat Map

Adopted by CPUC January 19, 2018

The data portrayed in the CPUC Fire-Threat Map were developed under Rulemaking 15-05-006, following procedures in Decision (D.) 17-01-009, revised by D.17-06-024, which adopted a work plan for the development of a utility High Fire-Threat District (HFTD) for application of enhanced fire safety regulations. The aforementioned decisions ordered that the HFTD be comprised of two individual map products. One of those map products is this CPUC Fire-Threat Map. The CPUC Fire-Threat Map depicts areas where enhanced fire safety regulations found in Decision 17-12-024 will apply. The final CPUC Fire-Threat Map was submitted to the Commission via a Tier 1 Advice Letter that was adopted by the Commission's Safety and Enforcement Division (SED) with a disposition letter on January 19, 2018. All data and information portrayed on the CPUC Fire-Threat Map are for the expressed use called out in D.17-12-024, and any other use of this map are not the responsibility or endorsed by the Commission or it's supporting Independent Review Team.

---

5 Comisión de Servicios Públicos de California, adoptado el 19 de enero de 2018, Mapa de Riesgo a Incendios de la CPUC, localizado en http://cpuc.ca.gov/general.aspx?id=6442454972

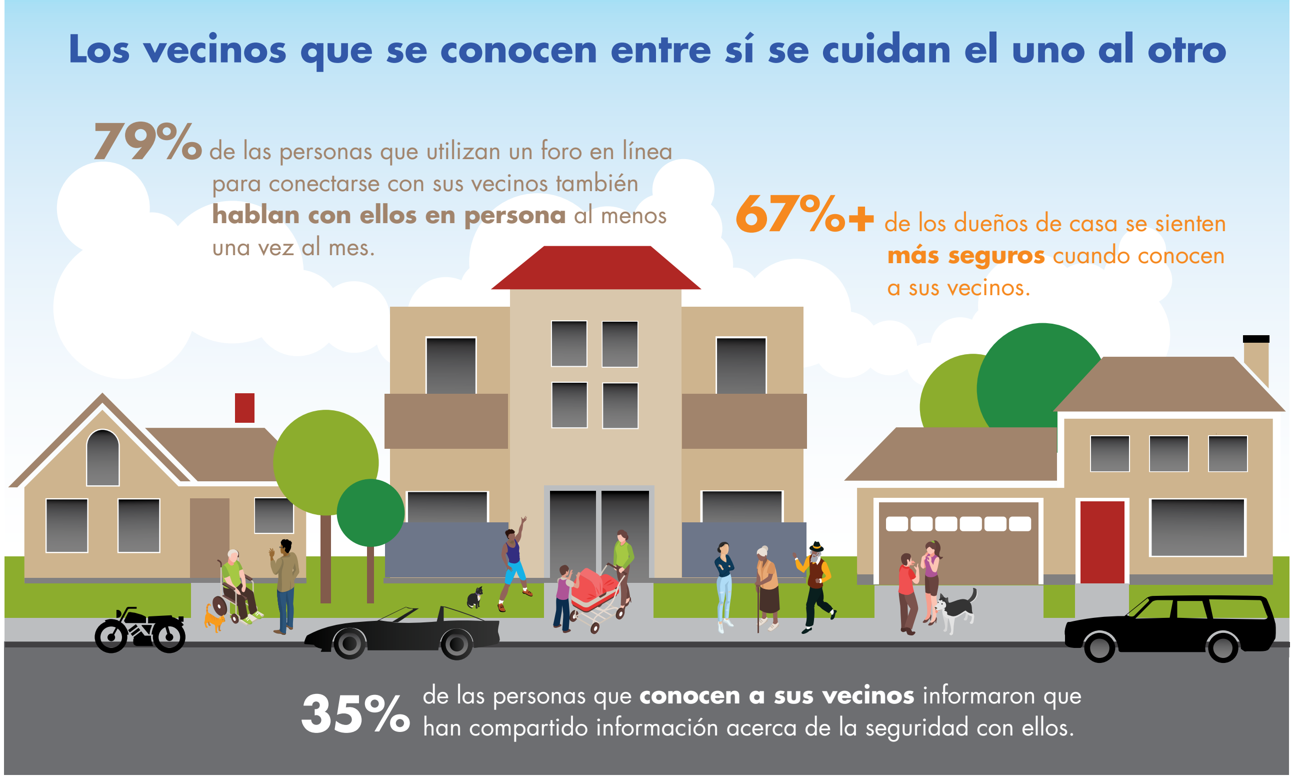
OPORTUNIDADES Y DESAFÍOS

Las acciones propuestas para esta área estratégica se centran en las oportunidades para fortalecer la preparación, prevención y recuperación ante desastres. Estas incluyen mejorar la educación pública, optimizar la consciencia situacional, actualizar las políticas, los procesos y los procedimientos de manejo de emergencias y de financiamiento de recuperación del Condado, proteger la tecnología de la información y mantener las carreteras para una mejor evacuación y acceso para los primeros en responder.

Como resultado de los incendios devastadores, los individuos, las organizaciones y las comunidades se han unido y fortalecido su resolución de hacer que el Condado de Sonoma esté más preparado. Se han forjado relaciones que crean un profundo sentido de conexión y comunidad. Las estadísticas demuestran que el indicador principal para las comunidades en recuperación rápida después de un desastre es cuán cohesivo es el vecindario y el grado en que los vecinos conocen a los demás vecinos. A medida que el Condado trabaja para facilitar la preparación individual y comunitaria, el compromiso que los residentes del Condado de Sonoma tienen entre sí será invaluable. La colaboración entre individuos, grupos comunitarios, organizaciones sin fines de lucro y agencias gubernamentales romperá los obstáculos y promoverá el objetivo de comunidades preparadas.

Las alertas y advertencias públicas se han convertido en un tema de interés y acción urgente entre los programas y las asociaciones de manejo de emergencias en todo el país. Las expectativas públicas para los servicios de alerta y advertencia del gobierno local han subido mucho más allá de las prácticas actuales de la industria. El Condado tiene la oportunidad de avanzar y servir como un líder estatal y nacional en la conversación continua con respecto a los programas de alerta y advertencia. Al desarrollar un Programa de Alerta y Advertencia Comunitaria verdaderamente completo, integrado y sostenible, el Condado puede cumplir con las crecientes expectativas y desafíos de esta misión de seguridad pública fundamental para sus residentes, comunidades y visitantes.

Varias jurisdicciones en el Condado de Sonoma han desarrollado vías de notificación comunitaria y sistemas de alerta. Los beneficios potenciales de consolidar estos esfuerzos son significativos. La consolidación en un solo programa (o sistema de sistemas) aumentaría la capacidad de respuesta, reduciría la redundancia operativa, mejoraría el cumplimiento de las normas y generaría ahorros en cuanto a las adquisiciones y la administración. Actualmente, el Condado utiliza Code Red como su



Los vecinos que se conocen entre sí se cuidan el uno al otro

79% de las personas que utilizan un foro en línea para conectarse con sus vecinos también **hablan con ellos en persona** al menos una vez al mes.

67%+ de los dueños de casa se sienten **más seguros** cuando conocen a sus vecinos.

35% de las personas que **conocen a sus vecinos** informaron que han compartido información acerca de la seguridad con ellos.

Fuente: Pewinternet.com/2009/Reports/18-Social-Isolation-and-New-Technology software de advertencia. Una plataforma más capaz y más fácil de usar permitiría la entrega más rápida y efectiva de las advertencias de emergencia al público y permitiría la integración de los sistemas de redes sociales.

El día 14 de junio de 2018, la Junta de Supervisores aprobó fondos y personal adicionales para el manejo de emergencias y la preparación comunitaria. Esto para apoyar medidas de resiliencia optimizadas, incluyendo programas de preparación comunitaria, tales como equipos comunitarios de respuesta ante emergencias (CERT, por sus siglas en inglés), servicios de comunicaciones auxiliares y programas de preparación individual y de vecindarios. Los fondos adicionales también apoyarán los ejercicios de planificación y capacitación y reforzarán las capacidades de coordinar la alerta de emergencia pública, la respuesta ante incidentes y la recuperación. Los incendios de octubre dieron urgencia al Proyecto de Servicios contra Incendios, creando oportunidades para acciones más rápidas, pero también desafíos en cuanto a la necesidad de fondos adicionales.[6] Los incendios de octubre dieron urgencia al Proyecto de Servicios contra Incendios, creando oportunidades para mayores eficiencias, pero también desafíos en cuanto a la necesidad de fondos adicionales. El mapa a la derecha muestra la reordenación de los distritos que existen en el Condado de Sonoma.

Distritos de Incendios del Condado de Sonoma

---

[6] En 2016, la Junta de Supervisores estableció un Consejo Asesor de Servicios contra Incendios para abordar los servicios contra incendios en el Condado, particularmente en las áreas no incorporadas, para asegurar un sistema de servicios contra incendios más eficiente, efectivo y sostenible. El 14 de agosto de 2018, la Junta recibió un informe y recomendaciones, abolió el Consejo Asesor de Servicios contra Incendios, tomó medidas para implementar fases del plan recomendado y dirigió al personal a que buscara oportunidades de financiamiento para apoyar el plan.

⚠ APORTACIÓN COMUNITARIA

Los miembros de la comunidad afirmaron abrumadoramente las metas y los objetivos identificados en el borrador del Marco. Los temas de las advertencias, la comunicación, la evacuación, el manejo de la vegetación, la educación y la preparación generaron la mayoría de los comentarios. Muchas personas solicitaron que el Condado coordine y trabaje estrechamente con todas las ciudades del Condado en un sistema de alerta y un programa de preparación. Las acciones que han sido incorporadas en el Marco incluyen la evacuación y el cuidado de animales grandes en casos de desastre, la organización de un día anual de preparación para desastres y la inclusión de la preparación personal en el programa de preparación comunitaria. Muchas personas de la comunidad solicitaron que se incorporen métricas objetivas y medibles en los planes que se desarrollen y que se proporcionen informes de estado a la Junta de Supervisores sobre una base regular.

Otras jurisdicciones dentro del Condado expresaron un fuerte deseo de mejorar la colaboración con respecto a un sistema de alerta y advertencia y ejercicios de capacitación. Los ejercicios de capacitación en conjunto podrían incluir simulacros de la ciudad y del Condado, además de ejercicios de "todas las ciudades" y una posible capacitación cruzada para apoyar al Centro de Operaciones de Emergencia. Hubo solicitudes de asistencia para establecer rutas de evacuación, un programa de manejo de la vegetación más integral y para promover que CalFire y CalTrans aumenten el manejo de la vegetación en sus propiedades.

> **"Necesitamos algo que alcance y despierte a todos. Y simulacros regulares de práctica de evacuación de emergencia... con preparaciones especiales para las poblaciones vulnerables."**
>
> **—MIEMBRO DE LA COMUNIDAD**

OBJETIVOS

1. Establecer un programa de advertencia integral de primera clase con tecnología innovadora y consciencia situacional de vanguardia.
2. Enfrentar los futuros desafíos al rediseñar el Programa de Manejo de Emergencias del Condado, proporcionar recursos adicionales, optimizar las capacidades de financiamiento externo y volver a comprometerse con las misiones de seguridad pública del Condado.
3. Dirigir, apoyar y capacitar a los enlaces comunitarios para desarrollar y mantener la preparación individual y del vecindario, incluyendo a las personas con discapacidades y otras necesidades de acceso y funcionales, tales como las personas con dominio limitado del inglés o que no hablen inglés.
4. Hacer que el gobierno del Condado sea más adaptable para proporcionar servicios continuos en situaciones de desastre a través de una planificación integral, una fuerza de trabajo más empoderada y mejores instalaciones y tecnología.

OBJETIVO C1

Establecer un programa de advertencia integral de primera clase con tecnología innovadora y consciencia situacional de vanguardia.

ACCIONES PROPUESTAS:	0-1 AÑO HASTA FINALES DE 2019	2-3 AÑOS 2020-2021	3+ AÑOS 2022+
Desarrollar un sistema de advertencia que comunique las alertas por medio de múltiples sistemas de comunicación y a las personas con discapacidades u otras necesidades de acceso y funcionales, incluyendo a las personas con dominio limitado del inglés o que no hablen inglés. Llevar a cabo capacitaciones y pruebas del sistema.	🟧		
Establecer un portal en línea que consolide la información crítica de los primeros en responder y los socios comunitarios al que tengan acceso todos los equipos de respuesta de emergencia (“Imagen Operativa Común”).	🟧		
Desarrollar protocolos y alianzas para comunicar información crítica a los funcionarios electos, los líderes del gobierno y de la comunidad y al público en general durante un desastre para que estén plenamente informados, incluyendo a las personas con discapacidades u otras necesidades de acceso y funcionales, tales como las personas con dominio limitado del inglés o que no hablen inglés.	🟧		

OBJETIVO C1

OBJETIVOS C1

Establecer un programa de advertencia integral de primera clase con tecnología innovadora y consciencia situacional de vanguardia.

ACCIONES COMPLETADAS:

- ✓ Se completó el informe posterior a la acción que resume las fortalezas y los desafíos del Centro de Operaciones de Emergencia durante la fase de respuesta y la recuperación inicial posterior a los incendios y que documenta y recomienda acciones necesarias para fortalecer las capacidades y los recursos del EOC.
- ✓ Se aprobaron $2.5 millones para el Departamento de Servicios de Emergencia y Contra Incendios para apoyar el desarrollo y la implementación de un Programa de Alerta y Advertencia Comunitaria optimizado, un Programa de Preparación Comunitaria y un Programa de Manejo de Emergencias.
- ✓ Se solicitaron fondos a través del Programa de Subsidios de Mitigación de Riesgos para crear un sistema de cámaras de advertencia temprana contra incendios mediante la instalación de cámaras de monitoreo de incendios en lugares estratégicos en todo el Condado, con los sistemas de microondas y/o las torres asociados.
- ✓ La Agencia de Agua del Condado de Sonoma se asoció con la Universidad de Nevada en Reno y UC San Diego para instalar ocho cámaras de detección de incendios en el Condado de Sonoma en 2018.
- ✓ Se solicitaron fondos a través del Programa de Subsidios de Mitigación de Riesgos para diseñar e instalar sirenas de advertencia en ubicaciones seleccionadas en el Condado y para desarrollar procedimientos de operación, prueba y mantenimiento.
- ✓ Se capacitó al personal del Condado en el nuevo sistema integrado de alerta pública.
- ✓ Se crearon plantillas para los mensajes de Alerta Inalámbrica de Emergencia (WEA) con un límite de 90 caracteres para ayudar a que las alertas se emitan más rápido.
- ✓ Se revisó la política respecto al uso de las WEA en incidentes de riesgo para la seguridad de la vida.
- ✓ Se crearon y grabaron mensajes de evacuación utilizando las plantillas SoCo Alert para posibles instrucciones comunitarias en casos de emergencia.
- ✓ Se realizaron pruebas del Sistema de Alerta y Advertencia los días 10 y 12 de septiembre de 2018.

OBJETIVO C2

Enfrentar los futuros desafíos al rediseñar el Programa de Manejo de Emergencias del Condado, proporcionar recursos adicionales, optimizar las capacidades de financiamiento externo y volver a comprometerse con las misiones de seguridad pública del Condado.

ACCIONES PROPUESTAS:	0-1 AÑO HASTA FINALES DE 2019	2-3 AÑOS 2020-2021	3+ AÑOS 2022+
Evaluar y actualizar los procedimientos, programas, organización, autoridades, infraestructura, personal, equipos y procesos de emergencia del Condado para determinar los cambios estructurales que mejor se ajusten a la capacidad y las necesidades del Condado en un futuro desastre.	🟧		
Evaluar y revisar la colocación administrativa y funcional del Programa de Manejo de Emergencias para informar cualquier cambio recomendado al Centro de Operaciones de Emergencia del Condado y/o las Operaciones del Manejo de Emergencias del Condado.	🟧		
Ampliar las capacitaciones y los simulacros para los gerentes de emergencias en todo el Condado, así como para los socios de ayuda mutua, los funcionarios electos y el personal del Condado.	🟧		
Aumentar la capacidad del Condado de buscar y apoyar subvenciones disponibles y oportunidades de financiamiento externo relacionadas con la recuperación de desastres, la preparación ante emergencias, la mitigación de riesgos, la resiliencia y la seguridad doméstica.	🟧	🟧	
Facilitar la revisión y la posible reorganización del Consejo de Emergencias para las Áreas de Operación del Condado de Sonoma.	🟧	🟧	

OBJETIVO C2

Enfrentar los futuros desafíos al rediseñar el Programa de Manejo de Emergencias del Condado, proporcionar recursos adicionales, optimizar las capacidades de financiamiento externo y volver a comprometerse con las misiones de seguridad pública del Condado.

ACCIONES COMPLETADAS:

- ✓ Se aprobó la estructura y el personal para el Programa de Manejo de Emergencias del Condado y la preparación ante emergencias.[7]
- ✓ Se formó un Comité Directivo de Subvenciones para revisar todas las oportunidades de financiamiento externo y se coordinó la presentación de 22 solicitudes al Programa de Subsidios de Mitigación de Riesgos (HMGP) de FEMA, por un importe total de más de $40 millones. A través del trabajo del nuevo comité, el Condado ha designado proyectos para abordar las prioridades estratégicas identificadas y optimizó la colaboración entre departamentos y externo.
- ✓ Se formó un Equipo de Finanzas para Desastres para maximizar los reembolsos para las operaciones de respuesta y recuperación por medio del programa de Asistencia Pública de FEMA.
- ✓ El Consejo de Emergencias formó un comité para llevar a cabo una evaluación inicial de su misión, explorar las mejores prácticas y dar recomendaciones al Consejo completo en su reunión de diciembre de 2018.

---

[7] Vea la reunión de la Junta de Supervisores realizada el 14 de agosto de 2018, artículo 44.

OBJETIVO C3

Dirigir, apoyar y capacitar a los enlaces comunitarios para desarrollar y mantener la preparación individual y del vecindario, incluyendo a las personas con discapacidades y otras necesidades de acceso y funcionales, tales como las personas con dominio limitado del inglés o que no hablen inglés.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Colaborar con las organizaciones voluntarias, sin fines de lucro y privadas para establecer grupos de trabajo comunitarios para servir como enlaces comunitarios y de vecindarios.	■		
Trabajar con los enlaces comunitarios y/o del vecindario para identificar los peligros, los riesgos y las estrategias de mitigación, incluyendo las rutas de evacuación.	■	▨	▨
Desarrollar un programa de equipos de respuesta comunitaria.	■		
Actualizar la ordenanza contra incendios del Condado para mejorar el Programa de Manejo de la Vegetación con incentivos, protocolos de inspección y reducción y financiamiento apropiado.	■		
Desarrollar protocolos de preparación ante desastres para la seguridad de las mascotas y el ganado.	■		

OBJETIVO C3

Dirigir, apoyar y capacitar a los enlaces comunitarios para desarrollar y mantener la preparación individual y del vecindario, incluyendo a las personas con discapacidades y otras necesidades de acceso y funcionales, tales como las personas con dominio limitado del inglés o que no hablen inglés.

ACCIONES COMPLETADAS:

✓ Se proporcionaron servicios de trituradora, priorizados para aquellas personas en las áreas quemadas, y para abordar las rutas de acceso y el espacio defendible.

✓ Se crearon tres puestos adicionales, de los cuales dos son dedicados al programa de manejo de emergencias del Condado y uno a la preparación comunitaria.

✓ Se asignaron $500,000 para mejorar el programa de manejo de la vegetación del Condado.

OBJETIVO C4

Hacer que el gobierno del Condado sea más adaptable para proporcionar servicios continuos en situaciones de desastre a través de una planificación integral, una fuerza de trabajo más empoderada y mejores instalaciones y tecnología.

ACCIONES PROPUESTAS:	0-1 AÑO HASTA FINALES DE 2019	2-3 AÑOS 2020-2021	3+ AÑOS 2022+
Identificar la infraestructura, los servicios y los recursos esenciales y necesarios durante un desastre y, en la medida que sea posible, establecer contratos y/o Memorándums de Entendimiento.	■		
Colocar con anticipación los equipos críticos (materiales de refugio, equipo de carreteras, etc.) en sitios designados y estratégicos en todo el Condado.	■	▨	
Actualizar el Plan de Continuidad de Operaciones del Condado (COOP) suponiendo que el Condado deberá funcionar de manera efectiva durante al menos 72 horas sin recursos estatales o federales.	■		
Proteger la infraestructura de información, datos y comunicaciones del Condado.	■	▨	
Trabajar con los socios federales, estatales, locales, tribales, comunitarios y/o privados para identificar, evaluar y modificar o reparar la infraestructura de transporte esencial para la respuesta crítica del Condado.	■		
Trabajar con los proveedores privados de los servicios públicos para identificar soluciones al endurecimiento de la infraestructura y para lidiar con los servicios destruidos en un desastre.	■		

OBJETIVO C4

Hacer que el gobierno del Condado sea más adaptable para proporcionar servicios continuos en situaciones de desastre a través de una planificación integral, una fuerza de trabajo más empoderada y mejores instalaciones y tecnología.

ACCIONES COMPLETADAS:

✓ Se eliminaron miles de árboles quemados a lo largo de las carreteras del Condado que representaron un riesgo para la seguridad.

✓ Se le otorgó una subvención de CalFire al Departamento de Transporte y Obras Públicas por el monto de $1,082,969 para evaluar los riesgos de combustible y mortalidad de árboles a lo largo de 83 millas del derecho de paso público en el noroeste del Condado de Sonoma y, posteriormente, para tratar 30 millas de las áreas de mayor prioridad.

✓ Se solicitó una Subvención de Mitigación de Riesgos para comprar e instalar un generador in situ para Roads.

✓ Se mapearon 4,952 propiedades dañadas por el incendio, se validaron los datos de parcelas para agilizar el proceso de Derecho de Entrada para la eliminación de escombros y se recopilaron datos de campo para monitorear el progreso de la limpieza.

✓ Se completó, junto con los Departamentos de Salud y Servicios Humanos, la primera fase del proyecto de integración de datos Access Sonoma para permitir la entrega coordinada de servicios a las víctimas desplazadas por el incendio.

✓ Se implementó un nuevo sitio web basado en la nube para brindar información de emergencia, diseñado para el alto tráfico web y optimizado para los dispositivos móviles: www.SoCoEmergency.org.

OBJETIVO C4

Hacer que el gobierno del Condado sea más adaptable para proporcionar servicios continuos en situaciones de desastre a través de una planificación integral, una fuerza de trabajo más empoderada y mejores instalaciones y tecnología.

ACCIONES COMPLETADAS (continuación):

✓ Se mejoró la protección de los datos:

- Se aprobó un Memorándum de Entendimiento con el Condado de Alameda para compartir el espacio del centro de datos para el equipo de conectividad a fin de mejorar la protección de las copias de respaldo de datos fuera del sitio y para usar el sitio para potenciales operaciones de recuperación.
- Se aprobaron $1.7 millones para mejorar la resiliencia y la capacidad operativa de la tecnología de la información.
- Se establecieron conexiones con los proveedores de la nube para implementar la replicación diaria de los datos críticos.
- Se preparó y se presentó una solicitud de Subvención de Mitigación de Riesgos para financiar una infraestructura de energía mejorada para el centro de datos primario del Condado, el cual respalda los servicios esenciales.

Área estratégica 2

VIVIENDA

VISIÓN

El Condado de Sonoma visualiza un mercado de vivienda que está en equilibrio, que es resistente y climáticamente inteligente a nivel regional, del vecindario y del propietario, que es asequible para los trabajadores del área y para las personas con necesidades funcionales y de acceso, donde las comunidades de color y otros grupos históricamente desfavorecidos, incluyendo a las personas con dominio limitado o sin dominio del inglés y los inmigrantes, tienen acceso equitativo y justo, que respeta los separadores comunitarios designados y los límites del crecimiento urbano, que tiene una diversidad de hogares ubicados cerca del tránsito, el empleo y los servicios y donde la economía es fundamental. Para lograr esta visión, el Condado adoptará un nuevo enfoque regional para construir 30,000 unidades de vivienda nuevas para el año 2023.

ASEQUIBLES

El Centro de Permisos de Resiliencia que expide permisos **expeditos**

Tarifas reducidas sobre ADU más pequeñas para animar a unidades más pequeñas que sean asequibles por diseño

Se hizo solicitud de mitigación de incendios de casas del Programa de subvenciones de mitigación de peligros para proporcionar **incentivos de participación de costos**

ACCESO IGUAL

ANTECEDENTES

A pesar de la escasez de viviendas antes de los incendios, la fortaleza de la comunidad era evidente. Los vecindarios tenían fuertes lazos sociales y las personas se unieron para apoyarse mutuamente después de los incendios. El reconstruir rápidamente y desarrollar nuevas viviendas asequibles no podría ser más urgente para restaurar nuestra comunidad.

Impacto de los incendios en la vivienda. Los incendios de octubre de 2017 destruyeron aproximadamente 5,143 hogares en todo el Condado de Sonoma, haciendo que fueran de los incendios más destructivos de la historia de California. La escasez de viviendas ya era crítica antes de los incendios y se ha vuelto insostenible. Se perdieron más viviendas en una noche de las que se habían construido en el Condado durante los siete años anteriores.

Las personas que perdieron sus hogares en los incendios enfrentan muchos desafíos. Además de sus pérdidas individuales y comunitarias, deben superar varios obstáculos para reconstruir sus vidas, incluyendo instalarse en nuevas acomodaciones, navegar el proceso de reclamaciones al seguro, encontrar arquitectos, planificar la construcción, obtener los permisos y enfrentar incertidumbre con respecto a la disponibilidad de contratistas. Deben determinar si es posible reconstruir en la misma ubicación, tamaño y calidad que su hogar anterior, cómo cumplir con los requisitos reglamentarios con los fondos disponibles y mucho más.

Mientras tanto, las personas con seguro se preocupan que los fondos para la vivienda temporal se agoten antes de que puedan reconstruir sus hogares. En una encuesta relacionada con los incendios de 2017 que se realizó un año después, el 53% de los encuestados informaron que no se había liquidado la parte correspondiente a la vivienda de su reclamación, mientras que el 66% informaron ser infrasegurados en esa parte.[8]

Los incendios afectaron a 1,596 familias de inquilinos y desplazaron directamente a aproximadamente 2,200 arrendatarios. Los incendios también crearon una ola secundaria de desplazamientos a través de las presiones del mercado relacionadas

---

[8] United Policyholders Six Month Survey (Encuesta semestral de United Policyholders)

con el desastre. A menudo los inquilinos se quedan con pocas esperanzas de que la casa en la que vivían sea reconstruida o alquilada a un precio asequible.

Antes de los incendios, muchas de las personas que buscaban una nueva vivienda no podían encontrar ni pagar un lugar digno para vivir. El Condado ya tenía tasas de vacantes muy bajas: el 1.8% para alquileres y el 1% para propietarios.[9] Un estudio del mercado de vivienda publicado en abril de 2018 utilizando datos previos al incendio estimó que el Condado de Sonoma necesitaría 14,634 unidades de alquiler asequibles para satisfacer la demanda. Además, sugirió que más de la mitad de los inquilinos del Condado de Sonoma pagan más de lo que se considera asequible para la vivienda y que casi un tercio paga más del 50% de sus ingresos en el alquiler.[10]

Además, la escasez de viviendas contribuyó a un aumento en el número de personas que se encontraban sin hogar. Luego de siete años de tasas en declive, el Recuento de Personas sin Hogar de 2018 demuestra un aumento del 6% sobre el año 2017. Es probable que esta tasa aumente aún más en el año 2019.

El Recuento de Personas sin Hogar además indica que un estimado de 21,482 personas están alojadas de manera inestable. Aproximadamente la mitad de estas personas indican que están compartiendo vivienda, haciendo *couchsurfing* (durmiendo en el sofá de un conocido) o que no tienen un contrato formal de alquiler debido a los incendios. Unas 2,363 personas fueron desplazadas de forma secundaria por los incendios, ya sea porque los propietarios regresaron a sus propiedades de alquiler cuando su casa se quemó, por el aumento de la renta después de los incendios o por la pérdida de empleo relacionada con los incendios. De los que llegaron a estar alojados de forma inestable después de los incendios, el 43% tenía más de 55 años de edad.

---

[9] Junta de Desarrollo Económico del Condado de Sonoma, Perfil del Condado 2017

[10] California Housing Partnership Corporation, Sonoma County's Housing Emergency and Proposed Solutions (La emergencia de vivienda del Condado de Sonoma y soluciones propuestas), abril de 2018

De las 16,666 personas que se registraron para los beneficios de FEMA en el Condado de Sonoma, el 29% tenía 65 años o más. Muchas de las personas mayores tienen ingresos fijos y lucharán en términos financieros para reconstruir sus hogares o para encontrar viviendas en el mercado de alquiler actual.

Después de los incendios, el costo de comprar una casa en el Condado de Sonoma se volvió cada vez más inalcanzable para muchos compradores de vivienda potenciales. El valor promedio de un hogar llegó a los $681,333, un aumento de los $604,380 durante los doces meses anteriores.[11] Este representa un aumento anual del 11%. Las rentas por unidades no dañadas también aumentaron a una tasa anualizada de 9.9% en los seis meses posteriores a los incendios.[12]

Al mismo tiempo, los empleadores del Condado de Sonoma lo encuentran cada vez más difícil atraer o retener a sus empleadores debido a los altos costos de la vivienda. Un estudio reciente halló que se necesitan 8,143 nuevas unidades de vivienda para el año 2020 para mantenerse al día con el empleo familiar proyectado hasta esa fecha.[13]

Respuesta posterior al incendio. A medida que el Condado hizo la transición de la respuesta a la recuperación, se estableció rápidamente una oficina para expeditar los permisos de reconstrucción de las casas destruidas en los incendios. El Centro de Permisos de Resiliencia ofrece una "ventanilla única" con procesos simplificados para todos los permisos residenciales relacionados con las 2,264 viviendas perdidas en el Condado no incorporado. La Ciudad de Santa Rosa tiene una oficina de permisos similar que tramita los permisos residenciales para los 2,879 hogares perdidos dentro de los límites municipales.

Al 13 de noviembre de 2018, se han presentado al Condado para su revisión 920 unidades de vivienda. De éstas, se han emitido los permisos para 679 unidades con otras 222 en trámite y las demás ya finalizadas. En la Ciudad de Santa Rosa, se han presentado 1,365 unidades de vivienda, de las cuales 1,073 ya cuentan con permisos, otras 241 están bajo revisión y las demás

---

[11] Asociación de Agentes Inmobiliarios de California, abril de 2018

[12] Scott Gerber Sonoma County Apartment Rent Survey (Encuesta sobre la Renta de Apartamentos en el Condado de Sonoma de Scott Gerber), 2017 y 2018

[13] Beacon Economics, abril de 2018

están finalizadas. En total, los 2,285 permisos emitidos, bajo revisión y finalizados suman al 44% de las 5,143 unidades de vivienda que fueron perdidas en los incendios en todo el Condado.

La construcción de nuevas viviendas asequibles y a tasa de mercado en todo el Condado tiene una urgencia aún mayor, ya que el Condado no ha seguido el ritmo de la demanda de vivienda en la última década. A medida que la construcción comienza, la ubicación adecuada es una consideración importante y hay un compromiso a largo plazo en todo el Condado de evitar la expansión con nuevos desarrollos. Esto llevó a la creación de los Límites de Crecimiento Urbano y la identificación de las Áreas de Desarrollo Prioritario (PDA, por sus siglas en inglés) en todo el Condado de Sonoma, en las que se desarrollará la mayor parte de las nuevas viviendas.

Los esfuerzos de recuperación del Condado se han centrado en crear las condiciones que atraigan a los promotores de desarrollo inmobiliario del sector privado para reconstruir y construir nuevas viviendas para un rango de ingresos. Además, se han enfocado en asegurar que el Condado y sus socios gubernamentales locales tengan las políticas y las prácticas vigentes para agilizar la planificación, el desarrollo y la construcción.

Ejemplos de estos esfuerzos incluyen asegurar una coordinación más fuerte entre el Condado y las nueve ciudades para confirmar los lugares de vivienda más apropiados, identificar los terrenos de propiedad del Condado que puedan usarse para la vivienda y prepararse estratégicamente para trabajar con la comunidad de desarrollo, identificar cambios en los reglamentos, procesos y procedimientos de uso de suelos para mejorar las oportunidades de vivienda innovadora y no tradicional para fomentar una amplia gama de desarrollo y organizar fuentes locales de financiamiento para maximizar los incentivos y el apalancamient.

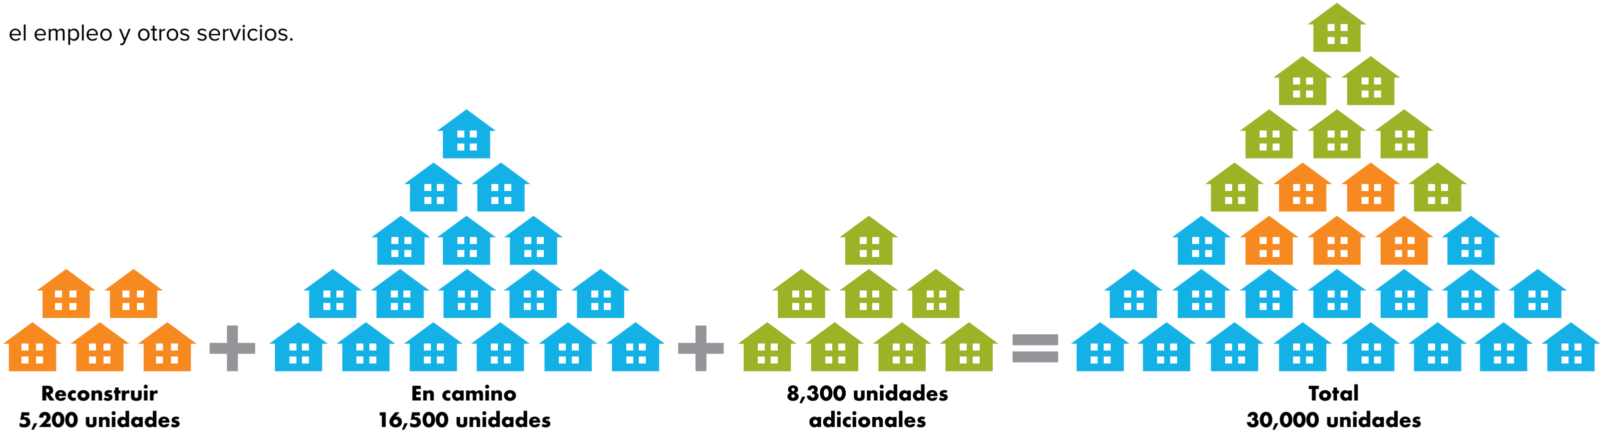
> “**ASEQUIBILIDAD.** Los precios del alquiler se han disparado después de la res. El efecto dominó de la res y la pérdida de casas han forzado a mucha gente a irse para poder pagar por un lugar para vivir.”
>
> —MIEMBRO DE LA COMUNIDAD

OPORTUNIDADES Y DESAFÍOS

Los líderes políticos regionales, estatales y nacionales tienen un gran interés en ayudar con la recuperación posterior al incendio. De igual forma, las instituciones financieras, los filántropos y las empresas quieren ayudar a marcar una diferencia positiva en la recuperación a largo plazo. El posicionar al Condado para trabajar de forma colaborativa con estos grupos para lograr este propósito en común es una oportunidad para transformar dramáticamente el panorama de la vivienda.

La mejor oportunidad es que los sectores público, privado y cívico compartan la misma visión y que trabajen en conjunto para lograr este objetivo común. Esto no ocurre por casualidad ni de la noche a la mañana; más bien es por el esfuerzo de muchos que trabajan en colaboración que se logrará el objetivo.

Uno de los desafíos que enfrenta el Condado es la meta ambiciosa de construir 30,000 unidades de vivienda en todo el Condado. Existen dudas acerca de la magnitud de esta meta, la ubicación de las unidades y el cronograma de entrega de las mismas. Algunos creen que son demasiadas las unidades que se entregarán demasiado rápido, mientras que otros creen que son muy pocas las unidades que se entregarán demasiado lento. Otros tienen preocupaciones con respecto a los detalles de las unidades de vivienda, incluyendo qué tan rápido están progresando las unidades de reconstrucción, cuántas de las unidades serán asequibles y si estarán ubicadas en áreas urbanas cerca del tránsito, el empleo y otros servicios.



OPORTUNIDADES Y DESAFÍOS

Dentro de los Planes Generales actualmente aprobados en todo el Condado, hay una capacidad de aproximadamente 46,000 unidades de vivienda, siempre que se construya a la capacidad total del plan. Actualmente, hay aproximadamente 16,500 unidades de vivienda en alguna etapa del proceso de desarrollo en todo el Condado. Los primeros análisis indican que, tomando en cuenta las 16,500 unidades de vivienda ya en trámite, las 8,500 unidades de vivienda restantes podrían, en teoría, acomodarse dentro de las Áreas de Desarrollo Prioritario y aún dejaría capacidad adicional dentro de las mismas en todo el Condado.

Un punto positivo de los datos de vivienda es que el Condado de Sonoma es una de sólo veintidós jurisdicciones en todo el Estado que cumple con los objetivos de necesidad de vivienda regional asignados por el Estado. Las más de 500 jurisdicciones que no cumplen con los objetivos de la Evaluación de Necesidades de Vivienda Regional (RHNA, por sus siglas en inglés) están sujetas a los requisitos de simplificación de SB35. Sin embargo, el Condado todavía está tomando las medidas necesarias para simplificar los procesos de aprobación de los proyectos de relleno cuando sea apropiado. Los proyectos de relleno son importantes para reducir los impactos climáticos y de servicios y aumentar las oportunidades de viviendas para la fuerza laboral y otras viviendas asequibles, siempre respetando los límites de crecimiento urbano establecidos.

Los incendios afectaron a individuos y hogares dentro de cada nivel socioeconómico. La devastación no distinguió por la edad, raza, etnia, ingresos, idioma, empleo, educación ni condiciones de vida. Sin embargo, el acceso a los recursos de recuperación, ya sean financieros, físicos o emocionales, así como a la información y orientación, puede diferir con base en las características individuales o del hogar. Los desafíos de reconstrucción incluyen la imparcialidad histórica e institucional que tiende a dirigir los recursos de vivienda a los ciudadanos blancos. El sesgo implícito en la industria de la vivienda tiende a mantener a las personas de color con una desventaja importante en el mercado de la vivienda.

La reconstrucción de viviendas perdidas y la construcción de nuevas viviendas requerirán de un gran aumento en el ritmo de la emisión de permisos y es probable que algunos vecindarios se opongan a cualquier nuevo desarrollo cerca de ellos. El navegar las muchas oportunidades y desafíos requerirá un enfoque intencional y reflexivo que sea equilibrado pero que avance la visión del Condado con respecto a la vivienda.

APORTACIÓN COMUNITARIA

La asequibilidad y la disponibilidad de viviendas tanto para inquilinos como para propietarios fue el tema de los aportes comunitarios. Esta fue la preocupación más común. Otras preocupaciones incluyeron facilitar la reconstrucción, brindar asistencia de recuperación para aquellas personas que lo necesiten, tener la ubicación y el tipo de producto adecuados, mantener o desarrollar estándares más altos para la construcción de viviendas, en particular la necesidad de que la vivienda sea resistente ante futuros desastres, usar terrenos públicos para la vivienda y crear la capacidad de tener más participación comunitaria en temas relativos a la vivienda.

Algunas de las estrategias clave que el público identificó como importantes para lograr nuestra visión de vivienda incluyen identificar los proyectos de vivienda que ya cuentan con subsidios pero que no avanzan y encontrar soluciones a lo que impida su construcción, integrar las estrategias de vivienda a través de las jurisdicciones del Condado, incorporar metas de resiliencia en la actualización del Plan General, proporcionar asistencia de alquiler e información sobre los derechos de los inquilinos con relación al aumento de los costos del alquiler para hispanohablantes y proporcionar más recursos para apoyar los esfuerzos de reconstrucción para aquellos que perdieron sus hogares, tanto ocupados por el propietario como por inquilinos.

Muchas de las agencias y los proveedores de servicios relacionados con la vivienda, así como las ciudades y otras jurisdicciones gubernamentales brindaron sus aportes. Identificaron tres estrategias clave para satisfacer las necesidades de vivienda en todo el Condado, incluyendo la adopción de un enfoque unificado y centrado en la vivienda a nivel regional e interjurisdiccional, el desarrollo de fondos de financiamiento para la mitigación de riesgos que puedan asegurar los fondos para los promotores de desarrollo inmobiliario durante todo el proceso de desarrollo de la tierra y compartir los recursos y datos a nivel regional.

APORTACIÓN COMUNITARIA

El Condado ha escuchado preocupaciones con respecto a la brecha entre las acomodaciones temporales para las personas desplazadas por los incendios y su ocupación de viviendas permanentes. Esta brecha abarca todos los tipos de vivienda e ingresos. Las personas que han sido desplazadas por los incendios necesitan fondos adicionales para permanecer alojadas entre ahora y cuando estén disponibles las viviendas permanentes. A medida que se agoten los fondos del seguro para los gastos de vivienda adicionales y el financiamiento de FEMA para la vivienda temporal, y que aún no estén disponibles nuevas unidades de vivienda, habrá una segunda ola de crisis para aquellos que perdieron sus viviendas debido a los incendios.

La capacidad de los sobrevivientes de los incendios de atravesar el período de respuesta y recuperación es fundamental para el éxito de nuestras soluciones de vivienda a largo plazo. El éxito requiere la cooperación regional con agencias de vivienda públicas y sin fines de lucro, subvenciones y organizaciones filantrópicas y un programa sostenido de manejo de casos de desastre que ayude a todos los sobrevivientes de los incendios.

La participación comunitaria en torno a la vivienda continuará y aumentará en conformidad con el uso de los fondos federales y estatales y en lo que respecta a las obligaciones de Vivienda Justa y Derechos Civiles del Condado.

> **“La vivienda NO es asequible para trabajadores jóvenes. Familias jóvenes se están mudando a otros estados para poder pagar para vivir y gozar la vida.”**
>
> **—MIEMBRO DE LA COMUNIDAD**

OBJETIVOS

1. Atraer fuentes de capital nuevas y ampliadas para incentivar la creación de viviendas para todos los niveles de ingresos.
2. Incrementar la seguridad regulatoria al cambiar el modelo de negocios del Condado y buscar activamente oportunidades para profundizar la cooperación regional.
3. Apoyar los estándares de construcción y de desarrollo con una mejora de la resiliencia ante los riesgos locales y la reducción de los impactos climáticos.
4. Apoyo a la reconstrucción de casas destruidas por incendios.
5. Explorar el uso de propiedades del Condado para atraer un desarrollo de viviendas que esté alineado con los objetivos del Condado.

OBJETIVO H1

Atraer fuentes de capital nuevas y ampliadas para incentivar la creación de viviendas para todos los niveles de ingresos.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Formar un Distrito Empresarial de Renovación (RED) como una Autoridad de Facultades Compartidas (JPA) para asegurar la coordinación y facilitar el financiamiento común que apoye una visión de vivienda regional y compartida.	■	■	
Ejecutar un Acuerdo de Autoridad de Facultades Compartidas con la Ciudad de Santa Rosa como un programa piloto de dos años.	■		
Coordinar las estrategias de financiación y recaudación de fondos con todos los municipios que busquen promover la vivienda asequible.	■		
Promover legislación para mejorar la eficacia de RED JPA y obtener el apoyo financiero del Estado.	■	■	
Tratar con las instituciones financieras para desarrollar nuevos proyectos dirigidos a la deuda y el capital.	■	■	■
Tratar con los promotores de desarrollos inmobiliarios para determinar las verdaderas necesidades de capital y adaptar los fondos disponibles del Condado y de la Ciudad para promover proyectos de calidad.	■	■	■
Convocar una amplia gama de instituciones para desarrollar nuevas estructuras de capital que mitiguen los riesgos de financiación e incentiven proyectos de calidad.	■		
Unirse a la Autoridad de Finanzas Públicas de California JPA y utilizar sus herramientas de financiación disponibles.	■		
Desarrollar una herramienta de financiación para las unidades ADU.	■		

OBJETIVO H1

Atraer fuentes de capital nuevas y ampliadas para incentivar la creación de viviendas para todos los niveles de ingresos.

ACCIONES PROPUESTAS (continuación):	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Asegurar el importe máximo de fondos federales y estatales para la vivienda asequible.	■	■	■
Apoyar el Plan de Acción y Análisis de las Necesidades Incumplidas del Departamento de Vivienda y Desarrollo Comunitario de California para la implementación de CDBG-DR.	■		
Apoyar la aprobación de bonos de vivienda locales y estatales.	■		
Llevar a cabo una Evaluación de Equidad de Vivienda robusta para documentar las necesidades y las oportunidades y asegurar que los resultados y las acciones recomendadas estén incorporados en los planes de vivienda para el futuro.	■		
Tratar con la comunidad empresarial para considerar opciones para que los empleadores apoyen e inviertan en nuevas viviendas.	■	■	■
Fortalecer las relaciones con todas las agencias estatales pertinentes, incluyendo CalHFA, el Consejo de Crecimiento Estratégico y el Comité de Asignación de Créditos Fiscales.	■	■	■
Ayudar que EDB y la Cámara de Comercio del Área Metropolitana de Santa Rosa organicen un Consejo de Vivienda de Empleadores, tal como se requiere el plan *Strategic Sonoma*.	■	■	■

OBJETIVO H1

Atraer fuentes de capital nuevas y ampliadas para incentivar la creación de viviendas para todos los niveles de ingresos.

ACCIONES COMPLETADAS:

✓ La Ciudad de Santa Rosa y la Junta de Supervisores acordaron en formar el RED JPA.

✓ El Banco de la Reserva Federal de San Francisco convocó a los prestamistas e instituciones financieras con el objetivo de aumentar la disponibilidad de capital para el desarrollo de viviendas.

✓ Se aseguraron $250,000 en fondos de Tipping Point para el desarrollo de capacidades para mejorar la eficacia de la Comisión de Desarrollo Comunitario del Condado.

✓ Se aseguraron $1,000,000 en fondos de iniciación de Hewlett Foundation para el RED JPA.

✓ Se recibieron las exenciones dirigidas por desastre del Departamento de Vivienda y Desarrollo Urbano de EEUU, las cuales mejoraron la flexibilidad para diversos programas de ayuda para la vivienda administrados por CDC.

✓ Continuamos trabajando con la firma consultora nacional calificada para ayudar a posicionar el Condado para recibir los fondos CDBG-DR, cuyo uso estratégico será para satisfacer las necesidades incumplidas.

OBJETIVO H2

Incrementar la seguridad regulatoria al cambiar el modelo de negocios del Condado y buscar activamente oportunidades para profundizar la cooperación regional.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Identificar cambios potenciales en los reglamentos, procesos y procedimientos del uso de suelos que podrían reducir el tiempo para completar los procesos, disminuir la incertidumbre en el proceso de aprobación y reducir el costo del desarrollo de viviendas, incluyendo los permisos de recuperación de los incendios.	▨	▨	▨
Evaluar y presentar para su consideración viviendas para la fuerza laboral de estándares multifamiliares en la zona cerca del empleo y otras iniciativas de vivienda.	▨		
Actualizar los Planes Específicos, los estudios de tarifas y otros documentos de planificación para ayudar a satisfacer las necesidades de vivienda regional.	▨	▨	▨
Informar el proceso de Actualización del Plan General sobre cuestiones relacionadas con la ubicación y los estándares de la vivienda, la mitigación de riesgos y la resiliencia.	▨	▨	▨
Considerar oportunidades para modernizar y estandarizar los permisos para facilitar que los promotores de desarrollo inmobiliario presenten solicitudes en todo el Condado.		▨	▨
Mejorar las oportunidades para los tipos de edificios innovadores y no tradicionales para una amplia gama de desarrollos de vivienda.	▨	▨	▨
Desarrollar iniciativas de vivienda adicionales que puedan llegar a ser evidentes después de la implementación de la ronda actual de iniciativas; los ciclos recurrentes de actualizaciones regulatorias permiten que los reglamentos evolucionen con las necesidades de la comunidad y del mercado.		▨	▨
Apoyar las respuestas regionales a la necesidad de más viviendas asequibles que se ha agravado después de los incendios, incluyendo la construcción de nuevas unidades de vivienda en las Áreas de Desarrollo Prioritario en las ciudades incorporadas y la coordinación con el Distrito Empresarial de Renovación (RED) y la Junta de Desarrollo Económico.	▨	▨	▨

OBJETIVO H2

Incrementar la seguridad regulatoria al cambiar el modelo de negocios del Condado y buscar activamente oportunidades para profundizar la cooperación regional.

ACCIONES COMPLETADAS:

✓ Se aumentó el tamaño máximo de las unidades de vivienda accesorias (ADU, por sus siglas en inglés) a 1,200 pies cuadrados.

✓ Se redujeron las tarifas para las ADU más pequeñas para animar la construcción de unidades más pequeñas que sean asequibles por diseño.

✓ Se aumentó el área de superficie residencial permitida en proyectos de uso mixto del 50 por ciento al 80 por ciento.

✓ Se demoró la recaudación de tarifas hasta la ocupación casi total, en lugar de a la hora de emitir los permisos.

✓ Se permitieron proyectos pequeños de habitación de ocupación individual (SRO) como un uso permitido y se eliminó el límite existente de 30 habitaciones para los proyectos de SRO más grandes.

✓ Se permitió la vivienda de transición y de apoyo en todos los distritos de zonificación que permitan las viviendas unifamiliares.

✓ Se analizaron las aproximadamente 16,000 posibles unidades de vivienda en trámite de desarrollo en todo el Condado. Este análisis se está utilizando para identificar obstáculos y desarrollar soluciones donde sea posible.

OBJETIVO H3

Apoyar los estándares de construcción y de desarrollo con una mejora de la resiliencia ante los riesgos locales y la reducción de los impactos climáticos.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Construir y reconstruir mejores hogares y mejorar las viviendas existentes en las Interfaces Urbano-Rural (WUI, por sus siglas en inglés) y otros lugares de alto riesgo con mayor resiliencia ante los riesgos locales.	▨	▨	▨
Facilitar las técnicas de endurecimiento de la construcción apropiadas para las interfaces urbano-rural y las modificaciones sísmicas para la construcción y reconstrucción y para las viviendas existentes a través de programas de educación y subvenciones.	▨	▨	▨
Ayudar a los propietarios a navegar las oportunidades de manejo de la vegetación a través de la asociación con Fire Safe Sonoma y otros programas similares.	▨	▨	▨
Proponer oportunidades de financiamiento para el manejo de la vegetación en propiedad privada para complementar la creación de zonas seguras alrededor de las casas en áreas de alto riesgo.	▨	▨	▨
Construir y reconstruir mejores hogares y mejorar las viviendas existentes con una eficiencia mejorada y costos operativos reducidos.	▨	▨	▨
Facilitar las técnicas de construcción adecuadas para el clima para la construcción y reconstrucción de viviendas a través de consultas y asistencia en la planificación de proyectos de parte de la División de Servicios Generales de Energía y Sostenibilidad.	▨	▨	▨
Facilitar la reconstrucción de viviendas con mejoras de energía limpia para la reconstrucción de viviendas destruidas en los incendios a través de una subvención de Sonoma Clean Power.	▨		

OBJETIVO H3

Apoyar los estándares de construcción y de desarrollo con una mejora de la resiliencia ante los riesgos locales y la reducción de los impactos climáticos.

ACCIONES COMPLETADAS:

- ✓ Se solicitó subsidio de Mitigación de Incendios en Viviendas del Programa de Subsidio de Mitigación de Peligros de FEMA a través de CalOES a fin de ayudar a realizar las inspecciones del cumplimiento de las reglamentaciones de espacios defendibles y la identificación de vulnerabilidades estructurales que podrían aumentar el riesgo de ignición de incendios forestales; incentivos de costo compartido para ayudar y animar a los dueños de propiedades a reducir la vegetación y mitigar los elementos vulnerables de la construcción que representan riesgo de ignición de incendios forestales; y educación crítica al público sobre prevención de pérdidas y preparación para incendios forestales.
- ✓ Se solicitó subsidio de Acondicionamiento Sísmico del Programa de Subsidio de Mitigación de Peligros de FEMA a través de CalOES a fin de implementar mejoras permanentes a estructuras de alto riesgo de daño por actividades sísmicas, con un enfoque específico en edificios de pisos blandos donde el primer piso carezca de fuerza o rigidez adecuadas para evitar que se ladee o colapse en un terremoto.

OBJETIVO H4

Apoyo a la reconstrucción de casas destruidas por incendios.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Facilitar el proceso acelerado de permisos de reconstrucción de casas destruidas en incendios.	■	■	■
Continuar operando el Centro de Permisos de Resiliencia.	■	■	
Explorar y desarrollar opciones de financiación para ayudar a reconstruir los hogares destruidos en los incendios.	■	■	■
Continuar abogando por asistencia con los asuntos de seguros con el estado, según sea apropiado.	■	■	■
Buscar fondos federales, estatales y otros para ayudar a reconstruir las brechas para aquellos que intentan reconstruir después de los incendios.	■	■	■
Facilitar y apoyar la navegación de la reconstrucción para ayudar a aquellos que intentan reconstruir las casas destruidas en los incendios.	■	■	■
Facilitar la asistencia en la navegación, incluyendo asesoría financiera, reclamaciones de seguros y reconstrucción, para aquellos que intentan reconstruir debido a incendios en asociación con el Centro de Recuperación del Condado de Sonoma ROC y con los Departamentos de Salud y Servicios Humanos (Red de Seguridad).	■	■	■

OBJETIVO H4

Apoyo a la reconstrucción de casas destruidas por incendios.

ACCIONES COMPLETADAS:

- ✓ Se abrió el Centro de Permisos de Resiliencia en febrero de 2018 para agilizar los permisos de reconstrucción.
- ✓ Se otorgó permiso a más de 650 viviendas a través del Centro de Permisos de Resiliencia hasta octubre de 2018.
- ✓ Se abogó por la reforma de los seguros en el estado.

OBJETIVO H5

Explorar el uso de propiedades del Condado para atraer un desarrollo de viviendas que esté alineado con los objetivos del Condado.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Continuar el proceso para evaluar y desarrollar viviendas en propiedades del Condado ya identificadas para la construcción de viviendas.	■	■	■
Evaluar la necesidad de viviendas para trabajadores de la construcción y si existen oportunidades en propiedades del Condado.	■	■	■
Continuar proceso de Solicitud de Propuestas para desarrollar viviendas en 2150 West College Avenue.	■	■	
Continuar el proceso de desarrollo de viviendas en Roseland Village.	■	■	
Continuar los esfuerzos para redefinir/vender el Chanate Campus como apoyo a los objetivos de vivienda.	■	■	
Identificar y evaluar otras oportunidades potenciales para viviendas en terrenos propiedad del Condado aún no identificados.	■	■	■
Explorar el potencial de vivienda como parte de un desarrollo de uso mixto en propiedades del Centro de Administración del Condado.	■	■	■
Seguir identificando posibles oportunidades de vivienda en otras tierras propiedad del Condado.	■	■	■

OBJETIVO H5

Explorar el uso de propiedades del Condado para atraer un desarrollo de viviendas que esté alineado con los objetivos del Condado.

ACCIONES COMPLETADAS:

- ✓ Se ha expedido una Solicitud de Propuestas (RFP) por parte de la Comisión de Desarrollo Comunitario para la propiedad de 2150 West College.
- ✓ La Comisión de Desarrollo Comunitario ha finalizado un proceso de RFP de dos partes para identificar a un constructor principal a fin de desarrollar Roseland Village para viviendas asequibles y a precio de mercado, y está avanzando con los procesos de desarrollo.
- ✓ El Condado de Sonoma y la Ciudad de Santa Rosa han expedido una encuesta informativa y un cuestionario sobre la viabilidad de mercado de los campus del Centro de Administración del Condado u otros predios propiedad del Condado y/o el campus del Ayuntamiento en el centro de la ciudad para posibles conceptos de desarrollo, incluyendo espacio de oficinas, edificios gubernamentales, uso mixto para ventas al detal y vivienda.

Área estratégica 3

ECONOMÍA

VISIÓN

El Condado de Sonoma está activamente asociado con los empleadores locales para lograr una comunidad resistente, inclusiva y económicamente diversa. A través de alianzas público-privadas, los negocios y residentes del Condado de Sonoma emergen con mayor capacidad para enfrentar los persistentes desafíos locales y pueden sobreponerse a futuros desastres.

INCLUSIVO

SOCIEDADES PÚBLICAS Y PRIVADAS

Alcance
que anima a los empleadores a solicitar préstamos de SBA

Se pidió a los residentes y visitantes de #GoSoCo que compren localmente para apoyar a las empresas

LOCAL

ANTECEDENTES

El Condado de Sonoma es el hogar de más de 500.000 residentes. Tiene 20.000 empresas empleando a más de 250.000 trabajadores. Con una tasa de desempleo de sólo el 3%, el mercado laboral está efectivamente a pleno empleo. Como tal, el potencial de crecimiento de la economía local se ha limitado gravemente por poco o ningún crecimiento en la fuerza de trabajo, en parte debido al alto costo de la vivienda. Los incendios han exacerbado el hecho de que el Condado de Sonoma tenga uno de los mercados laborales más restringidos en una década y una grave escasez de vivienda.

Antes de los incendios, la Junta de Desarrollo Económico del Condado de Sonoma (EDB) había comenzado a trabajar en una estrategia de desarrollo económico integral a cinco años, *Strategic Sonoma*. La EDB estaba realizando la fase de investigación de esta estrategia la cual incluía el análisis económico, la participación de los interesados, y un análisis de fortalezas, debilidades, oportunidades y amenazas (SWot). Se constituyó un Grupo Consultivo *Strategic Sonoma* de 30 miembros para guiar el proceso de planificación. El grupo había participado en talleres para comenzar a formar una estrategia. Cuando golpearon los incendios, este esfuerzo se desplazó inmediatamente hacia las necesidades de recuperación de la comunidad.

Impacto de los incendios en la economía local. Reconociendo las necesidades urgentes de la comunidad después de los incendios, la EDB del Condado de Sonoma redirigió el trabajo de *Strategic Sonoma* hacia la creación del *Plan de Recuperación Económica del Condado de Sonoma*. Como la EDB ya tenía conformado el Grupo Consultivo *Strategic Sonoma* de 30 miembros, fue capaz de hacer la transición rápidamente para concentrarse en la recuperación.

La EDB ha realizado una encuesta con las empresas locales para identificar los impactos de los incendios. Las 194 empresas que participaron en la encuesta del Plan de Recuperación Económica compartieron sus buenas y malas noticias. Casi todos los negocios afirmaron que habían sido afectados adversamente por los incendios. Las Empresas reportaron pérdidas físicas directas, pérdida de ventas, interrupciones a los servicios de electricidad y banda ancha y trabajadores transferidos. Muchas empresas expresaron su preocupación de que los incendios empeoraran desafíos como vivienda, asequibilidad, mano de obra, transporte y sostenibilidad medioambiental.

ANTECEDENTES

La vivienda sigue siendo una preocupación crítica para la comunidad empresarial. Como se discutió en la sección anterior, el Condado de Sonoma tendrá que hacer progresos significativos en el desarrollo de la construcción para reemplazar las viviendas perdidas y satisfacer las demandas. Las proyecciones sugieren que los ingresos tributarios y el empleo deben permanecer sólidos después de los incendios. La continuación de la construcción reducida de viviendas limitará el crecimiento futuro del empleo, los ingresos y los ingresos tributarios.

Situación post-incendio/esfuerzos en marcha. Incluso antes de que los incendios estuvieran completamente contenidos, el personal de la EDB comenzó a trabajar con los socios para cerciorarse de que la comunidad recibiera beneficios relacionados con desastres de parte del gobierno local, estatal y federal. El Departamento creó un *Centro de Recuperación de Negocios* temporal y sigue beneficiando a las empresas impactadas proporcionando servicios necesarios. Esto incluye ayuda con el acceso a fondos disponibles para reconstruir, cubrir nóminas, créditos tributarios e incentivos, y para ayudar con la presentación de reclamaciones. En colaboración con la Ciudad de Santa Rosa, la EDB creó una guía de recuperación de negocios con una lista completa de recursos para las empresas afectadas por los incendios. La EDB también ayudó a vincular empresas calificadas y trabajadores con los beneficios disponibles como los Préstamos para Desempleo por Desastres para Administración de Pequeñas Empresas. La Ciudad de Santa Rosa, la EDB, y la Cámara de Comercio Metropolitana formaron un equipo de contacto comunitario para apoyar a los empleadores más grandes de la zona. El equipo asistió con los problemas de fuerza laboral resultantes de los incendios y ofrecieron talleres personalizados.

A fin de apoyar a las pequeñas empresas en las semanas después de los incendios forestales y en el mercadeo hasta la temporada de las compras navideñas, la EDB lanzó la campaña Shop Local “#GoSoCo – Todo lo que necesitas es de aquí. “La campaña incluyó la participación de las cámaras de comercio del Condado y ganó un premio a nivel estatal de la Asociación de Desarrollo Económico Local de California y un premio nacional de la Asociación de Desarrollo Económico Internacional.

Las partes interesadas del Condado están de acuerdo con el deseo de recuperarse como comunidad más resiliente. La investigación obtenida a través del proceso *Strategic Sonoma* proporcionó una comprensión profunda de otras dinámicas en juego en la economía del Condado. Temas como la vivienda, la fuerza laboral, la sostenibilidad ambiental y la infraestructura surgieron como prioridades principales.

OPORTUNIDADES Y DESAFÍOS

Los incendios forestales han resaltado la necesidad de la EDB de continuar su papel en el desarrollo económico y de la mano de obra del Condado. La EDB también debe apoyar y priorizar los negocios, los empleados y los vecindarios más impactados por los incendios. Poco después de los incendios, la EDB realineó su Iniciativa *Strategic Sonoma* para centrarse en el desarrollo de un plan de recuperación económica a corto plazo. El plan identifica los esfuerzos de desarrollo económico que darán mayor oportunidad para que el condado se recupere. El plan de recuperación económica le reporta al Plan de Acción *Strategic Sonoma*, el cual delinea las estrategias de desarrollo económico a seguir en los próximos años para apoyar a las empresas locales y las comunidades creativas a medida que trabajan para reconstruir y traer de vuelta los puestos de trabajo perdidos.

Los desafíos antes de los incendios forestales, incluyendo el mercado laboral más restringido en décadas y una grave escasez de vivienda, empeoraron debido a los incendios forestales. El desafío es asegurar que los centenares de empresas que solicitaron ayuda financiera a raíz del desastre puedan obtener asistencia técnica y financiera necesaria para reconstruir y recuperarse. De acuerdo con la experiencia del pasado de FEMA con la recuperación de negocios después de un desastre, el 40-60% de las empresas que se cierran como resultado de un desastre nunca se reabrirán.

APORTACIÓN COMUNITARIA

La recuperación económica se discutió a menudo en las reuniones comunitarias organizadas para obtener información sobre el Marco de Trabajo. Los temas principales expresados incluyen asistencia para la vivienda de la fuerza laboral; la necesidad de construir rutas profesionales sostenibles para los empleados con un enfoque en la construcción; apoyo a los negocios locales impactados por los incendios; y la promoción y publicidad continua del Condado de Sonoma como destino turístico.

Los miembros de la comunidad señalaron consistentemente que las dos áreas críticas de la recuperación: la vivienda y la economía, están intrínsecamente vinculadas. Es difícil prever una fuerza laboral saludable y próspera sin un lugar para vivir. Algunos sugieren que los líderes de las diferentes disciplinas trabajen juntos para crear mayores oportunidades de vivienda para los residentes en empleos que fortalezcan la economía. Además, la vivienda es necesaria para la población estudiantil local.

Miembros de la comunidad expresaron su apoyo en la formación de rutas profesionales y en ayudar a los empleados en la fuerza laboral. Una forma de abordar esta necesidad es ampliar alianzas con institutos educativos, incluyendo escuelas intermedias y preparatorias, a fin de mejorar la educación y el entrenamiento para los programas de oficios y vocacionales, especialmente en la industria de la construcción. Los participantes sugirieron oportunidades como pasantes, préstamos, subvenciones y oportunidades educativas gratuitas como pasos para apoyar a los estudiantes. Los participantes también dijeron que la seguridad en el trabajo y el cuidado infantil asequible eran formas importantes para asistir a la fuerza laboral.

Los miembros de la comunidad apoyaron los esfuerzos para diversificar y expandir los negocios locales con la finalidad de crear empleos e impulsar la economía local. Una sugerencia es ampliar la economía más allá del turismo y la industria vinícola para fomentar y atraer nuevas empresas de fabricación y tecnología. El apoyo a la industria del cannabis también se observó como una manera de lograr crecimiento del empleo. Algunos miembros de la comunidad manifestaron la necesidad de aumentar los salarios debido al alto costo de vida en el Condado de Sonoma. Otros dijeron que ofrecer opciones mejores y más asequibles de transporte sería una buena manera de apoyar los trabajadores y sus familias. Las opiniones de la comunidad sugirieron que una infraestructura para banda ancha ampliada apoyaría a las empresas locales.

La comunidad también discutió estrategias para impulsar el turismo, incluyendo publicidad para decirle a turistas potenciales que el Condado de Sonoma está abierto para los negocios. Con el objetivo de albergar a los turistas, los miembros de la comunidad urgen que los hoteles sean reconstruidos rápidamente. Eso también aumentará las oportunidades de trabajo, especialmente para aquellos que estaban previamente empleados por empresas que se incendiaron. Los miembros de la comunidad también sugirieron animar a los residentes y visitantes a que comprasen localmente, incluyendo el uso de contratistas locales en la reconstrucción.

> **“Deberíamos recompensar a los empleadores por crear empleos locales que paguen lo suficientemente bien para que los empleados compren casas y departamentos.”**
>
> —MIEMBRO DE LA COMUNIDAD

ÁREA ESTRATÉGICA 3

Economía

OBJETIVOS

1. Desarrollar y apoyar una fuerza laboral local de alta calidad y equitativa que contribuya a reconstruir esfuerzos, resiliencia y vitalidad económica a largo plazo en el Condado de Sonoma.
2. Apoyar a las empresas locales para que prosperen asegurando el acceso a los recursos, desarrollando alianzas y proporcionando apoyo empresarial.

OBJETIVO E1

Desarrollar y apoyar una fuerza laboral local de alta calidad y equitativa que contribuya a reconstruir esfuerzos, resiliencia y vitalidad económica a largo plazo en el Condado de Sonoma.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Crear un Programa de Educación Cooperativa del Condado de Sonoma que combine el aprendizaje en el aula con experiencia de trabajo estructurado para desarrollar un flujo de graduados calificados hacia las firmas locales.	🟩		
Establecer un Consejo de Alineación de Talentos compuesto por empleadores privados, organismos gubernamentales e instituciones educativas para evaluar la escasez de talento actual y pronosticada, así como estrategias para abordar las necesidades y conectar las rutas profesionales.	🟩		
Desarrollar un plan para entrenar y reclutar a nuevos trabajadores de la construcción que incluya colaborar con el North Bay Construction Corps, un programa de entrenamiento de cinco meses después de la escuela para estudiantes de secundaria interesados en la construcción y los oficios.	🟩		
Utilizar la financiación de subvenciones del Departamento de Desarrollo del Empleo de California para ayudar a entrenar a los residentes en trabajos de construcción necesarios y promover oportunidades tanto en inglés como en español.	🟩	🟩	
Apoyar a un Consejo de Vivienda de Empleadores para fomentar una variedad de soluciones de vivienda para la fuerza laboral mediante la colaboración con los empleadores del sector privado y el Distrito de Empresas de Renovación con el objetivo de apoyar las oportunidades de aumentar la vivienda para la mano de obra, especialmente los trabajadores de la construcción y oficios asociados.	🟩	🟩	🟩
Continuar asociándose con y expandiendo el Cuerpo de Ecología Juvenil del Condado de Sonoma para incluir potencialmente "empleos verdes" enfocados en el manejo de la vegetación.	🟩	🟩	🟩
Establecer un centro formal de capacitación en habilidades de construcción para apoyar la programación de North Bay Construction Corps.	🟩	🟩	🟩
Mejorar las opciones de transporte para que los residentes se conecten con empleadores y servicios esenciales.	🟩	🟩	🟩

OBJETIVO E1

Desarrollar y apoyar una fuerza laboral local de alta calidad y equitativa que contribuya a reconstruir esfuerzos, resiliencia y vitalidad económica a largo plazo en el Condado de Sonoma.

ACCIONES COMPLETADAS:

✓ Se recibieron $3.2 millones en fondo de subsidio como Asistencia Adicional de Emergencia del Departamento de Desarrollo del Empleo de California para ayudar a los trabajadores afectados por los incendios forestales de octubre. El fondo de subsidio beneficiará a aproximadamente 700 individuos con servicios profesionales individualizados y a otros 200 trabajadores desubicados con asistencia para reempleo.

OBJETIVO E2

Apoyar a las empresas locales para que prosperen asegurando el acceso a los recursos, desarrollando alianzas y proporcionando apoyo empresarial.

ACCIONES PROPUESTAS:	0-1 AÑO HASTA FINALES DE 2019	2-3 AÑOS 2020-2021	3+ AÑOS 2022+
Ayudar a las organizaciones públicas y privadas del Condado de Sonoma a acceder a préstamos para recuperación económica y trabajar con agencias estatales y federales, bancos locales, cooperativas de ahorro y crédito y prestamistas alternativos para apoyar préstamos de negocios y subvenciones a empresas calificadas y proporcionar información en inglés y español.	🟩		
Apoyar el esfuerzo de mercadeo “Abierto para negocios” y otros esfuerzos de mercadeo focalizados para que los residentes y visitantes sepan que el condado está funcionando.	🟩	🟩	
Asociarse con el Turismo del Condado de Sonoma y otros socios para implementar una campaña de marketing de recuperación económica.	🟩	🟩	
Expandir la campaña GoSoCo y apoyar los demás esfuerzos de marketing de compras locales con el objetivo de aumentar la conciencia pública acerca de los beneficios económicos de las compras locales.	🟩	🟩	
Colaborar estrechamente con la comunidad agrícola para identificar necesidades y programas específicos de recuperación económica.	🟩	🟩	🟩
Expandir la infraestructura de banda ancha en todo el condado.	🟩	🟩	🟩
Crear las Iniciativas de Innovación Sonoma County AgTech y Manufacturing Alliance para facilitar los negocios locales mientras tratan de abordar los problemas comunes.	🟩	🟩	🟩

OBJETIVO E2

Apoyar a las empresas locales para que prosperen asegurando el acceso a los recursos, desarrollando alianzas y proporcionando apoyo empresarial.

ACCIONES COMPLETADAS:

- ✓ Divulgación con el fin de animar a los empleadores a solicitar préstamos SBA para recuperar los daños físicos y económicos.
- ✓ Continuar monitoreando que los recursos adicionales estén disponibles durante la recuperación, como el California IBank Disaster/Loan Guaranty Programs, EDA Revolving Loan Funds, y HUD Funding y animar a los empleadores a hacer la solicitud.
- ✓ Se solicitó subvención de la Administración de Desarrollo Económico para realizar el diseño/la ingeniería para la banda ancha en áreas rurales no atendidas específicas del Condado. Este proyecto fue desarrollado con la Oficina de Recuperación y Resiliencia, Departamento de Transporte y Obras Públicas, y el Departamento de Sistemas de Información. La solicitud presentada es por $605,500 para llevar a cabo el diseño, ingeniería y análisis de viabilidad de la banda ancha en ubicaciones selectas.

Área estratégica 4

SERVICIOS DE RED DE SEGURIDAD

VISIÓN

El Condado de Sonoma restaurará y mejorará la resiliencia de los sistemas de salud y servicios sociales, las redes y las capacidades para promover la equidad, la independencia y el bienestar de toda la comunidad.

Se proporcionó consejería de crisis a 65,000+ personas

ANTECEDENTES

Los departamentos del Condado de Sonoma trabajan juntos para proveer servicios a fin de satisfacer las necesidades de la comunidad, especialmente personas con discapacidades y con necesidades de acceso y funcionales, incluyendo personas con dominio de inglés limitado o que no hablen inglés. Los Servicios de la Red de Seguridad se refieren a servicios como salud conductual, asistencia para obtener beneficios alimenticios y médicos, asistencia financiera y servicios y protección para animales. Los departamentos de los Servicios de la Red de Seguridad ofrecen programas que ayudan a la comunidad en otros sitios a la vez que proporcionan servicios especializados para personas mayores, niños y la juventud, las familias, las personas con discapacidades y las personas de bajos ingresos y desamparados. Los Servicios de la Red de Seguridad se ofrecen en colaboración con organizaciones comunitarias. Antes de los incendios, los departamentos de los Servicios de la Red de Seguridad proporcionaban servicios con poco personal y recursos.

Los departamentos de los Servicios de la Red de Seguridad del Condado de Sonoma incluyen el Departamento de Servicios Humanos, el Departamento de Servicios de Salud, el Departamento de Servicios de Manutención Infantil, la Comisión de Desarrollo Comunitario, la Oficina del Sheriff, el Departamento de Libertad Condicional, el Defensor Público, y el Fiscal de Distrito.

Impacto de los Incendios en los Servicios de la Red de Seguridad. Los incendios forestales de octubre del 2017 aumentaron la demanda comunitaria de los Servicios de la Red de Seguridad y asistencia de recursos. Para responder a las necesidades inmediatas de la comunidad al iniciarse un incendio, los departamentos de la red de seguridad del Condado proporcionaron una variedad de servicios.

Los departamentos de los Servicios de la Red de Seguridad supervisaron la gestión de 41 refugios en todo el condado para dar protección a personas y familias desplazadas. Las evacuaciones obligatorias durante los incendios dieron lugar a más de 100.000 personas desplazadas de sus hogares y los refugios locales beneficiaron a más de 4.000 evacuados. Enfermeras, trabajadores sociales y profesionales de la salud conductual de los departamentos de la red de seguridad proporcionaron apoyo médico, emocional y social para los residentes desplazados y se ofrecieron servicios de refugio extendido para las personas que no pudieron encontrar vivienda después de la contención del incendio. Los Servicios Médicos de Emergencia, en el Departamento de Servicios de Salud, proporcionaron coordinación de respuestas, incluyendo asistencia con evacuaciones, recursos médicos y de salud en los refugios y repoblamiento de las instalaciones médicas. El personal también distribuyó suministros para niños desplazados, incluyendo pañales y fórmulas para los refugios y organizaciones comunitarias a fin de ayudar a los evacuados que necesitasen estos suministros. Para apoyar a los animales desplazados durante los incendios, los Servicios para Animales coordinaron grandes refugios de animales en colaboración con el Recinto Ferial del Condado de Sonoma y manejaron más de 14.000 llamadas para dar asistencia a los residentes en la localización de animales desplazados.

Los departamentos de la red de seguridad proporcionaron servicios para cubrir las necesidades de niños, mayores, personas con discapacidades, personas con necesidad de beneficios de desempleo y residentes indocumentados. El personal del departamento de la red de seguridad coordinó vivienda segura y de apoyo a todos los niños que fueron evacuados de la casa hogar Valley of the Moon Children’s Home, supervisado por el Departamento de Servicios Humanos, una semana después del inicio de los incendios. El personal se puso en contacto con los beneficiarios en riesgo de los Servicios de Asistencia en el Hogar, los clientes del Departamento de Libertad Condicional y otros clientes para determinar sus circunstancias y necesidades y proporcionarles el apoyo necesario. Los departamentos se aseguraron de que los servicios de tribunales continuaran durante el período de respuesta, incluyendo servicios de defensa de inmigración, a pesar de las evacuaciones de tribunales. El personal asistió a 4,700 personas con seguro de desempleo por desastres mediante JobLink para apoyar a las personas cuyo empleo e ingresos fueron impactados durante los incendios.

Para proteger a los residentes, el personal investigó más de 250 quejas por sobreprecio y se preparó para enjuiciar según fuese necesario. El personal de la red de seguridad también abrió dos centros de cuidado infantil de emergencia para trabajadores de respuesta de emergencia y otros miembros de la comunidad a fin de permitir que estas personas siguieran trabajando y ayudando con los esfuerzos de socorro en casos de desastre.

Durante los incendios, los miembros de la comunidad necesitaban información actualizada. El personal del departamento de servicios de la red de seguridad principalmente colaboró con más de 53,000 llamadas que pedían información a través de la línea de emergencia. Con el objetivo de apoyar a las organizaciones locales y proveedores de servicios a beneficiar a los miembros y familias de la comunidad, el personal del departamento de la red de seguridad preparó información sobre los impactos del trauma en las familias y los niños y compartió estos recursos críticos en todo el condado. Los departamentos de la red de seguridad también coordinaron la preparación de información crítica de seguridad con la finalidad de ayudar a los evacuados que regresaban a casa.

Para apoyar a los dueños de propiedades que perdieron sus hogares en incendios, la división de Salud Ambiental del Departamento de Servicios de Saludo recolectó y procesó más de 4,500 solicitudes para el Programa de Eliminación de Desechos Consolidados patrocinado por el gobierno.

Además de estos servicios relacionados con incendios, los departamentos de la red de seguridad continuaron proporcionando servicios básicos y obligatorios y gestionando su carga de casos.

Las organizaciones de base comunitaria también desempeñaron un papel crítico. Organizaciones no lucrativas locales coordinaron la recolección y distribución de alimentos, gestionaron las donaciones y coordinaron a los voluntarios. Fueron claves para identificar y satisfacer las necesidades de los miembros indocumentados de la comunidad, personas con discapacidades y otras con necesidades de acceso y funcionales y personas con dominio de inglés limitado o que no hablasen inglés.

Situación post-incendio/esfuerzos en marcha. Los incendios de octubre de 2017 dieron lugar a una destrucción generalizada y una pérdida significativa de vidas. Las personas mayores de 65 años de edad y con discapacidades físicas estuvieron representados desproporcionadamente entre las fatalidades. Los incendios han aumentado las demandas de los residentes por los servicios de la red de seguridad, especialmente en las comunidades marginadas.

La Oficina de Recuperación y Resiliencia y los Departamentos de Salud y Servicios Humanos participaron en Harder+Company Community Research en charlas a organizaciones comunitarias sobre la salud y los servicios humanos post-incendio. Harder+Company se propuso identificar esfuerzos para la recuperación y oportunidades para fortalecer las alianzas. Esta información se usará para informar sobre la planificación de la recuperación y fortalecer la red de proveedores de servicios de la red de seguridad.

Las opiniones obtenidas a través de estas conversaciones también ayudaron a informar sobre la visión, metas y actividades del Marco de Recuperación de los Servicios de la Red de Seguridad.

OPORTUNIDADES Y DESAFÍOS

Es un reto para los departamentos de los servicios de la red de seguridad satisfacer el aumento de la demanda de servicios con los niveles actuales de personal. Estos departamentos continuarán la búsqueda de oportunidades para expandir los servicios mediante la financiación innovadora asociándose con otros departamentos y organizaciones comunitarias.

Harder + Company identificó varias oportunidades y desafíos para satisfacer las necesidades de recuperación de la comunidad. Una oportunidad es mejorar el sistema 2-1-1. El sistema 2-1-1 fue saturado por el número de llamadas que recibió durante los incendios. No había suficientes operadores para satisfacer la demanda y la información actualizada no estaba siempre disponible. Se evaluarán otros modelos de sistema 2-1-1 para identificar oportunidades de mejoría de nuestro sistema local. Se tomará en cuenta la capacidad y el acceso fluido a los recursos y servicios durante y después de un desastre.

Los participantes también identificaron la necesidad de un puesto centralizado tipo “ventanilla única” para que los residentes reciban información actualizada sobre actualizaciones y servicios de recuperación. Este Marco de Trabajo identifica las formas de asociarse con los recursos existentes para ampliar los servicios y satisfacer las necesidades de la comunidad. Los participantes desean que el Condado trabaje más estrechamente con las organizaciones comunitarias durante la planificación de la recuperación y que conformen una mayor confianza y relaciones auténticas. En el desarrollo de este Marco de Trabajo, la oficina de recuperación y resiliencia se reunió con más de 80 grupos comunitarios y planea continuar expandiendo esa lista para fomentar alianzas.

APORTACIÓN COMUNITARIA

Al reconocer que muchos residentes continúan luchando con los traumas emocionales por los incendios, los miembros de la comunidad compartieron la necesidad constante de asegurarse de que se cubriesen las necesidades de salud mental y resiliencia en la comunidad después del fuego. Los servicios de salud mental gratuitos deben expandirse, incluyendo el cuidado informado de traumas. Pueden utilizarse animales y mascotas para la terapia. Crear espacios para la curación podría ayudar a satisfacer las necesidades de salud mental.

Construir alianzas y mejorar la coordinación es esencial para satisfacer las necesidades de los servicios de la red de seguridad de la comunidad. Trabajar juntos es fundamental y cada organización tiene un papel que desempeñar en la recuperación. También recomendaron mejorar la gestión de donaciones y bienes y voluntarios idóneos para organizaciones que buscan ayuda. Los participantes sugirieron acoger más talleres y eventos comunitarios con el fin de reunir a la gente y aumentar la comunicación.

Los miembros de la comunidad también piensan que es esencial beneficiar las personas con discapacidades y con necesidades de acceso y funcionales, incluyendo individuos con inglés limitado o sin inglés, en la recuperación y preparación para desastres. Las personas que históricamente han experimentado desigualdades sociales, incluyendo las personas de bajos ingresos, individuos con discapacidades, personas mayores y personas que no hablan inglés necesitan más atención y servicios, especialmente en los refugios de evacuación. Los recursos y la información deben ser culturalmente amigables y estar disponibles en español.

> **“Deberíamos dar prioridad a emergencias para que nuestra comunidad latina tenga acceso a recursos. De modo que estos recursos puedan estar aquí durante el tiempo de crisis.”**
>
> —MIEMBRO DE LA COMUNIDAD

OBJETIVOS

1. Mejorar la capacidad esencial de servicios del Condado para atender las necesidades de recuperación a largo plazo y prepararse para futuros desastres.
2. Cerciorarse de que se satisfagan las necesidades de salud mental y resiliencia post-incendio en la comunidad.
3. Fortalecer la capacidad con los socios cruzados del sector y los miembros de la comunidad para mejorar la coordinación y la comunicación.
4. Entender y abordar las desigualdades sociales para promover oportunidades para todos.

OBJETIVO S1

Mejorar la capacidad esencial de servicios del Condado para atender las necesidades de recuperación a largo plazo y prepararse para futuros desastres.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Mejorar la capacidad de gestión de refugios para desastres con mayores oportunidades de capacitación y colaboración con socios y jurisdicciones de voluntarios de la comunidad.	■		
Desarrollar un plan para asegurar que los recursos y servicios disponibles en los refugios para desastres sean accesibles para los residentes que no hablan inglés y/o son indocumentados.	■		
Explorar la creación de contratos de contingencia con proveedores de alimentos elegibles a fin de proporcionar servicios de alimentos saludables y nutritivos durante un desastre.	■		
Tomar en cuenta el desarrollo de un contrato de contingencia para la coordinación de proveedores de alimentos durante una emergencia, incluyendo un inventario y mapeo de los recursos alimenticios locales disponibles en todo el condado y a nivel nacional durante desastres.	■		
Prestar asistencia de reempleo a los trabajadores que han perdido su empleo porque las empresas de sus empleadores fueron destruidas o impactadas por incendios.	■		
Desarrollar un plan para organizar instalaciones de cuidado infantil de emergencia a fin de permitir que los trabajadores de servicios de emergencias y los miembros de la comunidad continúen con su labor en necesidades críticas.	■	■	
Continuar con los programas relacionados con la vivienda en Salud y Servicios Humanos, incluida la solicitud de becas de vivienda apropiadas.	■	■	■
Proseguir con las oportunidades de educación y divulgación para informar a los residentes sobre cómo prepararse para los desastres, con un enfoque en personas con discapacidades y con necesidades de acceso y funcionales, incluyendo individuos con inglés limitado o sin inglés.	■	■	■

OBJETIVO S1

Mejorar la capacidad esencial de servicios del Condado para atender las necesidades de recuperación a largo plazo y prepararse para futuros desastres.

ACCIONES COMPLETADAS:

- ✓ La Junta de Inversiones de la Fuerza Laboral del Condado de Sonoma (WIB) solicitó y recibió un Subsidio de Asistencia Adicional para Trabajadores Desubicados por Emergencias del Departamento de Desarrollo Laboral de California durante 18 meses a partir del 1° de marzo de 2018. Esta subvención de $3.2 millones permite que WIB y Job Link proporcionen asistencia centrada en negocios en respuesta a los despidos y/o cierre de empresas, incluyendo prevención de despidos y asistencia para reempleo a los trabajadores que han perdido sus puestos debido a los incendios.
- ✓ Se desarrolló un ejercicio de Escudo Urbano para probar las capacidades de los refugios el 6 de septiembre de 2018 con el fin de ofrecer oportunidades prácticas para que el personal organizase un refugio, incluyendo un área de necesidades médicas especiales.

OBJETIVO S2

Cerciorarse de que se satisfagan las necesidades de salud mental y resiliencia post-incendio en la comunidad.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Continuar proporcionando asesoría en crisis, disponible en todo el Condado a través de California HOPE, para los residentes afectados por los incendios.	■	■	
Alianzas con asociaciones profesionales de salud mental, proveedores de salud, donantes y organizaciones sin fines de lucro, para asegurar la continuidad de los servicios.	■	■	
Crear un plan que aborde la integración a corto y largo plazo de la atención informada a traumas en la comunidad a través de diversas instituciones, como escuelas, servicios de salud conductual y administración de casos.	■	■	
Crear espacios de curación comunal que ventilen el tema y desestigmaticen el trauma, incluyendo ayuntamientos, clínicas de sanación o eventos comunitarios.	■	■	■

OBJETIVO S2

Cerciorarse de que se satisfagan las necesidades de salud mental y resiliencia post-incendio en la comunidad.

ACCIONES COMPLETADAS:

- ✓ Se recibió una subvención del Programa de Servicios Iniciales por $1 millón del Departamento de Servicios de Atención Médica del Estado de California para prestar servicios de consejería de crisis en los refugios, al reingreso al hogar, al reingreso a la escuela, en el Centro de Asistencia de Área Local, y en los ayuntamientos comunitarios.
- ✓ El Departamento de Servicios de Atención Médica del Estado de California comprometió $3,350,000 para servicios continuos de consejería de crisis (California HOPE).
- ✓ Se recibió una subvención de $1 millón de Kaiser Permanente Northern California Community Benefit para continuar el Programa California Helping Outreach Possibilities Empowering (HOPE), que ofrece servicios de salud mental dirigidos a los afectados por los incendios forestales en octubre de 2017.

OBJETIVO S3

Fortalecer la capacidad con los socios cruzados del sector y los miembros de la comunidad para mejorar la coordinación y la comunicación.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Expandir las oportunidades de “ventanilla única” para que los residentes reciban información actualizada y recursos necesarios para la recuperación, como asistencia de navegación para asesoramiento financiero, reclamaciones de seguros y reconstrucción para afectados que quieran reconstruir por incendio.	▨		
Mejorar los servicios y la capacidad del 2-1-1 del Condado de Sonoma.	▨	▨	
Asociarse con evaluaciones y encuestas comunitarias y utilizar los datos comunitarios existentes para informar sobre las prioridades de recuperación en curso.	▨	▨	
Asociarse con proveedores comunitarios (hospitales, clínicas, centros de enfermería calificados, organizaciones no lucrativas, asociaciones religiosas, etc.) para desarrollar esfuerzos en colaboración de preparación y planificación para desastres.	▨	▨	
Identificar roles y responsabilidades de los socios comunitarios y del Condado en relación con las actividades de recuperación.	▨	▨	
Fortalecer la capacidad de la iniciativa Accessing Coordinated Care & Empowering Self Sufficiency (ACCESS) del Condado de Sonoma con el fin de coordinar la prestación de atención.	▨	▨	▨
Desarrollar una herramienta tecnológica que permita la coordinación y la evaluación entre departamentos de las mejoras en la salud, el bienestar y la autosuficiencia de los clientes con necesidades importantes como parte de la iniciativa ACCESS del Condado de Sonoma.	▨	▨	▨
Asegurar el acceso oportuno a las actualizaciones y servicios para los residentes que no hablan inglés proporcionando servicios de traducción y dedicar personal de extensión a estas comunidades durante un desastre.	▨	▨	▨

OBJETIVO S3

Fortalecer la capacidad con los socios cruzados del sector y los miembros de la comunidad para mejorar la coordinación y la comunicación.

ACCIONES COMPLETADAS:

- ✓ Se creó la iniciativa ACCESS del Condado de Sonoma para coordinar la prestación del servicio de cuidado. ACCESS consiste en un equipo de respuesta rápida, interdepartamental y multidisciplinar (IMDT).
- ✓ Alianza con la IBM para desarrollar una base de datos multi-departamental para apoyar el trabajo de ACCESS en el Condado de Sonoma y así identificar a las poblaciones objetivo que necesiten servicios y hacer seguimiento a la métrica de datos respecto al éxito.
- ✓ Se iniciaron conversaciones con socios clave de la comunidad, como Rebuilding Our Community (ROC) del Condado de Sonoma con el objetivo de colaborar en oportunidades tipo “ventanilla única”.

OBJETIVO S4

Entender y abordar las desigualdades sociales para promover oportunidades para todos.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Desarrollar principios y directrices para poner en marcha la implementación de contratación por desempeño para aumentar la eficiencia y eficacia de la prestación de servicios de la red de seguridad.	■		
Crear una evaluación completa de las necesidades de la comunidad utilizando una metodología de vulnerabilidad que evalúe las disparidades y las necesidades relacionadas con la salud, el bienestar y la autosuficiencia para dirigir las inversiones, los recursos y la política hacia la atención de las necesidades no satisfechas.	■	■	
Aproveche y utilice las herramientas ofrecidas por la red de la Alianza Gubernamental sobre Raza y Equidad (GARE) a fin de lograr la equidad racial y promover las oportunidades para todos.[14]	■	■	■

---

[14] La Alianza Gubernamental sobre Raza y Equidad (GARE) es una red nacional gubernamental que trabaja para lograr la equidad racial y promover las oportunidades para todos. La Alianza es un proyecto conjunto del nuevo Race Forward.

OBJETIVO S4

Entender y abordar las desigualdades sociales para promover oportunidades para todos.

ACCIONES COMPLETADAS:

✓ Reunir las opiniones de los socios comunitarios con el fin de desarrollar principios de contratación y mejorar los resultados comunitarios, reducir los costos, fortalecer la rendición de cuentas y crear estrategias que incorporen mejor la evidencia y los resultados en el proceso de contratación.

Área estratégica 5

RECURSOS NATURALES

VISIÓN

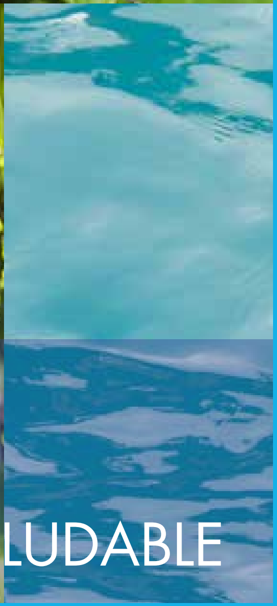
Los recursos naturales y las tierras de trabajo del Condado de Sonoma (es decir, suelos, arroyos, aguas subterráneas, agrícolas y recursos biológicos) son sanos y productivos. Estos son gestionados para dar apoyo a la resiliencia de cuencas y comunidades, proteger la salud y la seguridad pública, y contribuir para mejorar los valores ecológicos, las oportunidades recreativas y la vitalidad económica.

ECOSISTEMAS EQUILIBRADOS

Se eliminaron escombros quemados y árboles peligrosos en combinación con proyectos de pastoreo y adelgazamiento

VITALIDAD

Rehabilitación de más de **2,000 acres** de tierras quemados durante los incendios



AGUA SUBTERRÁNEA SALUDABLE

ANTECEDENTES

Los diversos ecosistemas de nuestro paisaje continúan atrayendo y conformando experiencias para los residentes y visitantes y apoyando la economía local. La variedad de nuestros activos naturales y la belleza escénica excepcional provee sustento, recursos y turismo constante. Sin embargo, también plantea desafíos y peligros.

Las tendencias recientes en precipitación, caudales y humedad del suelo, así como la ocurrencia y los patrones de los incendios, han identificado vulnerabilidades en nuestros recursos naturales y comunidades. Esto ha destacado la importancia de la mitigación de los incendios forestales, la predicción de inundaciones y la fiabilidad de existencia de agua subterránea y superficial.

Se han organizado diversos planes, políticas, programas y regulaciones locales para minimizar la exposición de las comunidades, personas y bienes a los peligros. El esfuerzo County Strategic Priority ‘Healthy Watersheds’ nació para mejorar los recursos naturales y la condición de las cuencas. Están activados Planes Locales de Mitigación de Riesgos

INTERFAZ DE TIERRAS SILVESTRES Y URBANAS (WUI) son zonas donde las casas se construyen cerca o entre tierras propensas a incendios de tierras silvestres. La WUI no es un lugar, en sí, sino un área que cumple con un conjunto de condiciones.

para la Agencia Hídrica del Condado y del Condado de Sonoma (Sonoma Water). El Elemento de Uso de la Tierra del Plan General del Condado de Sonoma 2020 reconoció las restricciones al desarrollo en áreas que están restringidas por las limitaciones naturales de los suelos. El Código del Condado de Sonoma sobre estándares seguros para incendios fue mejorado a fin de incluir la reducción de vegetación peligrosa y material combustible. El Plan Comunitario de Protección contra Incendios Forestales (CWPP) identificó las prioridades de reducción relacionadas con asuntos relativos a incendios forestales en la Interfaz Forestal/Urbana (WUI). Fire Safe Sonoma (FSS) trabajó con la comunidad en los esfuerzos de educación y preparación. El examen y las decisiones del Condado con respecto a nuevos desarrollos y remodelaciones permitieron que los sitios y los peligros estructurales fueran evaluados, evitados o mitigados. Estos esfuerzos continúan fortaleciendo nuestras comunidades y priorizando la preparación y resiliencia contra los peligros naturales y los causados por el ser humano en el futuro.

Impacto de los incendios en los recursos naturales. Además de la trágica pérdida de vidas y la destrucción de los hogares, las empresas y la infraestructura pública por los incendios de octubre del 2017, también se quemaron los paisajes silvestres y de trabajo. Se han producido varios impactos adversos a corto plazo y podrían producirse algunos cambios potenciales a largo plazo, aunque los sistemas naturales a menudo se recuperan adecuadamente con asistencia limitada.

Las agencias estatales formaron un Equipo de Respuesta de Emergencia para Cuencas (WERT)a fin de llevar a cabo una evaluación rápida inicial de los riesgos geológicos e hidrológicos post-incendios para la vida y las propiedades (colectivamente conocidos como Valores en Riesgo o VARS). El enfoque inmediato se centró en la protección de la vida y la propiedad, junto con los daños que afectarían el flujo de agua, el aumento de la erosión y la sedimentación y/o el potencial de deslizamientos, flujos de escombros y lodo. Los reportes de WERT identificaron más de 200 sitios VAR dentro de los perímetros de los incendios de Nuns and Tubbs. Otros VARs fueron identificados y evaluados por especialistas técnicos del Departamento de Pesca y Vida Silvestre de California, el Departamento de Recursos Hídricos de California, y las Juntas de Control de Calidad del Agua Regional de la Costa Norte y de la Bahía de San Francisco en conjunto con agencias locales y Cal Fire. Este grupo de especialistas técnicos también evaluó la posible amenaza inminente a la calidad del agua.

Los incendios forestales pueden tener efectos profundos en los procesos de las cuencas, y pueden modificar factores de precipitación y escorrentía que podrían influir en la erosión y sedimentación y los canales de corrientes durante varios años. Los incendios forestales pueden tener impactos a largo plazo en el ambiente biológico, pero hay relaciones e interacciones complejas que dificultan predecir y comprender todos los efectos. Algunas de las ventajas de las especies de plantas adaptadas al fuego o que dependen del fuego pueden darse, particularmente por quemaduras frecuentes de baja intensidad. Los incendios severos y catastróficos pueden provocar una alteración completa de las especies vegetales y de la comunidad. Los efectos directos o indirectos en especies biológicas de estatus especial no han sido pronosticados.

Situación post-incendio/esfuerzos en marcha. Las tierras dañadas por los incendios y los esfuerzos de supresión del fuego se ajustarán y responderán a través de procesos naturales. Algunas áreas necesitarán rehabilitación y restauración físicas, gestión activa, supervisión y medidas de seguimiento. Estos esfuerzos estarían orientados a prevenir la escorrentía de materiales tóxicos y sedimentos a los suministros de agua potable y los hábitats sensibles; a minimizar la amenaza de inundaciones, los derrumbes y otros peligros de seguridad; y a facilitar una recuperación de ecosistemas que tienda hacia una condición mejorada y más resistente.

El Condado de Sonoma ha estado liderando el esfuerzo de recuperación local, trabajando estrechamente con otras agencias locales, estatales y federales para abordar los impactos globales de los incendios, como las afectaciones a los recursos naturales. El Condado ha sido co-líder del Grupo de Trabajo en Cuencas de Agencias Locales (WTF), con representación de varias agencias y departamentos del Condado, incluyendo Sonoma Water, el Distrito de Preservación Agrícola y Espacio Abierto (AG + Open Space), Permit Sonoma, y los Parques Regionales del Condado de Sonoma (Parques Regionales).

ANTECEDENTES

AG + Open Space realizó y apoyó respuestas y recuperación en sus tierras y servidumbres. Está llevando a cabo varios estudios de investigación y planificación de recuperación de incendios y resiliencia y los ha integrado en sus programas. AG + Open Space también proporciona aportes técnicos al análisis de peligros de tormentas invernales y la gestión forestal y a los objetivos de la condición del sistema de arroyos. AG + Open Space y Sonoma Water financian al especialista de recursos naturales que trabaja en la Oficina de Recuperación y Resiliencia.

Sonoma Water coordinó con varias agencias locales, estatales y federales durante la respuesta y la recuperación temprana, interactuando con la Agencia Federal de Gestión de Emergencias (FEMA), dirigiendo un estudio (en colaboración con Pepperwood, AG + Open Space y ORR) conducido por el USGS para caracterizar las condiciones del suelo post-incendios y el Servicio Meteorológico Nacional (NWS) con el fin de mejorar los pronósticos y alertas de peligros de tormentas. Estos prepararon la señalización de advertencias y los envíos durante el primer invierno post-incendio. El personal de campo de Sonoma Water también trabajó con Cal Fire durante los esfuerzos de recuperación temprana para retirar la vegetación gravemente dañada a lo largo de las carreteras públicas.

Permt Sonoma ha supervisado la calidad de las aguas pluviales durante las respuestas a los incendios y durante la reconstrucción, para que la protección de la calidad del agua sea consistente con el permiso MS4. En coordinación con otros socios en el Grupo de Trabajo de las Cuencas, han estado educando a terratenientes, propietarios y contratistas sobre sus responsabilidades y los recursos y opciones con el objetivo de proteger los flujos y los recursos hídricos.

El Departamento de Agricultura/Pesos y Medidas (Comisionado de Agricultura) ayudó a obtener autorización y facilitar la logística especial para permitir el acceso a las funciones esenciales en las tierras de trabajo durante las evacuaciones por incendios.

La Extensión Cooperativa de la Universidad de California (UCCE) proporcionó supervisión y evaluación de los refugios temporales al ganado y realizó evaluaciones de daños de incendios relacionadas con reclamaciones FSA. La UCCE inmediatamente inició y continúa investigando varios asuntos clave de salud pública, agricultura y ecosistema.

OPORTUNIDADES Y DESAFÍOS

El Condado de Sonoma tiene la oportunidad de identificar y enfocar áreas prioritarias para la gestión activa de la estructura vegetal y las cargas de combustible con el fin de abordar el comportamiento potencial de los incendios forestales, reducir las pérdidas por incendios forestales, garantizar la seguridad de los bomberos y del público, y mejorar la resistencia del paisaje al fuego, las inundaciones y las sequías. Estos esfuerzos se basarán en nuestras inversiones anteriores en recopilación de datos, estudios científicos y aplicaciones tecnológicas avanzadas. La reducción eficaz y eficiente de la carga de combustible y la gestión de las tierras naturales que hagan uso racional de los recursos financieros y humanos requiere una comprensión clara y objetiva de los problemas de gestión de bosques[15] y de las ubicaciones prioritarias. La gestión activa de las tenencias privadas y públicas de tierra en áreas de alta prioridad sería clave para reducir los combustibles peligrosos en las comunidades y sus alrededores.

INTERFAZ DE TIERRAS SILVESTRES Y URBANAS

El Registrador federal provee definiciones para guía de varios tipos de Interfaz de Tierras Silvestres y Urbanas (WUI). En general, las condiciones de la WUI son donde la gente y su desarrollo se encuentran con combustibles de tierras silvestres.

INTERFAZ WUI es donde la comunidad urbanizada tiene un borde claro, hay más de tres estructuras por cada acre y las densidades de población son de más de 250 personas por cada milla cuadrada.

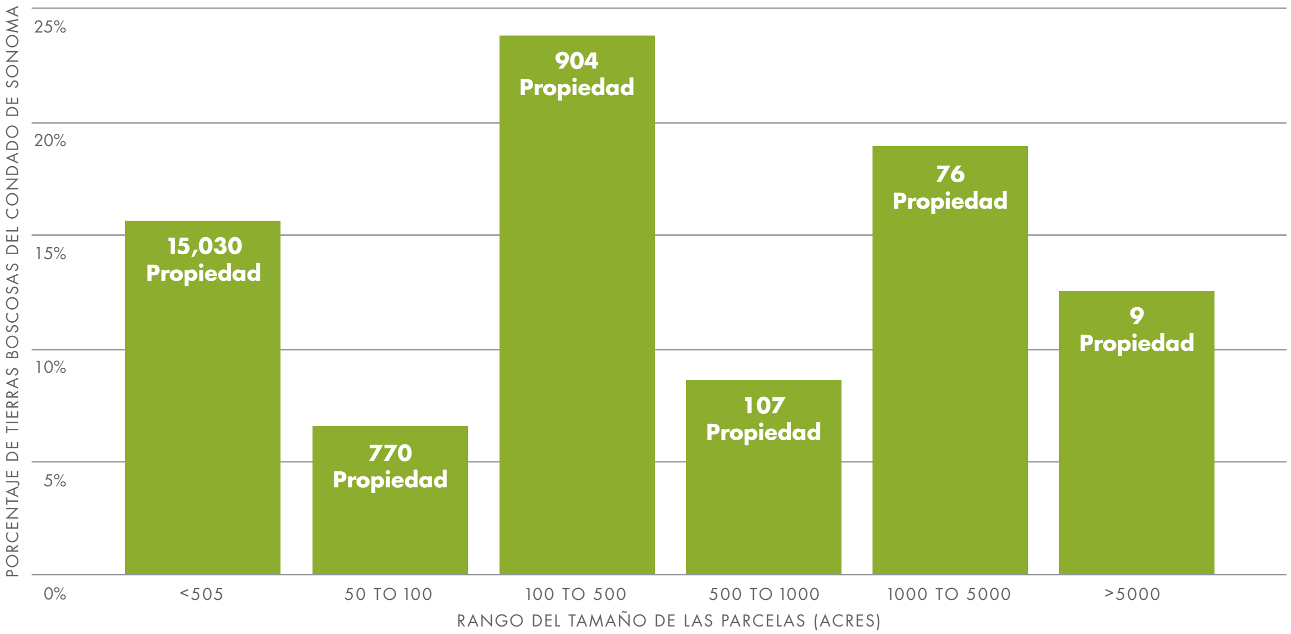
ENTREMEZCLA WUI son tierras con estructuras dispersas a través de áreas silvestres, tan pocas como una por cada cuarenta acres, y las densidades de población son bajas (menos de 250 personas por cada milla cuadrada).

---

[15] A lo largo de este documento, el término 'bosque' se utiliza para referirse a todos los tipos de vegetación leñosa en los alrededores como bosques, arbolados, sabanas y tierras arbustivas.

OPORTUNIDADES Y DESAFÍOS

Se necesitará un programa de alcance y educación con base científica respecto a la salud forestal y el manejo forestal para desarrollar e implementar soluciones, particularmente porque las tierras forestales en el Condado de Sonoma son, principalmente, propiedad privada. Muchos terratenientes privados no son conscientes de las técnicas y los recursos para implementar las medidas de protección de la salud forestal. Los métodos de tratamiento incluyen combinaciones de cosecha de productos de madera, aclarado mecanizado y pastoreo, eliminación de especies invasivas y quema programada de áreas. Muchas de estas tierras forestales “privadas” se encuentran dentro de la “Zona de Responsabilidad del Estado”



*Las tierras forestales se definen como aquellas con bosque de coníferas, maderas mixtas de coníferas o de madera dura en el mapa de vegetación de escala fina del condado de Sonoma.

(véase el mapa en la Sección de Preparación Comunitaria) donde Cal Fire tiene la responsabilidad financiera principal para prevenir y reprimir los incendios. Cal Fire puede participar en proyectos cooperativos con terratenientes privados. El Condado no posee tierras Forestales Nacionales, lo cual limita nuestras opciones para suscribir acuerdos con el gobierno federal con el objeto de realizar conjuntamente el trabajo de cuencas.

Si bien hay muchas oportunidades, “no hay soluciones sencillas para crear un bosque resiliente, y las repercusiones y concesiones acompañan cada forma de tratamiento de combustibles… Habrá necesidad de identificar y hacer cambios normativos y reglamentarios para facilitar la aplicación del Plan de Carbono Forestal”.

Los obstáculos substanciales a la eliminación de árboles de diámetro pequeño y arbustos que son parte del exceso de cargas de combustible incluyen la carencia de usos económicos y de infraestructura en la región. Sin embargo, las acciones recientes a nivel estatal están fortaleciendo la política, la reglamentación y el apoyo a la financiación para mejorar la salud forestal y la prevención de incendios forestales en el contexto del cambio climático. En 2018 se estableció un Grupo de Trabajo para Gestión Forestal de la Gobernación conformado por agencias estatales, locales, tribales y federales trabajando en asociación para aumentar la tasa de tratamientos forestales y expandir los mercados de productos madereros por región. Se buscan maneras de hacer esto en consonancia con el Plan de Carbono Forestal de California. La legislación reciente también proporciona financiación para la salud forestal, la prevención de incendios y la reducción de combustible en los próximos cinco años, reduce los obstáculos para los tratamientos de combustibles no industriales relacionados con el espacio defendible, y provoca cambios de política y regulación que apoyarán las decisiones sobre el uso del suelo formando y manteniendo frenos al combustible y zonas verdes.

No hay soluciones simples para crear un bosque resiliente, y las compensaciones acompañan a cada forma de tratamiento de los combustibles. Habrá necesidades de identificar y realizar cambios de políticas y normativos para simplificar la implementación del Plan de Carbono Forestal.[16]

---

[16] Equipo de Acción Forestal Climatológica. Mayo 2018. Plan de Carbono Forestal de California: Gestión de Nuestros Paisajes Forestales en un Clima Colgante. Sacramento, CA. 178P.

APORTACIÓN COMUNITARIA

El ámbito de Recursos Naturales del Marco de Trabajo se ha beneficiado en gran medida por el alcance de organizaciones no gubernamentales locales y grupos de interés. También se ha beneficiado de las opiniones del público en general. El aporte recibido ha ayudado a dar forma a nuestra declaración de visión y se centra en objetivos clave de alto nivel. Los comentarios de la comunidad han sido coherentes con y de apoyo a los objetivos generales y las acciones propuestas. La meta de reducción de la carga de combustible forestal fue clasificada como muy importante y la comunidad expresó el deseo de tomar decisiones eficaces con base científica y priorizar las acciones. La comunidad también apoyó la necesidad de la educación acerca de la importancia de la gestión de la vegetación en las tierras públicas y privadas. El público también solicitó la divulgación enfocada en WUIs, el uso del conocimiento tribal, la constitución de la confianza pública, y el apoyo a las acciones de los terratenientes. El público también clasificó las mejoras del sistema de corrientes como muy importantes. El abanico de ideas y sugerencias incluía la necesidad de proteger y vigilar las tierras naturales y de trabajo; posibles cambios en las delimitaciones protectoras de las corrientes; deseos de vincular la ciencia con las políticas y patrones del uso del suelo; participación con voluntarios, grupos comunitarios y ONGs en la planificación e implementación; y asistencia financiera y regulatoria para los terratenientes ribereños. Los comentarios también incluían un fuerte deseo de que la información pública basada en la ciencia y con educación diera luces acerca de la toma de decisiones sobre el uso de la tierra, la reducción de la carga de combustible y la gestión de cuencas. Varios sugirieron que se escalonaran esos programas para reducir la carga de los sobrevivientes de los incendios de 2017.

> **“El Condado de Sonoma tiene grandes propiedades, parcelas pequeñas, sitios de viviendas y lotes, todos los cuales deben tratarse de manera diferente.”**
>
> **—MIEMBRO DE LA COMUNIDAD**

OBJETIVOS

1. Reducir las cargas de combustible en los bosques, zonas boscosas y arbustos de manera estratégica para reducir los peligros de incendios forestales en las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, a enfermedades e insectos.

2. Evaluar y apoyar la recuperación de cuencas quemadas y proteger y mejorar los sistemas de corrientes para reducir el peligro de incendios forestales a las comunidades, apoyar el suministro de agua y la tolerancia a la sequía y ofrecer atenuación de inundaciones, a la vez que se da sustento a las funciones ecológicas y a la diversidad biológica.

3. Basarse en inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y alianzas para integrar la mejor ciencia disponible en esfuerzos de divulgación, desarrollo de políticas, reglamentos, incentivos y planificación decisiones sobre el uso de la tierra.

OBJETIVO N1

Reducir las cargas de combustible en los bosques, zonas boscosas y arbustos de manera estratégica para reducir los peligros de incendios forestales en las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, a enfermedades e insectos.

ACCIONES PROPUESTAS:	0-1 AÑO HASTA FINALES DE 2019	2-3 AÑOS 2020-2021	3+ AÑOS 2022+
Desarrollar la reducción de cargas de combustible estratégicas y proactivas y las prioridades de resiliencia del paisaje usando criterios clave (p. ej., riesgo de incendios forestales, salud pública y seguridad, necesidades de abastecimiento de agua, impactos económicos y sensibilidad de los ecosistemas) usando herramientas de soporte de decisiones con datos objetivos y asesores expertos.	🟦	🟦	
Evaluar opciones para la gestión activa de bosques, tierras boscosas y arbustos en las tierras públicas y privadas para las interrupciones de combustible y fuego que disminuyen los riesgos para las comunidades desarrolladas.	🟦	🟦	
Fortalecer la administración forestal regional para mejorar el liderazgo, la supervisión, la capacitación y financiación de proyectos de reducción de combustible; mejorar los recursos de datos y compartir para dar apoyo a las protecciones medioambientales y facilitar oportunidades efectivas de reducción de combustible para los proyectos de los terratenientes y comunitarios.			🟦

OBJETIVO N1

Reducir las cargas de combustible en los bosques, zonas boscosas y arbustos de manera estratégica para reducir los peligros de incendios forestales en las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, a enfermedades e insectos.

ACCIONES COMPLETADAS:

✓ Diversas agencias y organizaciones del Condado han comenzado esfuerzos continuos para apoyar una gestión forestal local y regional más sostenible, tales como:

  – Participar en el Grupo de Trabajo de Gestión Forestal de la Gobernación (FMTF), los Representantes de Condados Rurales de California (RCRC), y la Asociación de Recursos de la Costa Norte (NCRP). Nuestra participación elevará nuestro perfil, nos mantendrá actualizados en temas de reglamentación, financiación y política, y capitalizará respecto a lecciones aprendidas en otros lugares.

  – Involucrar a expertos independientes en la identificación y evaluación de las opciones de organización y estrategias económicas que puedan crear y mantener tierras naturales y de trabajo resilientes de manera efectiva, especialmente teniendo en cuenta el alto porcentaje de propiedad privada de las tierras forestales en el condado.

  – Unir esfuerzos de colaboración de agencias locales, estatales, tribales y federales con terratenientes y grupos comunitarios para entrenar, probar e implementar la reducción de combustible usando una amplia gama de métodos de tratamiento.

✓ El Ag + Open Space District inició varios esfuerzos de monitoreo, investigación y mejoramiento de la preparación, incluyendo un enfoque prioritario en la reducción de combustibles para todas las propiedades, que construya sobre las operaciones de pastoreo existentes, y participe en las discusiones de la gestión de vegetación en todo el condado. Fueron galardonados con una subvención de la Administración Nacional de Aeronáutica y del Espacio (Nasa) para evaluar la respuesta de las tierras de trabajo y naturales a los incendios, incluyendo la severidad de las quemas correlacionada con el tipo de cubierta vegetal.

OBJETIVO N1

Reducir las cargas de combustible en los bosques, zonas boscosas y arbustos de manera estratégica para reducir los peligros de incendios forestales en las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, a enfermedades e insectos.

ACCIONES COMPLETADAS (continuación):

- ✓ Sonoma Water ha incluido la consideración de los beneficios de la reducción de la carga de combustible en las calificaciones multi-beneficios dentro de los Planes de Recursos Hídricos Pluviales que priorizan los proyectos potenciales para las solicitudes de financiamiento del estado.
- ✓ Parques Regionales ha facilitado los proyectos de pastoreo y aclarado para reducir las cargas de combustible, está colaborando con Mayacama Golf Club en una pausa de combustible y en la búsqueda de financiación para permitir: mejoras en la infraestructura de pastoreo; retroadaptación para mejorar la protección contra incendios de las instalaciones y los accesos de emergencia; y agregar la gestión de incendios en los planes de administración de los parques.
- ✓ El Comisionado Agrícola continúa apoyando el control y la gestión de especies invasivas en tierras privadas afectadas por los incendios y/o los esfuerzos en la lucha contra incendios. Está llevando a cabo actividades de divulgación con empresas de control de plagas para garantizar el cumplimiento de las normas plaguicidas aplicables en las zonas incendiadas durante la reconstrucción y la recuperación de la vegetación.

OBJETIVO N1

Reducir las cargas de combustible en los bosques, zonas boscosas y arbustos de manera estratégica para reducir los peligros de incendios forestales en las comunidades y hábitats sensibles, mejorar la entrega de recursos y comodidades que la gente necesita, y mover los bosques en una trayectoria de mayor resistencia a la sequía, a enfermedades e insectos.

ACCIONES COMPLETADAS (continuación):

✓ UCCE convocó varios talleres centrados en estrategias de manejo forestal y de tierras con la finalidad de garantizar un paisaje rural resiliente, tales como discusiones sobre potenciales programas de incendios y pastoreo y preparación específica para incendios en los sitios residenciales y las parcelas grandes para trabajo. UC Master Gardeners se está asociando con otras agencias para aplicar sus investigaciones sobre incendios y sequías a nuestro entorno local, ofrecer entrenamientos y facilitar la implementación de principios de paisajismo resilientes a medida que las áreas dañadas por el fuego se recuperen.

✓ UCCE ha llevado a cabo estudios y financiación respecto a la influencia de diversas prácticas de manejo de tierras sobre la severidad de las quemas y la recuperación de los incendios, y llevó a cabo encuestas sobre la gestión del pastoreo, el estudio de los incendios, la valoración de los servicios del ecosistema y la iniciativa de suelo saludable.

✓ Las servidumbres y los esfuerzos de adquisición por parte de AG + Open Space desde los incendios de 2017 incluyeron las parcelas quemadas en los WUI con ecosistema apropiado y beneficios de reducción de riesgos de incendios.

✓ Con una subvención de Cal Fire recientemente otorgada, TPW y FES emprenderán un proyecto para evaluar los riesgos del combustible y la mortalidad de árboles a lo largo de 83 millas de vía pública en el noroeste del Condado de Sonoma, tratamiento de 30 millas de alta prioridad y proporcionar servicios de trituración para reducción de combustibles por parte de entes privados.

OBJETIVO N2

Evaluar y apoyar la recuperación de cuencas quemadas y proteger y mejorar los sistemas de corrientes para reducir el peligro de incendios forestales a las comunidades, apoyar el suministro de agua y la tolerancia a la sequía y ofrecer atenuación de inundaciones, a la vez que se da sustento a las funciones ecológicas y a la diversidad biológica.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Evaluar Mark West Creek y otras cuencas prioritarias quemadas para identificar analíticamente y clasificar las necesidades de recuperación y rehabilitación y prepararse para posibles riesgos secundarios en los próximos inviernos.	■	■	■
Incorporar los factores de resistencia al fuego, inundación y sequía en las decisiones sobre el uso del suelo en las zonas ribereñas y la protección funcional de las zonas ribereñas o incentivos para mejoría y la reglamentación.		■	■
Priorizar la resiliencia mejorada de las áreas de Interfaz Urbana Forestal (WUI) ante incendios y/o otros peligros naturales en las adquisiciones y servidumbres de protección de tierras en espacios abiertos, así como en las designaciones de separadores comunitarios.		■	■
Mejorar las condiciones del corredor de arroyos a través de actividades de divulgación, capacitación y voluntariado, basadas en estudios científicos, en programas exitosos de mantenimiento y restauración de hábitat.	■	■	■

OBJETIVO N2

Evaluar y apoyar la recuperación de cuencas quemadas y proteger y mejorar los sistemas de corrientes para reducir el peligro de incendios forestales a las comunidades, apoyar el suministro de agua y la tolerancia a la sequía y ofrecer atenuación de inundaciones, a la vez que se da sustento a las funciones ecológicas y a la diversidad biológica.

ACCIONES COMPLETADAS:

✓ ORR ha trabajado directamente con socios cuasi-gobierno y socios sin fines de lucro para ayudar a los terratenientes con BMPs de contención a fin de reducir al mínimo el riesgo de escurrimiento de desechos y de material tóxico a los arroyos y a los ríos en el inicio del 2018. Los esfuerzos contra la erosión y el control de sedimentos, las instalaciones BMP y el mantenimiento han continuado a medida que se acerca la temporada de lluvias 2018/19.

✓ AG + Open Space evaluó, obtuvo, administró y rehabilitó de forma activa más de 2,000 acres de tierras suyas quemadas. Retiraron las estructuras, infraestructuras y árboles de riesgo quemados, substituyeron las alcantarillas quemadas y tomaron medidas para prevenir el escurrimiento tóxico y proteger la seguridad pública. Continúan trabajando con los terratenientes de servidumbres para apoyar en su recuperación.

✓ AG + Open Space está conduciendo una evaluación en el condado de los corredores ribereños funcionales que van a apoyar los análisis de derrumbes post-incendio y el potencial de inundación, la iniciativa Tierras Vitales y servir como contribución a la gestión de las aguas subterráneas y la recuperación de salmónidos.

✓ Se retiraron los escombros quemados, los peligros y los sedimentos en el área de vía pública de Sonoma Water y se implementaron mejores prácticas de manejo de la erosión y los sedimentos (BMPs), se realizó medición y muestreo de los arroyos y de calidad del agua durante la primera temporada de lluvias después de los incendios.

OBJETIVO N2

Evaluar y apoyar la recuperación de cuencas quemadas y proteger y mejorar los sistemas de corrientes para reducir el peligro de incendios forestales a las comunidades, apoyar el suministro de agua y la tolerancia a la sequía y ofrecer atenuación de inundaciones, a la vez que se da sustento a las funciones ecológicas y a la diversidad biológica.

ACCIONES COMPLETADAS (continuación):

✓ Permit Sonoma está supervisando la calidad del agua pluvial mediante los programas de protección de aguas pluviales para reconstruir zonas y las áreas en las zonas quemadas donde la construcción aún no ha empezado. Están coordinando con las Juntas Regionales, recibiendo e investigando las quejas ciudadanas, proporcionando información sobre los métodos de instalación de BMP a propietarios y contratistas, y haciendo pruebas de calidad del agua.

✓ Parques Regionales despejó escombros quemados con el fin de volver a abrir 33.4 millas de sendero para el acceso público, retiró 488 árboles peligrosos, reparó decenas de alcantarillas dañadas, puentes y muros de contención, e instaló Bmps para erosión y sedimentación incluyendo 7500 pies de zarzos y barreras de erosión de troncos inmediatamente después de los incendios. Se han estabilizado laderas y promovido revegetación en localidades vulnerables al flujo catastrófico de desechos.

✓ Inmediatamente después de los incendios y durante la reconstrucción, TPW eliminó la infraestructura de drenaje dañada por el fuego, incluyendo las alcantarillas, e instaló y mantuvo BMPs temporales para proteger contra las inundaciones, la erosión y la sedimentación.

✓ Sonoma Water, parques regionales, Ag + Open Space han participado como parte del grupo de trabajo de la cuenca para llevar a cabo evaluaciones suplementaria después del incendio en corredores de arroyos clave antes del inicio de las lluvias de 2018/19. Las evaluaciones establecerán condiciones de referencia para ayudarnos a identificar ubicaciones prioritarias para las patrullas de tormentas y sitios que necesiten instalaciones o mantenimiento de BMP.

OBJETIVO N2

Evaluar y apoyar la recuperación de cuencas quemadas y proteger y mejorar los sistemas de corrientes para reducir el peligro de incendios forestales a las comunidades, apoyar el suministro de agua y la tolerancia a la sequía y ofrecer atenuación de inundaciones, a la vez que se da sustento a las funciones ecológicas y a la diversidad biológica.

ACCIONES COMPLETADAS (continuación):

- ✓ Regional Parks está buscando financiamiento para la estabilización y revegetación de sitios de Mount Hood que se quemaron o fueron incendiados y dañados por esfuerzos de supresión de incendios para prevenir inundaciones, erosión y flujos de escombros que podrían dañar las áreas aguas abajo.
- ✓ TPW, Sonoma Water y otros miembros del grupo de trabajo de la Cuenca están trabajando para evaluar la viabilidad técnica, de permisos y factibilidad financiera de reutilizar algunos de los árboles quemados peligrosos a lo largo de derechos de paso públicos como componentes de madera grandes beneficiosos en proyectos de restauración de hábitats acuáticos.
- ✓ Los muchos departamentos de la familia del Condado, otros organismos públicos, y socios comunitarios en el grupo de trabajo de la Cuenca y Collaborative Watershed continúan coordinando e implementando mitigación, monitoreo, rehabilitación y restauración que protege la calidad del agua y otros recursos naturales en y aguas abajo de las áreas quemadas en los incendios del 2017 de octubre.
- ✓ Las laderas dañadas por el fuego y los corredores de arroyos, junto con las cicatrices de lucha contra incendios, están siendo evaluados por su vulnerabilidad a posibles peligros secundarios de incendios como inundaciones, erosión y sedimentación. Estos tipos de preocupaciones después del incendio a menudo empeoran durante el segundo o tercer año después de un evento. Información para guiar la preparación de los terratenientes, protección del agua de tormenta durante la reconstrucción, información a las patrullas de tormentas y apoyar la respuesta adaptativa se está desarrollando, actualizando y distribuyendo ampliamente.

OBJETIVO N3

Basarse en inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y alianzas para integrar la mejor ciencia disponible en esfuerzos de divulgación, desarrollo de políticas, reglamentos, incentivos y planificación decisiones sobre el uso de la tierra.

ACCIONES PROPUESTAS:	**0-1 AÑO HASTA FINALES DE 2019**	**2-3 AÑOS 2020-2021**	**3+ AÑOS 2022+**
Nutrir la conciencia comunitaria y la comprensión de nuestro paisaje adaptado al fuego y el valor de convertirse en una comunidad adaptada al fuego resistente utilizando los resultados de la supervisión y la investigación post-incendio.		■	■
Continuar recolectando la mejor información científica disponible para informar el desarrollo de políticas e inversiones en el condado que protegen cuencas y comunidades desarrolladas de desastres naturales.	■	■	■
Considerar los datos científicos sobre el condición, vulnerabilidad al fuego y efectos relativos de los incendios de 2017 sobre tierras naturales y de trabajo durante las actualizaciones de políticas, planes y reglamentos de uso de la tierra.		■	■
Mejorar los peligros de los recursos naturales y la gestión de datos de resiliencia y la accesibilidad entre los gobiernos, Educativo instituciones, otras organizaciones y el público.	■	■	■

OBJETIVO N3

Basarse en inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y alianzas para integrar la mejor ciencia disponible en esfuerzos de divulgación, desarrollo de políticas, reglamentos, incentivos y planificación decisiones sobre el uso de la tierra.

ACCIONES COMPLETADAS:

✓ Collaborative Watershed, un grupo de más de 60 organizaciones, convocado para capturar colectivamente prioridades de recuperación y resiliencia iniciales, cuestiones y necesidades de datos. Como resultado de estas discusiones, el AG + Open Space generó un informe Living in a Fire Adapted Landscape: Priorities for Resilience, Sonoma County Natural and Working Lands *[Vivir en un paisaje adaptado al fuego: prioridades para la resiliencia, tierras naturales y de trabajo del Condado de Sonoma]*.

✓ AG + Open Space se asocia activamente con otras agencias del Condado, organizaciones no gubernamentales, distritos de conservación de recursos y organizaciones académicas en diversos proyectos de investigación y solicitudes de financiación para evaluar los factores que afectan los daños causados por incendios y éxito de recuperación.

✓ Sonoma Water amplió el calibre de arroyo y la red de monitoreo de precipitación y lideró el desarrollo de la Interfaz Web de 'Una Lluvia'. El acceso a datos en tiempo real mejora nuestra capacidad de asistir a varias jurisdicciones a medida que coordinamos el seguimiento de las tormentas y monitoreamos los peligros secundarios potenciales. Sonoma Water se financia para instalar un radar de banda X, y ha solicitado para apoyo de HMGP a otras Radar de banda X para mejorar la previsión de tormentas e inundaciones. Estos puede estar vinculados a otras mejoras en las redes de datos meteorológicos que ayuden a abordar las condiciones de permisos para el manejo de la vegetación mediante quemado prescrito.

OBJETIVO N3

Basarse en inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y alianzas para integrar la mejor ciencia disponible en esfuerzos de divulgación, desarrollo de políticas, reglamentos, incentivos y planificación decisiones sobre el uso de la tierra.

ACCIONES COMPLETADAS (continuación):

✓ Sonoma Water ha ampliado los programas de monitoreo de la calidad del agua (con US Geological Survey y Lawrence Livermore National Laboratory) para incluir la investigación sobre los riesgos de posibles tóxicos relacionados con el fuego y/o filtración por deterioro natural proporcionado por el lecho del río. Están liderando estudios de cambios en el suelo después del incendio, escurrimiento y riesgo de flujo de escombros trabajando con US Geological Survey, Pepperwood Preserve, California State Parks y Regional Parks.

✓ Sonoma Water inició programas piloto como el Proyecto FireSmart de Lake Sonoma para reunir datos, conducir alcances y educación, y apoyo a terratenientes con planificación e implementación de reducción de combustible y manejo forestal. Estos programas, en conjunto con la red de cámaras de fuego inicial, los talleres de fuego y pastoreo prescritos por UCCE, y el potencial desarrollo de CWPP para ayudar a proteger Lake Sonoma, una fuente de agua crítica de la cuenca.

✓ Regional Parks está persiguiendo fondos de subvenciones para la prevención de incendios de CALFIRE para apoyar un esfuerzo de planificación integral de incendios para todos los parques y reservas de espacio abierto en el condado.

✓ Permit Sonoma ha solicitado fondos de HMGP para realizar estudios de planificación y actualizar mapas de riesgos, incluyendo estudios específicos del sitio de la zona de fallas de Rodgers Creek que será integrado en el Condado de Sonoma LHMP.

OBJETIVO N3

Basarse en inversiones previas y continuas en adquisiciones de recursos naturales, monitoreo, estudios técnicos y alianzas para integrar la mejor ciencia disponible en esfuerzos de divulgación, desarrollo de políticas, reglamentos, incentivos y planificación decisiones sobre el uso de la tierra.

ACCIONES COMPLETADAS (continuación):

- ✓ Regional Parks ha proporcionado acceso público y recorridos de interpretación de paisajes quemados, incluyendo la serie de Nature Heals [La naturaleza sana] para la salud mental y el aprendizaje comunitario. Han instalado un sendero de interpretación del fuego en el parque regional de Shiloh Ranch y están facilitando nuevos monitoreos, investigación y estudios ecológicos después del incendio en varios sitios.
- ✓ El Comisionado Agrícola ha reunido información sobre desastres agrícolas acerca de los efectos del fuego sobre la producción agrícola y la resiliencia de las tierras agrícolas. Esta información mejorará nuestra comprensión del papel de varias coberturas y condiciones de la tierra, y la recuperación potencial necesidades de rehabilitación de tierras de trabajo dañadas por los incendios.
- ✓ UCCE colaboró con investigadores y organizó proyectos de ciudadano y ciencia para verificar la seguridad de los productos de jardines traseros, huevos, y la calidad del aire relacionados durante e inmediatamente después de los incendios. También se desarrollaron y distribuyeron rápidamente varias guías técnicas basadas en la ciencia para los terratenientes y miembros de la comunidad potencialmente afectados por los incendios.
- ✓ La concesión reciente de la subvención de Cal Fire para la evaluación y reducción de combustibles en el noroeste del Condado de Sonoma también apoyará a participación de FireSafe Sonoma en liderar el compromiso de los terratenientes, el alcance y la coordinación en esas comunidades.

PASOS SIGUIENTES

VISTA GENERAL

La colaboración entre la comunidad, los socios, otras agencias y el Condado durante el desarrollo del Marco fue un primer importante paso para establecer todos para ponernos a todos en un camino a la recuperación y resiliencia. En la siguiente fase, bajo el liderazgo de la Junta de Supervisores, la Oficina de Recuperación y Resiliencia supervisará la implantación de acciones propuestas. Una lista compilada de todas las acciones propuestas capturada durante el desarrollo del Marco es publicado en el sitio web de la Oficina de Recuperación y Resiliencia en el Apéndice A.

FINANCIACIÓN

Al igual que otros gobiernos locales, el Condado se enfrenta a retos de financiación constantes para mantener el nivel y la calidad de los servicios básicos proporcionados a los residentes del Condado. El costo de las actividades de respuesta para garantizar la seguridad pública y la continuidad de los servicios durante e inmediatamente después de octubre 2017 abrumó los recursos aún más. La ayuda federal está disponible y se prevé que al menos parcialmente reembolsará al Condado fondos generales para Actividades de Respuesta. Sin embargo, los fondos para la mayor parte de los esfuerzos de Recuperación, incluyendo las acciones intermedias y a largo plazo descritas en este Marco están aún por determinarse.

Con la declaración de catástrofe presidencial emitida el 10 de octubre de 2017, el Condado de Sonoma se convirtió en elegible para la financiación de asistencia federal para desastres a través programas de subvenciones de la Agencia Federal de Gestión de Emergencias de asistencia pública y mitigación de riesgos, y el Departamento de Estados Unidos de vivienda y desarrollo urbano y el Programa del bloque de desarrollo comunitario de recuperación ante desastres. Algunas de las acciones en el Marco de Recuperación y Resiliencia serán financiadas por estos programas. El Condado también está persiguiendo otros fondos de recuperación de desastres disponibles a través de la Administración de Desarrollo, una agencia dentro del Departamento de Comercio de los EE.UU., y el Subsidio de prevención de incendios de California Climate Investments.

Comité Directivo. Un Comité Directivo de subvenciones representado por departamentos del Condado y personal de la Oficina del Administrador del Condado fue formado para identificar y priorizar proyectos que son elegibles para fondos federales de subvenciones. Se está elaborando una carta para definir el propósito del Comité Directivo de subvenciones para las subvenciones para la recuperación de desastres y otras subvenciones, de manera que se comprenda claramente el alcance y el papel del Comité a largo plazo.

Departamentos presentaron solicitudes de subvenciones federales previas y un subconjunto de estos se consideró elegible para la financiación. Con el aporte de la Junta de Supervisores, el Comité Directivo de subvenciones está avanzando para solicitar fondos basados en una variedad de factores, algunos que están fuera del control del Condado. Un factor es la capacidad del Condado de manejar múltiples solicitudes y proyectos dados los recursos disponibles para dedicar a los esfuerzos de la concesión. Una serie de solicitudes de financiación federal se presentaron antes de la publicación de este Marco de Recuperación y Resiliencia. Los procesos federales de subvenciones son largos y complicados y se llevarán a cabo en los próximos años. La Oficina de Recuperación y Resiliencia seguirá coordinando la actividad de subvenciones federales con departamentos del Condado y gestionará y supervisará los esfuerzos en diferentes departamentos para cumplir con los plazos clave de las subvenciones federales y solicitar el reembolso cuando proceda.

La Oficina de Recuperación y Resiliencia investigará continuamente las oportunidades de financiación y trabajará para aprovechar los recursos disponibles para apoyar las acciones en este Marco. La Oficina de Recuperación y Resiliencia tiene la responsabilidad primordial de rastrear y reportar toda la actividad de subvenciones de recuperación a la Junta de supervisores. Una hoja de seguimiento de subvenciones se actualizará periódicamente y se compartirá con el liderazgo del Condado. La hoja de cálculo se publicará en el sitio web de la Oficina de Recuperación y Resiliencia para la accesibilidad pública.

ENFOQUE DE IMPLEMENTACIÓN

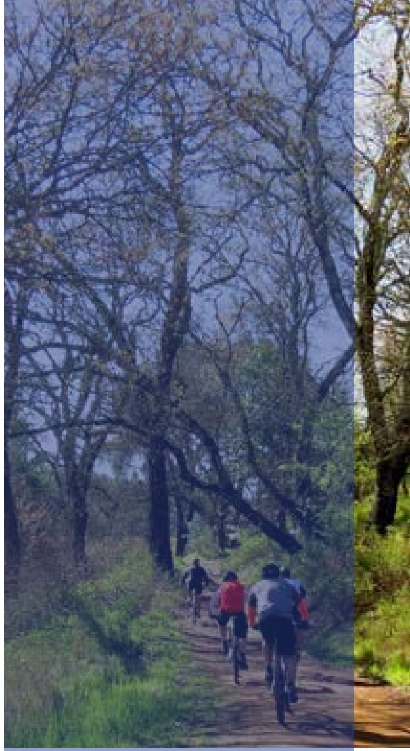
Aprobación de la Junta. La aprobación por la Junta del Marco no autoriza apropiaciones ni representa la aprobación del proyecto de las acciones propuestas en el Marco. Al igual que los proyectos del plan de mejoramiento del capital del Condado, los proyectos de recuperación propuestos serán llevados a la Junta de Supervisores para ser considerados como parte del proceso anual de aprobación del presupuesto del Condado. Algunas solicitudes de proyectos de recuperación pueden ocurrir fuera del ciclo, como las que tienen plazos vinculados a otras fuentes de financiación, como subvenciones externas, o aquellas que no requieren créditos del fondo general.

Planificación de la implementación. Tras la aprobación por la Junta de las acciones de recuperación propuestas, el personal de la oficina de recuperación y resiliencia trabajará estrechamente con los líderes del Departamento para apoyar el desarrollo de planes de implementación más detallados. Los líderes del Departamento del Condado tendrán el papel más crítico en la definición y la implementación completas de las acciones. Muchas acciones deberán implementarse en fases y coordinarse con otras acciones. Algunas acciones requerirán revisión de CEQA . Las líneas de tiempo se basarán en muchos factores que incluyen el ingreso de socios y de la comunidad, la capacidad y disponibilidad de la fuerza laboral, disponibilidad de fondos, plazos de proceso de financiación y coordinación efectiva con los socios del condado.

Coordinación en curso. La oficina de recuperación y resiliencia y los líderes del Departamento del Condado establecerán reuniones regulares y continuas de coordinación para asegurar el compromiso continuo y alineamiento con los objetivos de recuperación. Este nivel de coordinación permitirá que la oficina de recuperación y personal de resiliencia se informe de la situación del proyecto y de cualquier circunstancia cambiante. También asegurará la coordinación continua con los socios comunitarios, otros organismos y los líderes de la ciudad al continuar construyendo relaciones y desarrollando un plan formal para una interacción óptima y efectiva. El plan definirá dónde se necesita la coordinación, quién debe participar y de qué manera la coordinación es más relevante y productiva.

Seguimiento de datos. La oficina de recuperación y resiliencia también se asociará con el Departamento y el proyecto conducirá a un seguimiento del progreso, asegurará la recopilación de datos especialmente para el cumplimiento de informes de subvenciones y evaluará continuamente la capacidad de carga de trabajo y otros factores críticos para el éxito del proyecto . En los casos en que las organizaciones externas recojan los datos pertinentes, la Oficina trabajará con la organización para obtener acceso.

Indicadores de rendimiento. Establecer indicadores clave de desempeño que permitan al Condado medir el progreso hacia la recuperación y los objetivos de resiliencia será un enfoque en la próxima fase de desarrollo del Marco. Algunos trabajos ya se han completado en esta área, aunque algunos pueden necesitar ser reevaluados para aplicar una lente de resiliencia. Se utilizarán indicadores y métricas clave para informar de los progresos realizados a la Junta de supervisores y a la comunidad.

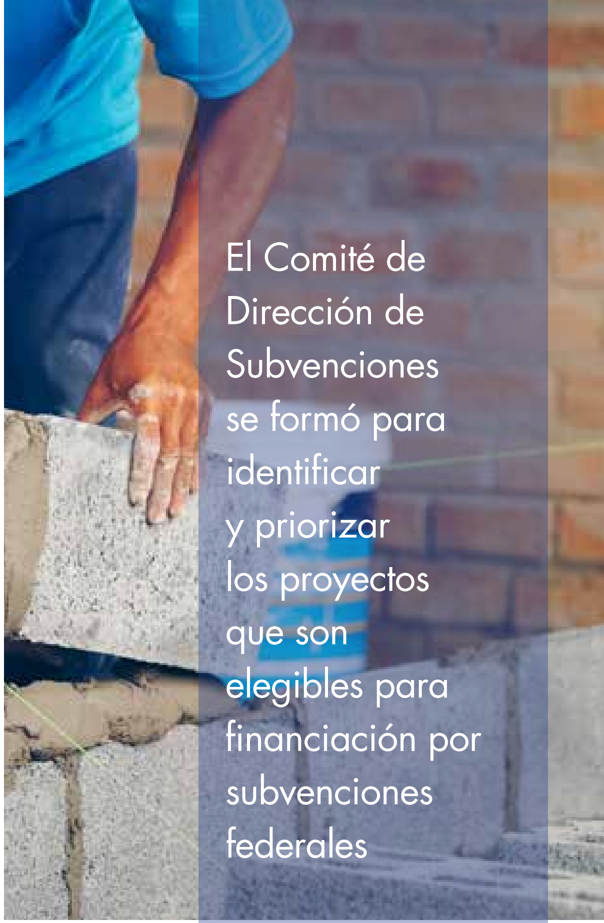


PASOS SIGUIENTES

Informes sobre el progreso de la acción de recuperación. La comunicación del estado de las acciones al público, la Junta de supervisores y los socios comunitarios es una parte importante del compromiso continuo con las partes interesadas. Los informes proactivos también fomentan la responsabilidad y la transparencia del gobierno. La oficina de recuperación y resiliencia continuará proporcionando actualizaciones a la Junta de Supervisores en las reuniones ordinarias de la Junta sobre la situación de los esfuerzos de recuperación y la aplicación de las acciones priorizadas. Estas actualizaciones también se publicarán en el sitio web de la oficina de recuperación y resiliencia. Estas actualizaciones anotarán hitos clave y resaltarán las cuestiones y dependencias no anticipadas, la información sobre subvenciones y financiación y la efectividad organizacional.

Anualmente, se presentará a la Junta un informe de progreso más formal sobre las acciones que se examinarán. En general, el informe se emitirá después del proceso presupuestario anual del Condado en junio para permitir que el informe refleje nuevos fondos aprobados para las acciones del Marco de recuperación. El informe proporcionará una visión a través del Condado del progreso hacia los objetivos de resiliencia en todo el Condado. Los cambios en los riesgos y los desafíos se reflejarán especialmente si se observan problemas comunes entre departamentos y proyectos que sugieran cambios en las políticas o estrategias.

Actualizaciones del Marco. El Marco es un documento vivo. A medida que se completen las acciones y surjan nuevas ideas, limitaciones u oportunidades de financiación, la lista de acciones propuestas se actualizará según sea necesario. Cuando sea necesario realizar revisiones a la lista de acciones propuestas, el personal de la oficina de recuperación y resiliencia trabajará con los departamentos y otros asociados para volver a priorizar, añadir o revisar las acciones basadas en el cambio de la dinámica. Una vez al año e inicialmente después de que se implementen varios proyectos, la oficina de recuperación y resiliencia examinará conjuntamente la efectividad del proceso de implementación y podrá recomendar mejoras al Marco general.



El Comité de Dirección de Subvenciones se formó para identificar y priorizar los proyectos que son elegibles para financiación por subvenciones federales

APÉNDICES

APÉNDICE A: ACCIONES POTENCIALES

Visite www.sonomacounty.ca.gov/ORR para obtener una lista de posibles acciones de recuperación. Esta lista de posibles acciones de recuperación es una serie de posibles acciones futuras que, si se aplican, podrían avanzare al Condado hacia la resiliencia. Reflejan las contribuciones recibidas durante las reuniones comunitarias del Condado, los talleres de la Junta de Supervisores, el grupo de trabajo y las discusiones de colaboración de la fuerza de trabajo, y reuniones de socios. La implementación de cualquier acción potencial puede requerir procesos de revisión formal adicionales.

APÉNDICE B: ENCUESTAS COMUNITARIAS Y EVALUACIONES DE NECESIDADES RECOPILADAS Y ANALIZADAS

Muchas organizaciones y grupos comunitarios realizaron encuestas relacionadas con la recuperación desde los incendios forestales del 2017 de octubre. Los datos recolectados a través de estos esfuerzos aumentan la comprensión del Condado de las necesidades, intereses y opiniones de la comunidad. A continuación se encuentra una lista de encuestas y evaluaciones de necesidades que eran referencias para la recuperación y el desarrollo del Marco de resiliencia.

Encuesta de SoCo rises

North Bay Fires – Encuesta de seis meses

Entrevista del fondo de resiliencia del Condado de Sonoma

Sesiones de escucha del fondo de resiliencia del Condado de Sonoma

Encuesta de respuesta a incendios silvestres de 2018

Mapeo de recursos para la salud mental de la Fundación de atención de salud

Impactos sobre las escuelas

Recomendaciones para la planificación de desastres en el Condado de Sonoma propuestas por la comunidad hispanoparlante

Informe de recolección de respuesta alimentaria de emergencia del Condado de Sonoma

Encuesta sobre sobrevivientes de incendios del Condado Sonoma

Evaluación de las primeras 5 necesidades

Investigación sobre incendios forestales y resultados sanitarios

APÉNDICE C: LA COMUNIDAD Y OTROS SOCIOS

Muchos miembros de la comunidad y otros socios proporcionaron apoyo y contribuciones iniciales al desarrollo del proceso del Marco de Recuperación y Resiliencia. Desde principios de junio de 2018, la Oficina de Recuperación y Resiliencia comenzó el seguimiento de la lista de grupos, empresas, organizaciones sin fines de lucro, partes interesadas y agencias externas y entidades públicas que el personal de oficina ha utilizado directamente. De estas discusiones, la coordinación y la colaboración futura están planeadas para promover la preparación y la resiliencia de la comunidad. La lista a continuación se actualizará en www.sonomacounty.ca.gov/ORR.

PREPARACIÓN E INFRAESTRUCTURA DE LA COMUNIDAD

Respuesta sobre la importancia de de las metas en esta área
(1 = No importante; 5 = Muy importante:
Establecer un programa de alerta integral: **4.6**
Rediseñar el programa de gestión de emergencias: **4.2**
Crear/sostener programas de preparación comunitaria: **4.9**
Proveer servicios continuos del Condado en un desastre: **4.8**

Comentarios del temáticos (en orden de número de respuestas):

Sistemas de alerta

- Publicar cómo recibe alertas la comunidad
- Sirenas, vibraciones, múltiples idiomas
- Las alertas no usan equipos tecnológicos (sirenas, árboles telefónicos, puerta a puerta, megáfonos)
- Usar medios sociales y expandir Nixle
- Simplificar las notificaciones
- Retirar la responsabilidad del Condado
- Telemetría de alarmas

Comunicación durante un desastre

- Recurso de una sola parada
- Asegurar que haya fuentes para gente sin recursos técnicos
- Asegurar la comunicación en múltiples idiomas, para gente con discapacidades y poblaciones con pocos servicios
- Trabajar con estaciones radiales
- Publicar dónde debe ir el público para información
- Usar radios HAM

Rutas de evacuación

- Múltiples rutas pre identificadas para cada dirección
- Educación pública y capacitaciones
- Mantener las rutas establecidas libres de vegetación y vehículos
- Más controladores de tráfico en una emergencia
- Requerir que las constructoras provean múltiples rutas

Gestión de la vegetación

- Mejorar la ordenanza del Condado
- Trabajar en diferentes jurisdicciones
- Aumentar la aplicación y las inspecciones
- Proporcionar opciones de paisaje endurecido y financiación para que los propietarios cumplan
- Requerir planes de paisaje para revisión regulatoria

Educar al público

- Conducir talleres públicos sobre qué papeles de emergencia serán necesarios en un desastre
- Mejor protección y suministros eléctricos de respaldo
- Ubicaciones de refugios
- Inventarios del hogar
- Diferenciar la respuesta para diferentes desastres
- Cómo vivir en áreas de peligro de incendio
- Cómo ser autosuficiente

Preparación comunitaria para emergencias

- Preparar/coordinar planes/capacitaciones para escuelas, gobierno, hospitales y personal de negocios
- Trabajar en diferentes jurisdicciones e idiomas
- Trabajar con centros de ancianos, grupos juveniles, escuelas, iglesias
- Proveer kits de emergencia para residentes de bajos ingresos
- Patrocinar eventos vecinales y paquetes de preparación
- Proveer capacitación a equipos/CERT/ICS de respuesta vecinal
- Proveer información y capacitación sobre programas de preparación COPE/Vigilancia vecinal/Conozca a su vecino/Alístese
- Realizar simulacros de barrios

Refugios

- Se necesitan servicios médicos
- Coordinador de comunicación en crisis (un puesto para todos los refugios)
- Establecer ubicaciones antes del desastre
- Se necesitan instalaciones adicionales
- Ubicaciones pre desastre, personal, MOU
- Planes para ancianos y personas enfermas
- Múltiples idiomas, refugios de animales

Misceláneo

- Modernizar/financiar completamente EOC, funciones claramente definidas
- Más torres celulares
- Archivar información sobre las lecciones aprendidas de 10/18
- Revisar anualmente el Plan de recuperación
- Conectar el Plan de recuperación con el Plan de mitigación de peligros del Condado
- Designar personal a agencias involucradas en respuesta/recuperación
- Más información a las áreas exteriores del Condado (Sonoma Valley, al norte de Healdsburg)

VIVIENDA

Respuesta sobre la importancia de las metas en esta área
(1 = No importante; 5 = Muy importante:
Atraer financiación nueva y expandida, la clasificación de la importancia fu: **4.29**
Reducir los tiempos de procesamientos de permisos para la construcción de viviendas, la clasificación de la importancia fue: **4.27**
Utilizar la propiedad pública del Condado para apoyar el desarrollo de relleno apropiado, la clasificación de la importancia fue: **4.8**

Comentarios del temáticos (en orden de número de respuestas):

Asequibilidad/Disponibilidad

- Proveer más vivienda/disponibilidad de vivienda
- Crear vivienda asequible
- Proveer vivienda para la fuerza laboral, de bajos ingresos y ancianos
- Más vivienda para trabajadores agrícolas
- Construir vivienda para estudiantes
- Hallar proyectos de vivienda que no avanzan y encontrar soluciones a lo que les impide ser construidos
- Preocupaciones de que el mercado no logrará vivienda asequible
- Comunicación regional y colaboración en todo el condado
- Preocupaciones sobre la especulación de precios
- Preocupaciones sobre gente desalojada como efecto secundario de los incendios
- Proveer vivienda temporal mientras se reconstruyen las casas dañadas por los incendios
- Integrar estrategias de vivienda en todas las jurisdicciones a nivel del condado
- Proveer vivienda de alquiler asequible, tanto multifamiliar como unifamiliar
- Preocupaciones sobre el logro de 30,000 unidades que es poco práctico

Ubicación correcta/Producto correcto

- Construir vivienda basada en los ya aprobados Planes Generales a nivel del condado
- Usar el proceso de actualización del Plan General para ayudar a lograr las metas de resiliencia
- Permitir tipos más pequeños de vivienda
- Proveer un rango de tipos de vivienda multifamiliares
- Convertir edificios existentes para proveer más vivienda
- Ubicar viviendas en zonas urbanas y cerca del transporte
- Independencia automotriz por diseño
- Ubicar viviendas lejos de las zonas afectadas por los incendios y usar eso para crear oportunidades de empleo en otras zonas del Condado
- Considerar construir casas más pequeñas
- Construir viviendas dentro de los centros de ciudades
- Un aborde balanceado para vivienda que sea reflexivo
- Construir viviendas verdes que sean climáticamente inteligentes
- Construir más ADU que puedan ser alquiladas
- Permitir zonas de lotes grandes para tener vivienda de relleno en todas las jurisdicciones
- Preocupaciones de que no habría infraestructura adecuada como de aguas y caminos para 30,000 unidades

De menor costo/fácil de reconstruir

- Tener políticas que reduzcan los costos de vivienda
- Tener emisión de permisos más rápida y simple
- Ser más permisivos con cuestiones clave de vivienda
- Controlar el costo de construcción en todas las jurisdicciones
- Se necesita reforma de CEQA
- Reducir los estándares de código y la “burocracia” para reconstrucciones de recuperación de desastres
- Reducción de tarifas para vivienda
- Permitir casas diminutas sobre ruedas
- Preocupaciones sobre requisitos de “paisajes seguros” que tienen conflicto

Mantener los estándares/estándares más altos

- Abordar cuestiones clave de vivienda por medio de regulaciones más estrictas
- El aumento de tarifas para pagar por vivienda asequible fue una estrategia
- Mantener la CEQA según corresponda
- Reglamentar viviendas vacías para crear más ocupaciones a nivel del condado
- Usar control de alquiler como una forma de lograr vivienda asequible
- Requerir seguro para pagar el 100% del costo de reconstrucción
- Mantener separadores de áreas verdes entre las comunidades

VIVIENDA (continuación)

Seguridad

- Preocupaciones de seguridad de incendio y otro desastre con vivienda adicional
- Preocupaciones de reconstruir en WUI para futuros incendios
- Priorizar proyectos de vivienda "a prueba de incendio"
- Comunidades cercadas y puertas de garaje donde las puertas no se abrirán si hay corte de electricidad es una preocupación de seguridad

Asistencia para los necesitados

- Proveer incentivos de reconstrucción para gente de bajos ingresos
- Proveer más recursos para apoyar los esfuerzos de reconstrucción para aquellos que perdieron sus casas, tanto las ocupadas por el dueño y las alquiladas
- Específicamente de las sesiones en español, proveer asistencia de alquiler e información de los derechos de los inquilinos con respecto al aumento de costos de alquiler para los que hablan español
- Proveer incentivos de reconstrucción para los propietarios
- Permitir estacionamiento de RV para vivienda asequible
- Preocupaciones sobre brechas de seguros

Capital/Incentivos

- Proveer incentivos de nueva construcción para una variedad de tipos de vivienda
- Usar instituciones financieras locales para recaudar capital para vivienda
- Aumentar la propiedad de vivienda por medio de préstamos a bajo interés
- Usar fondos del Estado para proveer más viviendas
- Hacer que el Condado se convierta en un socio de equidad en desarrollo de viviendas para lograr viviendas asequibles
- Usar incentivos para construir vivienda resistente a incendios
- Dar más incentivos a constructores de casas
- Usar impuestos del turismo como una forma de lograr viviendas asequibles
- Requerir que los viticultores provean viviendas asequibles
- Reconsiderar la tenencia de un bono de vivienda del Condado
- Construir "viviendas modelo de fideicomiso de tierras"
- Ayuda con préstamos a bajo interés para reconstrucción para los de la "mitad perdida"

Uso de tierras públicas

- Identificar tierras propiedad del Condado para el desarrollo de vivienda
- Usar tierras de propiedad del Condado para diferentes tipos de vivienda
- Usar el centro de administración del Condado como una prioridad antes de construir viviendas cercanas al aeropuerto

Constructores/Fuerza laboral

- Usar pequeños constructores locales y fuerza laboral local para reconstruir
- Trabajar con los constructores de la más alta calidad que tienen las mejores trayectorias
- Crear un "campamento de RV" para los trabajadores de reconstrucción en tierras propiedad del Condado

Participación de la comunidad

- Obtener aportes e interacción comunitaria significativa
- Preocupaciones sobre NIMBY-ism [No en my patio] como una barrera para proveer vivienda
- Educar a los barrios sobre la necesidad de vivienda
- Comunicarse directamente son sobrevivientes de incendios acerca del proceso de reconstrucción
- Trabajar con comunidades y personas vulnerables
- La "mitad perdida" necesita defensa y una voz: ellos son la población necesitada
- La comunidad necesita saber cómo participar en el proceso CDGB-DR con respecto al plan de acción y la distribución del Estado de fondos
- Defensa en curso para la reforma de seguros

APÉNDICE D: TEMAS DE APORTACIONES DE LA COMUNIDAD

ECONOMÍA

Apoyar las soluciones de vivienda de la fuerza laboral

- La vivienda y la economía están estrechamente vinculadas; necesitamos más viviendas para la fuerza laboral y para los estudiantes
- Trabajar en conjunto con los esfuerzos de vivienda
- Incentivar a la gente para que se quede a vivir aquí proporcionando reducciones de impuestos

Apoyar a la fuerza laboral y crear trayectorias profesionales sostenibles

- Asociarse con instituciones educativas y aumentar las oportunidades de educación/capacitación para oficios/construcción/capacitación vocacional, incluyendo en la escuela media y secundaria
- Crear oportunidades para aprendices
- Proveer préstamos, becas, oportunidades educativas gratuitas
- Garantizar la seguridad en el lugar de trabajo – capacitación, equipo apropiado, etc.

Apoyar a los negocios locales

- Diversificar la economía (no solo el turismo/vino)
- Fomentar la industria manufacturera
- Fortalecer los salarios – es caro vivir en el Condado de Sonoma
- Mejorar las opciones de transporte y hacerlas asequibles y accesibles para los que no hablan inglés
- Expandir y apoyar la industria de cannabis; ésta aumenta el crecimiento de empleos
- Expandir el mercado laboral local
- Animar a los fabricantes a mudarse al Condado de Sonoma
- Trabajadores del cuidado de niños desplazados – reconstruir las instalaciones de cuidado de niños rápidamente para proveer empleos y satisfacer las necesidades de los niños
- Proveer cuidado de niños más asequible para apoyar a la fuerza laboral
- Crear una fuerza operativa solamente para reclutar compañías de industria liviana o tecnológicas que puedan traer empleos altamente remunerados a esta área
- Construir infraestructura de banda ancha

Promover el Condado de Sonoma y comprar localmente

- Usar una campaña de turismo para informar a la gente que “el Condado de Sonoma está abierto”
- Construir hoteles que se quemaron para crear empleos de nuevo
- Animar a los residentes y visitantes a comprar localmente, incluyendo usar contratistas locales para reconstruir
- Comunicar mejor los impactos económicos de los incendios en la comunidad

---

SERVICIOS DE LA RED DE SEGURIDAD

Garantizar que se cumplan las necesidades de la comunidad de la salud mental y la resiliencia posteriores a los incendios

- Los miembros de la comunidad continúan luchando con el trauma emocional de los incendios; expandir los servicios de salud mental, incluyendo la atención informada de los traumas
- Usar animales para terapia
- Crear espacios para la sanación

Crear sociedades y coordinación en todos los sectores

- Fortalecer las sociedades y la coordinación con grupos comunitarios, iglesias, gobierno local/estatal/federal, etc; trabajar juntos hacia la recuperación – no es solo el trabajo del Condado
- Mejorar la gestión de las donaciones, voluntarios y la comunicación
- Organizar más talleres y eventos comunitarios para unir a la gente
- Crear una ventanilla única disponible para todos los sobrevivientes de incendios; el LAC está reconocido como un gran éxito y podría servir como un modelo de ventanilla única
- Abordar el rescate de animales en el plan de recuperación, incluyendo cómo la gente maneja los animales en la recuperación (por ejemplo, algunas personas que alquilan no pueden tener su mascota con ellas); mantener a la gente con sus mascotas en los refugios

Apoyar las necesidades de comunidades vulnerables

- Las comunidades desatendidas necesitan más atención y servicios, incluyendo en los refugios de evacuación (ancianos, barreras del idioma, personas sin hogar, residentes indocumentados, etc.)
- Los recursos y la información necesitan estar disponibles en español y ser culturalmente sensibles
- Apoyar a estudiantes desplazados
- Cerciorarse de que las máscaras estén disponibles ampliamente, incluyendo la talla de niños
- Aumentar el Impuesto de Ocupación Transitoria (TOT) y usar la financiación para los servicios de vivienda y para personas sin hogar

RECURSOS NATURALES

General/Visión

- Simplificar el lenguaje de la visión y las declaraciones imperativas para laicos
- Poner la reducción del combustible forestal 'separada' y bajo la preparación, no en Recursos Naturales
- Agregar la recreación a la visión de recursos naturales
- Hacer que el marco de trabajo aborde claramente la interconectividad y las relaciones entre los problemas del área de estrategia, por ejemplo, apoyar y expresar enlaces entre las políticas de planificación del uso de tierras, la vivienda, los recursos naturales o cambio por incendio/climático, sequía, economía
- Ninguna solicitud específica para otras metas u objetivos mayores
- "Proteger la cuenca contra la comunidad/ proteger la comunidad contra la cuenca"

Gestión forestal (clasificado muy importante)

- Muchas opiniones contrastantes sobre la 'gestión de la carga de combustible forestal': preocupaciones acerca del potencial de tala mal informada y generalizada de árboles y/o pérdida de hábitat, gente que quiere que las tierras silvestres se mantengan silvestres, deseo de decisiones y prioridades informadas por la ciencia; pero, también preocupaciones sobre cómo reducir diversas regulaciones y barreras para el manejo de la vegetación y el reconocimiento de que la supresión histórica ha creado una gran carga y se necesita mucho esfuerzo.
- Muchos comentarios para una mejor educación y alcance sobre la importancia y el valor del manejo de la vegetación usando todos los medios (desde la extracción del producto forestal, incluyendo madera y biomasa y almacenamiento de carbono neto, adelgazamiento mecánico, pastoreo/ramoneo del ganado incluyendo cabras y el incendio prescrito) – pero algunas preocupaciones sobre la 'tala' como adversa, etc.
- Solicitudes de demostraciones/proyectos piloto con incendio prescrito para mejorar la seguridad/ confianza del público
- Solicitud de programas de alcance enfocado/ estratégico para las Interfaces Urbanas de la Vida Silvestre
- Implementación incrementada de quemas prescritas, aumento de la financiación de los guardabosques, añadir deberes para la tala de vegetación a los sheriffs/guardabosques, usando cuadrillas de las cárceles para la mano de obra
- Más financiación para la aplicación de espacios defendibles, y también notar la oportunidad para hacer crecer la fuerza laboral/empleos en rubros relacionados
- Énfasis en los esfuerzos combinados públicos y privados; necesidad de grupos colectivos/ vecinales, también, sociedades de gobierno federal/estatal/local e interacción con la información científica
- Preocupaciones de que los parques/espacios abiertos no están manejando sus propias cargas de combustible de vegetación y que los lotes baldíos no están siendo administrados
- Preocupaciones sobre la necesidad de talar los árboles quemados restantes en las zonas de 2017 (inseguridad sobre ROW u otras áreas); preocupación de que la replantación usará otras especies que se queman (como el uso en los 1960 de plantados de Pinus attenuata); también, preocupaciones de que se necesita la replantación de bosques
- Evaluar el nuevo crecimiento de paisajes y 'decidir' qué comunidades de plantas queremos animar y mantener
- Usar el apoyo de subvenciones financiadas para la gestión de la carga de combustible de los dueños de tierras, pero también cobrar impuestos de estructura y hasta restricciones de los títulos de propiedad para mejorar el cumplimiento del retiro de vegetación (espacio defendible); cerciorarse de que la gente sepa que ellos son responsables del espacio defendible/retiros de árboles
- Usar el conocimiento de las comunidades tribales tribal sobre el trabajo con incendios para un ecosistema saludable
- Aclarar los requisitos para los paisajes alrededor de las casas: sugerencias sobre el espacio defendible (¿es húmedo y herbáceo?) versus conservación del agua (arbustos tolerantes a la sequía) y versus conservación de energía (árboles de sombra)
- Preocupaciones sobre proteger la calidad del aire al mismo tiempo que hacer reducciones de carga de combustible; se necesita información sobre el viento, etc.

Mejora del sistema de corrientes (clasificado muy importante)

- La redacción puede ser confusa en esta imperativa, algunos se preguntaron acerca de la conexión del suministro/demandas de agua y el agua para combatir incendios. La conexión de los sistemas de corrientes con los demás problemas relacionados con incendios no está clara para algunos
- Preferencia sobre los controles naturales de la erosión, etc. versus elementos sólidos/construidos
- Preocupaciones acerca de las áreas quemadas y la protección de la calidad del agua durante la próxima estación invernal
- Probablemente sea necesario aumentar los reveses ribereños y las servidumbres naturales; también restaurar y administrar los parques

RECURSOS NATURALES (continuación)

Mejora del sistema de corrientes (clasificado muy importante, continuación)

- Preocupaciones de que la orientación científica se vea abrumada por decisiones políticas o económicas – que se pondría en peligro el hábitat de la corriente; solicitudes para que se dé participación a muchas NGO en las actualizaciones de las políticas
- Deseo de mantener el crecimiento/los límites de la comunidad, limitar la expansión y enfocar áreas densamente urbanizadas
- Gama de ideas sobre franjas verdes, espacio abierto… solicitudes de mantener y aumentar los espacios protegidos y reducir la conversión de fincas a urbanización, pero también cierta incertidumbre sobre la calidad de la gestión de la vegetación en los espacios abiertos que son "propiedad" de agencias públicas
- Potencial de tierras de trabajo (viñedos, pastizales como reducciones por combustible)
- Preocupación de que se necesita diversidad agrícola para la resiliencia
- Se necesita asistencia financiera y reguladora para la conservación/restauración del lado de la corriente, especialmente para dueños de pequeñas propiedades
- Ideas para usar voluntarios y grupos comunitarios y esfuerzos de tipo de adopte una corriente para la implementación – Cuerpo de Jóvenes, Cuerpo de Conservación, tener programas escolares para créditos también
- Gustó la conexión a la Iniciativa de Tierras Vitales
- Se anotaron los enlaces a la economía (para la gestión forestal) para conexiones a la educación, capacitación de empleos y crecimiento de la fuerza laboral en la gestión de recursos naturales/ecológicos.
- ¡Proteger y monitorear; las cuencas!

Aprovechamiento de inversiones (clasificado muy importante, pero con pocas clasificaciones)

- Se quiere posibles políticas, regulaciones, fondos para anticipar y reducir mejor la presión de reconstruir (de nuevo) viviendas en el camino de zonas de incendios repetidos, usando transferencias de desarrollo u otros medios establecidos por adelantado (dándonos cuenta de no debemos afectar más a los sobrevivientes de los incendios recientes)
- "Limitar la construcción dentro de las áreas boscosas"
- De modo similar, se quiere corredores/brechas basadas en la ciencia en todos los paisajes, ¿pero puede ser gradual en el tiempo para reducir la carga de los dueños actuales?
- ¡Necesitamos declarar públicamente los beneficios económicos de tierras y agua saludables!
- Trabajar con NGO y la comunidad en la gestión cooperativa de los recursos naturales, con escuelas también
- Usar políticas/incentivos para proteger el espacio abierto y reducir la exposición a riesgos de incendio
- Se necesita identificar corredores de protección contra incendio en los planes de uso de tierras
- Usar toda la información de peligros para informar la zonificación del uso de tierras para 'hacer y no hacer vivienda – construir y no retirar
- Crítico integrar la ciencia en las decisiones y prioridades para el manejo de combustibles en los bosques y las corrientes
- Ideas que enlazan la educación de las cuencas en las escuelas acerca de los recursos, los peligros y la preparación
- Obtener y usar datos de otros desastres para aprender de la experiencia y adoptar las mejores prácticas
- Solicitudes de más educación y comunicación acerca de 'desastres'
- Deseo de usar fondos de 'Ag + Espacio Abierto' para la prevención de incendios
- Deseo de usar MÁS/TODO TOT para mejoras de la infraestructura
- Mejorar la recolección de datos para espacio abierto
- Dar seguimiento sobre el Plan General de 2020 y la implementación de ordenanzas/regulaciones – preocupaciones de que hay pocas consecuencias para los retrasos y seguimientos, pero también solicitudes de fortalecer la guía del uso de tierras relativa a los peligros en el Plan General de 2030
- Cerciorarse de usar las ideas del informe de ' Vivir en un paisaje adaptado a los incendios'

Adicionales

- Preocupaciones sobre los impactos del suelo de los incendios
- Preocupaciones sobre la conservación del agua – solicitudes de medición para TODOS (incluyendo las fincas) – se quiere asegurar flujos adecuados en las corrientes y el transporte de sedimentos
- Ideas para mejorar la conservación y la reutilización del agua – usar agua gris y agua reciclada – devolver el agua reclamada al bosque (no a las corrientes, "…el océano no necesita agua")
- Preocupaciones sobre la distribución del agua y las realidades frente a la sequía y el crecimiento.
- Preocupaciones de que los viñedos, vinerías y cannabis usan demasiada agua y nuestras fuentes de contaminantes
- Obtener Robots chinos para combatir incendios
- Adoptar una ordenanza para las líneas eléctricas subterráneas en todas las áreas propensas a incendios del Condado

APÉNDICE E: GLOSARIO DE ACRÓNIMOS

ABAG: Asociación de gobiernos del área de la bahía

ADU: Unidades de vivienda accesoria

BMP: Mejores prácticas de gestión

BRIC: Herramienta financiera una para construir comunidades resilientes e inclusivas

CalOES: Servicios de emergencia de la Oficina del gobernador de California

Cal Fire: Departamento de bosques y protección contra incendios de California

California HOPE: Ayuda de California, oportunidades, posibilidades, empoderamiento

CDBG-DR: Subsidio de bloque de desarrollo comunitario – recuperación ante desastres

HUD: Departamento de vivienda y desarrollo comunitario de los Estados Unidos

CDC: Comisión de desarrollo comunitario

CEQA: Ley de calidad ambiental de California

CERT: Equipo de respuesta a emergencias comunitarias

COOP: Plan de continuidad de operaciones

COPE: Ciudadanos organizados para prepararse para emergencias

EMS: Servicios médicos de emergencia

EDC: Centro de operaciones de emergencia

FEMA: Agencia Federal de gestión de emergencias

GARE: Alianza del gobierno sobre la raza y la equidad

HCD: Departamento de vivienda y desarrollo comunitario de California

HUD: Departamento de vivienda y desarrollo urbano de los Estados Unidos

LC: Centro de asistencia local

MTC: Comisión Metropolitana de transporte

NDRF: Marco nacional de recuperación ante desastres

NPH: Asociación de vivienda sin fines de lucro del norte de California

RED: Renovación del distrito empresarial

ROC: ROC Condado de Sonoma-reconstruyendo nuestra comunidad

SBA: Administración de pequeñas empresas

SCTA: Autoridad de transporte del Condado de Sonoma

SGC: Consejo de crecimiento estratégico

UCCE: Extensión Cooperativa de la Universidad de California

USFS: Servicio Forestal de los Estados Unidos

VARS: Valores en riesgo

VOAD: Organizaciones voluntarias activas en desastres

WERT: Equipo de respuesta de emergencia de cuenca

WUI: Interfaz urbano/forestal

APÉNDICE F: GUÍA PARA LOS DOCUMENTOS EN LÍNEA DEL MARCO DE RECUPERACIÓN Y RESILIENCIA

Esta guía es una lista de los documentos que son apéndices del Marco de Recuperación y Resiliencia. Todos los documentos se publican en el Sitio web de la Oficina de Recuperación y Resiliencia en www.sonomacounty.ca.gov/ORR en formato PDF en inglés y español.

Apéndice A: Acciones potenciales

This list of potential recovery actions is a range of potential future actions that, if implemented, could advance the County toward resilience. They reflect the input received during the County Community Meetings, Board of Supervisors workshops, working group and task force collaboration discussions, and partner convenings.

Apéndice B: Encuestas comunitarias y evaluaciones de necesidades recopiladas y analizadas

Many organizations and community groups conducted recovery-related surveys since the October 2017 wildfires that are listed in Appendix B. The data collected through these efforts augments the County's understanding of the community's needs, interests and opinions.

Apéndice C: La Comunidad y otros socios

Este apéndice es un lista de los muchos socios comunitarios y de otros países que brindaron apoyo y aportación inicial al proceso de desarrollo del Marco. Desde principios de junio de 2018, la oficina comenzó a rastrear la lista de grupos, empresas, organizaciones sin fines de lucro organizaciones, partes interesadas, agencias externas, y entidades públicas que el personal de oficina ha empleado directamente.

Apéndice D-1: Temas de aportación de la comunidad

La contribución de la comunidad al proyecto del Marco inicial se recibió de múltiples formas y formatos. Los miembros de la comunidad completaron una encuesta en línea, compartieron notas escritas en reuniones comunitarias o de partes interesadas, o enviaron comentarios y contribuciones por correo electrónico o correo ordinario a la oficina del administrador del condado. Todas las entradas y comentarios fueron recopilados. De la aportación comunitari compilada, la Oficina de Recuperación y Resiliencia generó temas clave para cada área estratégica de recuperación y resiliencia.

Apéndice D-2: Notas de reuniones comunitarias de Apéndice de grupo pequeños

Las notas del facilitador de las reuniones de la planificación de la recuperación comunitaria fueron recogidas y transcritas en formato de tabla.

Apéndice D-3: Hoja de cálculo de aportación comunitaria

Hojas de cálculo comunitarias completadas por individuos en las reuniones de la comunidad o enviadas por correo a la Oficina del Administrador del Condado se capturaron en formato de tabla.

Apéndice D-4: Respuestas a encuesta del Condado encuesta Monkey en línea

Informes basados en respuestas individuales a la Encuesta mono Cuestionario diseñado para reunir la entrada en el borrador inicial de la Recuperación y resiliencia Marco se incluyen como documentos PDF.

Apéndice G: Solicitudes de subvenciones presentadas

La lista más actualizada de solicitudes de subvenciones federales, estatales y de otro estado presentadas para proyectos de recuperación.

Como un documento vivo, este Marco de trabajo es un punto de inicio para acciones y sociedades en el entorno de la recuperación y la resiliencia.

La visión compartida reflejada aquí es un resultado del tiempo, la dedicación y las contribuciones de muchos miembros de la comunidad, agencias y organizaciones.

En el futuro, es imperativo que sigamos colaborando para que podamos seguir haciéndonos más resilientes y más fuertes de lo que éramos antes de los incendios.

CONDADO DE SONOMA

Recovery and Resiliency Framework Appendix A Potential Actions List - FIELD DEFINITIONS

Implementation Status	definition	Funding Status	definition	County Role	examples
Researching	Idea is being explored; staff is gathering information; partners are being identified; and/or stakeholders requested that action be considered.	**Funded**	Regardless of origin, the money source(s) to perform this activity is KNOWN and ACCESSIBLE whether through external grants, General Funds, etc. Funding is allocated, budgeted, awarded, and staff time, materials, contractors, etc. can be paid.	**Lead**	Leader, Director, Manager, Administrator, Executive, Principal
Scoping	Specific objectives, geographic coverage, target populations, timeframes or conditions are being identified and/or quantified. Scopes of work, tasks, schedules, and budgets have been developed either as part of existing programs and operations or as part of external grant-funded work.	**Unfunded/ Requested**	Regardless of origin, at least one (or more) likely money source to perform this activity has been IDENTIFIED and staff is in the process of gaining access to funds either through grant proposals, budget processes, new or changed fees or taxes, etc.	**Partner**	Co-Leader, Task Manager, Phase Manager, Team Member, Planning Committee member, Steering Committee Member
Underway	ALL phases of active work before completion fall in this category, i.e. at project kickoff, early implementation, draft reports, final phases.	**Unfunded/ Uncertain**	The funding source(s) to perform this activity has not yet been found, although work to explore and identify possible sources could be in progress. This category also applies to situations for which no funding source has been identified or is being currently pursued.	**Sponsor**	Funder, Grantor, Donor, Promoter
Completed	The particular project or action has been completed whether the action was a one-time event, a study, or an activity. Any final reports, invoicing or documentation are filed or submitted.			**Supporter**	Data Source or Supplier, Data Exchange/Clearinghouse, Data Storage Repository, Technology or Communications Support
				Stakeholder	Technical Advisor; Policy Advisor; Outside Reviewer; Coach; Beneficiary; End User

Recovery and Resiliency Framework Potential Actions List - COMMUNITY PREPAREDNESS AND INFRASTRUCTURE

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
CP1. **Establish a first class comprehensive warning program with innovative technology and state of the art situational awareness**	**CP1.1** Develop a warning system that communicates alerts over many communication systems and to individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking. Conduct trainings and tests of the system	CP 1.1							
		CP 1.1.1	Review and consider Incorporating California Office of Emergency Services public warning recommendations into County emergency operations plans, policies, and procedures.	Completed	Funded	Emergency Management	Lead		State Agencies Cities & Communities First Responders' Jurisdictions
		CP 1.1.2	Coordinate alert and warning systems over multiple communication systems, to include platforms that utilize opt-out systems	Underway	Funded	Emergency Management	Partner	ISD Sheriff	Cities & Communities First Responders' Jurisdictions
		CP 1.1.3	Collaborate on roles and responsibilities among emergency managers and first responders on warning systems and for issuing any warnings	Underway	Funded	Emergency Management	Partner	Sheriff	Cities & Communities First Responders' Jurisdictions
		CP 1.1.4	Develop a public outreach campaign to inform the public on warning expectations and what alert systems are available	Underway	Funded	Emergency Management	Lead	CAO ISD	Cities & Communities First Responders' Jurisdictions
		CP 1.1.5	Assist in training alert operators and personnel at dispatch centers and emergency operation centers to compose effective emergency alert messages and transmit them using available systems	Scoping	Unfunded/ Uncertain	Emergency Management	Lead	Sheriff	REDCOM Cities & Communities
		CP 1.1.6	Develop pre-scripted and "fill-in-the-blank" message templates and operational procedures for common, protective actions (i.e., prepare to evacuate, area re-entry, shelter-in-place, etc.)	Completed	Funded	Emergency Management	Lead	Sheriff ISD	REDCOMM Cities & Communities
		CP 1.1.7	Conduct community warning assessments	Underway	Funded	Emergency Management	Lead	ISD	Cities & Communities First Responders' jurisdictions
		CP 1.1.8	Ensure all warnings, outreach, templates, etc. cross all sensory, language and cultural barriers to reach all residents and visitors in Sonoma County, including individuals with disabilities and others with access and functional needs	Underway	Funded	Emergency Management	Lead		
		CP 1.1.9	Consider bull horns, and different siren tones on police cars as a localized auditory warning component	Underway	Unfunded/ Uncertain	Sheriff	Lead	Emergency Management	Cities & Communities First Responders' jurisdictions
		CP 1.1.10	Research the use of sirens or other auditory alert in areas of the County with limited or no cell service	Underway	Funded	Emergency Management	Lead	Sheriff	Cities & Communities First Responders' jurisdictions
		CP 1.1.11	Have Nixle and SoCo Alert sign-ups available at all County community meetings and work with organizations in the County to spread the message	Underway	Funded	CAO	Supporter	All departments	Cities & Communities First Responders' jurisdictions
	CP1.2 Establish an on-line portal that consolidates critical first responders' and community partner information that is accessible to all community partners ("common operating picture")	CP 1.2							

Recovery and Resiliency Framework Potential Actions List - COMMUNITY PREPAREDNESS AND INFRASTRUCTURE

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 1.2.1	Working with emergency managers and first responders, identify what situational information is needed, standardize verbiage and procedures, and determine how that information would be displayed	Scoping	Funded	Emergency Management	Lead	Sheriff Permit Sonoma SCWA	Cities & Communities First Responders' jurisdictions
		CP 1.2.2	Research, analyze and purchase available computer-based software to serve as the single repository for information.	Researching	Unfunded/ Uncertain	Emergency Management	Lead	ISD General Services	
		CP 1.2.3	Identify innovative methods and assess integrating real-time information from residents and communities to provide information to a common operating picture	Scoping	Unfunded/ Uncertain	Emergency Management	Lead	ISD	Cities & Communities First Responders' jurisdictions
		CP 1.2.4	Develop and conduct trainings and drills for all system activators	Scoping	Unfunded/ Uncertain	Emergency Management	Lead	ISD Sheriff	Cities & Communities First Responders' jurisdictions
		CP 1.2.5	Support the installation of fire cameras, weather stations, and seismic monitoring equipment in strategic County locations in support of a common operating picture	Underway	Funded	Emergency Management	Stakeholder	ISD General Services SCWA	Cities & Communities First Responders' jurisdictions
		CP 1.2.6	Integrate all sensors and monitoring data into the common operating picture (seismic, stream gauges, fire cameras, weather radar, Red Flag Warnings).	Scoping	Unfunded/ Uncertain	Emergency Management	Stakeholder	ISD General Services SCWA	Cities & Communities First Responders' jurisdictions
	CP1.3 Develop protocols and partnerships for communicating critical information to elected officials, government and community leaders, and the public during a disaster so they are fully informed, to include individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking	CP 1.3							
		CP 1.3.1	Identify critical information requirements of elected and senior appointed management officials for disasters and emergencies	Completed	Funded	Emergency Management	Lead	CAO, BOS	Cities & Communities First Responders' Jurisdictions
		CP 1.3.2	Develop processes and procedures that coordinate information with elected officials throughout the disaster or emergency response	Completed	Funded	Emergency Management	Partner	CAO, BOS	Cities & Communities First Responders' Jurisdictions
		CP 1.3.3	Develop protocols for dissemination of information during an emergency through all available media sources (newspaper, radio, social media, etc.), to ensure that messages are coordinated, accurate, and available in multiple languages	Scoping	Funded	Emergency Management	Partner	CAO	Cities & Communities First Responders' Jurisdictions Media sources
		CP 1.3.4	Research, and implement where possible, the assignment of Spanish speaking first responders to areas heavily impacted by a disaster, including rapid evacuations	Scoping	Funded	Emergency Management	Supporter	Sheriff	Cities & Communities First Responders' Jurisdictions

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
CP2. Meet future challenges by redesigning the County Emergency Management Program, providing additional resources, enhancing external funding capabilities, and recommitting to the County's public safety missions	**CP2.1** Assess and update overall County emergency procedures, programs, organization, authorities, infrastructure, staffing, equipping, and processes to determine structural changes that would best fit the capacity and needs of the County in a future disaster								
		CP 2.1.1	Review and possibly expand the Auxiliary Communications Service volunteer program	Scoping	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions
		CP 2.1.2	Review and possibly expand the Medical Reserve Corp volunteer program	Scoping	Unfunded/ Uncertain	DHS	Lead		Cities & Communities First Responders' Jurisdictions
		CP 2.1.3	Assess and overhaul/build new Emergency Operations Center	Researching	Unfunded/ Uncertain	Emergency Management	Stakeholder	CAO ISD	Cities & Communities First Responders' Jurisdictions
	CP2.2 Assess and review administrative and functional placement of the Emergency Management Program to inform any recommended changes to the County Emergency Management Operations	CP 2.2							
		CP 2.2.1	Evaluate existing systems and interface capacities of mutual aid partners and develop an integrated and comprehensive system that supports both local and mutual-aid response	Scoping	Unfunded/ Uncertain	Emergency Management	Partner	Sheriff	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
		CP 2.2.2	Research sustained funding methods for all new or expanded emergency services	Underway	Funded	Emergency Management	Lead	CAO	
		CP 2.2.3	Review and revise the County's Emergency Management Memorandum of Understanding with stakeholder agencies/jurisdictions	Scoping	Unfunded/ Uncertain	Emergency Management	Partner	All affected departments	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
	CP2.3 Expand trainings and drills for countywide emergency managers, mutual aid partners, elected officials, and County staff	CP 2.3							
		CP 2.3.1	Develop a public information and warning systems training program for County officials, Emergency Operations Center personnel, including appropriate authorizations to issue evacuation orders	Underway	Funded	Emergency Management	Lead	CAO ISD Sheriff	Cities & Communities First Responders' Jurisdictions
		CP 2.3.2	Strengthen collaboration with the Mutual Aid Regional Advisory Committee to ensure effective and efficient support to local response to a disaster.	Underway	Funded	Emergency Management	Partner	CAO	Cities & Communities First Responders' Jurisdictions
		CP 2.3.3	Revise County staff emergency management training plan and professional development	Underway	Funded	Emergency Management	Lead	All departments	

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 2.3.4	Collaborate with Mutual Aid and operational area partners to design, develop and conduct training exercises that evaluate communications and response systems	Scoping	Unfunded/ Uncertain	Emergency Management	Stakeholder	Sheriff	Cities & Communities First Responders' Jurisdictions
		CP 2.3.5	Conduct Incident Command System training and drills, workshops, table top and functional exercises	Underway	Funded	Emergency Management	Sponsor	Sheriff	Cities & Communities First Responders' Jurisdictions
		CP 2.3.6	Research cross training for other jurisdictions' to work in others EOC	Researching	Funded	Emergency Management	Partner		Cities & Communities First Responders' Jurisdictions
	CP2.4 Increase the County's capacity and capability to pursue and manage available grants and external funding opportunities related to disaster recovery, emergency preparedness, hazard mitigation, resiliency and homeland security	CP 2.4							
		CP 2.4.1	Complete and close-out the DR-4344 FEMA Public Assistance Project Worksheets, maintaining federal funding compliance at all levels, and maximizing reimbursement as well as hazard mitigation inclusion in the Project Worksheets.	Underway	Funded	ACTTC	Lead	CAO TPW Sheriff General Services County Counsel	
		CP 2.4.2	Create charter document for the Disaster Finance Team to formalize its structure, mission, roles, and authorities.	Scoping	Funded	ACTTC	Lead	CAO	
		CP 2.4.3	Pursue recovery and resiliency external funding opportunities to achieve County strategic priorities	Underway	Funded	CAO	Lead	Grant Steering Committee All departments	
		CP 2.4.4	Enhance grant pursuit, implementation, and compliance capabilities across County departments	Underway	Funded	CAO	Lead	Grant Steering Committee All departments	
		CP 2.4.5	Create strategic planning documents for the CAO grants function, and Grants Steering Committee, to formalize structure, mission, goals, scope, functions, and authorities.	Researching	Funded	CAO	Lead	Grant Steering Committee All departments	
		CP 2.4.6	Create grant tracking procedures and systems that enable centralized information and analysis of County funds committed, costs of grant pursuit activities, return on investment, active awarded grants	Researching	Unfunded/ Uncertain	CAO	Lead	All departments	
		CP 2.4.7	Successfully implement all awarded applications, maintaining compliance with funding requirements through all grant phases	Scoping	Unfunded/ Requested	CAO	Lead	All departments	Cities & Communities
		CP 2.4.8	Build resource library of external funding sources for Countywide recovery operations, including funding source information and compliance policies.	Researching	Funded	CAO	Lead	ACTTC General Services	Cities & Communities First Responders' Jurisdictions
		CP 2.4.9	Digitize historic payroll documents currently stored on microfiche	Scoping	Unfunded/ Uncertain	ACTTC	Lead		
		CP 2.4.10	Engage qualified national consulting firm to assist and position County to receive maximum Federal and State disaster recovery funds	Completed	Funded	CAO	Lead	CDC County Counsel	

Appendix A 5

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 2.4.11	Manage, coordinate, and oversee CDBG-DR funding opportunities, maintaining federal funding compliance at all levels	Underway	Funded	CDC	Lead	CAO	
		CP 2.4.12	Conduct regular federal procurement trainings with departments to build federal procurement capabilities	Researching	Funded	General Services	Partner	CAO County Counsel All departments	
		CP 2.4.13	Create County procurement policies and procedures that meet federal procurement requirements	Underway	Funded	General Services	Lead	CAO County Counsel All departments	Cities & Communities First Responders' Jurisdictions
	CP2.5 Review Sonoma County Operational Area Emergency Council	CP 2.5							
		CP 2.5.1	Evaluate the role of the Sonoma County Operational Area Emergency Council and determine the appropriate regional structure or entity to enhance countywide emergency services and preparedness	Underway	Funded	Emergency Management	Lead	CAO, BOS	Cities & Communities First Responders' Jurisdictions
CP3. Lead, support and train community liaisons to build and sustain individual and neighborhood preparedness, to include individuals with disabilities and others with access and functional needs, and individuals with limited English proficiency or non-English speaking	**CP3.1** Collaborate with volunteer, non-profit and private organizations to establish community working groups to serve as community and neighborhood liaisons	CP 3.1							
		CP 3.1.1	Collaborate with volunteer, non-profit and private organizations to establish community working groups to develop a Community Preparedness and Outreach Plan	Researching	Funded	Emergency Management	Sponsor		Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Groups Neighborhood
		CP 3.1.2	Review all neighborhood programs (COPE, Get Ready, Next Door) when preparing a program, and where possible collaborate with existing preparedness programs (Red Cross Home Fire Campaign, etc.)	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions
		CP 3.1.3	Use the Federal Emergency Management Agency Threat and Hazards Identification and Risk Assessments process to assess risk within the County to inform the Community Preparedness and Outreach Plan	Researching	Funded	Emergency Management	Sponsor		Federal Agencies Cities & Communities First Responders' Jurisdictions
		CP 3.1.4	Strengthen collaboration with Volunteer Organizations Active in Disaster (VOAD) and Rebuilding Our Community Sonoma County (ROC) and other volunteer, non-profit and private organizations in the Community Preparedness and Outreach Plan and Hazardous Materials Plan	Researching	Funded	Emergency Management	Partner	All departments	Cities & Communities First Responders' Jurisdictions
		CP 3.1.5	Develop and sponsor an annual countywide family-friendly "Disaster Preparedness Day" concept, with resource information and possible interactive demonstrations	Researching	Unfunded/ Uncertain	CAO/BOS	Lead		Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 3.1.6	Identify and collaborate with individuals and/or organizations to assume continuation of the local community preparedness plan and exercise drills	Researching	Funded	Emergency Management	Partner	CAO	Other jurisdictions, community groups
	CP3.2 Work with community/neighborhood liaisons to identify hazards, risks, mitigation strategies, including evacuation routes	CP 3.2							
		CP 3.2.1	Develop material to be used regarding preparedness and compile resources available (i.e., speakers, plan templates, etc.)	Researching	Funded	Emergency Management	Lead		Other jurisdictions, community groups
		CP 3.2.2	Convene workshops of localized community partners and train leaders to identify threats and preparedness options	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions
		CP 3.2.3	Promote safety committees within communities	Researching	Funded	Emergency Management	Supporter		Cities & Communities First Responders' Jurisdictions
		CP 3.2.4	Identify particular risks, obstacles and mitigation measures related to preparedness across individuals with disabilities and others with access and functional needs	Researching	Funded	Emergency Management	Partner		Cities & Communities First Responders' Jurisdictions
		CP 3.2.5	Research feasibility of contracting with organizations to transport to shelters those people unable to drive or without access to a vehicle	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
		CP 3.2.6	Develop a web site which will contain information for residents during an evacuation (threats, exit routes, shelter locations, etc.)	Completed	Funded	ISD	Lead	Emergency Management CAO	Cities & Communities First Responders' Jurisdictions
		CP 3.2.7	Where feasible, include traffic management strategies for evacuations	Researching	Funded	Emergency Management	Lead	ISD TPW Emergency Management	Cities & Communities First Responders' Jurisdictions
		CP 3.2.8	Explore the use of emergency preparedness curriculum in classrooms and other youth group organizations	Researching	Funded	Emergency Management	Lead		Educational/ResearchCities & Communities First Responders' Jurisdictions
		CP 3.2.9	Prepare household pre-emergency and emergency packets (templates), to include information a resident will need in the event of an evacuation (e.g., home inventory, identifying paperwork, etc.)	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions
		CP 3.2.10	Develop educational information and training curriculum around personal emergency preparedness for individuals to be knowledgable on how to be on their own for several days after a major disaster	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions
		CP 3.2.11	Working with communities, identify needs to better organize and strengthen their assets and capacities to build partnerships and promote collaboration and information sharing at all levels.	Researching	Funded	Emergency Management	Partner	ISD	Cities & Communities First Responders' Jurisdictions

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 3.2.12	Working with remote communities, research preparing maps of where residents live to assist first responders and individual neighborhood preparedness	Researching	Unfunded/ Uncertain	Emergency Management	Lead	ISD	Cities & Communities First Responders' Jurisdictions
	CP3.3 Develop community response team programs	CP 3.3							
		CP 3.3.1	Evaluate the role, effectiveness and localized need for County CERT programs, Auxiliary Communications Services, Medical Reserve Corp., and any other program that allows individuals and/or organizations to be pre-approved and trained to assist the County during and in the aftermath of a disaster or emergency	Scoping	Funded	Emergency Management	Partner		
		CP 3.3.2	Establish and publicize a community response team program	Researching	Funded	Emergency Management	Lead		
		CP 3.3.3	Engage with FEMA and Cal OES for funding and training for a model CERT program countywide	Scoping	Funded	Emergency Management	Lead	CAO	FEMA, CalOES
		CP 3.3.4	Establish Community Emergency Responder Trainings countywide.	Researching	Unfunded/ Uncertain	Emergency Management	Partner		Cities & Communities First Responders' Jurisdictions
	CP3.4 Update the County fire ordinance to enhance the Vegetation Management Program with incentives, inspection and abatement protocols, and appropriate funding	CP 3.4							
		CP 3.4.1	Develop an expanded vegetation management County ordinance that improves resiliency of at-risk residents and properties, including those subject to Homeowners Associations' Covenants, Conditions & Restrictions.	Researching	Funded	Permit Sonoma	Lead		Cities & Communities First Responders' Jurisdictions
		CP 3.4.2	Improve cycle time for weed abatement process	Researching	Unfunded/ Uncertain	Permit Sonoma	Lead		First responders' jurisdictions
		CP 3.4.3	Improve enforcement of Public Resources Code section 4291: 'for defensible space maintenance' and Sonoma County Code 13A.	Researching	Unfunded/ Uncertain	Permit Sonoma	Lead		State Agencies Cities & Communities First Responders' Jurisdictions
		CP 3.4.4	Research feasibility of requiring compliance with required defensible space and vegetation management practices at time of real estate transactions, remodels or upgrades	Researching	Funded	Permit Sonoma	Lead	PRMD	Cities & Communities First Responders' Jurisdictions
		CP 3.4.5	Encourage and help facilitate hazardous vegetation removal on private lots and small parcels to increase defensible space and improve emergency access, including expanded landowner participation in Cal Fire Vegetation Management Program	Researching	Unfunded/ Uncertain	Permit Sonoma	Lead	TPW	State Agencies Cities & Communities First Responders' Jurisdictions
		CP 3.4.6	Improve guidance for effective defensible space that also considers drought, erosion control, biologic resources, and low impact development	Researching	Funded	Permit Sonoma	Lead	SCWA	Cities & Communities First Responders' Jurisdictions

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 3.4.7	Develop strategies that assist private lot and small parcel property owners with selective removal of vegetation damaged by fires.	Researching	Funded	Permit Sonoma	Lead	TPW	Cities & Communities First Responders' Jurisdictions
		CP 3.4.8	Develop and distribute landscaping information and templates that supports creating and maintaining fire-safe and sustainable landscapes in the wildland-urban interface (to be distributed in permitting process)	Underway	Funded	Permit Sonoma	Lead	Permit Sonoma UCCE SCWA	Cities & Communities First Responders' Jurisdictions
		CP 3.4.9	Expand chipper program	Researching	Unfunded/ Uncertain	Permit Sonoma	Lead		First responders' jurisdictions
		CP 3.4.10	Revisit rules regarding fires at campgrounds during fire season	Researching	Funded	Regional Parks	Lead	Permit Sonoma	Cities & Communities First Responders' Jurisdictions
		CP 3.4.11	Apply for funding for education and incentives for Safe and Resilient Sonoma County, to harden structures and create defensible space to reduce the risk of fire damage in identified vulnerable locations throughout County WUI	Scoping	Funded	Permit Sonoma	Lead		Cities & Communities First Responders' Jurisdictions
	CP3.5 Develop disaster preparedness protocols for pets and livestock safety	CP 3.5							
		CP 3.5.1	Develop realistic, achievable and sustainable protocols for community members to be trained as disaster animal worker resources who can be mobilized during an emergency	Scoping	Unfunded/ Uncertain	UCCE	Partner	Health Emergency Management	Other jurisdictions, community groups
		CP 3.5.2	Develop an Agriculture Disaster Animal Entry Permit that provides protection of equine, livestock, poultry and livestock feed assets	Underway	Funded	UCCE	Lead	Health Emergency Management	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
		CP 3.5.3	Complete the Animals in Disaster Response Plan, an Annex to the Emergency Operations Plan	Underway	Funded	Health	Lead	UCCE Emergency Management	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
CP4. **Make County government more adaptable to provide continued services in disasters through comprehensive planning, a more empowered workforce, and improved facilities and technology**	**CP4.1** Identify essential infrastructure, services and resources necessary during a disaster and, to the extent possible, have agreements in place	CP 4.1							
		CP 4.1.1	Establish priorities for essential services and critical business operations during and after a disaster or multi-hazard event.	Underway	Funded	Emergency Management	Lead	All Departments	Cities & Communities First Responders' Jurisdictions
		CP 4.1.2	Identify and work with culturally-competent local service providers to assist on front line immediately following a disaster in a Local Assistance Center, ensuring access to non-English speaking and/or undocumented residents (i.e., Undocufund, Grantmakers Concerned with Immigrant and Refugee Rights, Sonoma County Secure Families Immigrant Defense Collaborative)	Researching	Unfunded/ Uncertain	CAO	Lead	Health Human Emergency Management	Cities & Communities

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 4.1.3	Identify and utilize County Disaster Workers who are multi-lingual and contracted language providers to communicate with the community, including undocumented residents, for official communications and at shelters, call centers, local assistance centers, etc.	Researching	Funded	Emergency Management	Lead	HR, CAO	
		CP 4.1.4	Look for sister organizations in other jurisdictions that could be used on an on-call-basis in a disaster to ensure effective and efficient response	Researching	Funded	Health/Human	Lead	Emergency Management	Cities & Communities Nonprofit/For-Profit Organizations
		CP 4.1.5	Develop a long term funding strategy for Rebuilding our Community (ROC) to assist community members throughout the recovery process	Researching	Funded	CAO	Lead	Emergency Management	Cities & Communities First Responders' Jurisdictions Nonprofit Organizations
		CP 4.1.6	Identify tasks and functions and/or resources that could be performed by non-governmental CBOs, FBO and volunteer organizations and provide relevant training	Researching	Unfunded/ Uncertain	Emergency Management	Partner	TPW Sheriff	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
		CP 4.1.7	Apply for funding to retrofit Petaluma Veterans Hall for seismic stability and possible use as a shelter	Completed	Funded	General Services	Lead		
		CP 4.1.8	Apply for funding for seismic strengthening and retrofit of existing structures in vulnerable locations throughout the County	Completed	Funded	General Services	Lead		
		CP 4.1.9	Rebid contracts with FEMA required language included (based on prioritization for most frequently used disaster support goods/services or upon termination for less essential goods/services	Scoping	Funded	General Services	Lead		
		CP 4.1.10	Maintain updated procurement binder with available contractors/agencies/volunteer organizations; to include current contingency contracts	Scoping	Funded	TPW	Lead	General Services Emergency Management	All outside organizations affected
	CP4.2 Pre-stage critical resources at strategic, designated sites throughout the County	CP 4.2							
		CP 4.2.1	Review and assess resources that could be strategically placed in sites throughout the County for better response in a disaster	Scoping	Unfunded/ Requested	TPW	Lead	All departments	Cities & Communities First Responders' Jurisdictions Nonprofit/For-Profit Organizations
		CP 4.2.2	Assess and identify Parks maintenance yards (County center, Healdsburg, Tolay, Spring Lake, Doran, Stillwater Cove, etc.) for essential critical equipment that would be used in an emergency; research funding for same	Scoping	Funded	Parks	Lead		Other jurisdictions, community groups
	CP4.3 Update the County's Continuity of Operations Plan (COOP) assuming that County will need to function effectively and independently (without state or federal resources) for at least 72 hours	CP 4.3							
		CP 4.3.1	Maintain updated roster of county "emergency essential personnel and services" and county departments' "business resumption plans" for use during high threat situations.	Underway	Funded	CAO	Lead	All departments	

Recovery and Resiliency Framework Potential Actions List - COMMUNITY PREPAREDNESS AND INFRASTRUCTURE

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		CP 4.3.2	Establish effective Continuity of Government and Continuity of Operations programs.	Underway	Funded	CAO	Partner	All departments	
	CP4.4 Protect information, data, and communication infrastructure	CP 4.4							
		CP 4.4.1	Identify primary County technology infrastructure, business systems, and critical facilities needed to support the essential services and critical business operations and implement specific protective measures	Underway	Unfunded/ Requested	ISD	Lead	All departments	
		CP 4.4.2	Identify community infrastructure and utility services that are essential to the operation of the County technology infrastructure and systems and implement specific protective measures	Underway	Unfunded/ Requested	ISD	Lead	CAO General Services	
		CP 4.4.3	Assess risks and hazards that currently exist in the County technology infrastructure and community infrastructure and utilities	Scoping	Unfunded/ Requested	ISD	Partner		
		CP 4.4.4	Prioritize technology infrastructure modernization projects (both County and Community) that directly relate to mitigating risks for points of failure that affect accessibility and scalability of critical business systems.	Scoping	Unfunded/ Requested	ISD	Lead	All departments	Cities & Communities First Responders' Jurisdictions
		CP 4.4.5	Apply for funding for a stand-alone generator for County of Sonoma's datacenter to ensure mission critical systems (911 and computer aided dispatch communications) have auxiliary power	Completed	Funded	ISD	Lead	CAO General Services	
		CP 4.4.6	Ensure County information is securely backed up offsite	Completed	Funded	ISD	Lead		
		CP 4.4.7	Enhance EOC information systems capacity to handle a large scale County disaster	Scoping	Unfunded/ Requested	ISD	Partner		
	CP4.5 Work with federal, state, local, tribal, community and/or private partners to identify, assess, and modify or repair essential transportation infrastructure for critical County response	CP 4.5							
		CP 4.5.1	Identify and assess essential transportation infrastructure necessary in a response and modify, repair, and/or maintain.	Underway	Funded	TPW	Lead		Cities & Communities First Responders' Jurisdictions
		CP 4.5.2	Assist with mapping and prioritization of vulnerable hillslopes in the burned areas that require specific rehabilitation or restoration efforts.	Researching	Unfunded/ Uncertain	TPW	Partner		Cities & Communities First Responders' Jurisdictions
		CP 4.5.3	Apply for funding for culvert improvements to reduce flooding (Drake Rd., Guerneville and Roberts Rd., Penngrove)	Completed	Funded	TPW	Lead		
		CP 4.5.4	Apply for funding for bank stabilization to protect River Road using primarily natural materials in order to protect a vital transportation link, as well as residences and agricultural land	Completed	Funded	TPW	Lead		
		CP 4.5.5	Apply for funding to purchase and install onsite generator for the Sonoma County Santa Rosa Road maintenance yard to prevent risk of service interruption of disaster response	Completed	Funded	TPW	Lead		

Goal	Proposed Action	Ref Id	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
	CP 4.6 Work with private utility providers for solutions to hardening infrastructure and coping with destroyed utilities in a disaster	CP 4.6							
		CP 4.6.1	Collaborate with other jurisdictions in the County about response to any de-energization by PG&E	Underway	Funded	Emergency Management	Partner		Cities & Communities First Responders' Jurisdictions Utilities
		CP 4.6.2	Work with PG&E to determine feasibility of conducting de-energization trainings and drills prior to a disaster	Researching	Funded	Emergency Management	Lead		Cities & Communities First Responders' Jurisdictions Utilities
		CP 4.6.3	Work collaboratively with PG&E to leverage vegetation management practices and implementation as its vegetation management practices are expanded based on the California Public Utilities Commission's High Fire-Thread District map and resulting regulations	Researching	Unfunded/ Uncertain	TPW	Partner	Permit Sonoma	Cities & Communities First Responders' Jurisdictions Utilities
		CP 4.6.4	Encourage local energy systems and microgrids and seek to obtain funding	Researching	Unfunded/ Uncertain	TBD	Supporter		Cities & Communities First Responders' Jurisdictions
		CP 4.6.5	Collaborate with private utility companies to define how back-up communication services can be provided if infrastructure is damaged during a disaster event	Researching	Funded	Emergency Management	Partner		Cities & Communities First Responders' Jurisdictions Telephone carriers
		CP 4.6.6	Consider mandatory underground utilities for newly constructed neighborhoods and commercial properties.	Researching	Unfunded/ Uncertain	Permit Sonoma	Supporter	General Services	Cities & Communities First Responders' Jurisdictions Utility companies
		CP 4.6.7	Advocate for utility companies undergrounding electrical lines on all properties	Researching	Unfunded/ Uncertain	CAO	Supporter	Permit Sonoma General Services	Cities & Communities First Responders' Jurisdictions Utility companies
		CP 4.6.8	Advocate for state and federal funding for undergrounding of utilities	Underway	Funded	CAO	Lead		
		CP 4.6.9	Advocate for and possibly establish a “Dig Once” policy	Underway	Unfunded/ Uncertain	TPW	Supporter	EDB Permit Sonoma CAO	

Recovery and Resiliency Framework Potential Actions List - HOUSING

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)
H1: Attract new and expanded sources of capital to incentivize the creation of housing for all income levels	**H1.1** Form a Renewal Enterprise District (RED) as a Joint Powers Authority (JPA) to ensure coordination and facilitate pooled financing that supports a regional, shared housing vision	H 1.1						
		H 1.1.1	Execute Joint Powers Authority Agreement with the City of Santa Rosa as a two-year pilot. Coordinate funding and financing strategies with all municipalities seeking to encourage affordable housing. Pursue legislation to enhance effectiveness of RED JPA and garner State financial support.	Underway	Funded	CDC	Partner	County Counsel, CAO
		H 1.1.2	Engage developers to discern true capital needs and tailor available County and City funds to promote quality projects.	Underway	Funded	CDC	Partner	Permit Sonoma
		H 1.1.3	Secured $250,000 capacity building funding from Tipping Point to enhance the effectiveness of the County's Community Development Commission	Complete	Funded	CDC	Partner	
		H 1.1.4	Secured $1,000,000 start-up funding from Hewlett Foundation for RED JPA	Complete	Funded	CDC	Partner	
		H 1.1.5	Received targeted disaster waivers from US Department of Housing and Urban Development that increased flexibility for various housing assistance programs administered by CDC	Complete	Funded	CDC	Lead	
	H1.2 Engage financial institutions to develop new, more targeted debt and equity projects	H 1.2						
		H 1.2.1	Continue to convene an array of institutions to develop new capital structures that mitigate financing risks and incentive quality projects.	Underway	Funded	CDC	Lead	County Counsel
		H 1.2.2	Join the California Public Finance Authority JPA and utilize its available financing tools	Researching	Unfunded/Requested	CDC	Lead	County Counsel
		H 1.2.3	Develop financing tool for ADU's	Underway	Unfunded/Requested	CDC	Supporter	Permit Sonoma
		H 1.2.4	Support Federal Reserve Bank of San Francisco's convening of lenders/financial institutions with the goal of increasing availability of capital for housing development	Complete	Funded	CDC	Supporter	
	H1.3 Secure the maximum amount of federal and state affordable housing funds	H 1.3						
		H 1.3.1	Support California Housing and Community Development Department's Unmet Needs Analysis and Action Plan for deployment of CDBG-DR	Underway	Funded	CDC	Supporter	CAO

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)
		H 1.3.2	Support passage of local and state housing bonds	Complete	Funded	BOS	Supporter	
		H 1.3.3	Deepen relationships with all relevant State agencies, including CalHFA, Strategic Growth Council, Tax Credit Allocating Committee	Underway	Funded	CDC	Lead	CAO
		H 1.3.4	Conduct a robust Assessment of Fair Housing to document needs and opportunities, and ensure findings and recommended actions are incorporated into housing plans going forward	Scoping	Unfunded/Requested	CDC	Lead	County Counsel
		H 1.3.5	Utilize qualified national consulting firm to assist and position the County to receive CDBG-DR funds, and strategically utilize for unmet needs	Complete	Funded	CDC	Partner	CAO, County Counsel
	H1.4 Engage the business community to consider options for employers to support and invest in new housing	H 1.4						
		H 1.4.1	Assist EDB and Santa Rosa Metro Chamber to organize an Employer Housing Council, as called for in the Strategic Sonoma plan	Researching	Funded	EDB	Partner	CDC, CAO
H2: Increase regulatory certainty by changing the County's business model and actively seek opportunities to deepen regional cooperation	**H2.1** Identify potential changes to land use regulations, processes and procedures that could reduce the time to complete processes, decrease uncertainty in the approval process and reduce the cost of housing development, including fire recovery permits	H 2.1						
		H 2.1.1	Evaluate and bring forward for consideration multi-family standards, workforce housing combining zone standards near jobs, and other housing initiatives	Researching	Funded	Permit Sonoma	Lead	
		H 2.1.2	Collaborate and advocate on land use planning issues related to housing production, including General Plan update and for an environmentally appropriate and effective conservation and mitigation strategy update.	Researching	Unfunded/Requested	Permit Sonoma	Partner	CAO
		H 2.1.3	Continue to identify areas to address fire recovery regulatory changes related to increasing regulatory certainty, structure resiliency, and other, yet to be identified opportunities.	Researching	Funded	Permit Sonoma	Lead	CAO
		H 2.1.4	Increased the allowable residential floor area in mixed-use projects from 50 percent to 80 percent	Complete	Funded	Permit Sonoma	Lead	
		H 2.1.5	Shifted collection of affordable housing fees until near occupancy, rather than at permitting	Complete	Funded	Permit Sonoma	Lead	
		H 2.1.6	Allowed small single room occupancy (SRO) projects as a permitted use and removed the existing 30-room limit for larger SRO projects	Complete	Funded	Permit Sonoma	Lead	

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)
		H 2.1.7	Allowed transitional and supportive housing in all zoning districts that allow single-family dwellings	Complete	Funded	Permit Sonoma	Lead	
		H 2.1.8	Analyzed roughly 16,000 possible housing units in the development pipeline countywide. Current analysis has been to identified high level status of projects to help determine those projects furthest along in the process. Further analysis is needed on a case by case basis with the developer and local jurisdiction as opportunities to participate are identified.	Underway	Funded	Permit Sonoma	Partner	
		H 2.1.9	Consider opportunities for modernization and standardization of permitting to make it easier for developers to submit applications countywide	Researching	Unfunded/Uncertain	Permit Sonoma	Stakeholder	CAO
		H 2.1.10	Review higher density development opportunities within Urban Service Areas near jobs and transit, as provided in the General Plan, by considering a workforce housing combining zone district(s)	Researching	Unfunded/Requested	Permit Sonoma	Lead	
		H 2.1.11	Update Specific Plans, fee studies, and other planning documents to support meeting regional housing needs	Scoping	Unfunded/Requested	Permit Sonoma	Lead	
		H 2.1.12	Inform the General Plan Update process regarding issues related to respond to regional housing needs, hazard mitigation, and resiliency	Scoping	Unfunded/Requested	Permit Sonoma	Lead	CAO
		H 2.1.13	Develop for consideration additional housing initiatives that may become apparent after the current round of initiatives have been implemented; on-going cycles of regulatory updates allows the regulations to evolve with the needs and desires of the community	Researching	Unfunded/Requested	Permit Sonoma	Lead	CAO
	H2.2 Enhance opportunities for innovative and non-traditional building types for a wide range of housing developments	H 2.2						
		H 2.2.1	Increased the maximum size of accessory dwelling units (ADUs) to 1,200 square feet	Complete	Funded	Permit Sonoma	Lead	
		H 2.2.2	Reduced fees on smaller ADUs to encourage smaller units that are affordable by design	Complete	Funded	Permit Sonoma	Lead	
H3: Support building and development standards with improved local hazard resiliency and reduced climate impacts	**H3.1** Build/Rebuild/Retrofit more resilient homes in Wildland Urban Interface (WUI) and other high-risk hazard locations	H 3.1						
		H 3.1.1	Facilitate construction hardening techniques appropriate for wildfire/urban interfaces and seismic retrofits for rebuilding and existing homes through education and grant programs. Seek Hazard Mitigation Grant for provide assistance for structures at risk of wildfires within high risk areas. Seek Hazard Mitigation Grant for provide assistance for seismic retrofits within high risk areas.	Underway	Unfunded/Requested	Permit Sonoma	Partner	CDC, CAO

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)
		H 3.1.2	Help property owners navigate vegetation management opportunities through partnership with Fire Safe Sonoma and similar programs	Researching	Unfunded/Requested	Permit Sonoma	Partner	Permit Sonoma, CAO
		H 3.1.3	Advocate for funding opportunities for private property vegetation management to complement creating safe zones around homes in high risk areas	Researching	Unfunded/Requested	Permit Sonoma	Partner	Permit Sonoma, Parks and Open Space, CAO
	H3.2 Build/Rebuild better homes with improved efficiency and reduced operating costs							
		H 3.2.1	Facilitate climate positive construction techniques for building/rebuilding homes through consultation and project planning assistance from the Energy and Sustainability Division of General Services	Underway	Funded	General Services	Lead	ACTTC, Permit Sonoma, CAO
		H 3.2.2	Facilitate building/rebuilding housing with clean energy programs through Sonoma Clean Power grant program	Underway	Funded	General Services	Supporter	Permit Sonoma, CAO
H4: Support rebuilding fire destroyed homes								
	H4.1 Facilitate expedited permitting process for rebuilding home destroyed in the fires	H 4.1.1	Continue Resiliency Permit Center to expedite fire recovery permits	Underway	Funded	Permit Sonoma	Lead	
	H4.2 Explore and develop funding options to assist rebuild of homes destroyed in the fires	H 4.2.1	Seek Federal, State, and other funding to assist rebuilding gaps for those seeking to rebuild after the fires	Underway	Unfunded/Requested	CDC	Lead	CAO
	H4.3 Facilitate and support rebuild navigation to assist those seeking to rebuild homes destroyed in the fires	H 4.3.1	Facilitate navigation assistance, including navigation to financial advising, insurance claim assistance, and professional building services for those seeking to rebuild from the fires in partnership with the ROC Sonoma County Recovery Center	Researching	Unfunded/Requested	CAO	Partner	Health Services, Human Services
	H4.4 Seek insurance issue support at the State level	H 4.4.1	Continue to advocate for assistance with insurance issues with the State	Underway	Funded	CAO	Lead	
H5: Explore use of County-owned property to attract housing development that aligns with County goals	**H5.1** Continue process to evaluate and develop housing on already identified County-owned properties for housing development	H 5.1						
		H 5.1.1	Continue process to secure a housing developer for 2150 W College	Underway	Funded	CDC	Lead	County Counsel
		H 5.1.2	Continue process to develop housing at Roseland Village	Underway	Funded	CDC	Lead	County Counsel
		H 5.1.3	Continue efforts to repurpose/sell the Chanate campus as allowed under California statute	Underway	Funded	General Services	Lead	County Counsel

Recovery and Resiliency Framework Potential Actions List - HOUSING

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)
		H 5.1.4	Explore the potential for housing as part of a mixed-use development on the County Administration Center property	Underway	Unfunded/Requested	General Services	Lead	CAO
	H5.2 Identify and evaluate other potential opportunities for housing on County-owned land not yet identified	H 5.2						
		H 5.2.1	Continue to identify possible housing opportunities on other County-owned land	Underway	Unfunded/Requested	General Services	Lead	CAO
	H5.3 Collaborate with contractors and developers to address barriers such as labor supply that limit rapid housing development	H 5.3						
		H 5.3.1	Evaluate the need for construction worker housing and whether opportunities exist on County owned properties	Scoping	Unfunded/Requested	General Services	Lead	Permit Sonoma, CAO

Recovery and Resiliency Framework Potential Actions List - ECONOMY

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency	Outside Partner(s)
E1: Develop and support a high quality and equitable local workforce that contributes to rebuild efforts, resiliency, and long-term economic vitality in Sonoma County.	**E1.1** Build sustainable career pathways tied to education and new business opportunities, especially in the area of construction.	E 1.1							
		E 1.1.1	Create a Sonoma County Cooperative Education Program that combines classroom-based learning with structured work experience to develop a pipeline of skilled graduates into local firms.	Underway	Unfunded/ Requested	EDB	Partner		WIB, chambers of commerce, Santa Rosa Junior College, Sonoma State University, Sonoma County Office of Education, CTE Foundation, Empire College, Sonoma County Alliance, local high schools, local employers
		E 1.1.2	Continue to partner with and expand the Sonoma County Youth Ecology Corps to potentially include "green jobs" focused on vegetation management.	Underway	Funded	Workforce Investment Board	Partner	Human Services, Water Agency	Sonoma County Youth Ecology Corps, Tribes
		E 1.1.3	Develop a plan to train and recruit new construction workers that includes collaborating with the North Bay Construction Corps, a five-month after school training program for high school seniors interested in construction and the trades.	Underway	Unfunded/ Uncertain	EDB	Supporter		North Bay Construction Corps, WIB, chambers of commerce, Santa Rosa Junior College,
		E 1.1.4	Utilize grant funding from the California Employment Development Department to help train residents for in-demand construction jobs and promote opportunities in both English and Spanish.	Underway	Funded	Human Services	Lead	Workforce Investment Board	WIB, chambers of commerce, Santa Rosa Junior College, Sonoma State University, Sonoma County Office of
		E 1.1.5	Consider establishing a formal construction skills training center to support North Bay Construction Corps programming.	Underway	Unfunded/ Requested	EDB	Partner	Human Services, Workforce Investment Board	North Bay Construction Corps, WIB, chambers of commerce Santa Rosa Junior College, Sonoma State University, Sonoma County Office of Education, CTE Foundation, Empire College, local high schools, local employers
		E 1.1.6	Establish a Talent Alignment Council to evaluate shortages in the workforce and develop strategies to fill gaps. Council will discuss employer workforce needs and better align training programs to match those needs.	Scoping	Funded	EDB	Lead		Private employers, government bodies, Santa Rosa Junior College, Sonoma State University, and other key organizations and staffed by the Sonoma County Workforce Investment Board (WIB)

Appendix A 18

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency	Outside Partner(s)
		E 1.1.7	Expand scholarship offerings from non-profit organizations and other philanthropic individuals and organizations for low-income and middle-class students.	Research	Unfunded/ Uncertain	EDB	Partner	Human Services, Workforce Investment Board	Community Foundation Sonoma County, 10,000 Degrees Sonoma County, Career Technical Education Scholarship Fund, the Rotary Club of the Valley of the Moon, other philanthropic individuals and organizations.
	E1.2 Support workforce housing solutions.								
		E 1 2.1	Collaborate to support an Employer Housing Council, to encourage a variety of workforce housing solutions by collaborating with private sector employers and the Renewal Enterprise District to support opportunities for increased workforce housing, especially for construction and associated trade workers.	Underway	Funded	CDC	Partner	EDB	Sonoma County Community Development Commission, City of Santa Rosa, chambers of commerce, local employers, Sonoma County Alliance
	E1.3 Improve transportation options for residents to connect with employers and essential services.								
		E 1.3.1	Work with employers to fund and establish shuttle services, especially for senior resident needs.	Research	Unfunded/ Uncertain	TPW	Lead	EDB	SMART, County, City, and Regional Transit Systems, Private Employers.
		E 1.3.2	Explore public-private partnerships for ride sharing programs to create affordable transportation solutions.	Research	Unfunded/ Uncertain	TPW	Lead	EDB	SMART, County, City, and Regional Transit Systems, Private Employers.
		E 1.3.3	Explore opportunities to leverage SMART and expand, adjust, and discount bus routes, especially for displaced residents.	Research	Unfunded/ Uncertain	TPW	Lead	EDB	SMART, County, City, and Regional Transit Systems, Private Employers.
E2: Support local businesses to thrive by ensuring access to resources, developing partnerships, and providing entrepreneurial support.	**E2.1** Assist public and private organizations in Sonoma County in accessing economic recovery loans and other available assistance.	E 2.1.1	Collaborate with partners for outreach to encourage employers to apply for SBA loans to recoup physical and economic damage.	Underway	Unfunded/ Uncertain	EDB	Partner		City of Santa Rosa, Other Cities, Chambers of commerce, Small Business Development Center, SCORE
		E 2.1.2	Monitor additional resources that come available during recovery, such as Housing and Urban Development (HUD) funding, and encourage employers to apply.	Underway	Unfunded/ Requested	EDB	Partner	CAO, CDC, Human Services, Workforce Investment Board	State and Federal funding agencies
		E 2.1.3	Assist public and private organizations in Sonoma County in accessing economic recovery loans and work with state and federal agencies, local banks, credit unions, and alternative lenders to support business lending and grants to qualified businesses and provide information in English and Spanish.	Underway	Funded	EDB	Partner		California Governor's Office, State and Federal partners, local banks, credit unions, lenders

Goal	Proposed Action	Ref ID	Potential Activities or Projects	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency	Outside Partner(s)
		E 2.1.4	Create a pathway to ensure the resiliency of Sonoma County's local agriculture industry by developing long-term solutions for challenges facing agriculture sustainability, such as climate change, market forces, labor shifts and the technology gap.	Scoping	Unfunded/ Uncertain	UCCE	Partner	Ag Comm, Ag + Open Space, EDB	Local businesses, trade associations, non-profits, education, labor groups, government officials, members
	E2.2 Partner with Sonoma County Tourism and other partners to implement a robust economic recovery marketing campaign.	E 2.2.1	Partner with Sonoma County Tourism and other partners to implement an economic recovery marketing campaign.	Completed	Funded	EDB	Partner	CAO	Sonoma County Tourism, GoLocal, City of Santa Rosa, Visitor's Centers/Bureaus, Chambers of Commerce, Other Marketing partners.
		E 2.2.2	Support "Open for Business" marketing effort and other targeted marketing efforts to let residents and visitors know that the County is up and running.	Completed	Funded	EDB	Partner		Sonoma County Tourism, GoLocal, City of Santa Rosa, Visitor's Centers/Bureaus, Chambers of Commerce, Other Marketing partners.
		E 2.2.3	Encourage both residents and non-residents to shop online for Sonoma County goods and donate to local non-profits.	Underway	Unfunded/ Uncertain	EDB	Partner		Sonoma County Tourism, GoLocal, City of Santa Rosa, Visitor's Centers/Bureaus, Chambers of Commerce, Other Marketing partners.
		E 2.2.4	Expand the GoSoCo campaign and support other shopping local shopping marketing efforts to increase public awareness of the economic benefits of shopping local	Underway	Unfunded/ Uncertain	EDB	Partner		Sonoma County Tourism, GoLocal, City of Santa Rosa, Visitor's Centers/Bureaus, Chambers of Commerce, Other Marketing partners.
	E2.3 Expand broadband infrastructure across the county.	E 2.3.1	Explore opportunities to increase access to broadband throughout Sonoma County to increase opportunities for key activities such as receiving urgent information, telecommuting, grocery deliveries, etc.	Underway	Unfunded/ Requested	EDB	Lead	TPW	Access Sonoma Broadband, Sonoma Clean Power

Recovery and Resiliency Framework Potential Actions List - SAFETY NET

Goal	Proposed Action	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
SN1: Enhance core County service capacity to address long-term recovery needs and prepare for future disasters.		SN 1						
	SN1.1 Enhance capacity to manage disaster shelters with increased training opportunities and collaboration with community volunteer partners and jurisdictions.	SN 1.1	Underway	Funded	Human Services	Lead	Emergency Management, Health Services	Voluntary Organizations Active in Disasters (VOAD), Medical Reserve Corps
	SN1.2 Develop a plan to ensure available resources and services at disaster shelter are accessible to non-English speaking and/or undocumented residents.	SN 1.2	Underway	Funded	Human Services	Lead	Emergency Management, CAO, Health Services	Volunteer Organizations Active in Disasters (VOAD)
	SN1.3 Explore creation of contingency contracts with eligible food providers to provide healthy and nutritious food services during a disaster.	SN 1.3	Underway	Unfunded/ Uncertain	UCCE	Lead	Emergency Management General Services, Human Services, Health Services	Sonoma County Food Systems Alliance, Volunteer Organizations Active in Disasters (VOAD)
	SN1.4 Consider development of a contingency contract for coordination of food providers during an emergency, including an inventory and mapping of local food resources available throughout the county and nationally during disasters.	SN 1.4	Researching	Unfunded/ Uncertain	UCCE	Lead	Emergency Management General Services, Human Services, Health Services	Sonoma County Food Systems Alliance, Volunteer Organizations Active in Disasters (VOAD)
	SN1.5 Provide re-employment assistance for workers who have lost their jobs because employers' businesses were destroyed or impacted by fires.	SN 1.5	Underway	Funded	Human Services	Lead	EDB	Workforce Investment Board (WIB)
	SN1.6 Continue housing-related programs in Health and Human Services, including applying for appropriate housing grants.	SN 1.6	Underway	Funded	Human Services	Lead	CDC	
	SN1.7 Utilize funding from the California Office of Emergency Services to support housing efforts for victims of elder abuse and neglect.	SN 1.7	Researching	Unfunded/ Requested	Human Services	Lead		Cal OES
	SN1.8 Pursue education and outreach opportunities to inform residents on public health disaster preparedness, with a focus on individuals with disabilities and others with access and functional needs, including individuals with limited English proficiency or non-English speaking.	SN 1.8	Researching	Funded	Health Services	Lead	Emergency Management, CAO	Community partners
	SN1.9 Develop a plan to set up emergency childcare facilities to allow emergency responders and community members to continue critical work needs.	SN 1.9	Research	Unfunded/ Uncertain	Health Services	Lead	Human Services	First 5, Community Child Care Council

Recovery and Resiliency Framework Potential Actions List - SAFETY NET

Goal	Proposed Action	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
SN2: Ensure the post-fire mental health and resiliency needs of the community are met.		SN 2						
	SN2.1 Continue to provide crisis counseling, available county-wide through California HOPE, for residents affected by the fires.	SN 2.1	Underway	Funded	Health Services	Lead		Council on Aging, Petaluma People Services Center, West County Community Services and Goodwill Redwood Empire
	SN2.2 Partner with mental health professional associations, healthcare providers, funders, and nonprofits, to identify gaps in and ensure continuity of services.	SN 2.2	Underway	Unfunded/ Uncertain	Health Services	Partner		Wildfire Mental Health Collaborative
	SN2.3 Create a plan that addresses the short- and long-term integration of trauma-informed care in the community throughout various institutions, including schools, behavioral health services, and case management.	SN 2.3	Researching	Unfunded/ Uncertain	Health Services	Lead		
	SN2.4 Create communal healing spaces that open the conversation and destigmatize trauma, including town halls, healing clinics, or community events.	SN 2.4	Researching	Unfunded/ Uncertain	Health Services	Partner	Human Services	ROC Sonoma County, California HOPE, community organizations
SN3: Build capacity with cross sector partners and community members to improve coordination and communication.		SN 3						
	SN3.1 Strengthen Accessing Coordinated Care & Empowering Self Sufficiency (ACCESS) Sonoma County Initiative's capacity to coordinate care delivery, inc	SN 3.1	Underway	Unfunded/ Requested	Health Services	Lead	Human Services	Other County Departments, IBM
	SN3.2 Develop a technology tool to enable cross-departmental coordination and assessment of improvements in the health, well-being and self-sufficiency of high needs clients.	SN 3.2	Underway	Unfunded/ Requested	Health Services	Lead	Human Services	IBM
	SN3.3 Expand "one-stop-shop" opportunities for residents to receive updated information and resources needed for recovery, which includes navigation assistance for financial advising, insurance claims, and rebuilding for those seeking to rebuild from the fires.	SN 3.3	Scoping	Unfunded/ Uncertain	CAO	Lead	Health Services, Human Services, Permit Sonoma, CDC	Rebuilding Our Community (ROC) Sonoma County
	SN3.4 Identify roles and responsibilities of community partners and the County as they relate to recovery activities.	SN 3.4	Researching	Unfunded/ Uncertain	CAO	Lead	Health Services, Human Services	Community partners
	SN3.5 Enhance services and capacity of 211 Sonoma County.	SN 3.5	Scoping	Unfunded/ Uncertain	Human Services	Sponsor	Emergency Management, CAO	
	SN3.6 Partner with community assessments and surveys and utilize existing community data to inform ongoing recovery priorities.	SN 3.6	Underway	Funded	CAO	Partner	Health Services, Human Services	

Recovery and Resiliency Framework Potential Actions List - SAFETY NET

Goal	Proposed Action	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
	SN3.7 Partner with community providers (hospitals, clinics, skilled nursing facilities, non-profits, faith-based organizations, etc.) to develop collaborative disaster planning and preparedness efforts.	SN 3.7	Underway	Funded	Health Services	Partner	Human Services, Emergency Preparedness	Hospitals, clinics, skilled nursing facilities, non-profits, faith-based organizations, etc.
SN4: Understand and address social inequities to advance opportunities for all.		SN 4						
	SN4.1 Create a comprehensive community needs assessment using a vulnerability methodology that assesses disparities and needs related to health, well-being and self-sufficiency.	SN 4.1	Underway	Funded	Health Services	Lead	Safety Net Services County Departments	Community partners
	SN4.2 Develop principles and guidelines to launch implementation of performance-based contracting to increase efficiencies and effectiveness of safety net service delivery.	SN 4.2	Scoping	Unfunded/ Requested	CAO	Lead	Health Services, Human Services, CDC, Probation	Community partners
	SN4.3 Leverage and utilize tools offered by the Government Alliance on Race and Equity network to achieve racial equity and advance opportunities for all.	SN 4.3	Underway	Funded	Health Services	Lead	Human Resources, CAO	

Recovery and Resiliency Framework Potential Actions List - NATURAL RESOURCES

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
NR1: Reduce fuel loads in forests, woodlands and shrub lands strategically to lower wildfire hazards to communities and sensitive habitats, improve delivery of resources and amenities people need, and move forests on a trajectory of increased resistance to drought, disease, and insects.	**NR1.1** Develop strategic, proactive fuel reduction and landscape resiliency priorities using key criteria (e.g., wildfire risk, public health and safety, water supply needs, economic impacts, and ecosystem sensitivity) using decision-support tools with objective data and expert advisors.		NR 1.1						
		Assess fire impacts to carbon storage and identify carbon-wise options for fuel load reductions.	NR 1.1.1	Underway	Funded	Ag + Open Space	Lead	UCCE	Education/ Research; State Agencies
		Consider fuel and fire break benefits in identifying potential forest, woodland, and shrubland land acquisitions, conservation easements, and/or development right transfers.	NR 1.1.2	Underway	Funded	Ag + Open Space	Lead	Regional Parks; Permit Sonoma	NGO/Non-Profits
		Assess fuel risks and tree mortality along public right of way in northwest Sonoma County to prioritize treatment locations.	NR 1.1.3	Scoping	Funded	TPW	Lead	Permit Sonoma	Fire Safe Sonoma
		Collaborate to create and maintain a decision support resources that gather relevant scientific base data, human and ecosystem assets at risk, driving factors controlling fire hazards that can be accessible to public and private decision makers as they identify and prioritize fuel load and other resiliency management actions.	NR 1.1.4	Scoping	Unfunded / Uncertain	CAO	Partner	Sonoma Water; Permit Sonoma; Regional Parks; Ag + Open Space; ISD	Educational/ Research; State Agencies; Non-profit organizations
		Based on best available science, consider designating various forest fuel management land use overlays that could impose restrictions to improve community safety.	NR 1.1.5	Researching	Unfunded / Uncertain	Permit Sonoma	Lead	Ag Comm	Education / Research
		Based on best available science, consider designating various forest fuel management land use overlays that feature incentives to improve community safety.	NR 1.1.6	Researching	Unfunded / Uncertain	Permit Sonoma	Lead	Ag + Open Space; UCCE	Education / Research
	NR 1.2 Evaluate options for active management of forests, woodlands, and shrub lands on public and private lands for fuel and fire breaks that decrease risks to developed communities.		NR 1.2						
		Implement preventative fuel load reduction and fuel breaks along public road rights-of-way, according to priorities informed by NR 1.1.	NR 1.2.1	Scoping	Unfunded / Requested	TPW	Lead		Cities & Communities; State Agencies
		Coordinate expedited thinning, burning and grazing projects to reduce fuel loads on properties owned or managed by the County and Special Districts, according to priorities informed by NR 1.1.	NR 1.2.2	Scoping	Unfunded / Uncertain	CAO	Partner	Regional Parks; Ag + Open Space; Sonoma Water	Mayacama Golf Club
		Collaborate to identify and implement fuel breaks in upper Mark West Creek watershed.	NR 1.2.3	Underway	Funded	Regional Parks	Partner	Regional Parks; Ag + Open Space; Sonoma Water	Sonoma RCD; Pepperwood Preserve; Friends of Mark West Watershed; Mayacama Golf Club

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		Provide supportive guidance to private property owners and advocate for improved technical, financial, and regulatory conditions to faciliate forest management via multiple strategies and methods that provide ecological and public safety benefits to the community.	NR 1.2.4	Underway	Unfunded / Uncertain	UCCE	Partner	Permit Sonoma; CAO	State Agencies; RCD; non-profit organizations
		Assist and support increased opportunities for fuel load reduction on private and public lands using grazing (including demonstration projects and updated guidance from Certified Rangeland managers).	NR 1.2.5	Researching	Unfunded / Uncertain	UCCE	Lead	Regional Parks	Education/ Research; RCD; State Agencies;Coast Ridge Community Forest
		Encourage the potential creation of volunteer, community-based land stewardship associations (e.g., Prescribed Burn Associations, Grazing Cooperatives), particularly in vulnerable rural areas with high fuel loads.	NR 1.2.6	Scoping	Unfunded / Uncertain	UCCE	Partner		RCDs; nonprofit organizations; neighborhood groups;
		Management of dead and dying Bishop Pine on the Sonoma Coast for fuel load reduction and ecosystem restoration.	NR 1.2.7	Researching	Unfunded / Uncertain	TPW	Supporter	Permit Sonoma	State Parks (Sonoma-Mendocino Coast District); Timber Cove; State Agencies (CalTrans)
		Assist private property owners with burned parcel revegetation management to promote healthy vegetation structure and density over time.	NR 1.2.8	Underway	Unfunded / Uncertain	UCCE	Partner		RCDs; non-profit organizations
	NR 1.3 Strengthen regional forest stewardship to improve leadership, oversight, training and funding of fuel reduction projects, while improving data resources and sharing to support environmental protections while facilitating effective fuel reduction opportunities for landowner and community-based projects.		NR 1.3						
		Promote opportunities for landowners and the general public to gain understanding of cultural, economic, and environmental issues about forest stewardship activities as part of demonstration and/or implementation efforts.	NR 1.3.1	Underway	Unfunded / Uncertain	UCCE	Lead	Regional Parks	State Agencies; RCDs; Tribes; Landowners
		Participate in the Governor's Forest Management Task Force (FMTF), the Rural County Representatives of California (RCRC), and the North Coast Resource Partnership (NCRP). Our participation will elevate our profile, keep us up-to-date on regulatory, funding, and policy issues, and capitalize on lessons learned elsewhere.	NR 1.3.2	Underway	Unfunded / Uncertain	CAO	Lead	Sonoma Water	State Agencies; Federal Agencies
		Evaluate the potential for traditional markets, regulations, and innovative means to improve the health and resilience of Sonoma County forest ecosystems, and provide recommendations that could include local or regional-scale governance structures, tax or fee funding, commercial activities, and landowner cooperative efforts.	NR 1.3.3	Underway	Unfunded / Uncertain	CAO	Partner	Permit Sonoma	Education/ Research; State Agencies; non-profit organziations; Pepperwood Preserve; Sonoma County Forest Working Group
		Assess the potential for improved local-regional commercial markets in small wood biomass and related emerging vegetation management/carbon storage methods.	NR 1.3.4	Researching	Unfunded / Uncertain	CAO	Supporter	Sonoma Water	State Agencies; For-Profit Business; Education/Research; Blue Forest Conservation

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
NR2: **Assess and support burned watersheds' recovery, and protect and enhance stream systems to lessen wildfire danger to communities, support water supply and drought tolerance, and provide flood attenuation while sustaining ecological functions and biological diversity.**	**NR2.1** Assess Mark West Creek and other priority burned streams to identify and rank recovery and rehabilitation needs and prepare for potential secondary hazards over the next few winters.		NR 2.1						
		Provide technical and resource information to landowners within burned watersheds regarding prevention of erosion, sedimentation, and water quality impairment that may be relevant for approximately five years post-fire.	NR 2.1.1	Completed	Funded	CAO	Partner	Permit Sonoma; Sonoma Water	RCD; NGO/Non-Profit; State Agencies
		Assist private property owners with containment BMPs to minimize the risk of debris and toxic material runoff to streams and rivers in early 2018, and with erosion and sediment control BMP installations and maintenance over approximately five subsequent rainy seasons.	NR 2.1.2	Underway	Unfunded / Uncertain	CAO	Partner	Sonoma Water	RCD; Nonprofit Organizations (Russian Riverkeeper; Sonoma Ecology Center; Sonoma County Conservation Action)
		Assess post-fire stream channel stability and vulnerability to potential secondary fire hazards due to potential flooding, erosion, and sedimentation, and debris flows for approximately five years post-fire.	NR 2.1.3	Underway	Unfunded / Uncertain	CAO	Partner	Sonoma Water; Regional Parks	RCD; NGO/Non-Profit; State Agencies
		Monitor burned public land native vegetation recovery, erosion and sedimentation risks, invasive/noxious species establishment to prioritize and implement remedial efforts as needed to minimize hazards.	NR 2.1.4	Underway	Funded	Regional Parks; Ag + Open Space	Lead	TPW; Ag Comm	State Agencies
		Assist private property owners in areas affected by the October 2017 with evaluation of burned vegetation, residual fuel loads, invasive/noxious species.	NR 2.1.5	Researching	Unfunded / Uncertain	Permit Sonoma	Partner	CAO; UCCE; Ag Comm	State Agencies (Cal Fire); Fire Safe Sonoma; RCDs
		Assess, design and implement stabilization and re-vegetation needs on Hood Mountain sites burned or damaged during fire-fighting to prevent flooding, erosion, and debris flows.	NR 2.1.6	Underway	Unfunded / Requested	Regional Parks	Lead		Nonprofit organizations (Sonoma Ecology Center); State Agencies
		Assist with/request mapping and prioritization of vulnerable hillslopes and/or earthen dams within burn areas	NR 2.1.7	Researching	Unfunded / Uncertain	Permit Sonoma	Supporter	Regional Parks	State Agencies (Division of Safety of Dams)
		Support manure management planning for private equine properties within burned watersheds.	NR 2.1.8	Researching	Unfunded / Requested	UCCE	Supporter	Permit Sonoma	Sonoma County Horse Council; State Agencies (Regional Board)
		Collaborate to provide guidance and support funding efforts for owners of individual or shared private roads and bridges with post-fire erosion and sediment control.	NR 2.1.9	Researching	Unfunded / Uncertain	TPW	Supporter	Permit Sonoma; Sonoma Water	Sonoma Ecology Center; State Parks
	NR 2.2 Incorporate fire, flood and drought resiliency considerations in stream corridor land use decisions involving riparian zones and functional riparian zone protection/enhancement incentives and regulations.		NR 2.2						

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		Prioritize fuel load reduction benefits as ranking criteria in the storm water resource planning process.	NR 2.2.1	Completed	Funded	Sonoma Water	Lead	Permit Sonoma	Cities & Communities; State Agencies
		Support invasive species control and management on private lands disturbed by the fires and/or fire-fighting efforts. Conduct outreach with pest control businesses to ensure compliance with applicable pesticide regulations within the fire areas during rebuilding and vegetation recovery.	NR 2.2.2	Underway	Unfunded / Uncertain	Ag Comm	Lead	UCCE	RCDs; Non-profits; For-Profit Businesses
		Map potential riparian (and shoreline) buffers of adequate width, length, hydrology, soils and vegetation to provide effective fuel breaks, flood conveyance and groundwater recharge. Include all functional low fuel load/high moisture land uses (e.g., storm water basins or water storage ponds; irrigated fields, pastures, or recreation facilities, native riparian, wetlands, or managed grasslands).	NR 2.2.3	Underway	Funded	Ag + Open Space	Lead	Sonoma Water	Academic/Research; University of California; Sonoma State University
		Apply fire and drought research to our local setting, offer trainings, and facilitate implementation of resilient landscaping principles as the fire-damaged areas recover and rebuild.	NR 2.2.4	Underway	Unfunded / Uncertain	UCCE	Partner	Sonoma Water	UC Master Gardners; Sonoma Marin Water Saving Partnership; Daily Acts
		Collaborate with qualified public entities, researchers, and NGOs to identify and prioritize stream corridor and/or other open space parcels that would contribute to a network providing resiliency to future fire, floods, and drought.	NR 2.2.5	Scoping	Unfunded / Uncertain	CAO	Partner	Ag + Open Space; Regional Parks; Sonoma Water; Permit Sonoma	Cities & Communities; non-profit organizations
		Evaluate policies and regulatory framework that could facilitate future acquisition (in fee title/easement with transfer of development rights) of parcels suitable for integration in multi-benefit green breaks by public agencies or NGOs qualified to assume management responsibility.	NR 2.2.6	Researching	Unfunded / Uncertain	Permit Sonoma	Lead		Non-profit organizations
		Evaluate opportunities to work with willing sellers to purchase (in fee title/easement with transfer of development rights) of parcels suitable for integration in multi-benefit green breaks by public agencies or Non-Governmental Organizations qualified to assume management responsibility.	NR 2.2.8	Underway	Unfunded / Uncertain	Ag + Open Space	Lead		Non-profit organizations
	NR 2.3 Prioritize improved resilience of Wildland Urban Interface (WUI) areas to fire and/or other natural hazards in open space land protection acquisitions and easements as well as in community separator designations.		NR 2.3						
		Prioritize easements and acquisitions within the WUI and areas affected by 2017 fires that have appropriate ecosystem and fire hazard reduction benefits.	NR 2.3.1	Underway	Funded	Ag + Open Space	Lead		
		Gather, review, and describe applicable policies, practices, and regulations from similar regions that are successful in providing fire and flood resiliency for natural resources/working lands.	NR 2.3.2	Scoping	Unfunded / Requested	Permit Sonoma	Lead	UCCE	Educational/Research; Federal Agencies; nonprofit organizations
		Coordinate to consider both ecological and emergency access requirements for long-term management along fire-fighting scars on parks and other public lands within the burned zone.	NR 2.3.3	Researching	Unfunded / Uncertain	Regional Parks	Partner	Ag + Open Space; Permit Sonoma; FES	nonprofit organizations; educational/research; state agencies (Cal Fire)

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		Pursue cooperative vegetation management planning in vicinities/neighborhoods with several jurisdictions (e.g., Oakmont)	NR 2.3.4	Scoping	Unfunded / Requested	Regional Parks	Partner		City of Santa Rosa; State Parks
		Evaluate and consider expansion and adaptation of wildland urban interface (WUI) and community separator planning concepts to include possible 'green breaks' with multiple benefits for natural resources and communities.	NR 2.3.5	Researching	Unfunded / Uncertain	Permit Sonoma	Lead		Non-profit organizations; State Agencies; Federal Agencies

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
	NR 2.4 Improve stream corridor conditions via outreach, training, and voluntary actions modeled on successful stream maintenance and habitat restoration programs, based on scientific studies.		NR 2.4						
		Coordinate with partners regarding planning and implementation of multi-benefit stream rehabilitation/restoration projects on public and private lands.	NR 2.4.1	Researching	Unfunded / Uncertain	Sonoma Water; Ag + Open Space	Partner	Regional Parks	RCD; non-profit organizations
		Identify existing hazard trees on public land suitable for beneficial reuse as Large Woody Debris (LWD) in aquatic habitat restoration projects and facilitate their storage and distribution to appropriate agencies and organizations.	NR 2.4.2	Scoping	Unfunded / Uncertain	Sonoma Water	Partner	TPW; Regional Parks	State Agencies (CDFW); Federal Agencies (NOAA Fisheries)
		Work with public and private partners to improve preparedness for water quality Best Management Practice (BMP) deployment in future emergencies; develop informal agreements regarding materials, methods, working relationships, responsibilities and geographic coverages to help address potential BMP needs on private lands.	NR 2.4.3	Scoping	Unfunded / Uncertain	CAO	Partner	Sonoma Water; Permit Sonoma;	RCD; non-profit organziations; For-Profit Businesses
		Collaborate with adjacent landowners to improve management practices that could result in enlarged, effective multi-benefit buffers around parks and other public lands.	NR 2.4.5	Researching	Unfunded / Uncertain	Regional Parks	Partner	Ag + Open Space; TPW	RCD; UCCE; Landowners
		Consider expanding stream maintenance activities in public responsibility reaches to foster flood conveyance, protect water quality and aquatic habitat, and provide fuel breaks.	NR 2.4.6	Researching	Unfunded / Uncertain	Sonoma Water	Lead	Regional Parks	Cities & Communities
NR3: Build on prior and continuing investments in natural resources acquisitions, monitoring, technical studies and partnerships to integrate best available science into outreach efforts, policy development, regulations, incentives, and land use planning decisions.	**NR 3.1** Nurture community awareness and understanding of our fire-adapted landscape and the value of becoming a resilient fire-adapted community using results of post-fire monitoring and research.		NR 3.1						
		Engage the general public and specific stakeholder groups in physical and virtual visits to burned lands, via Nature Heals series and fire interpretive trail(s), along with visits to similar vulnerable lands for comparison.	NR 3.1.1	Completed	Funded	Regional Parks	Lead		NGO/Non-Profits
		Conduct focused landowner and community outreach and conversation about fire risks, fuel reduction, and forest management within the water supply priority watershed of Lake Sonoma.	NR 3.1.2	Completed	Funded	Sonoma Water	Partner	FES	For profit Business (Ag Innovations); RCDs; Fire Safe Sonoma
		Participate in reporting post-fire natural resources monitoring data results and interpretations via a range of platforms, in culturally relevant ways, addressing broad audiences as well as specific stakeholder groups.	NR 3.1.3	Underway	Unfunded / Uncertain	CAO	Partner	Sonoma Water; Ag + Open Space; Regional Parks; UCCE;	Educational/Research; State Agencies

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		Facilitate public access to the improved rainfall, runoff, and natural hazards monitoring network (e.g., Sonoma OneRain), to improve awareness and knowledge of recovery status and secondary hazard risks in the burned areas.	NR 3.1.4	Underway	Unfunded / Uncertain	Sonoma Water	Partner	Permit Sonoma	Cities & Communities
		Increase the integration of the weather, streamflow, water quality and fire detection systems (e.g., cameras) monitoring network with planning and permitting of forest and stream management actions.	NR 3.1.5	Underway	Funded	Sonoma Water	Partner	Permit Sonoma	Federal Agencies; Educational/Research (UC San Diego; UN Reno); For profit Business (PG&E)
		Expand citizen-scientist participation in data collection for on-going natural resources monitoring and/or event response and recovery documentation (including public schools, 4-H or other youth programs).	NR 3.1.6	Underway	Unfunded / Uncertain	UCCE	Partner	Superintendent of Schools	NGO/Non-Profits; Education/Research
		Use inspection and enforcement activities as opportunities to inform and educate regarding required and recommended land, vegetation, soil and water management practices.	NR 3.1.7	Researching	Unfunded / Uncertain	Permit Sonoma	Lead	Ag Comm	Cities & Communities
		Perform outreach and education to inform public about ecological importance of forests and the critical role (and native cultural history) related to prescribed and managed burning and grazing.	NR 3.1.8	Researching	Unfunded / Uncertain	UCCE	Partner	Superintendent of Schools	RCD; NGO/Non-Profit; Tribes; Education/Research
	NR3.2 Continue to collect best available scientific information to inform policy development and county investments that protect watersheds and developed communities from natural disasters.								
		Contribute to field assessments and analysis of monitoring and remote sensing data to assess fine-scale burn severity, vegetation mortality, carbon loss, slope stability, erosion and sedimentation, and stream channel response to fire damage.	NR 3.2.1	Underway	Funded	Ag + Open Space	Partner	Sonoma Water	Education/ Research; Pepperwood Preserve
		Research potential future fire hazards to water supply / water quality via possible contamination of the natural filtration provided by the gravels underlying the Russian River.	NR 3.2.2	Underway	Funded	Sonoma Water	Partner		Educational/ Research (UCB Lawrence Livermore Lab); Federal Agencies (USGS)
		Conduct post-fire field and modeling research on soil, runoff, and debris flow hazards to assess variability between geologic units and vegetation types in Sonoma County; support improved secondary hazard forecast modeling.	NR 3.2.3	Underway	Funded	Sonoma Water	Partner	Regional Parks	Federal Agencies (USGS); Educational/ Research (Pepperwood Preserve); State Agencies (State Parks)
		Conduct and collaborate on studies evaluating how initial land use/vegetation type and condition affected fire damage and recovery progress, featuring impacted public and protected lands as case studies.	NR 3.2.4	Underway	Unfunded / Uncertain	Ag + Open Space	Lead	UCCE; Ag Comm	Educational/ Research
		Estimate the economic value of ecosystem services lost due to the 2017 fires to assist with cost/benefit analysis of various policy and planning decisions, and support funding requests.	NR 3.2.5	Underway	Unfunded / Uncertain	Ag + Open Space	Lead	Sonoma Water	Educational/ Research

Goal	Proposed Action	Potential Activities or Projects	Ref ID	Implementation Status	Funding Status	Primary Agency	County Role	Other County Agency(ies)	Outside Partner(s)
		Fill key data gaps regarding ecosystem services valuations that can guide prioritization of forest management actions and assist in choosing/pursuing various organizational options (cooperatives; special districts; Joint Powers Authority; Marketing Order, etc.)	NR 3.2.6	Researching	Unfunded / Uncertain	CAO	Partner		Educational/ Research (UCB; Pepperwood); nonprofits; RCDs; for profit (ebalive)
	NR 3.3 Consider scientific data about the condition, fire vulnerability, and relative impacts of the 2017 fires on natural and working lands during updates to land use policies, plans, and regulations.		NR 3.3						
		Incorporate watershed resiliency and natural resource priorities in the Agriculture + Open Space District's Vital Lands Initiative.	NR 3.3.1	Underway	Funded	Ag + Open Space	Lead		Landowners
		Conduct supplemental studies and mapping to support updates to the seismic hazards of the Rodgers Creek Fault zone for the update to the LHMP	NR 3.3.2	Scoping	Unfunded / Requested	Permit Sonoma	Lead		State Agencies
		Explore modifications to County Code and Ordinances that will advance Natural Resources resiliency and community safety.	NR 3.3.3	Researching	Unfunded / Uncertain	Permit Sonoma	Lead		Cities & Communities
		Highlight watershed resiliency and natural resource priorities in the General Plan update.	NR 3.3.4	Researching	Unfunded / Uncertain	Permit Sonoma	Lead		Cities & Communities
		Incorporate multibenefit projects for watershed resiliency and natural resource priorities in updates to the Storm Water Resources Plans (Russian River and Southern Sonoma County watersheds)	NR 3.3.5	Scoping	Unfunded / Requested	Sonoma Water	Lead	Ag + Open Space; Regional Parks; Permit Sonoma	
		Coordinate and collaborate to craft environmentally responsible conservation and mitigation for listed species and wetlands/waters of Sonoma County with programs, policies and mitigation strategies that reduce development uncertainty while protecting natural resources (e.g., Regional Conservation Investment Strategies Program, Habitat Conservation Plan, or other local plan updates).	NR 3.3.6	Researching	Unfunded / Uncertain	CAO	Partner	Permit Sonoma	Cities & Communities; State Agencies; Federal Agencies
	NR 3.4 Improve natural resources hazards and resiliency data management and accessibility between governments, academic institutions, other organizations and the public.		NR 3.4						
		Use reporting about the roles of natural resources relative to the 2017 fires (positive and negative) to prompt awareness about wildfire, flooding, and drought risk and resiliency.	NR 3.4.1	Researching	Unfunded / Uncertain	Permit Sonoma	Partner	Sonoma Water	Cities & Communities; non-profit organizations; education/research
		Engage with Tribes to gather their interpretations of recent fire patterns and damage, and solicit guidance reflecting native cultural practices of vegetation management.	NR 3.4.2	Researching	Unfunded / Uncertain	Permit Sonoma	Partner	Sonoma Water; UCCE	Tribes
		Continue to collaborate with public and private partners to improve the consistency of natural resource management information, avoid duplication of efforts, and increase outreach extent and effectiveness.	NR 3.4.3	Underway	Unfunded / Uncertain	UCCE	Partner	Permit Sonoma; Ag Comm; Sonoma Water	Non-profit organizations; RCD

Sonoma County Recovery and Resiliency Framework

Public Comment Emailed Submissions from 9/25/18 through 10/26/18

Date Rec	Name	Topic Discussed
9/26/2018	Jean Reynolds	Appreciates the idea of adding sirens, not a cell phone user.
9/26/2018	Jane Ekbatani	Need to favor rebuilding houses for fire survivors over any other housing agenda; worried too that tariffs will increase the materials that are needed for rebuilding.
9/26/2018	Suzanne Hart	Excellent idea to use fire alarm boxes, referring to effective they have been for the city of San Francisco.
9/27/2018	Shay McCown	Advocating for sirens as an alert system for major emergencies. Explains that growing up with sirens have always been effective (she and her husband are in their late seventies). Felt that the system used on Oct 8th was not successful.
9/28/2018	Kimberly Robertson	Requests a siren system for the area of Frans Valley Road to the top of Tarwater Hill. 170 homes in this area do not
10/10/2018	Will Abrams	Provided feedback in the structure of - measurable "you cannot mange what you cannot measure"; Assessment of Capabilities (strengths, weaknesses); Assessment of Operational Environoment (opportunities, threats); Ownership/responsible Resources (internal and external); Actionalable Key Performances Indicators.
10/18/2018	Dawn M. Ross	Urges the City and County to put together a "Vulnerable Population Plan" for future emergencies. Create a list of schools, medical facilities, assisted living and mental facilities. List should be shared among first responders. Should be a plan where the folks are taken and a website created to track these folks, etc.
10/18/2018	Andrew Smith	Create an ongoing program to get people to install one of the following on their cell phones: Nixle or SoCo Alert updates. Work with cell phone companies, water/trash companies, buy a new phone make it an option, even working with banks to get this accomplished.
10/19/2018	Ed Weber	Don't over react and start a housing boom, we should honor the limits we have already set and not take rural lands for housing… Let our true healing be the restoration of housing for what was lost, a slow rate of growth for the county, and priority sustained for our agrarian way of life.
10/24/2018	Josephine Borgeson	solidarity. Wished that emerengy food network had a larger role in the framework. Recommendst that mapping community assets for meeting emergency food needs be a part of the preparedness plan of each of the regions, communities and neighborhoods here in Sonoma County.
10/26/2018	Will Abrams	Provided comments throughtout the draft Framework document using the comment tool.
10/26/2018	Linda Evans	Submitted letter on behalf of 15 organizations supporting Spanish-speaking and immigrant communities. Letter includes suggestions for all 5 critical areas of recovery.

Sonoma County Recovery and Resiliency Framework

Public Comment Emailed Submissions from 9/25/18 through 10/26/18

10/26/2018	Ben Peters	Notes that "microgrids" and "electricity" are not mentioned in the Framework. Feels that the CP4 goal needs to go farther and explicitly state that onsite solar and energy storage systems should be evaluated be prioritized when feasible. Similar goal should be to evaluate and encourage local energy systems and microgrids and to obtaqin grants and funding to encourage the development of these systems. Outside energy storage and clean energy generation discussed by agencies/groups. No mention of it in the doc. The doc should make clear that allowing a private electric and gas utility to operate in our county should only be allowed when it provides a public benefit and that we have the power to determine the future of our energy system. The doc should make clear that allowing a private electric and gas utlity to operate in our county shoudl only be allowed when it provides a public benefit and that we have the power to determine the future of our energy system.
10/26/2018	Kerry Fugett	Comments collected at the People Care Forum: On-going mental health and emotional support throughout the county for all ages. Address the issues of environmental toxicity as it relates to human health. Place equity, diversity and inclusion at the heart fo all recovery and resiliency efforts.

10/26/2018	Kerry Fugett	Submitted comments gathered at Resilient Rebuild and Earth Care Forums: - youth to employment pipeline - funding through carbon based economy - mentorship opportunities - microgrants, sustainability pilots - expanding opportunity for short term engagement, online - enhance public & private partnerships Changing zoning laws to allow for tiny homes/microhousing Bring all food scraps (residential & commercial) to be processed and used in Sonoma County. - to rebuild soil nutrients for food, to sequester carbon as soon as possible - need to include landscapes as part of our natural environment, provide more training to landscape professionals, rescape California, more native or drought-tolerant plants. Micro-public process meetings coordinated and funded for fun, food, beverages, participation - promote the end of divisiveness, inclusion, promote rights for life & rights of nature, own sacred gift & birthright Develope neighborhood resilience through planning what food can be grown floowing a need to feed people. what is a resilient diet for various regions? How long to create - what plants and seeds need to be in each neighborhood? Daily acts and NoCal... volunteer to be part of these organizations foucs on my own neighborhood. Resilient Housing: please consider alternative, natural building designs that are fire-resilient, well insultaed, durable and very affordable - having the residents help in teh construction process - exceptions for permit requirementsof tje stirtire os kist 120 sq ft as part of the emerency shelter ordiance. - shift the paradigm to acount for housing for all. - mine, discover the complete demographic profile of needs - Match supply with demand - bring in biophilia, bring nature inside - create hubs of community for info presentation, presentation the digital town hall - use nextdoor app - incentivize A.D. U.s - co-housing need to design Community Housing foruyms to promote education & especially creativity process /funding for eco-friendly materials - fund rain water harvesting - we failed fire survivors by forcing them inot the fire housing market. when the next fire comes, how are we proactively ready for the thousands of living structures to be ready that week? Maybe some "tiny houses" - find a way to legalize trailer or tiny house living in the city limits, even if these means regulation permitting process (flip chart notes provided)

Sonoma County Recovery and Resiliency Framework

Public Comment Emailed Submissions from 9/25/18 through 10/26/18

10/26/2018	Kerry Fugett	Signatures submitted from Daily Acts (total of 612 unique signatures in support of adding the following to the framework): Prioritize Sustainability and Climate Action. Place equity at the center. Invest in collaborative structures & community networks. (sign-in sheet provided, along with signatures)
10/26/2018	Ted Stashak	The Sonoma County Horse Council is very concerned that the draft Recovery and Resiliency Framework does not address the needs of large animals, livestock, pets, and their owners in disaster scenarios. Neither the Sonoma County Horse Council (SCHC), nor our partners at Sonoma County Animal Services (SCAS) were solicited for input on this plan. We are coming in late in the game, but we hope to have an impact on the Resiliency Plan for the benefit of all animals and their owners before this plan is finalized. (Full doc provided)
10/26/2018	Nicole Bradin	Need to be prepared to handle other types of natural disasters, earthquakes, floods, as well as man-made disasters, terrorist attacks, active shooters, etc. Visitors are not mentioned in plan (tourism), include partners from the hospitality industry wine, hotel, restaurants, etc, Not sure section 5.3 - Economy - belongs in the plan. The plan is long - might want to inlcude cliff-notes resident friendly version with highlights for key audiences.
10/26/2018	Melita Love	Given the importance of food for sustenance and resilience for all of us, I recommend the specific inclusion of emergency food preparedness and coordination in the Framework; possibly in Goals CP3, SN 1 and SN3. Submitted recommendations prepared by Emergency Food Providers.

Recovery and Resiliency Framework

Summary of Significant Changes

On September 25, 2018, the Office of Recovery and Resiliency (Office) presented the Draft Recovery and Resiliency Framework to the Board of Supervisors. This framework included input from a comprehensive community engagement effort to gather feedback and input from community members and partners. Community engagement opportunities included: Recovery Planning Community Meetings held throughout Sonoma County, an online survey, feedback gathered in meetings with community partners and stakeholders, input submitted via email, and input gathered at workshops held by the Board on each of the strategic areas of recovery in 2018.

Following the presentation of the Draft Framework, the County opened up an additional 30 day period for members of the public to submit feedback, from 9/25/18 through 10/26/18. Members of the public were encouraged to submit input to recoveryinfo@sonoma-county.org. The Office received 19 emailed submissions, which influenced many of the Framework changes highlighted below.

SECTION OF FRAMEWORK	**Pg #**	**WHAT'S CHANGED**
Framework Overview		
Executive Summary	9-15	Added this section
Recovery Roles and Responsibilities	29-31	This is a new section of the Framework to identify the different roles that government, nonprofits, private sector, and community members play in recovering from a disaster
Core Principles	32	Added a new Guiding Principle – "Social Equity"
Throughout Framework and Appendices	many	Removed the term "vulnerable populations", and replaced with "individuals with disabilities and others with access and functional needs, including individuals with limited English and non-English speaking"
Guide to Framework Documents Online	Appendix F, pg 156	Added this section
Community Preparedness and Infrastructure		
Strategy Area, Actions & Timelines	58-64	Adjusted timelines of Proposed Actions
Strategy Area, Challenges & Opportunities	53-55	Added alert and warning
Strategy Area, Community Input	56	Added language on metrics and progress measurement
Action Table	Appendix A	Added program/action items regarding animals in disaster (training, permitting, evacuation, and food supply)
Action Table	Appendix A	Added action item for a countywide Disaster Preparedness Day
Action Table	Appendix A	Added action item for development of materials/trainings regarding individual, personal emergency preparedness
Action Table	Appendix A	Amended relevant action items to include undocumented residents

Action Table	Appendix A	Added action item to identify, catalog and confirm services needed in a Local Assistance Center
Action Table	Appendix A	Added action items to encourage and support local energy systems and microgrids
Action Table	Appendix A	Added action item to work with remote communities to map house locations where feasible
Action Table	Appendix A	Added action items to train County workers on federal procurement capabilities and requirements
Housing		
Strategy Area, Actions & Timelines	78-87	Adjusted timelines of Proposed Actions
Throughout Strategy Area	67-88	Overall rewrite to reduce length and aid clarity
Strategy Area, Challenges & Opportunities	74	Added Implicit Bias discussion in the housing industry that tends to keep people of color at a substantial disadvantage in the housing market
Strategy Area, Challenges & Opportunities	74	Added SB35 Regional Housing Needs Assessment targets met by Sonoma County discussion
Economy		
Strategy Area, Actions & Timelines	97-99	Adjusted timelines of Proposed Actions
Action Table	Appendix A	Added action items related to expansion of workforce development services and job fairs
Action Table	Appendix A	Added creation of “green jobs” focused on vegetation management with Sonoma County Youth Ecology Corps partnership.
Safety Net Services		
Strategy Area, Actions & Timelines	109-115	Adjusted timelines of Proposed Actions
Strategy Area, Challenges & Opportunities	106	Added to section, including the need for a “one-stop-shop” resource
Action Table	Appendix A	Added two action items to address food services needs and coordination during disasters, including creation of MOU’s with organizations; identified UCCE as lead department
Action Table	Appendix A	Added an action item to create a plan to ensure resources and services at shelters are accessible to non-English speakers and undocumented residents
Natural Resources		
Strategy Area, Actions & Timelines	128-136	Adjusted timelines of Proposed Actions
Throughout Strategy Area	117-139	Overall rewrite to simplify and improve clarity

Strategy Area, Challenges & Opportunities	123-125	Added to section to reflect recent legislative changes, ongoing studies, regional organization networking, and funding programs
Strategy Area, Goals	127	Incorporated more explicit reference to burned watersheds' recovery needs in the goals
Strategy Area, Actions & Timelines	129-139	Updated actions completed to-date to include activities recently initiated or completed by various county agencies and partners

County of Sonoma
Agenda Item
Summary Report

Clerk of the Board
575 Administration Drive
Santa Rosa, CA 95403

Agenda Item Number: 62
(This Section for use by Clerk of the Board Only.)

To: Board of Supervisors

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): Board of Supervisors

Staff Name and Phone Number:
Supervisor David Rabbitt (707) 565-2241

Supervisorial District(s):
Second District

Title: Fee Waiver

Recommended Actions:

Approve a Sonoma County Veterans Memorial Buildings fee waiver in the amount of $1,890.00 for the Redwood Empire Food Bank's bi-monthly food distribution program at the Petaluma Veteran's building from December 2018 – June 2019. (Second District)

Executive Summary:

Redwood Empire Food Bank provides food distribution services twice a month at the Petaluma Veteran's Memorial building. The services include Groceries to Go, an emergency food assistance program and a Senior Basket serving low-income seniors over the age of 60.

Discussion:

Prior Board Actions:

Approved a fee waiver in 2017.

Strategic Plan Alignment Goal 4: Civic Services and Engagement

Fiscal Summary			
Expenditures	**FY 18-19 Adopted**	**FY 19-20 Projected**	**FY 20-21 Projected**
Budgeted Expenses	0.00		
Additional Appropriation Requested	1,890.00		
Total Expenditures	1,890.00		
Funding Sources			
General Fund/WA GF			
State/Federal			
Fees/Other			
Use of Fund Balance			
Contingencies	1,890.00		
Total Sources	**1,890.00**		

Narrative Explanation of Fiscal Impacts:

Staffing Impacts

Position Title (Payroll Classification)	**Monthly Salary Range** (A – I Step)	**Additions** (Number)	**Deletions** (Number)

Narrative Explanation of Staffing Impacts (If Required):

N/A

LICENSE AGREEMENT CONDITIONS AND REQUIREMENTS FOR USE OF SONOMA COUNTY VETERANS MEMORIAL BUILDINGS

SONOMA COUNTY GENERAL SERVICES

2300 County Center Drive A200, Santa Rosa CA 95403
(707) 565-2158 halls@sonoma-county.org

1. **LICENSE.** The County of Sonoma ("County") hereby licenses to___________________ ("Licensee") use of the Veterans Memorial Building (or por thereof), on the date(s) and for specific space and purposes as specified in the Reservation documents, and in accordance with the provisions of this License Agreen ("Agreement").

2. **PAYMENT.** Licensee shall pay the County the license fee and other amount(s) specified in the Reservation documents ("Rental Fees"). Checks shall b made payable to the County of Sonoma. All payments are due 30 days in advance of event.

3. **DEPOSIT REFUND.** Licensee agrees that the deposit, if any be required, made upon execution by Licensee of this Agreement shall not be refundable any reason unless County, in its absolute discretion, determines such a refund in whole or in part, to be warranted.

4. **NON-LIABILITY OF COUNTY.** County, its officers, agents, and employees shall not be liable to Licensee, or any of its officers, agents, employees, invitees, for any loss or damage from any cause. Licensee expressly waives all claims against County, its officers, agents, and employees, unless such injury or dan is caused by or due to the sole negligence or willful misconduct of County, its officers, agents, and employees.

5. **INDEMNIFICATION.** Licensee agrees to accept all responsibility for loss or damage to any person or entity, and to defend, indemnify, hold harmless release County, and its officers, agents, and employees, from and against any and all actions, claims, damages, liabilities or expenses that may be asserted by any pe or entity, including Licensee, arising out of or in connection with this Agreement or Licensee's use of the licensed facilities, whether or not there is concurrent negligence on the part of the County, but excluding liability due to the sole active negligence or sole willful misconduct of the County. This indemnification obliga is not limited in any way by any limitation on the amount or type of damages or compensation payable to or for Licensee or its agents under workers' compensation acts, disability benefit acts, or other employee benefit acts.

6. **TRANSFER OF MANAGEMENT OF FACILITIES.** County may transfer the operation and management of the facilities covered by this Agreemen a third party entity during the term of this Agreement ("Management Entity") pursuant to a written agreement between County and the Management Entity. This License Agreement shall remain in full force after any such transfer. County will endeavor to provide advance notice to Licensee of any such transfer before the effective date of such transfer.

7. **INSURANCE.** At all times during the life of this agreement the Licensee shall maintain at its own expense the insurance specified below:

a) **Workers' Compensation and Employers Liability Insurance** (*if Licensee has employees*):

1. .
2. Workers' Compensation insurance with statutory limits as required by the Labor Code of the State of California.
3. Employers' Liability with limits of $1,000,000 per Accident; $1,000,000 Disease per employee; $1,000,000 Disease per policy.
4. *Required Evidence of Coverage*:
   i. Certificate of Insurance.

If Licensee currently has no employees, Licensee agrees to obtain the above-specified Workers' Compensation and Employers' Liability insurance should any employees be engaged during the term of this Agreement or any extensions of the term.

b) **General Liability Insurance**:

1. Commercial General Liability Insurance on a standard occurrence form, no less broad than ISO form CG 00 01.
2. Minimum Limits: $1,000,000 per Occurrence; $2,000,000 General Aggregate; $2,000,000 Products/Completed Operations Aggregate.
3. Licensee shall disclose any deductible of self-insured retention in excess of $25,000 and such deductible or self –insured retention must be approved in advance by County. Licensee is responsible for any deductible or self-insured retention.
4. The County of Sonoma, its officers, agents, employees and Management Entity, shall be additional insureds for liability arising out of the Licensee's ongoing operations. (ISO endorsement CG 20 26 or equivalent). The insurance provided to County, et al. as additional insured shall ap on a primary and non-contributory basis with respect to any insurance or self-insurance program maintained by them.
5. The policy shall cover inter-insured suits between County and Licensee and include a "separation of insureds" or "severability" clause which treats each insured separately.
6. *Required Evidence of Coverage*:
   i. Copy of the additional insured endorsement or policy language granting additional insured status; and
   ii. Certificate of Insurance.

c) **Liquor Liability Insurance** *(for events with alcohol)*:

1. Minimum Limits: $1,000,000 for each Common Cause or Occurrence: $1,000,000 Aggregate.
2. Licensee shall disclose any deductible or self-insured retention in excess of $25,000 and such deductible or self-insured retention must be approved in advance by County. Licensee is responsible for any deductible or self-insured retention.
3. *Required Evidence of Coverage*:
   i. Certificate of Insurance.

d) **Standards for Insurance Companies**: Insurers shall have an A.M. Best's rating of at least A:VII.

e) **Documentation**:

1. The Certificate of Insurance must include the following reference: Event Name: __________________________________ Date: ______
2. All required Evidence of Coverage shall be submitted prior to the execution of this Agreement. Licensee agrees to maintain current Evidence Coverage on file with County for the required period of insurance.
3. The name and address for Additional Insured endorsements and Certificates of Insurance is: the County of Sonoma, its officers, agents, employees and Management Entity; Sonoma County Sonoma Veterans Building, Booking Office 2300 County Center Dr A200, Santa Rosa CA 95
4. Required Evidence of Coverage shall be submitted for any renewal or replacement of a policy that already exists, at least ten (10) days before expiration or other termination of the existing policy.
5. Licensee shall provide immediate written notice if: (1) any of the required insurance policies is terminated; (2) the limits of any of the require policies are reduced; or (3) the deductible or self-insured retention is increased.
6. Upon written request, certified copies of required insurance policies must be provided within thirty (30) days.

f) **Policy Obligations**: Licensee's indemnity and other obligations shall not be limited by the foregoing insurance requirements.

g) **Material Breach**: If Licensee fails to maintain insurance coverage which is required pursuant to this Agreement, it shall be deemed a material breach of this Agreement. County, at its sole option, may terminate this Agreement and obtain damages from Licensee resulting from said breach

8. **EXPIRATION OF LICENSE.** At the expiration of the time of use of the facilities, Licensee shall quit the facilities and return to County all equipment facilities procured from County, which premises, equipment, and the facilities shall be in as good condition and repair as before Licensee's use thereof except for ordinary wear and use. Licensee shall reimburse County for any equipment or facility damaged during the use of the facility.

9. **COMPLIANCE WITH LAWS.** Licensee, its officers, agents, employees, and invitees shall comply with all rules and regulations prescribed by County the use and occupancy of the facilities, and with all applicable laws, ordinances and regulations adopted or established from time to time, by any governmental agen or department thereof. Licensee shall obtain and comply with all permits or licenses required by the laws, ordinances, and rules or regulations mentioned herein.

11. PROGRAM REQUIREMENT. Licensee shall file with County at least thirty (30) days prior to holding the event allowed hereunder, a full and detaile outline of all activities required, all stage and equipment requirements, the hall and chair set-up and such other information as may be required concerning such function. Licensee shall make an appointment to meet with facility staff at event location to review rental and set up requirements prior to event.

12. SEATING CAPACITY. The seating capacity of each facility or portion thereof is on file at the office of the facility manager and incorporated herein b this reference. Licensee shall not sell or distribute, or permit to be sold or distributed, tickets or passes in excess of the seating capacity of the facility or facilities hereinabove described, nor admit thereto a larger number of persons than can safely and freely move about therein. The decision of the facility manager and the Fir Marshall in this respect shall be final.

13. CONCESSION SALES. County reserves the sole right to operate the parking lots, box office concessions, check rooms, and any food or beverage concession; provided, however, that County may, in writing, authorize Licensee to operate any of the aforesaid upon such terms as County may deem proper.

14. ACCESS. County shall have the absolute right to enter the licensed facilities, or any portion thereof, at all times.

15. CONTROL. In renting the facility to the Licensee, it is understood the County does not relinquish the right to control the management thereof, and to enforce all necessary laws, rules and regulations. The decision of the County's representatives, as to required staffing, and the number of persons that can safely and freely move about in said licensed space, shall be final.

16. SECURITY. Licensee shall be required to provide and pay for _______ police and _______ private security personnel to be present for the safety of the public during use of the facilities.

17. OBJECTIONABLE PERSONS. County reserves the right to eject or cause to be ejected from the premises any objectionable person or persons; and neither County nor any of its officers, agents or employees shall be liable to Licensee for any damages that may be sustained by Licensee through the exercise by County of such right.

18. BROADCASTING. No events or portions of events shall be taped, broadcast or televised without the prior written consent of County.

19. ADVERTISING. Upon request, Licensee shall submit to County copies of all Licensee's advertising or other publicity for any event at the facilities.

20. STORAGE. In the receipt, handling, care or custody of property of any kind shipped or otherwise delivered to the premises or stored on such premises either prior to, during or subsequent to the use of the facilities by Licensee, County and its officers, agents and employees shall act solely for the accommodation of Licensee; and neither County, its officers, agents nor employees shall be liable for any loss, damage or injury to such property.

21. OBSTRUCTIONS. No portions of the sidewalks, entries, passages, vestibules, halls or way of access to public utilities of the facilities shall be obstruc or caused to be obstructed, by Licensee or caused or permitted to be used for any purpose other than ingress or egress to and from the facilities. The doors, skylights stairways or openings that reflect or admit light into any portion of the building, including hallways, passageways, also radiators and house lighting attachments, sh no way be obstructed.

22. LIABILITY FOR LOSS OR DAMAGE TO COUNTY PROPERTY. Licensee shall be liable to County for any loss or damage to the facilities arisi from or in connection with Licensee's use of the facilities, or that by any of its officers, agents, employees, and invitees.

23. FLAMMABLE MATERIALS. No flammable materials such as bunting, tissue paper, etc., shall be used for decorations; and all materials used for decorative purposes must be treated with flame-proofing and approved by the local Fire Department. No fireworks, open flame, nor device prohibited by local polic fire jurisdictions shall be permitted.

24. DEFAULT. Should the Licensee default in the performance of any of the terms and conditions of this License, County, in its discretion, may (in additio other legal remedies available) immediately terminate this License. In such event, Licensee shall be liable for the full amount of the fee(s) provided for herein, less charges received from others for use of the facilities at the time, or times, specified in this License. Any deposit made by Licensee to County shall be retained by County and applied to payment of such amounts due.

25. CONTRACT ADDITIONS. Additional provisions or modifications may be attached to this Agreement and, when signed, shall be binding on the partie

26. CANCELLATION BY COUNTY. In addition to the right to terminate this Agreement upon Licensee's default, County shall have the right to terminat part or all of this Agreement at any time, in the following circumstances:

a) Upon thirty (30) days' written notice,

b) Immediately without notice if the County Board of Supervisors, the County Emergency Services Director, County Administrative Officer, the Manager or other local, state or federal official determines that the facilities are required for public necessity or emergency use,

c) Immediately without notice if the facility is destroyed or damaged or should a strike occur.

Neither County nor any of its officers, agents or employees shall be liable to Licensee for any damages that may be sustained by Licensee through exerci by County of any of its rights to cancellation pursuant to this section. Upon cancellation by County, any deposit made by Licensee may be refunded at County's sole discretion.

27. CANCELLATION BY LICENSEE. The Licensee is liable for the following amounts in the event of cancellation by Licensee: a) If the event is cancell 90 days or more from the date held, 50% of the deposit shall be retained by County; b) if the event is cancelled between 30-90 days of the date held, the entire depo shall be retained by County; c) if the event is cancelled between 15-30 days of the date held, Licensee shall forfeit 50% of the Rental Fee; d) if the event is cancelle within 15 days of the date held, Licensee shall forfeit 100% of the Rental Fee.

28. NONDISCRIMINATION. Licensee shall comply with all applicable federal, state and local laws, rules and regulations in regard to nondiscrimination because of race color, ancestry, national origin, religion, gender, marital status, age, medical condition, handicap, sexual orientation, or any other prohibited basis.

29. NOTE: CHEWING GUM, GLITTER, CANDLES, AND SHOES ON THE WALL (S) ARE NOT PERMITTED IN THE FACILITIES AT ANY TIME.

30. CHANGES. Any changes to the reservation must be made 30 days prior to the event. Accommodation of changes is subject to availability and not guaranteed.

31. CERTIFIED ACCESS SPECIALIST DISCLOSURE. Pursuant to California Civil Code Section 1938, the subject property has/has not been inspecte a "Certified Access Specialist".

32. POSSESSORY INTEREST AND OTHER TAXES. Licensee is fully responsible for and agrees to pay all real and personal property taxes (including tax levied on a possessory interest, as defined in California Revenue and Taxation Code Section 107 or successor statute, if applicable), general and special assessm and other charges of every description, levied on or assessed against any and all interests held by Licensee, including personal property of Licensee located on the facilities, to the full extent incurred during the term of this Agreement. Licensee expressly recognizes and understands that this Agreement may create a possessory interest subject to property taxation and that Licensee may be subject to payment of property taxes levied on such interest

33. ALL FEES AND PAPERWORK, INCLUDING PROOF OF INSURANCE, ARE DUE 30 DAYS PRIOR TO THE EVENT.

SIGN AND RETURN THE LICENSE AGREEMENT AND ONE COPY OF RESERVATION.

County of Sonoma Agenda Item Summary Report

Clerk of the Board
575 Administration Drive
Santa Rosa, CA 95403

Agenda Item Number: 63
(This Section for use by Clerk of the Board Only.)

To: Board of Supervisors

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): Board of Supervisors

Staff Name and Phone Number:	**Supervisorial District(s):**
Supervisor Lynda Hopkins 565-2241	Fifth District

Title: Fee Waiver

Recommended Actions:

Approve Fee Waiver in the amount of $619.00 for the Russian River Sisters of Perpetual Indulgence to hold the annual free community Christmas dinner at the Guerneville Veteran's Memorial Building on December 25, 2018. (Fifth District)

Executive Summary:

The Guerneville community has been putting on a free annual Christmas dinner at the Guerneville Veteran's Building for over 68 years. The Board of Supervisors has been sponsoring the hall rental fees for the free dinner for many years. The Sisters raise funds to provide the hot meal, and it is staffed mostly by volunteers – many who look forward to this event every year.

Discussion:

Prior Board Actions:

Approved Fee Waivers in 11-10-2015, 11-01-2016 and 12-05-2017

Re: Fee Waiver for the Holiday Community Dinner in Guerneville

Dear Susan:

On behalf of the Russian River Sisters, we are once again requesting that the Board of Supervisors grant a waiver of the reservation fees for the Guerneville Veteran's Hall on Christmas Day for our annual Community Dinner and Toy Giveaway.

Each year, we raise funds from the local community to purchase food, organize donations from local businesses as well as community members, and work with Mama's Family to collect toys for the Annual Community Dinner in Guerneville. We are an all-volunteer 501c3 organization, and the dinner is staffed by dedicated volunteers from the local community.

We do not charge for the dinner and it is open to everyone in the community. Last year, we served approximately 500 meals throughout the day. It is a fun and festive event. A majority of the attendees are from low-income households or homeless individuals, and many of the children that receive toys from us come from families that cannot afford to give them gifts. We also provide meals to seniors who cannot leave their homes to attend the dinner.

We hope you will support us in our important work once again with this waiver.

Thank you for your consideration.

Regards,

The Russian River Sisters

Cancellation:
If the event is cancelled 90 days or more from the date held, 50% of the deposit shall be retained by the County (General Services Department).
If the event is cancelled between 30-90 days of the date held, the entire deposit shall be retained.
If the event is cancelled 15-30 days of the date held 50% of the Rental Fee will be retained.
If the event is cancelled within 15 days of the event 100% of the Rental Fee will be retained.

CLEANING/DAMAGE DEPOSITS:
The entire cleaning/damage deposit will be forfeited if ANY of the following occur:
GUM IS FOUND IN THE FACILITY (FLOOR, ETC.)
GLITTER IS FOUND IN THE FACILITY
ALCOHOL IS BROUGHT INTO FACILITY DURING A "NON-ALCOHOL" EVENT

LICENSE AGREEMENT CONDITIONS AND REQUIREMENTS
FOR USE OF SONOMA COUNTY VETERANS MEMORIAL BUILDINGS

SONOMA COUNTY GENERAL SERVICES
2300 County Center Drive A200, Santa Rosa CA 95403
(707) 565-2158 halls@sonoma-county.org

1. LICENSE. The County of Sonoma ("County") hereby licenses to___Russian River Sisters ("Licensee") use of the Veterans Memorial Building (or portion thereof), on the date(s) and for specific space and purposes as specified in the Reservation documents, and in accordance with the provisions of this License Agreement ("Agreement").

2. PAYMENT. Licensee shall pay the County the license fee and other amount(s) specified in the Reservation documents ("Rental Fees"). Checks shall be made payable to the County of Sonoma. All payments are due 30 days in advance of event.

3. DEPOSIT REFUND. Licensee agrees that the deposit, if any be required, made upon execution by Licensee of this Agreement shall not be refundable for any reason unless County, in its absolute discretion, determines such a refund in whole or in part, to be warranted.

4. NON-LIABILITY OF COUNTY. County, its officers, agents, and employees shall not be liable to Licensee, or any of its officers, agents, employees, or invitees, for any loss or damage from any cause. Licensee expressly waives all claims against County, its officers, agents, and employees, unless such injury or damage is caused by or due to the sole negligence or willful misconduct of County, its officers, agents, and employees.

5. INDEMNIFICATION. Licensee agrees to accept all responsibility for loss or damage to any person or entity, and to defend, indemnify, hold harmless and release County, and its officers, agents, and employees, from and against any and all actions, claims, damages, liabilities or expenses that may be asserted by any person or entity, including Licensee, arising out of or in connection with this Agreement or Licensee's use of the licensed facilities, whether or not there is concurrent negligence on the part of the County, but excluding liability due to the sole active negligence or sole willful misconduct of the County. This indemnification obligation is not limited in any way by any limitation on the amount or type of damages or compensation payable to or for Licensee or its agents under workers' compensation acts, disability benefit acts, or other employee benefit acts.

6. TRANSFER OF MANAGEMENT OF FACILITIES. County may transfer the operation and management of the facilities covered by this Agreement to a third party entity during the term of this Agreement ("Management Entity") pursuant to a written agreement between County and the Management Entity. This License Agreement shall remain in full force after any such transfer. County will endeavor to provide advance notice to Licensee of any such transfer before the effective date of such transfer.

7. INSURANCE. At all times during the life of this agreement the Licensee shall maintain at its own expense the insurance specified below:

a) **Workers' Compensation and Employers Liability Insurance (*if Licensee has employees*):**

1. .
2. Workers' Compensation insurance with statutory limits as required by the Labor Code of the State of California.
3. Employers' Liability with limits of $1,000,000 per Accident; $1,000,000 Disease per employee; $1,000,000 Disease per policy.
4. *Required Evidence of Coverage*:
   i. Certificate of Insurance.

If Licensee currently has no employees, Licensee agrees to obtain the above-specified Workers' Compensation and Employers' Liability insurance should any employees be engaged during the term of this Agreement or any extensions of the term.

b) **General Liability Insurance**:

1. Commercial General Liability Insurance on a standard occurrence form, no less broad than ISO form CG 00 01.
2. Minimum Limits: $1,000,000 per Occurrence; $2,000,000 General Aggregate; $2,000,000 Products/Completed Operations Aggregate.
3. Licensee shall disclose any deductible of self-insured retention in excess of $25,000 and such deductible or self –insured retention must be approved in advance by County. Licensee is responsible for any deductible or self-insured retention.
4. The County of Sonoma, its officers, agents, employees and Management Entity, shall be additional insureds for liability arising out of the Licensee's ongoing operations. (ISO endorsement CG 20 26 or equivalent). The insurance provided to County, et al. as additional insured shall apply on a primary and non-contributory basis with respect to any insurance or self-insurance program maintained by them.
5. The policy shall cover inter-insured suits between County and Licensee and include a "separation of insureds" or "severability" clause which treats each insured separately.
6. *Required Evidence of Coverage*:
   i. Copy of the additional insured endorsement or policy language granting additional insured status; and
   ii. Certificate of Insurance.

c) **Liquor Liability Insurance** *(for events with alcohol)*:

1. Minimum Limits: $1,000,000 for each Common Cause or Occurrence: $1,000,000 Aggregate.
2. Licensee shall disclose any deductible or self-insured retention in excess of $25,000 and such deductible or self-insured retention must be approved in advance by County. Licensee is responsible for any deductible or self-insured retention.
3. *Required Evidence of Coverage*:
   i. Certificate of Insurance.

d) **Standards for Insurance Companies**: Insurers shall have an A.M. Best's rating of at least A:VII.

e) **Documentation**:

1. The Certificate of Insurance must include the following reference: Event Name: ____Community Holiday Dinner____ Date: __12/25/18______.
2. All required Evidence of Coverage shall be submitted prior to the execution of this Agreement. Licensee agrees to maintain current Evidence of Coverage on file with County for the required period of insurance.
3. The name and address for Additional Insured endorsements and Certificates of Insurance is: the County of Sonoma, its officers, agents, employees and Management Entity; Sonoma County Sonoma Veterans Building, Booking Office 2300 County Center Dr A200, Santa Rosa CA 95403.
4. Required Evidence of Coverage shall be submitted for any renewal or replacement of a policy that already exists, at least ten (10) days before expiration or other termination of the existing policy.
5. Licensee shall provide immediate written notice if: (1) any of the required insurance policies is terminated; (2) the limits of any of the required policies are reduced; or (3) the deductible or self-insured retention is increased.
6. Upon written request, certified copies of required insurance policies must be provided within thirty (30) days.

f) **Policy Obligations**: Licensee's indemnity and other obligations shall not be limited by the foregoing insurance requirements.

g) **Material Breach**: If Licensee fails to maintain insurance coverage which is required pursuant to this Agreement, it shall be deemed a material breach of this Agreement. County, at its sole option, may terminate this Agreement and obtain damages from Licensee resulting from said breach.

8. EXPIRATION OF LICENSE. At the expiration of the time of use of the facilities, Licensee shall quit the facilities and return to County all equipment and facilities procured from County, which premises, equipment, and the facilities shall be in as good condition and repair as before Licensee's use thereof except for ordinary wear and use. Licensee shall reimburse County for any equipment or facility damaged during the use of the facility.

9. COMPLIANCE WITH LAWS. Licensee, its officers, agents, employees, and invitees shall comply with all rules and regulations prescribed by County for the use and occupancy of the facilities, and with all applicable laws, ordinances and regulations adopted or established from time to time, by any governmental agency or department thereof. Licensee shall obtain and comply with all permits or licenses required by the laws, ordinances, and rules or regulations mentioned herein.

10. ASSIGNMENT. No assignment of this Agreement or any duty or interest hereunder shall be made by Licensee without the prior written consent of County.

11. PROGRAM REQUIREMENT. Licensee shall file with County at least thirty (30) days prior to holding the event allowed hereunder, a full and detailed outline of all activities required, all stage and equipment requirements, the hall and chair set-up and such other information as may be required concerning such function. Licensee shall make an appointment to meet with facility staff at event location to review rental and set up requirements prior to event.

12. SEATING CAPACITY. The seating capacity of each facility or portion thereof is on file at the office of the facility manager and incorporated herein by this reference. Licensee shall not sell or distribute, or permit to be sold or distributed, tickets or passes in excess of the seating capacity of the facility or facilities hereinabove described, nor admit thereto a larger number of persons than can safely and freely move about therein. The decision of the facility manager and the Fire Marshall in this respect shall be final.

13. CONCESSION SALES. County reserves the sole right to operate the parking lots, box office concessions, check rooms, and any food or beverage concession; provided, however, that County may, in writing, authorize Licensee to operate any of the aforesaid upon such terms as County may deem proper.

14. ACCESS. County shall have the absolute right to enter the licensed facilities, or any portion thereof, at all times.

15. CONTROL. In renting the facility to the Licensee, it is understood the County does not relinquish the right to control the management thereof, and to enforce all necessary laws, rules and regulations. The decision of the County's representatives, as to required staffing, and the number of persons that can safely and freely move about in said licensed space, shall be final.

16. SECURITY. Licensee shall be required to provide and pay for _______ police and _______ private security personnel to be present for the safety of the public during use of the facilities.

17. OBJECTIONABLE PERSONS. County reserves the right to eject or cause to be ejected from the premises any objectionable person or persons; and neither County nor any of its officers, agents or employees shall be liable to Licensee for any damages that may be sustained by Licensee through the exercise by County of such right.

18. BROADCASTING. No events or portions of events shall be taped, broadcast or televised without the prior written consent of County.

19. ADVERTISING. Upon request, Licensee shall submit to County copies of all Licensee's advertising or other publicity for any event at the facilities.

20. STORAGE. In the receipt, handling, care or custody of property of any kind shipped or otherwise delivered to the premises or stored on such premises either prior to, during or subsequent to the use of the facilities by Licensee, County and its officers, agents and employees shall act solely for the accommodation of Licensee; and neither County, its officers, agents nor employees shall be liable for any loss, damage or injury to such property.

21. OBSTRUCTIONS. No portions of the sidewalks, entries, passages, vestibules, halls or way of access to public utilities of the facilities shall be obstructed, or caused to be obstructed, by Licensee or caused or permitted to be used for any purpose other than ingress or egress to and from the facilities. The doors, skylights, stairways or openings that reflect or admit light into any portion of the building, including hallways, passageways, also radiators and house lighting attachments, shall in no way be obstructed.

22. LIABILITY FOR LOSS OR DAMAGE TO COUNTY PROPERTY. Licensee shall be liable to County for any loss or damage to the facilities arising from or in connection with Licensee's use of the facilities, or that by any of its officers, agents, employees, and invitees.

23. FLAMMABLE MATERIALS. No flammable materials such as bunting, tissue paper, etc., shall be used for decorations; and all materials used for decorative purposes must be treated with flame-proofing and approved by the local Fire Department. No fireworks, open flame, nor device prohibited by local police or fire jurisdictions shall be permitted.

24. DEFAULT. Should the Licensee default in the performance of any of the terms and conditions of this License, County, in its discretion, may (in addition to other legal remedies available) immediately terminate this License. In such event, Licensee shall be liable for the full amount of the fee(s) provided for herein, less rent charges received from others for use of the facilities at the time, or times, specified in this License. Any deposit made by Licensee to County shall be retained by County and applied to payment of such amounts due.

25. CONTRACT ADDITIONS. Additional provisions or modifications may be attached to this Agreement and, when signed, shall be binding on the parties.

26. CANCELLATION BY COUNTY. In addition to the right to terminate this Agreement upon Licensee's default, County shall have the right to terminate part or all of this Agreement at any time, in the following circumstances:

a) Upon thirty (30) days' written notice,

b) Immediately without notice if the County Board of Supervisors, the County Emergency Services Director, County Administrative Officer, the Manager or other local, state or federal official determines that the facilities are required for public necessity or emergency use,

c) Immediately without notice if the facility is destroyed or damaged or should a strike occur.

Neither County nor any of its officers, agents or employees shall be liable to Licensee for any damages that may be sustained by Licensee through exercise by County of any of its rights to cancellation pursuant to this section. Upon cancellation by County, any deposit made by Licensee may be refunded at County's sole discretion.

27. CANCELLATION BY LICENSEE. The Licensee is liable for the following amounts in the event of cancellation by Licensee: a) If the event is cancelled 90 days or more from the date held, 50% of the deposit shall be retained by County; b) if the event is cancelled between 30-90 days of the date held, the entire deposit shall be retained by County; c) if the event is cancelled between 15-30 days of the date held, Licensee shall forfeit 50% of the Rental Fee; d) if the event is cancelled within 15 days of the date held, Licensee shall forfeit 100% of the Rental Fee.

28. NONDISCRIMINATION. Licensee shall comply with all applicable federal, state and local laws, rules and regulations in regard to nondiscrimination because of race, color, ancestry, national origin, religion, gender, marital status, age, medical condition, handicap, sexual orientation, or any other prohibited basis.

29. NOTE: CHEWING GUM, GLITTER, CANDLES, AND SHOES ON THE WALL (S) ARE NOT PERMITTED IN THE FACILITIES AT ANY TIME.

30. CHANGES. Any changes to the reservation must be made 30 days prior to the event. Accommodation of changes is subject to availability and not guaranteed.

31. CERTIFIED ACCESS SPECIALIST DISCLOSURE. Pursuant to California Civil Code Section 1938, the subject property has/has not been inspected by a "Certified Access Specialist".

32. POSSESSORY INTEREST AND OTHER TAXES. Licensee is fully responsible for and agrees to pay all real and personal property taxes (including any tax levied on a possessory interest, as defined in California Revenue and Taxation Code Section 107 or successor statute, if applicable), general and special assessments, and other charges of every description, levied on or assessed against any and all interests held by Licensee, including personal property of Licensee located on the facilities, to the full extent incurred during the term of this Agreement. Licensee expressly recognizes and understands that this Agreement may create a possessory interest subject to property taxation and that Licensee may be subject to payment of property taxes levied on such interest

33. ALL FEES AND PAPERWORK, INCLUDING PROOF OF INSURANCE, ARE DUE 30 DAYS PRIOR TO THE EVENT.

SIGN AND RETURN THE LICENSE AGREEMENT AND ONE COPY OF RESERVATION.

VETERANS HALLS CLEAN UP INSTRUCTIONS

When your contact person arrives at the hall, have them check in with the event staff before the start of the function regarding the clean-up of the hall. The facility must be left in the same condition that you received it. The following are guidelines for clean up.

Floors

- Pick up trash and foodstuff on the floors and put into the trash receptacles.
- Sponge any spills on the carpet.

Tables and Chairs

- Wipe down all tables and other equipment.
- Bring any spills or spots on the chairs and/or carpet to the attention of the event staff.

Decorations

- Remove all decorations and discard in the trash or remove from the premises.

Restrooms

- Pick up trash and papers from bathroom floor.
- Be sure there is no water left running in the sinks.
- Please notify event staff if there is a problem in the restrooms.

Trash

- Dispose of all garbage and trash (paper plates, napkins, plastic cups, leftover food, etc.)
- Pick up and discard all trash left on the patios after your event, including empty glasses and cigarette butts from the ground.
- Empty all waste receptacles into dumpsters; this does not include the restrooms- the staff will handle the disposal of the restroom trash.

Personal Articles

- Remove all supplies and equipment belonging to your group.
- Remove all personal articles from the premises when you leave.
- All items left in the building may be discarded the following day.

Thank you for your cooperation. By signing below, you acknowledge receipt of the cleaning instructions and your responsibilities stated above.

Title: Proposed amendment to Conditions of Approval for the Blue Rock Quarry related to expenditure of funds for required traffic improvements. 7888 Highway 116 North, Forestville, Permit Sonoma File: PLP97-0069.

Recommended Actions:

Hold a public hearing and adopt resolution approving amendments to Conditions of Approval of Resolution No. 07-0014 for the Blue Rock Quarry, 7888 Highway 116 North, Forestville, to allow the fair share contributions for traffic improvements required by conditions of approval to be combined to construct any of the traffic improvement projects listed in said conditions and/or to construct bicycle/pedestrian improvements benefitting the downtown Forestville area. Permit Sonoma File: PLP97-0069.

Executive Summary:

No changes are requested to the operation of the Blue Rock Quarry or use permit conditions other than conditions of approval outlining the prospective use of certain fair share contirbutions already paid by the quarry owner to offset impacts on local roads. The conditions arose from mitigation measures identified in the Final EIR for the impacts of the quarry expansion project on local roads and bicycle and pedestrian circulation in the Forestville area and require a fair share percentage payment toward the cost of seven (7) specific roadway or traffic circulation projects. All payments required by the conditions have been made, and the proposed modification relates only to how the money can be applied to the individual projects.

Approximately $2,484,492 was deposited by the quarry applicant as its fair share contribution pursuant to the conditions of approval. The Department of Transportation and Public Works (DTPW) has held the funds in separate dedicated accounts for each improvement since the funds were deposited. There is insufficient funding in each account to complete any of the seven projects at this writing. At the request of your Board, staff have prepared a proposed amended condition No. 18 to allow some or all of the funds from the separate accounts to be pooled and used toward construction of one or more of the identified projects and/or to complete a connection between the West County Trail and Highway 116 through land managed by Regional Parks to improve bicycle and pedestrian circulation in downtown Forestville.

Discussion:

BACKGROUND

The owners of the Blue Rock Quarry submitted Application PLP 97-0069 seeking various entitlements to allow expansion of the quarry. After lengthy study and preparation of an environmental impact report (EIR) under the California Environmental Quality Act (CEQA), the project was approved by your Board on January 9, 2007. A copy copy of Resolution No. 07-0014 is attached as Attchment B.

Because the EIR found traffic from the quarry expansion would have direct impacts on various roadways and on bicycle and pedestrian circulation in the Forestville area, mitigation measures and conditions of approval required the project to pay a percentage share (fair share) of the costs of seven identified road and circulation improvements in the local Forestville area. These payments wre required in addition to the one-time countywide traffic impact fee and annual payment of the Aggregate Road Mitigation fee for wear and tear on haul roads from mining trucks. Each fair share payment was calculated based on estimated costs of the individual road or circulation improvement in 2003-2004 dollars and the percentage that additional quarry traffic was expected to contribute to the need for the improvement, as set out in the conditions of approval. Three of the conditions allowed transfer to other projects on the list, but four conditions did not so provide. The quarry owner's obligation regarding these conditions was met by the one-time deposit of funds. For a list of the funds on deposit, see Attachment C.

Even with the fair share mitigation amounts, it was not certain in 2007 that some or any of the road and circulation improvements could be built because of uncertainties about future remaining funding and the need for Caltrans approval of the improvements that affected State highways. Therefore, when your Board approved the expansion it also approved a statement of overriding considerations for the project pursuant to the California Environmental Quality Act (CEQA). See Exhibit C to Attachment B, Resolution 07-0014. Your Board found that even if the identified local traffic impacts were not entirely mitigated, specified benefits of the expansion project outweighed any unavoidable adverse impacts. With redirection of some of the fair share fee money, not all of the seven identified local projects will be completed. Nevertheless, at the time your Board approved the quarry expansion, the statement of overriding considerations recognized the possibility that none of the improvements might ever be constructed. The statement of overriding considerations adopted in 2007 remains in effect, and the redirection of the funds does not create any additional adverse impacts not identified in Resolution 07-0014.

The existing conditions of approval are set forth in Exhibit E to Resolution 07-0014. The proposed amended conditions of approval would allow funds designated for separate identified local road and circulation improvements to be transferred to other projects within the original list of improvements and/or to be used to complete a connection between the West County Trail and downtown Forestville, improving bicycle and pedestrian circulation in the local area. Any use of the deposited funds for a bicycle/pedestrian trail connection is contingent on prior completion, public review and approval of a full CEQA study for that potential project, now being undertaken by Regional Parks.

Condition of Approval No. 18 currently provides:

> 18. Prior to the expansion or clearing, the operator shall pay a fair share fee of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 19-26). The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for

costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

Mitigation Monitoring. PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

As amended by the proposed resolution, Condition of Approval No. 18 would read in full, with proposed changes underlined:

18. Prior to the expansion or clearing, the operator shall pay a fair share fee of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 19-25). Notwithstanding any contrary language in Conditions No. 19, 20, 21, 22, 23, 24 and/or 25, the fair share funds deposited for each improvement identified in any Condition No. 19, 20, 21, 22, 23, 24 and/or 25, in the joint discretion of the directors of the Department of Transportation and Public Works and PRMD, may be aggregated and used for planning and construction of:

(i) Any one or more of the road improvement and/or traffic circulation projects identified in Conditions No. 19, 20, 21, 22, 23, 24 and/or 25; and/or

(ii) Completion of other improvements to facilitate improved bicycle and pedestrian circulation in the Forestville area, including but not limited to a bicycle/pedestrian connection between the West County Trail and downtown Forestville.

(iii) No fair share funds shall be expended for planning or construction of a bicycle/pedestrian connection between Highway 116 in downtown Forestville and the existing terminus of the paved West County Trail until and unless an adequate study pursuant to CEQA of potential environmental impacts for the connector trail project has been completed, subjected to public review and comment and approved by the county. Absent an adequate and approved CEQA analysis for said project, all funds referenced herein shall be spent only on projects in the listed improvements in Conditions No. 19, 20, 21, 22, 23, 24 and/or 25 of Resolution 07-0014.

Nothing in this Condition modifies or deletes any requirement stated in Condition No. 26 relating to the annual Road Maintenance Fee payment to the Aggregate Roadway Mitigation Fund.

The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Costof improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

Mitigation Monitoring. Permit Sonoma Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

The trail connection, improvements to the intersection of Mirabel Road and Highway 116 and/or construction of Mirabel Road shoulders are tentatively identified as the most likely projects to use the fair share funds, but the final decision will be made upon analysis of updated costs of construction, feasibility and community input, subject to the approval of the Directors of Transportation and Public Works and Permit Sonoma. The Mirabel Road/116 intersection and improvement of Mirabel Road shoulders are two of the original identified projects.

The need to improve bicycle and pedestrian circulation in the local area referenced installing sidewalks/pathways where needed along both sides of Highwy 116 between Covey Road and Mirabel Road, or five-foot wide bicycle lanes in the same area, as determined appropriate by Permit Sonoma. The condition relating to these improvements allowed transfer of the funds to other road improvements listed in the original conditions. Staff has determined that construction of the connection to the West County Trail would serve a similar purpose of improving bicycle and pedestrian ciculation in the downtown Forestville area. The estimated cost of constructing the trail connection at this time is approximately $750,000. Transportation and Public Works would work with Regional Parks to incorporate the mitigation funds into future Capital Improvement Program.

Prior Board Actions:

Adoption of Resolution 07-0014, January 9, 2007.
Direction to pursue redistribution of the fair share contributions on deposit in order to more fully fund one or more projects in the Forestville area related to local impacts from expanded quarry traffic, June 12, 2018.

Strategic Plan Alignment Goal 3: Invest in the Future

Contribute to infrastructure improvements that promote mobility, safety, connectivity and convenience.

Fiscal Summary

Item Number: ________________

Date: December 11, 2018 Resolution Number: ________________

☐ 4/5 Vote Required

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, Amending Conditions Of Approval Nos. 18, 19, 20, 21, 22, 23, 24, And 25 Of Resolution No. 07-0014 Regarding The Blue Rock Quarry, 7888 Highway 116 North, Forestville, To Allow Certain Fair Share Funds Paid By The Permittee To Be Redistributed Among The Traffic Improvement Projects Listed In Said Conditions of Approval And/Or To Construct Bicycle/Pedestrian Improvements Benefitting The Downtown Forestville Area. PRMD File No. PLP-97-0069.

Whereas, on or about January 9, 2007, the Board of Supervisors (“Board”) of the County of Sonoma (“County”) adopted Resolution No. 07-0014, approving a 20-year surface mining use permit for a 24-acre± expansion of the Blue Rock Quarry, together with an associated zone change, reclamation plan, and annual production limits pursuant to Application PLP-97-0069 (“the Project”). A true and correct copy of Resolution 07-0014 is attached to this resolution as Exhibit A and incorporated herein; and

Whereas, prior to approving the Project, the Board certified an environmental impact report (“EIR”) for the Project in compliance with all requirements of the California Environmental Quality Act (“CEQA”); and

Whereas, Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25 of Resolution 07-0014 describe certain road and traffic circulation improvements in the local Forestville area identified in the EIR as mitigation for certain adverse impacts of the Project, and further describe the nexus between the Project and the need for said improvements and the fair share percentage or proportion of the cost of said improvements attributable to the Project; and

Whereas, in Exhibit B to Resolution 07-0014, the Board specifically found that the projects identified in Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25 might not be constructed if additional funding was not made available and/or Caltrans failed to approve road improvements on Highway 116 and that if the projects were not constructed, the traffic impacts they were designed to mitigate would remain significant impacts that cannot be fully mitigated; and

Whereas, Exhibit C to Resolution 07-0014 consists of a statement of overriding considerations pursuant to CEQA in which the Board determined that specific economic, legal, social, technological and other benefits of the Project outweigh all unavoidable, adverse impacts of the Project, and that the Project should be approved; and

Whereas, Conditions of Approval No. 21, 23 and 24 expressly allow the funds deposited for a specific improvement to be transferred to other improvements listed in said conditions, but Conditions of Approval No. 19, 20, 22 and 25 do not so provide; and

Whereas, the fair share funds required by Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25 have been paid by the permittee; and

Whereas, the funds on deposit, combined with funds from all other projects required to date to pay a fair share of the improvements identified in Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25, are not sufficient to construct all or most of the projects identified in Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25; and

Whereas, the County Department of Transportation and Public Works (DTPW) together with County Regional Parks has identified a project to construct a connection for bicycle and pedestrian traffic between the West County Trail in the Forestville area and downtown Forestville which would be capable of construction with the fair share funds and which would serve a similar purpose to that of Condition of Approval No. 23, namely improving pedestrian and bicycle circulation in downtown Forestville; and

Whereas, Sonoma County Regional Parks is presently beginning analysis pursuant to CEQA of potential environmental impacts of the bicycle and pedestrian connector trail between Highway 116 in downtown Forestville and the current nearby terminus of the paved West County Trail, which will be completed and circulated for public review prior to any programming and/or expenditure of any deposited funds for the connector trail bicycle and pedestrian circulation improvement project; and

Whereas, allowing redistribution of all of the funds in Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25 to complete the trail connection and one or more of the listed projects in Conditions of Approval Nos. 18, 19, 20, 21, 22, 23, 24, and 25 will better serve the intentions of the Board in providing traffic improvements and benefits to the local Forestville area; and

Now, Therefore, Be It Resolved that Condition Of Approval No. 18 of Resolution No. 07-0014 is hereby amended to read in full as follows:

18. Prior to the expansion or clearing, the operator shall pay a fair share fee of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 19-25). Nothing in this Condition modifies or deletes any requirement stated in Condition No. 26. Notwithstanding any contrary language in Conditions No. 19, 20, 21, 22, 23, 24 and 25, the fair share funds deposited for each improvement identified in any Condition No. 19, 20, 21, 22,

23, 24 and/or 25, in the joint discretion of the directors of the Department of Transportation and Public Works and PRMD, may be aggregated and used for planning and construction of:

(i) Any one or more of the road improvement and/or traffic circulation projects identified in Conditions No. 19, 20, 21, 22, 23, 24 and/or 25; and/or

(ii) Completion of other improvements to facilitate improved downtown Forestville bicycle and pedestrian circulation, including but not limited to a bicycle/pedestrian connection between the West County Trail and downtown Forestville.

(iii) No fair share funds shall be expended for planning or construction of a bicycle/pedestrian connection between Highway 116 in downtown Forestville and the existing terminus of the paved West County Trail until and unless an adequate study pursuant to CEQA of potential environmental impacts for the connector trail project has been completed, subjected to public review and comment and approved by the county. Absent an adequate and approved CEQA analysis for said project, all funds referenced herein shall be spent only on projects in the listed improvements in Conditions No. 19, 20, 21, 22, 23, 24 and/or 25 of Resolution 07-0014.

The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

<u>Mitigation Monitoring</u>. PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

Be It Further Resolved that any and all provisions of Conditions No. 19, 20, 21, 22, 23, 24 and/or 25 as originally adopted but in conflict with Condition No. 18 as amended herein shall be of no further force or effect.

RESOLUTION NO. 07-0014

DATED: January 9, 2007

RESOLUTION OF THE BOARD OF SUPERVISORS OF THE COUNTY OF SONOMA, STATE OF CALIFORNIA, ADOPTING CERTAIN FINDINGS, MITIGATION MEASURES, A MONITORING PROGRAM, AND ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS APPROVING AN EXPANSION OF THE BLUE ROCK QUARRY CONSISTING OF A 20-YEAR SURFACE MINING PERMIT TO EXPAND QUARRY OPERATIONS ON 24± ACRES WITH AN ANNUAL PRODUCTION LIMIT OF 400,000 CUBIC YARDS PER YEAR, PLUS 50,000 CUBIC YARDS IN RECYCLING PER YEAR, AND APPROVING A RECLAMATION PLAN COVERING VESTED RIGHTS AREA (APN 084-220-017), PRIOR USE PERMIT AREA (APN 084-220-010), AND EXPANSION MINING AREA (APNs 084-220-007, -009, -013, -015, -018, -019) ON PROPERTY LOCATED AT 7888 HIGHWAY 116 NORTH, FORESTVILLE; ZONED RRD (RESOURCES AND RURAL DEVELOPMENT), B6-160 ACRE DENSITY, SR (SCENIC RESOURCES); SUPERVISORIAL DISTRICT NO. 5 (PLP97-0069)

RESOLVED, that the Board of Supervisors ("the Board") of the County of Sonoma ("the County") hereby finds and determines as follows:

1. Procedural History

1.1 Dean Soiland ("the Project Applicant") filed Application PLP 97-0069 with the County's Permit and Resource Management Department ("PRMD") to rezone to add Mineral Resource combining district on 56± acres and to obtain the entitlements necessary to expand the mining area of the Blue Rock Quarry to include 24± acres to the west, with an annual production limit of 400,000 cubic yards (excluding recycled material), on property located at 7888 Highway 116 North, Forestville, APNs 084-220 -007, -009, -010, -013, -015, -017, -018, -019 ("the Project Site"); zoned RRD (Resources and Rural Development), B6-160 acre density, SR (Scenic Resources); Supervisorial District No. 5. More specifically, Application PLP 97-0069 requests the following entitlements ("the Proposed Project"):

TRANSPORTATION AND PUBLIC WORKS:

"The conditions below have been satisfied" BY ______________________________ DATE ________

U 16. The applicant shall install left turn pocket at the intersection of Highway 116/Blue Rock Quarry Entrance. The installation of the left turn pocket will be implemented by the Blue Rock Quarry owner upon approval from Caltrans. The operator shall apply to Caltrans for the installation of the left turn pocket within 60 days of Board approval and shall obtain a State of California Encroachment Permit before making any improvements or constructing left turn lane on State Highway 116 and shall construct other improvements in accordance with Caltrans Standards. *Mitigation Measure 3.6-B.1*

Mitigation Monitoring: The operator shall submit proof to PRMD that encroachment permits have been obtained prior to initiating work within the Caltrans right-of-way.

U 17. A Traffic Mitigation Fee shall be paid to the County of Sonoma, as required by Section 26, Article 98 of the Sonoma County Code, before expansion of clearing or mining activities, based on Table 20 in the EIR of 238 ADT. This fee is for indirect cumulative traffic impacts throughout the County and shall be in addition to fair share contributions required for direct project impacts to roads in the immediate vicinity. This permit shall not be vested until the traffic mitigation fees are paid in full. *Mitigation Measure 3.6-F*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 18. Prior to the expansion or clearing, the operator shall pay a fair share of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 19-26). The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 19. Highway 116 / Mirabel Road Intersection: The quarry operator shall pay a fair share of the cost of the improvement/signalization of the Highway 116/Mirabel Road intersection. The improvements would include the correction of an existing sight distance problem on Highway 116 west of the intersection, construction of a left turn lane on Highway 116 for traffic turning northbound onto Mirabel Road, and a right turn lane onto the Forestville Bypass/Mirabel Road Extension for southbound traffic, installation of traffic signals, and other associated improvements to the intersection. The cost of the improvements is estimated at $2.8 million in 2003/2004 dollars. The project's fair-share is 22.3 percent. *Mitigation Measure 3.6-A.2*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 20. Mirabel Road Shoulders: The quarry operator shall pay a fair share of the cost of widening Mirabel Road to provide paved shoulders. The cost of the improvements is estimated at $2.15 million in 2003/2004 dollars. The project's fair-share is 23.9 percent. *Mitigation Measure 3.6-C.1, Mitigation Measure 3.6-D.4*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 21. Highway 116/Covey-Forestville Road Intersection: The quarry operator shall pay a fair share of the cost of installing traffic signals (with pedestrian signals) at the intersection of Highway 116/Covey-Forestville Roads and adding left turn lanes on both Highway 116 approaches and a right turn lane on the westbound Highway 116 approach to the intersection. The cost of the improvements is estimated at $700,000 in 2003/2004 dollars. The project's fair-share is 8.1 percent. The fair share may be transferred to other road mitigation projects (i.e., the intersection at Mirabel Extension south), listed herein as determined appropriate by DTPW. *Mitigation Measure 3.6-A.1, Mitigation Measure 3.6-D.1*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 22. River Road/Mirabel Road Intersection: The quarry operator shall pay a fair share of the cost of adding left turn lanes on both River Road approaches and a left turn lane on the northbound Mirabel Road approach to the River Road/Mirabel Road intersection. The cost of the improvements is estimated at $1.9 million in 2003/2004 dollars. The project's fair-share is 14.8 percent. *Mitigation Measure 3.6-A.3*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 23. Downtown Forestville Pedestrian and Bicycle Circulation: The quarry operator shall pay a fair share of the cost of providing sidewalks/pathways, where needed, along both sides of Highway 116 between Covey Road and Mirabel Road, to allow school children to walk on the sidewalks/pathways. Alternatively, five-foot wide bike lanes along each side of Highway 116 between Covey Road and Mirabel Road could be substituted as determined appropriate by PRMD. If bike lanes were provided along Highway 116 in this area, Highway 116 would need to be widened by six to eight feet on the north side of the highway for about 175 feet west of Covey Road. Some on-street parking spaces would have to be eliminated near First and Second Streets. The fair share may be transferred to other road mitigation projects (i.e., the intersection at Mirabel Extension south), listed herein as determined appropriate by DTPW. The cost of the improvements is estimated at $150,000 in 2003/2004 dollars. The project's fair-share is 8.1 percent. *Mitigation Measure 3.6-D.2*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 24. Enhance Visibility of Crosswalks: The quarry operator shall pay a fair share of the cost of enhancing the visibility of existing crosswalks on Highway 116 at Covey Road and First Street. This could include additional striping, signage and/or lighting as determined appropriate by PRMD. The cost of the improvements is estimated at $150,000 in 2003/2004 dollars. The project's fair-share is 8.1 percent. The fair share may be transferred to other road mitigation projects (i.e., the intersection at Mirabel Extension south), listed herein as determined appropriate by DTPW. *Mitigation Measure 3.6-D.3*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 25. Construct Forestville Bypass/Mirabel Road Extension: The quarry operator shall pay a fair share of the cost of constructing a bypass road to the south of the downtown area of Forestville. The cost of the improvements is estimated at $6.5 million in 2003/2004 dollars. The project's fair-share is 11.3 percent. *Mitigation Measure 3.6-D.5*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 26. The quarry operator shall participate in the Aggregate Road Mitigation Fund. The operator shall pay annually a Road Maintenance Fee per ARM Plan standards (Section 7.3, No. 11 and Section 7.7) to mitigate wear and tear to County maintained roads caused by the operation's truck traffic from the expanded mining area on the primary haul route(s). The fee shall be assessed based on the estimated cost of maintaining County roads caused by the use of County roads by aggregate trucks.

The County shall assess the Road Maintenance Fee each year at the end of the mining season for the life of the permit. The operator shall pay the maintenance fee within six months of receiving notice of the fee amount. If the developer does not make payment within six months, the account will be sent to Collections and the operator may be issued a Notice of Violation of the Conditions of Approval of this permit. The permit may be subject to revocation or modification for any permit violation. *Mitigation Measure 3.6-F.1*

Mitigation Monitoring: The Department of Transportation and Public Works will be responsible for: 1) adjusting and publishing the road maintenance fee annually on January 1st of each year. PRMD will: 1) determine the operator's annual road mitigation fee; 2) formally bill and collect from the operator; and 3) initiate collection proceedings and may issue a Notice of Violation if the operator defaults on the payment.

Title: Proposed amendment to conditions of approval for the Canyon Rock Quarry related to expenditure of funds for required traffic improvements. 7525 Highway 116 North, Forestville, Permit Sonoma File: PLP97-0046.

Recommended Actions:

Hold a public hearing and adopt a resolution approving amendments to conditions of approval of Resoution No. 08-0089 for the Canyon Rock Quarry, 7525 Highway 116 North, Forestville, to allow certain required fair share contributions for traffic improvements to be combined to construct any of the traffic improvement projects listed in said conditions of approval and/or to construct bicycle/pedestrian improvements benefitting the downtown Forestville area. Permit Sonoma File: PLP97-0046.

Executive Summary:

No changes are requested to the operation of the Canyon Rock Quarry or use permit conditions other than conditions of approval outlining the prospective use of certain funds already paid by the quarry owner to offset impacts on local roads. The conditions arose from mitigation measures identified in the Final EIR for the impacts of the quarry expansion project on local roads and bicycle and pedestrian circulation in the Forestville area and require a fair share percentage payment toward the cost of seven (7) specific roadway or traffic circulation projects. All payments required by the conditions have been made, and the proposed modification relates only to how the money can be applied to the individual projects.

Approximately $1,929,917 was deposited by the quarry applicant as its fair share contribution pursuant to the conditions of approval. The Department of Transportation and Public Works (DTPW) has held the funds in separate dedicated accounts for each improvement since the funds were deposited. There is insufficient funding in each account to complete any of the seven projects at this writing. At the request of your Board, staff have prepared a proposed amended condition No. 15 to allow some or all of the funds from the separate accounts to be pooled and used toward construction of one or more of the identified projects and/or to complete a connection between the West County Trail and Highway 116 through land managed by Regional Parks to improve bicycle and pedestrian circulation in downtown Forestville.

Discussion:

BACKGROUND

The owners of the Canyon Rock Quarry submitted Application PLP 07-0046 seeking various entitlements to allow expansion of the quarry. After lengthy study and preparation of an environmental impact report (EIR) under the California Environmental Quality Act (CEQA), the project was approved by your Board on January 9, 2007. A copy copy of Resolution No. 08-0089 is attached as Exhibit A.

Because the EIR found traffic from the quarry expansion would have direct impacts on various roadways and on bicycle and pedestrian circulation in the Forestville area, mitigation measures and conditions of approval required the project to pay a percentage share (fair share) of the costs of seven identified road and circulation improvements in the local Forestville area. These payments were required in addition to the one-time countywide traffic impact fee and annual payment of the Aggregate Road Mitigation fee for wear and tear on haul roads from mining trucks. Each fair share payment was calculated based on estimated costs of the individual road or circulation improvement in 2003-2004 dollars and the percentage that additional quarry traffic was expected to contribute to the need for the improvement, as set out in the conditions of approval. Three of the conditions allowed transfer to other projects on the list, but four conditions did not so provide. The quarry owner's obligation regarding these conditions was met by the one-time deposit of funds. For a list of the funds on deposit see Attachment C.

Even with the fair share mitigation amounts, it was not certain in 2007 that some or any of the road and circulation improvements could be built because of uncertainties about future remaining funding and the need for Caltrans approval of the improvements that affected State highways. Therefore, when your Board approved the expansion it also approved a statement of overriding considerations for the project pursuant to the California Environmental Quality Act (CEQA). See Exhibit B to Attachment B, Resolution 08-0089. Your Board found that even if the identified local traffic impacts were not entirely mitigated, specified benefits of the expansion project outweighed any unavoidable adverse impacts. With redirection of some of the fair share fee money, not all of the seven identified local projects will be completed. Nevertheless, at the time your Board approved the quarry expansion, the statement of overriding considerations recognized the possibility that none of the improvements might ever be constructed. The statement of overriding considerations adopted in 2007 remains in effect, and the redirection of the funds does not create any additional adverse impacts not identified in Resolution 08-0089.

The existing conditions of approval are set forth in Exhibit C to Resolution 08-0089. The proposed amended conditions of approval would allow funds designated for separate identified local road and circulation improvements to be transferred to other projects within the original list of improvements and/or to be used to complete a connection between the West County Trail and downtown Forestville, improving bicycle and pedestrian circulation in the local area. Any use of the deposited funds for a bicycle/pedestrian trail connection is contingent on completion, public review and prior approval of a full CEQA study for that prospective project, now being undertaken by Regional Parks.

Condition of Approval No. 15 currently provides:

> 15. Prior to the expansion of clearing or mining operations onto adjacent parcels or within 36 months aftr the California Court of Appeals issues a decision or order in Appellate case no. A119543 affirming the judgment in the action entitled *Forestville Citizens for Sensible Growth v. County of Sonoma et al.,* Sonoma Superior Court, case no. SCV 238992, whichever occurs first, the operator shall pay a fair share of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 16-22). The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

As amended by the proposed resolution, Condition of Approval No. 15 would read in full, with proposed changes underlined:

> 15. Prior to the expansion of clearing or mining operations onto adjacent parcels or within 36 months after the California Court of Appeals issues a decision or order in Appellate case no. A119543 affirming the judgment in the action entitled *Forestville Citizens for Sensible Growth v. County of Sonoma et al.,* Sonoma Superior Court, case no. SCV 238992, whichever occurs first, the operator shall pay a fair share of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 16-22). Notwithstanding any contrary language in Conditions No. 16, 17, 18, 19, 20, 21, and/or 22, the fair share funds deposited for each improvement identified in any Condition No. 16, 17, 18, 19, 20, 21, and/or 22, in the joint discretion of the directors of the Department of Transportation and Public Works and PRMD, may be aggregated and used for planning and construction of:
>
>> (i) Any one or more of the road improvement and/or traffic circulation projects identified in Conditions No. 16, 17, 18, 19, 20, 21, and/or 22; and/or
>>
>> (ii) Completion of other improvements to facilitate improved bicycle and pedestrian circulation in the Forestville area, including but not limited to a bicycle/pedestrian connection between the West County Trail and downtown Forestville.
>>
>> (iii) No fair share funds shall be expended for planning or construction of a bicycle/pedestrian connection between Highway 116 in downtown Forestville and the existing terminus of the paved West County Trail until and unless an adequate study pursuant to CEQA of potential environmental impacts for the connector trail project has been completed, subjected to public review and comment and approved by the county. Absent an adequate and approved CEQA analysis for said project, all funds referenced herein shall be spent only on projects in the listed improvements in Conditions No. No. 16, 17, 18, 19, 20, 21, and/or 22 of Resolution 08-0089.

The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

The trail connection, improvements to the intersection of Mirabel Road and Highway 116 and/or construction of Mirabel Road shoulders are tentatively identified as the most likely projects to use the fair share funds, but the final decision will be made upon analysis of updated costs of construction and feasibility, subject to the approval of the Directors of Transportation and Public Works and PRMD. The Mirabel Road/116 intersection and improvement of Mirabel Road shoulders are two of the projects identified in 2008.

The need to improve bicycle and pedestrian circulation in the local area referenced installing sidewalks/pathways where needed along both sides of Highwy 116 between Covey Road and Mirabel Road, or five-foot wide bicycle lanes in the same area, as determined appropriate by PRMD. The condition relating to these improvements allowed transfer of the funds to other road improvements listed in the original conditions. Staff has determined that construction of the connection to the West County Trail would serve a similar purpose of improving bicycle and pedestrian ciculation in the downtown Forestville area. The estimated cost of constructing the trail connection at this time is approximately $750,000. Transportation and Public Works would work with Regional Parks to incorporate the mitigation funds into future Capital Improvement Program.

Prior Board Actions:

Adoption of Resolution 08-0089, January 29, 2008.
Direction to pursue redistribution of the fair share funds on deposit in order to more fully fund one or more projects in the Forestville area related to local impacts from expanded quarry traffic, June 12, 2018.

Strategic Plan Alignment Goal 3: Invest in the Future

Contribute to infrastructure improvements that promote mobility, safety, connectivity and convenience.

Fiscal Summary

Related Items “On File” with the Clerk of the Board:

County of Sonoma
State of California

Item Number: ____________

Date: December 11, 2018 Resolution Number: ____________

☐ 4/5 Vote Required

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, Amending Conditions Of Approval No. 15, 16, 17, 18, 19, 20, 21, And 22 Of Resolution No. 08-0089 Regarding The Canyon Rock Quarry, 7525 Highway 116 North, Forestville, To Allow Certain Fair Share Funds Paid By The Permittee To Be Redistributed Among The Traffic Improvement Projects Listed In Said Conditions of Approval And/Or To Construct Bicycle/Pedestrian Improvements Benefitting The Downtown Forestville Area.. PRMD File No. PLP-97-0046.

Whereas, on or about January 29, 2008, the Board of Supervisors (“Board”) of the County of Sonoma (“County”) adopted Resolution No. 08-0089, approving a 20-year surface mining use permit for a 35-acre± expansion of the Canyon Rock Quarry, together with an associated zone change, reclamation plan, and annual production limits pursuant to Application PLP-97-0046 (“the Project”). A true and correct copy of Resolution 08-0089 is attached to this resolution as Exhibit A and incorporated herein; and

Whereas, in 2006, prior to approving the Project, the Board certified a final environmental impact report for the Project (the “EIR”) in compliance with all requirements of the California Environmental Quality Act (“CEQA”); and

Whereas, in January 2008, staff presented an Addendum to the Final EIR (“Addendum”) relating to the Project and the use permit as part of Resolution No. 08-0089; and

Whereas, Conditions of Approval No. 15, 16, 17, 18, 19, 20, 21, and 22 of Resolution No. 08-0089 describe certain road and traffic circulation improvements in the local Forestville area identified in the EIR as mitigation for certain adverse impacts of the Project, and further describe the nexus between the Project and the need for said improvements and the fair share percentage or proportion of the cost of said improvements attributable to the Project; and

Whereas, in Resolution 08-0089, the Board found that the road improvement projects identified in Conditions of Approval No. 15, 16, 17, 18, 19, 20, 21, and/or 22 might not be constructed if additional funding was not made available and/or Caltrans failed to approve road improvements on Highway 116 and that if the projects were not constructed, the traffic impacts they were designed to mitigate would remain significant impacts that cannot be fully mitigated; and

Whereas, Exhibit B to Resolution 08-0089 consists of a statement of overriding considerations pursuant to CEQA in which the Board determined that specific economic, legal, social, technological and other benefits of the Project outweigh all unavoidable, adverse impacts of the Project, and that the Project should be approved; and

Whereas, Conditions of Approval No., 18, 20, and 22 expressly allow the funds deposited for a specific improvement to be transferred to other improvements listed in said conditions, but Conditions of Approval No. 15, 16, 17, 19 and 21 do not so provide; and

Whereas, the fair share funds required by Conditions of Approval No. 15, 16, 17, 18, 19, 20, 21, and/or 22 have been paid by the permittee; and

Whereas, the funds on deposit, combined with funds from all other projects required to date to pay a fair share of the improvements identified in Conditions of Approval No. 16, 17, 18, 19, 20, 21, and/or 22, are not sufficient to construct all or most of the projects identified in Conditions of Approval No. 16, 17, 18, 19, 20, 21, and/or 22; and

Whereas, the County Department of Transportation and Public Works (DTPW) together with County Regional Parks has identified a project to construct a connection for bicycle and pedestrian traffic between the West County Trail in the Forestville area and downtown Forestville which would be capable of construction with the fair share funds and which would serve a similar purpose to that of Condition of Approval No. 20, namely improving pedestrian and bicycle circulation in downtown Forestville; and

Whereas, Sonoma County Regional Parks is presently beginning analysis pursuant to CEQA of potential environmental impacts of the bicycle and pedestrian connector trail between Highway 116 in downtown Forestville and the current nearby terminus of the paved West County Trail, which will be completed and circulated for public review prior to any programming and/or expenditure of any deposited funds for the connector trail bicycle and pedestrian circulation improvement project; and

Whereas, allowing redistribution of all of the funds required by Conditions of Approval No. 15, 16, 17, 18, 19, 20, 21, and/or 22 to complete the trail connection and one or more of the listed projects in Conditions of Approval No. 16, 17, 18, 19, 20, 21, and/or 22 will better serve the intentions of the Board in providing traffic improvements and benefits to the local Forestville area.

Now, Therefore, Be It Resolved that Condition Of Approval No. 15 of Resolution No. 08-0089 is hereby amended to read in full as follows:

15. Prior to the expansion or clearing, the operator shall pay a fair share fee of the cost of improvements for direct impacts to off-site roads and intersections listed below (Condition Nos. 16-22). Nothing in this Condition modifies or deletes any requirement stated in Condition No. 26. Notwithstanding any contrary language in Conditions No. 16, 17, 18, 19, 20, 21, and/or 22, the fair share funds deposited for each improvement identified in any Condition No. 16, 17, 18, 19, 20, 21, and/or 22, in the joint discretion of the directors of the Department of Transportation and Public Works and PRMD, may be aggregated and used for planning and construction of:

(i) Any one or more of the road improvement and/or traffic circulation projects identified in Conditions No. 16, 17, 18, 19, 20, 21, and/or 22; and/or

(ii) Completion of other improvements to facilitate improved downtown Forestville bicycle and pedestrian circulation, including but not limited to a bicycle/pedestrian connection between the West County Trail and downtown Forestville.

(iii) No fair share funds shall be expended for planning or construction of a bicycle/pedestrian connection between Highway 116 in downtown Forestville and the existing terminus of the paved West County Trail until and unless an adequate study pursuant to CEQA of potential environmental impacts for the connector trail project has been completed, subjected to public review and comment and approved by the county. Absent an adequate and approved CEQA analysis for said project, all funds referenced herein shall be spent only on projects in the listed improvements in Conditions No. 16, 17, 18, 19, 20, 21, and/or 22 of Resolution 08-0089.

The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full. *Mitigation Measures 3.6-A.1-3.*

Mitigation Monitoring. PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

Be It Further Resolved that any and all provisions of Conditions No. 16, 17, 18, 19, 20, 21, and/or 22 as originally adopted which are in conflict with Condition No. 15 as amended herein shall be of no further force or effect.

RESOLUTION NO. 08-0089

DATED: January 29, 2008

RESOLUTION OF THE BOARD OF SUPERVISORS OF THE COUNTY OF SONOMA, STATE OF CALIFORNIA, MAKING CERTAIN FINDINGS, ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS, AND APPROVING AN EXPANSION OF THE CANYON ROCK QUARRY CONSISTING OF A 20-YEAR SURFACE MINING USE PERMIT TO EXPAND QUARRY OPERATIONS ON 35± ACRES TO ALLOW THE QUARRY TO ANNUALLY EXPORT A MAXIMUM OF 562,500 CUBIC YARDS OF AGGREGATE MATERIAL, OF WHICH 500,000 CUBIC YARDS COULD CONSIST OF MATERIAL MINED ON-SITE, AND ANNUALLY IMPORT UP TO 62,500 CUBIC YARDS, INCLUDING RECYCLED MATERIAL (APNS 083-210-006, 083-210-015, 083-210-019, 083-210-020), ON PROPERTY LOCATED AT 7525 HIGHWAY 116 NORTH, FORESTVILLE; ZONED RRD (RESOURCES AND RURAL DEVELOPMENT), B6-160 ACRE DENSITY, SR (SCENIC RESOURCES), BR (BIOTIC RESOURCE), F2 (FLOODPLAIN), MR (MINERAL RESOURCE); SUPERVISORIAL DISTRICT NO. 5 (PLP97-0046)

RESOLVED, that the Board of Supervisors ("the Board") of the County of Sonoma ("the County") hereby finds as follows:

1. Procedural History

1.1 Wendel Trappe ("the Project Applicant") filed Application PLP 97-0046 with the County's Permit and Resource Management Department ("PRMD") to obtain the entitlements necessary to expand the mining area of the Canyon Rock Quarry (hereinafter "the Proposed Project").

1.2 On June 20, 2006, the Board adopted Ordinance No. 5667, which amended the zoning maps of the County by reclassifying 113.77± acres of real property at the Project site to add the MR (Mineral Resource) combining district to the current zoning ("the MR Zone Change").

b) If hazardous waste is generated or stored, then the operator shall comply with hazardous waste generator laws and AB2185 requirements and obtain a permit or approval from the Certified Unified Program Agency (Sonoma County Department of Emergency Services performs this function in Sonoma County). The operator shall submit a copy of a current permit to the PRMD Health Specialist to verify compliance.

c) All hazardous waste materials shall be stored, handled and managed in accordance with the approved site plan and hazardous materials plan so as to reduce the potential for any spillage.

d) No soil or other material containing hazardous or toxic waste shall be imported to the quarry (Note: this condition is not intended to restrict the recycling of concrete or asphalt on site). *Impact IV.D.,1 Impact V.C.1*

Mitigation Monitoring: The Department of Emergency Services will provide verification to PRMD that the requirements have been met.

TRANSPORTATION AND PUBLIC WORKS:

"The conditions below have been satisfied" BY ______________________________ DATE ________

U 13. The operator shall obtain a State of California Encroachment Permit before making any improvements or constructing any driveway (or intersection) to State Highway 116 and shall construct the improvements (driveway or intersection) in accordance with Caltrans Standards.

Condition Compliance: The operator shall submit proof to PRMD that encroachment permits have been obtained prior to expansion of clearing or mining activities onto adjacent parcels.

U 14. A Traffic Mitigation Fee shall be paid to the County of Sonoma, as required by Section 26, Article 98 of the Sonoma County Code, before expansion of clearing or mining activities or within 36 months after the California Court of Appeals issues a decision or order in Appellate case no. A119543 affirming the judgment in the action entitled *Forestville Citizens for Sensible Growth v. County of Sonoma et al.*, Sonoma County Superior Court, case no. SCV 238992, whichever occurs first, based on Table IV.A.6 in the Final EIR of 325 ADT. This fee is for indirect cumulative traffic impacts throughout the County and shall be in addition to fair share contributions required for direct project impacts to roads in the immediate vicinity. This permit shall not be vested until the traffic mitigation fees are paid in full.

U 15. Prior to the expansion of clearing or mining activities onto adjacent parcels or within 36 months after the California Court of Appeals issues a decision or order in Appellate case no. A119543 affirming the judgment in the action entitled *Forestville Citizens for Sensible Growth v. County of Sonoma et al.*, Sonoma County Superior Court, case no. SCV 238992, whichever occurs first, the operator shall pay a fair share of the cost of improvements for direct impacts to off-site roads and intersections listed below (Conditions No. 16-22). The permit shall not be vested until the traffic fair share contributions are paid in full. The fair-share percentage for the project was calculated based on the projected change in traffic conditions and the method defined by Caltrans' "Guide for the Preparation of Traffic Impact Studies" for determining equitable responsibility for costs. Cost of improvements are estimated in 2003/2004 dollars and shall be adjusted annually based on the Engineering News Record's Building Cost Index for the San Francisco Bay Area until the project's fair-share has been paid in full.

U 16. Highway 116 / Mirabel Road Intersection:

The quarry operator shall pay a fair share of the cost of the improvement/signalization of the Highway 116/Mirabel Road intersection. The improvements would include the correction of an existing sight distance problem on Highway 116 west of the intersection, construction of a left turn lane on Highway 116 for traffic turning northbound onto Mirabel Road, and a right turn lane onto the Forestville Bypass/Mirabel Road Extension for southbound traffic, installation of traffic signals, and other associated improvements to the intersection. The cost of the improvements is estimated at $2.8 million in 2003/2004 dollars. The project's fair-share is 14 percent. *Impact IV.A.1b*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 17. Mirabel Road Shoulders:

The quarry operator shall pay a fair share of the cost of widening Mirabel Road to provide paved shoulders. The cost of the improvements is estimated at $2.15 million in 2003/2004 dollars. The project's fair-share is 15.6 percent. *Impact IV.A.2, Impact IV.A.3d*

Mitigation Monitoring: PRMD Project Review staff shall verify that payment has been made prior to authorizing expansion of clearing or mining activities.

U 18. Highway 116/Covey-Forestville Road Intersection:

The quarry operator shall pay a fair share of the cost of installing traffic signals (with pedestrian signals) at the intersection of Highway 116/Covey-Forestville Roads and adding left turn lanes on both Highway 116 approaches and a right turn lane on the westbound Highway 116 approach to the intersection. The cost of the improvements is estimated at $0.7 million in 2003/2004 dollars. The project's fair-share is 4.7 percent. The cost of these improvements may be transferred to other road improvement projects (i.e., the intersection at Mirabel Extension south), in the vicinity as determined appropriate by DTPW. *Impact IV.A.1a*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 19. River Road/Mirabel Road Intersection:

The quarry operator shall pay a fair share of the cost of adding left turn lanes on both River Road approaches and a left turn lane on the northbound Mirabel Road approach to the River Road/Mirabel Road intersection. The cost of the improvements is estimated at $1.9 million in 2003/2004 dollars. The project's fair-share is 9.3 percent. *Impact IV.A.1*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 20. Downtown Forestville Pedestrian and Bicycle Circulation:

The quarry operator shall pay a fair share of the cost of providing sidewalks/pathways, where needed, along both sides of Highway 116 between Covey Road and Mirabel Road, to allow school children to walk on the sidewalks/pathways. Alternatively, five-foot wide bike lanes along each side of Highway 116 between Covey Road and Mirabel Road could be substituted as determined appropriate by PRMD. If bike lanes were provided along Highway 116 in this area, Highway 116 would need to be widened by six to eight feet on the north side of the highway for about 175 feet west of Covey Road. Some on-street parking spaces would have to be eliminated near First and Second Streets. The costs of these improvements may be transferred to other road improvement projects (i.e., the intersection at Mirabel Extension south), in the vicinity as determined appropriate by DTPW. The cost of the improvements is estimated at $150,000 in 2003/2004 dollars. The project's fair-share is 5.0 percent. *Impact IV.A.3*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 21. Construct Forestville Bypass/Mirabel Road Extension:

The quarry operator shall pay a fair share of the cost of constructing a bypass road to the south of the downtown area of Forestville. The cost of the improvements is estimated at $6.5 million in 2003/2004 dollars. The project's fair-share is 6.1 percent. *Impact IV.A.3*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 22. Enhance Visibility of Crosswalks:

The quarry operator shall pay a fair share of the cost of enhancing the visibility of existing crosswalks on Highway 116 at Covey Road and First Street. This could include additional striping, signage and/or lighting as determined appropriate by PRMD. The cost of the improvements is estimated at $150,000 in 2003/2004 dollars. The project's fair-share is 5.0 percent. The cost of these improvements may be transferred to other road improvement projects in the vicinity as determined appropriate by PRMD. *Impact IV.A.3c*

Mitigation Monitoring: PRMD Project Review shall verify payment has been made prior to authorizing expansion of clearing or mining activities.

U 23. The quarry operator shall participate in the Aggregate Road Mitigation Fund. The operator will pay annually a Road Maintenance Fee per ARM Plan standards (Section 7.3, No. 11 and Section 7.7) to mitigate wear and tear to County maintained roads caused by the operation's truck traffic from the expanded mining area on the primary haul route(s). The fee shall be assessed based on the estimated cost of maintaining County roads caused by the use of County roads by aggregate trucks.

The County shall assess the Road Maintenance Fee each year at the end of mining season for the life of the permit. The operator shall pay the maintenance fee within six months of receiving notice of the fee amount. If the developer does not make payment within six months, the account will be sent to Collections and the operator may be issued a Notice of Violation of the Conditions of Approval of this permit. The permit may be subject to revocation or modification for any permit violation.

Mitigation Monitoring: The Department of Transportation and Public Works will be responsible for: 1) adjusting and publishing the road maintenance fee annually on January 1st of each year. PRMD will: 1) determine the operator's annual road mitigation fee; 2) formally bill and collect from the operator; and 3) initiate collection proceedings and may issue a Notice of Violation if the operator defaults on the payment.

FLOOD AND DRAINAGE:

"The conditions below have been satisfied" BY ______________________________ DATE ________

U/R 24. Prior to clearing or mining in the expansion area, drainage improvements shall be designed by a civil engineer and constructed in accordance with PRMD standards and the Water Agency's Flood Control Design Criteria. Plans shall be submitted for review and approval by the Permit

(This Section for use by Clerk of the Board Only.)

To: Board of Supervisors

Board Agenda Date: December 11, 2018

Vote Requirement: Majority

Department or Agency Name(s): Permit Sonoma (PRMD)

Staff Name and Phone Number:
Traci Tesconi 565-1948

Supervisorial District(s):
Fourth and Fifth

Title: Appeal of a Use Permit approval for a new winery, wine cave, tasting rooms, marketing accommodations, and events, and industry wide events (Ramey Winery); located at 7097 Westside Road, Healdsburg. PRMD File No. UPE14-0008.

Recommended Actions:

Conduct a public hearing and at the conclusion of the hearing, adopt a Resolution denying the appeal and upholding the Board of Zoning Adjustment’s decision to approve the Use Permit for a 60,000 case winery, a new wine cave, conversion of an existing historic hop kiln building to a public tasting room and conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation unit on the upper floor, 20 agricultural promotional events per year, and two industry wide event days per year on 75 acres.

Appellants: Warren Watkins representing Healdsburg Citizens for Sustainable Solutions, Maacama Watershed Alliance, Forest Unlimited, Sonoma Coast Rural Preservation, and Todd Everett.

Project Applicants: David and Carla Ramey on behalf of Ramey Vineyards LLC.

Executive Summary:

The project site is located at 7097 Westside Road, Healdsburg; and zoned Land Intensive Agriculture 60 acres per dwelling unit (east of Westside Road) and Land Intensive Agriculture 100 acres per dwelling unit (west of Westside Road). The 75-acre parcel is one legal parcel of record bisected by Westside Road, but contains three Assessor Parcel Numbers (110-240-031, -032, and -040). The property is located in both Supervisorial District No. 4 and 5.

The project site is 75 acres containing 42 acres of commercial vineyard, single family residences, a historic hop kiln and bale barn, a reservoir, and agricultural accessory buildings. The parcel is served by private wells and on-site septic system. On the west side, a new winery is proposed with a maximum annual case production of 60,000 cases and a new wine cave. On the east side, an existing hop kiln will be converted to a public tasting room and the existing hop bale barn will be converted to a reserve tasting room with a two-guest room marketing accommodations on the upper floor. The project includes 20 annual agricultural promotional events with a range of guests and participation in two industry wide event days.

The focal point of the project is the rehabilitation and reuse of the two historic hop buildings to tasting rooms. A Historic Resource Study (dated July 2014) and a Supplemental Historic Resource Study (dated March 2015) were prepared for the project by Knapp Architects (refer to Attachment L) . The report evaluated the historical and architectural significance of two agricultural buildings, the Hop Kiln and Baling Barn, and the wood Trestle that connected them. The report found the site eligible for listing in the California Register, and therefore considered them historical resources for the purposes of CEQA. The Sonoma County Landmarks Commission and the Design Review Committee reviewed the project proposal and plans in a joint meeting and made recommendations to site layout, architecture, landscape, and signage. The Sonoma County Landmarks Commission voted unanimously to recommend the HD (Historical District) Combining Zone be added to APN 110-240-031 in its entirety (east side of Westside Road). Refer to Condition No. 77 of the Conditions of Approval (Exhibit A attached to the Resolution).

The project site can accommodate all on-site parking needs and wastewater disposal. Site improvements are required along the road frontage on the applicants' property to improve sight distance on the west side of the road. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this portion of the project site. Food and wine pairing will be limited, consistent with adopted food-service conditions for approved wineries and tasting rooms.

On September 21, 2017, the Board of Zoning Adjustments (BZA) adopted the Mitigated Negative Declaration in accordance with the CEQA guidelines (refer to Attachment O) and approved the Use Permit with modifications (refer to Attachment G - BZA Resolution No. 17-010) filed by David and Carla Ramey, on behalf of Ramey Vineyards LLC. The BZA approved the new winery (two story, approx. 32,210 square feet) with a maximum annual production capacity of 60,000 cases, a new wine cave (approx. 20,720 square feet), a conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and a conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation unit on the upper floor. The BZA also approved 20 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests) and participation in industry wide events totaling two event days per year with a maximum of 300 guests on the 75 acres.

However, the BZA eliminated the two largest agricultural promotional events with 300 guests, recommended solar panels be installed on the winery building roof (Condition No. 84), required the winery building be completed and granted final occupancy within two years of commencement of the tasting room operations (Condition No. 82), and prohibited the applicants from granting any future well easements or agreements to third parties for use of the on-site wells (Condition. No 30.b.).

The project does not propose weddings, receptions, or concerts. The parcel is under a prime Land Conservation Contract. No vines will be removed to accommodate the winery facility or related site infrastructure. There will be no significant environmental impacts because mitigation measures have been incorporated into the project under the draft Conditions of Approval in Attachment A. As requested by the applicant and approved by the Board of Zoning Adjustments, the Use Permit allows four years to initiate the approval with a one year extension of time under the authority of Section 26-92-130 of the Zoning Code.

On October 2, 2017, a timely appeal was filed by the following persons: Warren Watkins representing Healdsburg Citizens for Sustainable Solutions, Maacama Watershed Alliance, Forest Unlimited, Sonoma Coast Rural Preservation, and Todd Everett (refer to Attachment B).

The public hearing for this item was set to be heard by the Board of Supervisors on August 14, 2018. However, it was decided by the Board to continue the public hearing for this item to December 11, 2018, in order to consider the additional information provided to the Board by the appellants on August 9, 2018 and August 11, 2018. Once again, for the continued public hearing, a large public hearing sign was installed at the project site, notices were mailed out to surrounding property owners within 300-feet of the project and to any other interested persons, and the hearing notice was published in the local newspaper.

Discussion:

Background:

Since the 1800's the project site has been used for agriculture, including orchards, hops and currently wine grapes. In 1988, the project site was known as Westside Farms, a vegetable farm and pumpkin patch with hay rides. In 1990, 32 acres of Chardonnay grapes and 10 acres of Pinot Noir grapes were planted. The farm continues to keep its namesake. The vineyard and winery operations are operated by two generations of the Ramey family. Currently, Ramey Winery is operated off site in an industrial building in Healdsburg.

The project site is one legal parcel consisting of three Assessor Parcel Numbers. A Lot Line Adjustment (LLA04-0088) was approved and recorded in 2005 describing one legal parcel of record, merging all underlying parcels. The current AP page depicts tie line connecting the land on both sides of the road. The project site cannot be further subdivided or sold off separately.

On January 21, 2014, the Use Permit application was filed with PRMD with traffic, greenhouse gas, and noise studies. After County review, further design review information, Williamson Act information, and additional environmental studies in the areas of: biology, historic and cultural resources, hydrology, and water balance analysis; were required for the project.

On December 2, 2014, the proposed project went before a joint review with the Design Review Committee and the Sonoma County Landmarks Commission. Overall, the DRC and Landmarks Commission liked the project, but had minor changes to the project's design and required a joint, final review of the project before issuance of any related grading or building permits. A condition of the project requires the HD (Historical District) zoning overlay zone be placed on the east side of the project site where the existing hop kiln buildings are located.

On September 21, 2017, the Board of Zoning Adjustments held a properly noticed public hearing to consider the Mitigated Negative Declaration and the Project described in Resolution No. 17-010 (refer to Attachment G). On October 2, 2017, the approval was appealed (refer to Attachment A).

After the Board hearing date was continued, staff prepared a Revised Mitigated Negative Declaration that was recirculated through the State Clearinghouse (Refer to Attachment S). The purpose for the revision was to gather reports and provide more detailed information on the wine cave construction and add mitigation measures related to air quality and water quality related to the wine cave construction.

Project Description: A Use Permit for:
West side of project site:

- A new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases. The winery building would be built into the hillside meadow in front of the wine caves, using a cut-and-fill, low-profile design. Grapes will be locally sourced from on-site, Sonoma County, and bordering counties. Case-good will stored off site at a local warehouse. All crushing, processing, aging, bottling, and storing of wine will be indoors. Features include processing area, bottling area, mechanical room, wine storage and tank areas, administrative offices, employee kitchen/breakroom, employee shower and locker room, a wine library, a commercial kitchen, employee and public restrooms, and two technical tasting rooms. Technical tasting rooms are used for business tastings' with distributors, local restaurant and chefs.
- A wine cave (approx. 20,720 square feet) for "wine vault storage", meaning long-term aging of wine in barrels. The wine cave will be a Class II wine cave not open to the general public. The proposed wine cave will be 36 feet wide and 16 feet high. The wine cave will be constructed by cut-and-cover excavation. The wine cave structure will include cast-in-place foundations, stem walls and concrete slabs, and pre-cast tunnel arch segments. Soil material from the cave area will be used to fill over the top of the cut and cover cave. All of the soil generated from this excavation, as well as from other grading for the winery, would be placed in temporary stockpiles only on the west side of the project site. The applicants' engineer, Adobe & Associates, estimate that approximately 15,843 cubic yards would be excavated from the cave area. Approximately 9,575 cubic yards would be placed over the cave once the pre-cast tunnel arches are set. This leaves approximately 6,268 cubic yards of spoils temporarily stockpiled on the west side of the project site to then be used for the winery building, driveway, and landscaping areas.

East side of project site:

- Conversion of the historic hop kiln building to public tasting building with two rooms with wine tasting bars, a commercial kitchen, public restrooms, case-good storage, general storage, and office. Includes an elevator.
- Conversion of the historic hop baling barn to a reserve tasting room with wine bar, commercial kitchen, and VIP lounge area on middle floor. The upper floor contains marketing accommodations consisting of two- guest rooms each with a full bathroom, totaling 759 square feet in size, with a lounge area 513 square feet in size. The lower floor is used for general storage and a mechanical room. The reserve tasting room is for customers who prefer to do wine tasting and food and wine pairing in a private setting with more one on one education of wine and the wine-making processes. The reserve tasting room will also be used for agricultural promotional

events, industry wide events, and tastings with food and wine pairings for wine industry guests staying in the marketing accommodations.

- 20 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests). The BZA eliminated from the project the two agricultural promotional events with 300 guests. No weddings, receptions, or concerts are proposed or approved.
- Participation in industry wide events totaling two event days per year with a maximum of 300 guests.
- On the west side at the winery, event size is limited to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle. Industry-wide events will not be held on this side of the project site. At the winery, agricultural promotional events will be business and marketing related tastings and food and wine pairings for distributors, restaurant owners, and chefs.
- Food and wine pairing is proposed in the public and reserve tasting rooms on the east side, consistent with approval of similar requests and during agricultural promotional events.
- 15 fulltime employees, 3 part time employees, and 6 seasonal employees for a total of 24 employees.
- New parking areas: East side includes: 20 standard spaces, 4 handicap accessible spaces, and 58 overflow parking spaces (unmarked gravel area). West side includes: 25 standard spaces, 2 handicap accessible spaces, and 21 overflow parking spaces (unmarked). Bicycle spaces are provided at a ratio of 1 bicycle space for every 5 vehicle spaces.
- New winery wastewater disposal system with pre-treatment system and disposal via on-site vineyard irrigation system. The process waste will be pre-screened at collection points in the facility and directed to an aerobic treatment unit (manufacturer to be determined). The treatment unit will reduce waste strength and suspended solids to levels approved by the State Water Quality Control Board for surface irrigation. Treated wastewater will be pumped to a point of connection to the vineyard irrigation system. The process system will be subject to a Waste Discharge Permit issued by the State Water Quality Control Board, North Coast Region.
- New domestic septic systems on east and west side of project site to serve all employee and guest restrooms. The septic systems will be subject to a Septic Permit and Plans issued by the Well and Septic Section of PRMD.
- Two existing driveways on east and west side of the project site will be used with improvements required by the Department of Transportation and Public Works. On the west driveway, sight distance improvements are proposed by removing trees and vegetation, lowering and terracing the berm located on the project site just north of the existing driveway on Westside Road. Driveway and sight distance improvements will be subject to plans approved by the Department of Transportation and Public Works and an Encroachment Permit issued by the Engineering Section of PRMD.
- Existing on-site wells to be used for all winery and domestic uses.
- None of the existing vineyard will be removed to accommodate the proposed use or related site infrastructure.
- The 42 acres of vineyard consists of Chardonnay (32 acres) and Pinot Noir (10 acres) grapes. The on-site vineyard produces 250 tons of grapes. The 32 acres of Chardonnay grapes will be processed on site. The 10 acres of Pinot Noir grapes remain under a long term lease by another local winery. The Winery Trip Generation Form prepared by W-Trans, states approximately 720

tons of grapes would be imported to the project site from local areas in order to reach the maximum annual production capacity of 60,000 cases. This calculates to approximately 62 cases/ton, consistent with industry standards which range between 58 to 65 cases/ton depending upon the grape variety and processing operations.

Hours of operation:

- Winery operations: Monday through Friday, 7:00 a.m. to 6:00 p.m. Non-Harvest Season.
  Monday through Friday, 6:00 a.m. to 10:00 p.m. Harvest Season
- Tasting Room hours: 10:00 a.m. to 5:00 p.m., 7 days a week
- Industry- Wide events: 11:00 a.m. to 5:00 p.m. , two event days per year
- Agricultural Promotional Events: 11 a.m. to 3 p.m., 9 a.m. to 9 p.m., or 6 p.m. to 9 p.m. (refer to Table below for specific event hours)

The following Table provides the proposed events and locations on the project site:

Ramey Wine Cellars Proposed Ag Promotional Events - UPE14-0008

Event Type	**No. of Events per Year**	**Hours**	**Maximum number of guests**	**Event Location on the property**
Industry-wide Event	2 event days per year	10 am - 5 pm **(*)**	300	Tasting rooms, or outdoor walnut grove (East side)
~~New wine release tastings – by invitation only~~ **BZA's eliminated from project approval**	~~2~~	~~9 am - 9 pm~~	~~300~~	~~Tasting rooms, or outdoor walnut grove (East side)~~
Wine tastings	5	9 am - 9 pm	120	Tasting rooms, or outdoor walnut grove (East side)
Wine tastings	5	11 am - 3 pm; or 6 pm - 9 pm	60	Tasting rooms, or outdoor walnut grove (East side)
Winemaker lunches or dinners with on-site food preparation, and food and wine pairings	10	11 am - 3 pm; or 6 pm - 9 pm	30	Baling barn, outdoor walnut grove, or winery (East and West side)

(*) Industry wide events must occur during the public tasting room hours.

Site Characteristics:

The project site is located approximately 7.2 miles southwest from the City of Healdsburg. The project site is one legal parcel comprised of three Assessor's Parcel Numbers (110-240-031; 110-240-032; and 110-240-040) totaling 75 acres in area. The subject property is bisected by Westside Road, with approximately 6.5 acres situated to the west of Westside Road and 68.5 acres lying on the east side of Westside Road. The westerly 6.5 acres is currently developed with two single family residences, a barn, a pole barn two out buildings and a 3 ½ acre-foot reservoir. The easterly 68.5 acres is planted with approximately 42 acres of vineyard (32 acres Chardonnay and 10 acre Pinot Noir grapes) and contains an existing historic hop kiln structure (6,850 sq. ft.) and hop baling barn (5,290 sq. ft.). Under the Use Permit, these structures are to be converted to tasting rooms as part of the project proposal. There is a 1,250 sq. ft. residence to be removed located east of the hop kiln and baling barn. The eastern portion of the property gently slopes downward and eastward toward the Russian River to the east. The hop kiln and baling barn tasting rooms are located approximately 950 feet west of the Russian River. Additionally, on the eastern end of the property near the Russian River is a grove of walnut trees. This area is not proposed for development, but, will be used for outdoor agricultural promotional events. The property also contains oak woodland, grassland, and landscaped areas.

Surrounding Land Use and Zoning:

Westside Road runs approximately 12 miles from Hacienda Bridge in Forestville to Highway 101 in Healdsburg. Land use in the project vicinity is primarily vineyard, wineries, tasting rooms, small family farms, and single family residences. Lands surrounding the subject property are residential and agricultural with vineyards and wineries. To the east is the Russian River, which includes riparian habitat and oak woodland along with vineyards. On the other side of the Russian River is Riverfront Regional Park. The zoning designation in the project vicinity is LIA (Land Intensive Agriculture) due to its rich farming soils. There are several winery and tasting rooms located along Westside Road. The project referral was sent to the public interest groups of Westside Community Association (WSA) and Westside Association to Save Agriculture (WASA). The project site is located outside of the Dry Creek Valley Citizens Advisory Committee referral area.

Surrounding parcels are zoned:

North/Northwest:
Land Uses: Winery and tasting room (Arista), commercial vineyards, and single family residences.
Zoning: Land Intensive Agriculture 20 acre density, Z (Second Unit Exclusion)

South/Southwest:
Land Uses: Winery and tasting room (Williams-Seylem), commercial vineyards, and single family residences.
Zoning: Land Intensive Agriculture, 20 acre density, Z (Second Unit Exclusion)

East:
Land Uses: Russian River and Riverfront Regional Park
Zoning: PF (Public Facilities), F1, F2, MR, RC, VOH

Since 2014, on Westside Road there have been three winery projects filed besides this proposed project:

- PLP14-0031; 4603 Westside Rd, 10,000 case winery, public tasting room, and 12 promotional event days with a maximum of 180 people and 13 industry-wide event days, plus winemaker meals not proposed as events. No weddings are proposed. North of proposed project. Located approximately 2.5 miles from this project site. On July 6, 2017, the Use Permit was denied by the Board of Zoning Adjustments. The applicant filed an appeal to the Board of Supervisors, but the hearing has not been set pending revisions to the project.

- PLP15-0032; 4075 Westside Rd, public tasting room with on-site barrel ageing and storage for 65 to 85 barrels on 1.7 acres. No special events, including agricultural events, promotional events, industry-wide events and/or tours are proposed. North of proposed project. Located approximately 3 miles from this project site. On August 17, 2017; the request was denied by the Board of Zoning Adjustments. The applicants filed an appeal to the Board of Supervisors, but subsequently withdrew the project.

- UPE16-0102; 6677 Westside Rd, 492 case winery, public tasting, tours, appointment only food and wine tasting service, and annual agricultural promotional events (four w/ 100 guests, and 14 w/ 50 guests with no outdoor amplified music. Adjacent parcel to the north of proposed project. Located approximately .40 miles from the project site. *Incomplete- Status Pending.*

<u>Appellants' Original Contentions:</u>

1. The Project generates significant employee, public, and truck traffic in an area with inadequate sight lines.
2. The large scale project with tasting rooms on both sides of the road, situated within an approximately 1,000 feet radius of three existing tasting rooms is detrimental to the rural character of the area.
3. Disproportionate focus on hospitality and promotional uses is inconsistent with the Williamson Act contract and the intent of the General Plan to preserve agriculture and rural character.
4. The overwhelming concentration of existing wineries on Westside Road and other similar County roadways is too great of a safety and county-wide issue for the Board of Supervisors to ignore.

1. The appellant contends the project generates significant employee, public, and truck traffic in an area with inadequate sight lines.

   <u>BZA discussion</u>:
   The Board of Zoning Adjustments approved the Project after consideration of the recommendations and the conclusions in the traffic study information found acceptable by the Department of Transportation and Public Works. A focused Traffic Study was prepared for the project by a traffic engineer with Whitlock and Weinberger Transportation, Inc. (W-Trans) in 2014, revised February 23, 2015, and further revised for the Final Traffic Study dated March 10, 2016. On April 21, 2017 and September 12, 2017; W-Trans submitted two addendum letters on collision history and sight distance analysis, respectively. The W-Trans Addendum, dated April 21, 2017, explains that collision history for the study area indicates there were two collisions on the study segment in the most recent five-year period according to California Highway Patrol records. The collision rate is below

average and according to the traffic engineer of W-Trans, the segment appears to be operating within expected safety parameters.

The Sonoma County General Plan 2020 Circulation and Transit Element Figure CT-4 identifies Westside Road as a Rural Major Collector. Westside Road is a two-lane rural roadway with paved width of approximately 25 to 26 feet in the vicinity of the project site. It is marked with a double yellow centerline. There is not a posted speed limit in the project vicinity. A speed survey performed by W-Trans at the project site driveway indicates that in the project vicinity speeds are about 30 to 35 mph. The current volume on Westside Road is about 3,000 ADT near Felta Road, based on counts performed by the County in August 2012; but drops to about 1,050 vehicles per day near the project site based on counts obtained on July 16, 2013. A count performed by the County in late July 2015 indicates the volumes have dropped 12 to 15 percent since 2012, though the higher 2012 volumes were used by W-Trans for their analysis.

Relative to trip generation, it is anticipated that the proposed new winery including tasting rooms would have a total of 15 employees, each generating an average of three trips per day. W-Trans expects trips for daily operations to be distributed fairly evenly to and from the south and north. However, to provide a more conservation evaluation, W-Trans evaluated trip generation as if all trips would arrive and depart from Healdsburg to the north via Westside Road. An average of 52 visitors per day is expected for tasting, generating 42 trips daily assuming average vehicle occupancy of 2.5 visitors per vehicle, the proposed project is expected to generate an average of 92 vehicle trips per day. Truck traffic associated with winery operations is expected to consist of five trips per day, on average. A majority of the grapes grown on site (32 acres Chardonnay grapes) will be processed on site within the proposed winery, instead of being hauled off site for processing.

The project, as modified by the Board of Zoning Adjustments, includes 20 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests) and 2 industry wide event days with 300 guests. It is assumed that a maximum sized 300-person event would require a staff of 14. Using an occupancy of 2.5 guests per vehicle and solo occupancy for staff, maximum sized event would be expected to generate 268 trip ends at the driveway, including 134 inbound trips at the start of the event and 134 outbound trips at the driveway. W-Trans expects these trips would be spread out such that no more than 60 trips in either direction would occur during a single hour, with staff arriving before and departing after guests.

Sight distances along Westside Road from the existing driveway locations were evaluated by W-Trans based on sight distance criteria contained in "A Policy on Geometric Design on Highways and Streets," published by American Association of State Highways and Transportation Officials (AASHTO). The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet. Sight distance to the north of the tasting room driveway on the east side, after removal of the existing Westside Farms sign, is more than 400 feet. To the south of the tasting room driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic. The sight distance to the south of the winery driveway on the west side is 250 feet. To the north of the winery driveway, vegetation will be removed and the northwesterly hillside of the project site lowered and terraced to allow a sight distance of 250 feet, in accordance with a letter report, Grading and Cross Section Plan, and a Stopping Sight Distance plan prepared by the applicant's engineer, Adobe & Associates (refer to Attachments L & M). Adobe & Associates also prepared a video simulation showing vehicles traveling along the project site with the sight distance improvements completed and sight stopping distance scenario.

A further W-Trans addendum letter dated September 13, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway. Also, an existing mirror across Westside Road on the project site will remain and will extend sight lines.

Before the BZA hearing, on September 14, 2017, a neighbor, Marc Bommersbach, submitted a letter to Permit Sonoma prepared by Alta Planning, who reviewed the W-Trans Traffic Study. Alta Planning acknowledged W-Trans used a conservative approach in determining existing traffic volumes and existing road conditions, but, did have a concern with W-Trans' method for the reported 85th percentile speed that impacts the required sight distance (refer to Attachment J).

In response, a traffic engineer from the Department of Transportation and Public Work provided a memorandum reinstating their opinion that the speed study done by W-Trans complies with the requirements and is consistent with standard engineering practice for performing engineering speed studies. The response letter concludes DTPW is satisfied with and accepts the results of the W-Trans methodology for determining the 85th percentile speed and necessary stopping sight distance analysis for the proposed Project (refer to Attachment K).

2. The appellants contend the large scale project with tasting rooms on both sides of the road, situated within an approximately 1,000 feet radius of three existing tasting rooms is detrimental to the rural character of the area.

   BZA discussion:
   The Board of Zoning Adjustments found the project consistent with the General Plan, specifically the purpose of the Land Intensive Agricultural designation and the Agricultural Resource Element's Objectives, Goals, and Policies that encourages processing, marketing, and promoting agricultural products grown in Sonoma County. All the proposed uses under this Use Permit are subject to specific General Plan policies designed to protect and preserve agricultural lands, support a healthy and competitive local agricultural industry, balance agricultural processing, support and visitor serving uses with agricultural production and ensure that agricultural production and related processing, support and visitor service uses remain the primary use of land. The Board of Zoning Adjustment staff report outlines several Agricultural Resource Element's relevant policies to the Project, however, two key policies to the tasting room use are as follows:

   "***Policy AR-4a***: *The primary use of any parcel within the three agricultural land use categories shall be agricultural production and related processing, support services, and visitor serving uses. Residential uses in these areas shall recognize that the primary use of the land may create traffic and agricultural nuisance situations, such as flies, noise, odors, and spraying of chemicals*."

   BZA discussion:

The Board of Zoning Adjustments found the Project consistent with the Land Intensive Agriculture (LIA) zoning designation, which allows the proposed tasting rooms, marketing and promotional events, marketing accommodations, processing of agricultural products of a type grown or produced primarily on site or in the local area, and related storage of products grown or processed on site, all with a use permit.

"***Policy AR-6f***: *Local concentrations of visitor serving and recreational uses, and agricultural support uses as defined in Goal AR-5, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and may constitute grounds for denial of such uses. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors*:"

(1) Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element's objectives for level of service on a site specific and cumulative basis.
(2) Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells.
(3) Whether the above uses would be detrimental to the rural character of the area.

<u>BZA discussion</u>:
The County does not have a limit as to the number of tasting rooms or wineries allowed within a certain radius. Policy AR- 6f provides three criterion to determine if uses constitute a detrimental concentration of uses. After a review of Policy AR-6f, the project information, and environmental studies; the Board of Zoning Adjustments determined the Project would not be detrimental to the rural character of the area. No joint road access conflicts have been identified, and the traffic analysis for the Project shows that the Proposed Project-generated traffic will not exceed General Plan objectives for levels of service on a site-specific or cumulative basis. The proposed radius of influence characteristics from the Project pumping operations will not reach neighboring properties or affect neighboring wells, or the Russian River. Because agricultural production and related processing, support services and visitor serving uses are the primary uses in the LIA districts, these uses are part of the rural characteristics of the area. The elements of the Proposed Project – vineyards, a winery, and tasting rooms – are consistent with this rural character.

For Westside Road, specifically, the rural area includes the historic hop kiln buildings. Both the hop kiln and hop bale barn will be preserved and restored as part of the Project, creating a benefit rather than a detriment to the rural character of the area. The two hop kiln buildings are dilapidated and unless they are rehabilitated, the County could lose an important part of the local agricultural heritage. A Historic Resource Study (dated July 2014) and a Supplemental Historic Resource Study (dated March 2015) were prepared for the project by Knapp Architects. On December 2, 2014, the project plans were reviewed in a joint meeting with the Sonoma County Landmarks Commission and Sonoma County Design Review Committee, with the following actions were taken:
- Approve the existing height of the hop kiln at 45-feet and the bale barn at 41-feet which exceeds the 35-foot height requirement in the LIA zoning district.
- Approve maintaining the two structures (hop kiln and bale barn) in their current footprint within the Scenic Corridor setback.

- Final review of the project plans (after the Board of Supervisors decision) will again be a joint meeting before Landmarks and the Design Review Committee.
- The HD zoning (Historic Combining District) be added to the property.

The Knapp report concludes the project conforms to the Secretary of the Interior's Standards for Rehabilitation in almost all respects and would not materially impair the characteristics which make it eligible for listing, meaning that under the CEQA Guidelines, the project would have a less than significant impact on historical resources. At the applicant's request, the project returned to the Landmarks Commission asking the HD zoning only be applied to the east side of the project site where the hop kiln buildings are located and not apply HD zoning to the west side because the buildings on this side were found ineligible for listing on the California Register. At the July 7, 2015, Landmarks Commission meeting, the Commission voted unanimously to recommend addition of the HD Combining Zone and Landmark Designation on APN 110-240-031 in its entirety (east side of Westside Road) and not recommend adding the HD combining zone on APN 110-240-040 (west side of Westside Road). Their decision was based on findings that the historic resources on the east side of Westside Road met the eligibility and integrity criteria for State and Local County designation and the HD Combining Zone. The structures on the west side of Westside Road have changed over time to the extent that they no longer retained historic integrity that met eligibility criteria. Condition No.78 requires the applicant to apply for a zone change to add the HD combining zoning district on the APN 110-240-031 on the east side of the road prior to temporary or final occupancy of the hop kiln or hop bale barn.

In addition, to reduce traffic impacts, the guest capacity for agricultural promotional events on the west side of the Project site is limited to a maximum of 30 guests which equals 12 vehicles using the standard ratio of 2.5 persons per vehicle. Also, industry wide events will not be held on the west side of the project site. A Traffic Control and Parking Management Plan has been prepared by the applicant to demonstrate queuing areas for guest vehicles along the two project driveways for the winery and tasting rooms and the locations of parking attendants on duty for the duration of events.

W-Trans prepared a *sensitivity analysis* using the same roadway segment Level of Service methodology in the Highway Capacity Manual. W-Trans determined that 208 vehicle trips could be added in each direction on Westside Road before the northbound direction would experience unacceptable LOS D operation. W-Trans, using 2.5 guests per vehicle ratio, estimated that 200 vehicles carrying more than 500 guests could arrive at an event during one hour and another 500 guests (i.e. 200 vehicles) could depart from the same event or different winery event, and the operation would remain acceptable level of service standards. Using an actual proposed event size of 300-guests, and assuming that as many as 150 guests arrive and depart during a single hour from the same direction, the road would retain the capacity for another event having a combined total of more than 350 guests. Based on their review, W-Trans concludes there is adequate capacity for the multiple events to generate trips simultaneously without having a significant negative impact on operation of Westside Road.

Neighbors raised concerns that winery's production capacity is too large for Westside Road. The project site is within the Russian River Appellation Area. According to the County's Winery Database, the average annual case production capacity is 82,230 cases for wineries in this appellation. This even excludes the three largest wineries (Industry West Commerce Center LLC (UPE07-0133) at 3,000,000 cases; Korbel (PLP95-0003) at 2,500,000 cases; and Rodney Strong Vineyards (UPE97-0110B) at 1,500,000 cases.

Based on the above information, with limits on case capacity and events, and mitigation measures incorporated into the project to improve road safety and sight line distance, to control noise sources with levels acceptable under the General Plan, to preserve the two historical hop buildings, to coordinate events with the two adjacent wineries, and to not hold events during large bicycle events; the proposed project will not be detrimental to the community character or result in an over concentration of wineries in the near vicinity.

Furthermore, the applicants have a good relationship with the two adjacent wineries (Williams Seylem and Arista), who both support the Ramey Winery proposal. A condition, as recommended by the applicant, has been added to the Use Permit to require event coordination between the Ramey winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since the applicants have no control on the event dates since they are set by the Russian River Valley Grape Growers Association. A condition also prohibits scheduling larger events during large organized bicycle events. A standard condition is included in the Use Permit requiring the applicant to participate in a future event coordination program to be used for special events when that program is available. The Conditions of Approval require driveway improvements, right of way dedication, and provision of all parking on site with no parking allowed on Westside Road. The frequency and size of agricultural promotional events are limited, and industry wide events will be two days total.

3. The appellants contend there is a disproportionate focus on hospitality and promotional uses is inconsistent with the Williamson Act contract and the intent of the General Plan to preserve agriculture and rural character.

<u>BZA discussion</u>:
The Board of Zoning Adjustments determined the parcel was in compliance with its prime Land Conservation Act (Williamson Act) contract, and the Project met the *Principles of Compatibility Findings* required under Section 51238.1 of the Land Conservation Act and the compatible use threshold under the County Uniform Rules for land under a contract.

Under State law, Section 51238.1 of the Land Conservation Act, it states, “Uses approved on contracted lands shall be consistent with all of the following principles of compatibility:

(1) *The use will not significantly compromise the long-term productive agricultural capability of the subject contracted parcel or parcels or on other contracted lands in agricultural preserves*.
(2) *The use will not significantly displace or impair current or reasonably foreseeable agricultural operations on the subject contracted parcel or parcels or on other contracted land in agricultural preserves.*
(3) *The use will not result in the significant removal of adjacent contracted land from agricultural or open-space use.*

"Compatible Use" is defined as any use determined by the county or city administering the preserve pursuant to sections 51231, 51238 or 51238.1 or by this act to be compatible with the agricultural, recreational, or open space use of land within the preserve and subject to contract. In addition, Section 51220.5 states that "cities and counties shall determine the types of uses to be deemed compatible in a manner which recognizes that a permanent or temporary population increase hinders or impairs agricultural operations."

Under the County's Uniform Rules for land under a Land Conservation Act contract, the following uses are listed as compatible uses: winery, tasting rooms, marketing accommodations, and the existing primary residence to remain on the project site. Under the Uniform Rules, the existing barn, existing storage shed/canopy, and existing reservoir, used for the vineyard irrigation, are considered accessory agricultural structures under Rule B.8 and B.9, respectively.

Incidental use has been defined by the County to mean "compatible uses" which cannot occupy more than 15 percent of the land area or five acres, whichever is less. For the 75 acres parcel size, the 5 acre threshold would apply. Of the 75 acre parcel, approximately 42 acres are currently planted in grapes, of the remaining 33 acres, the total area consists of 3.40 acres for existing and new development area (147,885 square feet). The existing primary residence and area consists of approximately .35 acres. In total, the compatible uses for the Project comprise of 3.75 acres of the 75 acre parcel, below the 5-acre threshold.

Furthermore, no vines will be removed to accommodate the proposed project. The winery, tasting rooms, existing residence and the related infrastructure and improvements encompass approximately a small portion, approximately 5% of the overall project site and considered secondary to the primary use of the project site which will remain a large commercial vineyard. The 5% of development area is also consistent with the LIA zoning's maximum lot coverage requirement for a parcel greater than 20 acres in size listed under Section 26-040-030 (e) of the Zoning Code.

Discussion:
The proposed use is a winery to process grapes grown on the site and from the local area, and tasting rooms to sell the wine produced on site. No vines would be removed to accommodate the project development. The agricultural promotional events or industry wide events do not compromise agricultural capability because they are marketing tools to help sell wine produced on site and ensure the long term viability of the vineyard and winery. The proposed agricultural promotional events are limited in frequency and size and held in the afternoon and evening hours, avoiding the on-site agricultural activities which occur in the early morning hours. To the north of the proposed project site there are two parcels and to the south is one parcel that have remained under Land Conservation Act contracts for years. These are also commercial vineyard properties along Westside Road. The Project consists of uses that are in direct relationship to the on-site vineyard and off-site vineyards in the area.

4. The appellants contend there is an overwhelming concentration of existing wineries on Westside Road and other similar County roadways which is too great of a safety and county-wide issue for the Board of Supervisors to ignore.

BZA discussion:
The Board of Zoning Adjustments found the establishment, maintenance or operation of the Project for which application is made, will not, under the circumstances of this particular case, be detrimental to the health, safety, peace, comfort and general welfare of persons residing or working in the neighborhood of such use, nor be detrimental or injurious to property and improvements in the neighborhood or the general welfare of the area.

In addition to the discussion under Appellants' Issues 1-3 above, the particular circumstances in this case also include traffic safety and lack of significant noise impacts. The Traffic Study for the Ramey Winery Project prepared by W-Trans, dated March 10, 2016, was accepted by the Sonoma County Department of Transportation and Public Works. An Addendum letter prepared by W-Trans, dated April 21, 2017, explains that collision history for the study area indicates there were two collisions on the study segment in the most recent five-year period according to California Highway Patrol records. The collision rate is below average and according to the traffic engineer of W-Trans, the segment appears to be operating within expected safety parameters. The Conditions of Approval require driveway improvements, right of way dedication, and provision of all parking on site with no parking allowed on Westside Road. The frequency and size of agricultural promotional events are limited, and industry wide events will be two days total.

Sight distances along Westside Road from the existing driveway locations were evaluated by W-Trans based on sight distance criteria contained in "A Policy on Geometric Design on Highways and Streets," published by American Association of State Highways and Transportation Officials (AASHTO). The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet. Sight distance to the north of the tasting room driveway on the east side, after removal of the existing Westside Farms sign, is more than 400 feet. To the south of the tasting room driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic. The sight distance to the south of the winery driveway on the west side is 250 feet. To the north of the winery driveway, vegetation will be removed and the northwesterly hillside of the project site lowered and terraced to allow a sight distance of 250 feet, in accordance with a letter report, Grading and Cross Section Plan, and a Stopping Sight Distance plan prepared by the applicant's engineer, Adobe & Associates. Adobe & Associates also prepared a video simulation showing vehicles traveling along the project site with the sight distance improvements completed and sight stopping distance scenario.

An Addendum letter from the traffic engineer of W-Trans, dated September 13, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway. A Traffic Control and Parking Management Plan will be implemented to control guest traffic entering and exiting the project site, and guest vehicle parking and movement on the project site.

The use of amplified music or sound and loud musical instruments are only permitted indoors at the tasting room buildings during daytime hours with doors and windows closed. Outdoor events and activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the Site Plan. In the Picnic Walnut Grove area, amplified speech is limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. The winery's Use Permit is under a one-year review of event activities after commencement of the first event to determine condition compliance.

Additional Appellants Contentions:

The appellants submitted additional information on their appeal on August 9 and August 10, 2018, which is similar to their previous appeal, but discussed below:

5. The appellants contend there are public safety issues with the deviation from sight distance standard and opposing driveways.

BZA discussion:
The Board of Zoning Adjustments reviewed and considered the traffic analysis provided by W-Trans and required mitigations to improve sight distance for both driveways. The traffic study information was reviewed and accepted by the Department of Transportation and Public Works (refer to discussion in item 1 above in the staff report).

To once again address the appellants' concerns, W-Trans confirms in a letter dated October 26, 2018, that for the two existing project driveways, adequate sight distance can be achieved for both project driveways with improvements along the project frontage. Conditions of approval require that the project demonstrate at least a 250 –feet of stopping sight distance prior to final occupancy of any new structure (Condition No. 57 – Attachment A to Resolution).

6. The appellants contend a public safety issues with the joint road use conflicts in an area of concentration.

BZA discussion:
The Board of Zoning Adjustments reviewed and considered the Final Traffic Study prepared by W-Trans which includes sensitivity analysis was done to demonstrate that even with events happening at the same time at more than one winery, there would not be traffic conflicts or an overconcentration of use. However, a condition has been added to the Use Permit to require event coordination between the Ramey winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since these event days are set by the Russian River Valley Grape Growers Association.

The conditions also prohibit scheduling larger events during large organized bicycle events. Furthermore, a standard condition is included in the Use Permit requiring the applicant to participate in a future event coordination program to be used for special events when that program is available.

On October 16, 2014, a referral response was received by Steven Schmitz Steven on behalf of the members of the Sonoma County Bicycle and Pedestrian Advisory Committee (SCBPAC), requiring as a condition of project approval, the installation of adequate bicycle racks near the entrance to the proposed public tasting rooms (refer to Condition No. 96 under Attachment A of the Resolution).

7. The appellants contend the project is inconsistent with General Plan policy AR-6f.

BZA discussion:
The Board of Zoning Adjustments considered the three factors set forth in General Plan policy AR-6f, as outlined and discussed above in item 2 of this staff report. The Board of Zoning Adjustments approved the project finding:

- No joint road access conflicts have been identified, and the traffic analysis for the proposed project shows that the proposed project-generated traffic will not exceed General Plan objectives for levels of service on a site-specific or cumulative basis.
- Based on the hydrological report prepared by EBA Engineering and peer reviewed by the Geologist at Permit Sonoma, the proposed radius of influence characteristics from the proposed project pumping operations will not reach neighboring properties or affect neighboring wells.
- In the Zoning Code for the LIA (Land Intensive Agriculture) zoning district, agricultural production and related processing, support services and visitor serving uses are the primary uses, and these uses are part of the rural characteristics of the area. The elements of the proposed project – vineyards, a winery, and tasting rooms – are consistent with this rural character. In addition, this rural area includes the historic hop kiln buildings, which as part of the project, will be preserved and restored, creating a benefit rather than a detriment to the rural character of the area.

8. The appellants contend the project is inconsistent with the Williamson Act and County Uniform Rules.

BZA discussion:
The Board of Zoning Adjustments determined the proposed project site is in compliance with its Land Conservation Act contract, the County's Uniform Rules, and the State's Principles of Compatibility findings as outlined in item 3 above in this staff report. Marketing accommodations are an allowed use under Rule 8.3 (B)-(2) of the local Uniform Rules for Agricultural Preserves. The request for marketing accommodations is consistent with prior approved marketing accommodations as the following wineries through approved Use Permits, for such wineries as Silver Oak, Lambert Bridge, Hop Kiln, to name a few. The appellants contend the proposed marketing accommodations are similar to a guest house or second dwelling unit. However, the two-guest room marketing accommodations are on the upper floor of the reserve tasting room, whereas the entire building is not intended to be uses as a single family residence or as a guest house. The Board of Zoning Adjustments placed a condition on the marketing accommodation to restrict any other uses, as follows:

Condition 81. *The two guest room marketing accommodations located on the upper floor of the reserve tasting room (hop bale barn) shall not be used for commercial purposes, including, but not limited to, transient occupancy, vacation rental, hosted vacation rental, or farm stay; and a form of monetary compensation shall not be accepted or exchanged. The marketing accommodations are limited to use by private guests of the winery operator or the winery owners.*

<u>Mitigation Monitoring</u>: If the Permit and Resource Management Department receives a complaint that the marketing accommodations are being used for occupancy beyond private guests of the winery operator or the winery owners, PRMD staff shall investigate the complaint and if the condition is violated the Use Permit may be subject to modification or revocation

9. The appellants contend the project will risk a "stand alone" hospitality complex.

<u>BZA discussion:</u>
The Board of Zoning Adjustment took precautions to prevent a stand-alone tasting room from occurring by requiring Condition No. 84, as follows:

84. Building permits for the winery building and east side tasting room conversions shall be filed simultaneously. The applicant expects the tasting room improvements to be completed before completion of the winery building and wine cave construction. The winery building construction shall begin prior to final occupancy of the tasting room buildings to ensure the project site does not convert to stand-alone tasting rooms. <u>The winery building construction must be completed and granted final occupancy within two years of commencement of the tasting rooms operations</u>, or all tasting room uses shall cease until such time the winery building receives final occupancy.

10. The appellants contend the cave and winery design violate the 15% (incidental) hospitality rule.

<u>BZA discussion:</u>
Under the Land Intensive Agricultural General Plan, Agricultural Resource Element, or the Zoning Code does not require that hospitality/visitor serving uses, such as tasting rooms or events, be incidental to agricultural processing. Regardless, the large commercial vineyard and the case production size demonstrate there is a balance between agricultural use and visitor serving use on the project site. Permit Sonoma does require as an interpretation of the Code that administrative uses such as office space be incidental to the winery production, in general, using a measurement of 15% to be considered an incidental use. For this project, the office and administration space calculates to 14% of the winery production and storage components. The Board of Zoning Adjustments approved the project and did not reduce the amount of administrative/office square footage.

11. The appellants contend that it's unknown whether the wine cave is even viable given the lack of geologic analysis.

<u>Discussion:</u>
On January 17, 2014, a Tunnel Data and Feasibility Report for the project site's proposed wine cave was prepared by Condor Earth Technologies and provided to PRMD on October 1, 2018 (see discussion and attachments in the Mitigated Negative Declaration). The 2014 Condor report provides subsurface data and preliminary geotechnical engineering conclusions and recommendations for the design and construction of the wine caves. Condor's geologist visually logged the earth materials encountered during drilling and directed the sampling of soil and rock. According to the Condor report, the subsurface data indicates the ground surface at the project site is underlain by the following from top to bottom:

- Natural soil to depths of about 7 feet
- Up to about 7 feet of old alluvium
- Up to about 7 feet of completely weathered shale
- Serpentine extending to the maximum depth drilled of about 43 feet

Condor's initial sampling indicates that serpentine soils are present and may be within the area to be excavated for the caves. If found during wine cave excavation, it will be subject to strict controls in compliance with State Air Resources Board regulations, discussed under Air Quality, Section 3, of the Mitigated Negative Declaration. Condor's report concludes, based on their review of the subsurface data and engineering evaluation, that the construction of the proposed wine cave at the project site is feasible.

Furthermore, on August 13, 2018, Condor provided a response to the letter provided by the appellants from Jane Nielson dated August 7, 2018. Condor confirms that the construction of the proposed wine cave at the project site is feasible. The wine cave structure will include cast-in-place foundations, stem walls and concrete slabs, and pre-cast tunnel arch segments. Soil material from the cave area will be used to fill over the top of the cut and cover cave. All of the soil generated from this excavation, as well as from other grading for the winery, would be placed in temporary stockpiles only on the west side of the project site. These stockpiles are anticipated to total 15,843 cubic yards of material, of which 9,575 cubic yards will be from the cut-and-cover grading operation. The soils will then be used to backfill around the wine cave structure, and for grading and landscaping around the new winery building. Any stockpiling of cave spoils shall be located outside of the scenic corridor setback and maintain a 50-foot setback from the on-site reservoir (refer to Condition No. 91 and 103- Attachment A of Resolution. Current project plans show the locations of the proposed wine cave and cave spoils on the west side of the project site.

12. The appellants contend noise impacts are not mitigated.

BZA discussion:

The Board of Zoning Adjustments considered the results of the Noise Assessment, dated March 2017 and the Noise Addendum dated August 2017 prepared by Illingworth & Rodkin, Inc., and imposed mitigations to reduce potential noise impacts from the different site features and buildings. For event noise, amplified music or sound is not permitted outdoors. The use of amplified music and sound, loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music is only permitted indoors in the two tasting room buildings during daytime hours until 9 P.M. with doors and windows closed. No outdoor music or use of sound systems is permitted around the tasting room buildings. No amplified music or sound is permitted either indoors or outdoors at the winery building. Outdoor events can only occur within the Picnic Walnut Grove Area as depicted on the site plan until 9 P.M. and may use amplified speech limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. In the Picnic Walnut Grove Area, the use of quieter, non-amplified, acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations, is permitted outdoors, during daytime hours until 9 P.M.

For winery noise, due to the distance of sensitive receptors (residences) and consistency with Table NE 2 of the Noise Element of the General Plan, mitigation is required to reduce heavy truck noise and mechanical and bottling noise. By extending a proposed retaining wall on and along the southerly property line next to the winery building, placing solid walls in the area of the mechanical room and restricting nighttime truck use and nighttime bottling, the noise standards of the General Plan will be met.

Appellants' Technical Opinions

The appellants also submitted additional professional opinions rebutting the study results provided by the applicants' consultants in the areas of biological resources, geology/wine cave feasibility, and noise, as discussed below:

Biological Resources: The biologist for the appellants, Avocet Research Assoc., LLC, Jules Evens, Principle, ARA; opines, in summary, the biological studies completed for the proposed project are out of date (2013 and 2014) and protocol- level surveys for several special status animal species should be required before permitting. In response, Wildlife Research Associates and Jane Valerius updated the analysis from the California Natural Diversity Database (CNDDB) for special status plants and animals for 2018. WRA and Valerius confirm the project site is outside of the range for the California Tiger Salamander specie. WRA and Valerius explain that a wetlands determination is not required for determining suitable habitat for special status amphibians; and defend the studies they conducted on the project site in 2014 and 2018 and their conclusions (refer to Attachment O). Detailed information is provided in the Revised-Recirculated Mitigated Negative Declaration, the mitigation measures incorporated into the project, and attached studies.

Geology/wine cave: The geologist for the appellants, Dr. Nielson, recommends further studies on the wine cave and disposition of excess spoils. Wine cave feasibility and geotechnical reports completed for the proposed project by Condor and RGH Consultants conclude that the construction of the wine cave is feasible for the project site. The Geotechnical Study Report prepared by RGH Consultants, dated January 27, 2014, confirmed the project site is not in active landslide areas and the geologists of RGH Consultants also state they did not observe activate landslides at the project site. The current project site plans depict the temporary location of the wine cave excavation spoils to be placed on the west side of the project site, located outside of the Scenic Corridor setback and setback 50-feet from the on-site reservoir. Cave spoils are not permitted to be placed on the east side of the project site. Conditions of approval require that the temporary cave spoils stockpiles are subject to all provisions of the Storm Water Management Plan. Furthermore, if serpentine soils are found in the cave spoils, all excavation, transfer and placement of such soils must comply with the Airborne Toxic Control Measures required by 17 California Code of Regulations, section 93105, as well as with the Bay Area Air Quality Management District program. No soil will be placed as fill on the east side of the Proposed Project. More detailed information is provided in the Revised-Recirculated Mitigated Negative Declaration, the mitigation measures incorporated into the project and attached studies.

Noise: The noise consultant for the appellants, Vibro-Acoustics Consultants, Keith Kimberling, VACC; opines there are fatal flaws with the methodology and assumptions in the Environmental Noise Assessments completed for the proposed project by Illingworth & Rodkin. Vibro- Acoustics concludes they do not believe the mitigation measures would be sufficient to attenuate noise from the winery such that the General Plan Noise Element standards would be met. In response, Illingworth & Rodkin provided a letter dated September 26, 2018 (refer to Attachment O). Illingworth & Rodkin defend their work and explain that Vibro- Acoustics is misreading the noise standards setforth in the Sonoma County General Plan, they grossly over-estimate vehicle speeds, and show a lack of understanding of how wineries actually work. Lastly, Illingworth & Rodkin explain they coordinated and consulted with the County's Environmental Health Specialist, who accepted their studies and conclusions. Detailed information is provided in the Revised-Recirculated Mitigated Negative Declaration, the mitigation measures incorporated into the project, and attached studies.

Recommended Action:
Staff recommends that the Board of Supervisors deny the appeal and uphold the Board of Zoning Adjustment's decision to approve the project subject to the Conditions of Approval attached as Exhibit A to the Board Resolution.

Prior Board Actions:

None

Strategic Plan Alignment	Goal 2: Economic and Environmental Stewardship

The Use Permit process provides the opportunity for a new winery to process grapes grown on the site and reduce the tonnage of grapes that are currently hauled off site for processing, consistent with the General Plan GOAL AR-5: *Facilitate agricultural production by allowing agriculture-related support uses, such as processing, storage, bottling, canning and packaging, and agricultural support services, to be conveniently and accessibly located in agricultural production areas when related to the primary agricultural production in the area*." In addition, the Use Permit allows the winery to have wine tasting facilities, agricultural promotional events, and industry wide events which are all direct marketing and educational tools that help increase sales directly to consumers, increase their wine club membership, and provide label recognition for the winery in a competitive market. These visitor-serving uses are consistent with General Plan Policy AR-6a: *Permit visitor serving uses in agricultural categories that promote agricultural production in the County, such as tasting rooms, sales and promotion of products grown or processed in the County, educational activities and tours, incidental sales of items related to local area agricultural products, and promotional events that support and are secondary and incidental to local agricultural production*. The Sonoma County Economic Development Board found that winegrowers and wineries contributed more than $13.4 billion to the local economy based on 2012 figures. Recommended mitigation measures, conditions of approval, and the groundwater monitoring program would promote environmental stewardship.

Resolution Of The Board Of Supervisors Of The County Of Sonoma, State Of California, Adopting A Mitigated Negative Declaration, Denying An Appeal By Healdsburg Citizens For Sensible Solutions Et Al., And Granting Use Permit Approval To Ramey Vineyards LLC For A New Winery And Related Improvements At 7097 Westside Road, Healdsburg;
APN 110-240-031, -032, And -040
Supervisorial Districts 4 and 5.

RESOLVED, that the Board of Supervisors finds and determines as follows:

Section 1. Proposed Project and Procedural History

1.1 David and Carla Ramey, on behalf of Ramey Vineyards LLC, ("the Applicant") filed a Use Permit application to construct a new two-story winery building with a maximum annual case production of 60,000 cases, a new wine cave, conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation unit on the upper floor ("the Proposed Project"). The property is located at 7097 Westside Road, Healdsburg; APN APNs: 110-240-031, -032, and -040; Land Intensive Agriculture 60 acres per dwelling unit (east of Westside Road) and Land Intensive Agriculture 100 acres per dwelling unit (west of Westside Road).

The Proposed Project requested 22 agricultural promotional events per year consisting of 10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, 2 events with 300 guests, and participation in two days of industry wide events per year with a maximum of 300 guests each day. No weddings, receptions, or concerts are requested. Agricultural promotional events on the west side of Westside Road would be limited to 30 guests with no industry wide events. A four- year Use Permit term was requested under Section 26-92-130 of the Zoning Code. The 75-acre site is under a prime Land Conservation Contract. No vines will be removed to accommodate the winery facility or related site infrastructure.

1.2 A Mitigated Negative Declaration ("MND") was prepared for the Proposed Project and was noticed and made available for agency and public review in accordance with the California Environmental Quality Act ("CEQA") and the State and County CEQA Guidelines.

1.3. The Board of Zoning Adjustments held a properly noticed public hearing on September 21, 2017, at which time the Board of Zoning Adjustments heard and received all relevant testimony and evidence presented orally or in writing regarding the Mitigated Negative Declaration and the Project. All interested persons were given an opportunity to be heard regarding the Mitigated Negative Declaration and the Project.

1.4 On September 21, 2017, the Board of Zoning Adjustments adopted the MND and approved the Proposed Project with modifications, for a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, a new wine cave (approx. 20,720 square feet), conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and conversion of an existing historic hop baling barn to a reserve tasting room with two-guest room marketing accommodations on the upper floor. The approval included 20 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests) and participation in two industry wide event days per year with a maximum of 300 guests per day. Agricultural promotional events on the west side of Westside Road would be limited to a maximum of 30 guests with no participation in industry wide events. A four-year term to activate the Use Permit was approved as allowed under Section 26-92-130 of the Zoning Code. No weddings, receptions, or concerts were proposed or approved.

1.6 The Board of Zoning Adjustments eliminated the two largest agricultural promotional events with a maximum of 300 guests, recommended solar panels be installed on the winery building roof, required the winery building to be completed and granted final occupancy within two years of commencement of the tasting room operations, and prohibited the Applicant from granting any future well easements or agreements to third parties for use of the on-site wells.

1.7 On October 2, 2017, Healdsburg Citizens for Sustainable Solutions, the Maacama Watershed Alliance, Forest Unlimited, Sonoma Coast Rural Preservation, Todd Everett and Warren Watkins (collectively, “Appellants”) appealed the Board of Zoning Adjustment decision to the Board of Supervisors (“Board”) pursuant to County code. Appellants identified as issues what they consider to be employee, public and truck traffic in an area of inadequate sight lines, detriment to rural character of the area from a large scale project within 1000 foot radius of three existing tasting rooms, a disproportionate focus on hospitality and promotional uses that appellants believe is inconsistent with the General Plan and Williamson Act, and over-concentration of existing wineries on Westside Road and other similar County roadways.

Section 2. CEQA Compliance

2.1 In making its determination to approve the MND and to approve the Proposed Project, the Board recognizes that a range of technical and scientific opinion exists with respect to certain environmental issues. The Board has gained a well-rounded understanding of the range of these issues by its review of the MND, the prior proceedings at the Board of Zoning Adjustments, all comments, testimony, letters and reports regarding the MND, and its own experience and expertise in these environmental issues. Prior to making the following findings, the Board has reviewed and considered the evidence and analysis presented in the MND, the information presented in the Appeal and post-Appeal comments, the technical reports, information and responses submitted prior to and after the Board of Zoning Adjustments hearing, staff responses addressing those reports and comments, and all public comments made at or before the hearing. The Board has gained a well-rounded understanding of the environmental issues presented by the Proposed Project and the Board's findings are based on full appraisal of all viewpoints, all evidence and all information in the record of these proceedings. The Board further finds that the MND reflects the Board's independent judgment and analysis.

The Board finds that the MND has been completed in compliance with CEQA and that the MND adequately and fully describes the Proposed Project and its potential environmental effects.

The Board further finds that it has not received data, analysis or expert opinion to constitute a fair argument that the Proposed Project will result in any significant environmental effects that are not reduced to less than significant levels by mitigation measures and/or conditions of approval adopted herewith and incorporated herein by reference. Therefore, an EIR is not required for the Proposed Project.

The Board concurs with the analysis and conclusions in the MND and the staff analysis and recommendations and finds that with the imposition of the mitigation measures provided in the MND and conditions of approval attached hereto as Exhibit A and incorporated herein, all environmental impacts associated with the Proposed Project will be less than significant, including but not limited to the specific potential impacts described in Section 2.4. The Proposed Project does not have impacts that are individually limited but that would be cumulatively considerable when viewed in connection with the effects of past projects, other current projects and the effects of probable future projects and the effects of probable future projects

2.4 Without in any way limiting the Board's general findings set forth in this Resolution, the Board makes the following further specific findings regarding environmental impacts of the Proposed Project evaluated in the MND, suggested by Appellants or discussed in public comment on the MND and/or the Proposed Project.

a. Aesthetics.
The Proposed Project is located on Westside Road, a designated Scenic Corridor in the County General Plan. A setback of 30 percent of lot depth to a maximum of 200 feet from the centerline of Westside Road is required for new development other than barns and similar agricultural support buildings. .

On the east side of Westside Road, existing historic but dilapidated hop kiln structures within the Scenic Corridor are proposed for rehabilitation, with their original architecture remaining unchanged. Addition of two guest marketing accommodation rooms on the second floor of the hops baling barn will not affect the historic appearance of the exterior, and a bridge proposed to connect the two buildings will be similar to a trestle that was once part of the original architecture. At a joint session of the Sonoma County Landmarks Commission and the Design Review Committee the two bodies gave preliminary approval for the rehabilitation and conversion of the hop kiln buildings, including keeping them at their current location within the scenic corridor setback along Westside Road at their present height, which exceeds the 35-foot height limit in the LIA zoning district. A condition of approval requires that HD (Historical District) zoning be placed on the east side of the project site where the hop kiln buildings are located to ensure continued protection of this historic resource. New landscaping will shield a new paved parking area on the east side of Westside Road from view from Westside Road.

All development on the west side of Westside Road, including the proposed winery building and wine cave, are more than 200 feet from the front property line. A noise barrier/retaining wall at the winery building site is shielded from public view by the existing residence on the property and existing and proposed landscaping. The winery building will have a maximum height of 29 feet. 12 trees will be removed for the winery building, but the required landscape plan includes new trees and ground cover to screen the building from the public right-of-way. Much of the existing vegetation between Westside Road and the new winery will remain.

Conditions of approval require a lighting plan that will maintain nighttime lighting levels at the minimum necessary for security and safety. New exterior lighting must be low mounted, downward casting, and fully shielded to prevent “wash out” onto adjacent properties or the night sky. Flood lights are not allowed. Lighting must be shut off automatically after closing and security lighting shall be motion-sensor activated. The lighting plan must include a photometric analysis that illustrates there will be no light spillage onto adjacent properties or onto Westside Road. The new parking areas are required to meet rural lighting standards. The proposed exterior lighting plan (Sheets A5.00 and A5.01 prepared by Lundberg Designs, dated April 2015 meets these requirements, but will be subject to final review and approval by the Design Review Committee and Landmarks Commission prior to building permit issuance

All elements of the final site plan, building elevations, design including materials, colors and finishes, circulation, parking, landscaping, exterior signage, irrigation and exterior lighting are required to be approved by the Design Review Committee and the Landmarks Commission prior to issuance of building permits to ensure compliance with conditions of approval and reduction of potential aesthetic impacts to less than significant levels.

b. Conversion of Farmland and Williamson Act Zoning.

(i) No conversion of farmland.
The proposed project contains a mix of designations, including Prime Farmland on the east side where the commercial vineyard exists. Farmland of Statewide Importance and Unique Farmland lies along the Westside Road frontage on both sides, and there is Grazing Land on the west side where the new winery building is proposed. 42 acres of the total site are planted in grapes. None of the existing vineyard will be removed to accommodate the proposed development. A total of 3.75 acres of the total site will be used for existing and proposed development, which is 5% of the total parcel size. The winery and tasting room uses are considered agricultural related uses in support of the larger commercial vineyard and the local agricultural industry.

(ii) Williamson Act.
The property is subject to a Land Conservation Contract (Williamson Act) and meets the following standards of the Sonoma County Uniform Rules for Agricultural Preserves and Farmland Security Zones (“Uniform Rules”) regulating such contracts:

(a) The land must be devoted to an agricultural or open space use as defined in the Williamson Act. The County has required at least 50% of the parcel to be devoted to agriculture or open space, and in this case 42 of 75 acres are planted in grapes.

(b) The parcel at 75 acres exceeds the minimum parcel size of 10 acres.

(c) The existing barn, storage shed/canopy, and existing reservoir used for vineyard irrigation are considered agricultural accessory structures under Uniform Rules B.8 and B.9 and are incidental and subordinate to the agricultural uses. The winery, tasting room, marketing accommodations and the single family residence that will remain on the parcel are considered compatible uses under the Uniform Rules. Agricultural promotional events are considered a compatible use because they directly relate to the promotion or sale of wine produced on site, no event lasts longer than two days or provides overnight accommodations, and no permanent structure devoted to events is constructed on the land. Wine tasting, tasting rooms and marketing accommodations are separately defined as compatible uses, and are not considered events. Compatible uses are permissible if they are incidental to the primary use of the land for agriculture, listed in the Uniform Rules and meet the criteria for compatibility. Incidental has been defined by the County to mean that compatible uses may collectively occupy no more than 15% of the land, or five acres, whichever is less. For the 75 acre parcel, the five acre threshold would apply. The compatible uses of 3.4 acres for the winery, tasting rooms and related infrastructure plus 0.35 acres for the residence would comprise 5% of the total 75 acre parcel.

c. Conflict with Existing Agricultural Zoning.

The Proposed Project is consistent with the Land Intensive Agriculture (LIA) zoning designation, which allows the Proposed Project’s tasting rooms, marketing and promotional events, marketing accommodations, processing of agricultural products of a type grown or produced primarily on site or in the local area, and related storage of products grown or processed on site, all with a use permit. All the uses are subject to specific General Plan policies designed to protect and preserve agricultural lands, support a healthy and competitive local agricultural industry, balance agricultural processing, support and visitor serving uses with agricultural production and ensure that agricultural production and related processing, support and visitor service uses remain the primary use of land.

The General Plan policies listed in the relevant sections of the Zoning Ordinance for storage and processing activities at the winery are:

> **Policy AR-5c**: Permit storage, bottling, canning, and packaging facilities for agricultural products either grown or processed on site provided that these facilities are sized to accommodate, but not exceed, the needs of the growing or processing operation. Establish additional standards in the Development Code that differentiate between storage facilities directly necessary for processing, and facilities to be utilized for the storage of finished product such as case storage of bottled wine. Such standards should require an applicant to demonstrate the need for such on-site storage.

General Plan Policy AR-5c relates to limiting the amount of finished product (case goods storage) on agriculturally zoned lands. Case goods storage of finished product will be off-site at a local warehouse. Barrel aging is part of processing and will occur in the wine cave.

> **Policy AR-5g:** Local concentrations of any separate agricultural support uses, including processing, storage, bottling, canning and packaging, agricultural support services, and visitor-serving and recreational uses as provided in Policy AR-6f, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and shall be avoided. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors:
>
> (1) Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element's objectives for level of service on a site specific and cumulative basis.
> (2) Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells.
> (3) Whether the above uses would be detrimental to the rural character of the area. In cases where the proposed processing use would process only products grown on site, such use would not be subject to this concentration policy.*

The Proposed Project winery would process grapes grown on-site, from the local area, and from surrounding counties as needed. 10 acres of pinot noir grapes are leased to another winery. 32 acres of chardonnay grapes will be processed on-site. The on-site vineyard produces about 250 tons of grapes and an additional 720 tons would be imported to the winery from local areas to reach maximum annual production capacity of 60,000 cases. The County has in the past found winery use permits that process grapes from neighboring counties to be consistent with this policy. In times of drought or other natural disasters such as fire and flood, allowing importation of grapes from neighboring counties is necessary for wineries to continue to operate.

For the Proposed Project's tasting rooms, marketing activities and special events, the General Plan policies listed in the Zoning Ordinance are:

> **Policy AR-6d:** Follow these guidelines for approval of visitor serving uses in agricultural areas:
>
> (1) The use promotes and markets only agricultural products grown or processed in the local area.
> (2) The use is compatible with and secondary and incidental to agricultural production activities in the area.
> (3) The use will not require the extension of sewer and water.
> (4) The use is compatible with existing uses in the area.
> (5) Hotels, motels, resorts, and similar lodging are not allowed.
> (6) Activities that promote and market agricultural products such as tasting rooms, sales and promotion of products grown or processed in the County, educational activities and tours, incidental sales of items related to local area agricultural products are allowed.
> (7) Special events on agricultural lands or agriculture related events on other lands in the Sonoma Valley Planning Area will be subject to a pilot event coordination program which includes tracking and monitoring of visitor serving

activities and schedule management, as necessary, to reduce cumulative impacts.

The winery at the Proposed Project will process grapes grown on-site, from the local area, and from surrounding counties as needed. 10 acres of pinot noir grapes are leased to another winery. 32 acres of chardonnay grapes will be processed on-site. The on-site vineyard produces about 250 tons of grapes and an additional 720 tons would be imported to the winery from local areas to reach maximum annual production capacity of 60,000 cases. The County has in the past found winery use permits that process grapes from neighboring counties to be consistent with this policy. In times of drought or other natural disasters such as fire and flood, allowing importation of grapes from neighboring counties is necessary for wineries to continue to operate.

The Proposed Project will be compatible with existing uses in the area and long term agricultural use of the land because it is an agricultural use similar to other agricultural and winery uses in the area. No existing agriculture or vineyard would be removed for the Proposed Project. Conditions of approval limit detrimental impacts on nearby residential use, including but not limited to control of noise and requirements for new exterior lighting to be low mounted, downward casting, and fully shielded to prevent “wash out” onto adjacent properties or the night sky. As General Plan Policy AR-4a provides, in the LIA zone residential uses shall recognize that agricultural production and related processing, support services and visitor serving uses are the primary use of the land and may create some conflicts with residential or other uses. The Proposed Project will be served by on-site well and septic and will not require expansion of sewer or water services. No lodging is proposed, and the marketing accommodations may not be offered to the general public or traded for any form of monetary compensation. The Proposed Project is conditioned to require participation in a special events coordination program when one is available for the area.

> **Policy AR-6f:** Local concentrations of visitor serving and recreational uses, and agricultural support uses as defined in Goal AR-5, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and may constitute grounds for denial of such uses. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors:
>
> (1) Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element’s objectives for level of service on a site specific and cumulative basis.
> (2) Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells.
> (3) Whether the above uses would be detrimental to the rural character of the area.

No joint road access conflicts have been identified, and the traffic analysis for the Proposed Project shows that Proposed Project-generated traffic will not exceed General Plan objectives for levels of service on a site-specific or cumulative basis. See also Section 2.4(e) below. Based on the findings and facts in Section 2.4(d) below, the proposed radius of influence characteristics from the Proposed Project pumping operations will not reach neighboring properties or affect neighboring wells. Because agricultural production and related processing, support services and visitor serving uses are the primary uses designated in the County code for the LIA districts, these uses are part of the rural characteristics of the area. The elements of the Proposed Project – vineyards, a winery, and tasting rooms – are consistent with this rural character. In addition, this rural area includes the historic hop kiln buildings. They will be preserved and restored as part of the Proposed Project, creating a benefit rather than a detriment to the rural character of the area.

For the Proposed Project's marketing accommodations, the criteria and General Plan policies listed in Section 26.04.020(j) of the Zoning Ordinance are:

> Promotional or marketing accommodations for private guests, provided, that the use, at a minimum, meets all of the following criteria:
>
> (1) The use promotes or markets agricultural products grown or processed on the site.
> 2) The scale of the use is appropriate to the production and/or processing use on the site.
> (3) The use complies with General Plan Policies AR-6d and AR-6f.
> (4) No commercial use of private guest accommodations is allowed.
> (5) Any such use on a parcel under a Williamson Act contract must be consistent with Government Code Section 51200 et seq. (the Williamson Act) and local rules and regulations.

The proposed two guest rooms for overnight stays are located on the upper floor of the restored historic hop baling barn. They will be used for wine marketing only, and no form of monetary compensation can be charged or exchanged for their use. The rooms will not be available to the general public or for any commercial purpose and do not constitute lodging. As found in Sections 2.4(a) above, all proposed uses are consistent with the Williamson Act. The marketing accommodations are consistent with General Plan Policies AR-6d and 6f, as analyzed above.

d. Hydrology and Water Quality.

The Groundwater Availability Study prepared by EBA Engineering concludes that the water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the Proposed Project and will not result in negative impacts to local groundwater or surface water resources. The Proposed Project site is located within a Class 1 water area, identified in the General Plan as a major groundwater basin, and the underlying aquifer is comprised of alluvial deposits associated with the Russian River, which is a managed water system that ensures perennial flow throughout the year and serves as a continuous source of recharge to the aquifer. The projected radius of influence characteristics induced by the pumping operations will not encroach onto neighboring properties. In addition, the proposed water use is projected to induce no measurable changes in surface water flows in the Russian River. A condition of approval for the Proposed Project prohibits the Permit Holder/Applicant from granting any future well easements or agreements which would allow water from the project site wells to be used by third parties or transferred for off-site uses.

All project development including winery wastewater and domestic septic systems will be more than 800-feet from the Russian River. The Preliminary Stormwater Management Plan identifies a slight increase in runoff for the 2-year 24-hour storm as a result of the proposed improvements. The increase in the runoff in the area of the winery improvements will be captured in the existing pond, which has adequate capacity to capture the increase. Allowing the runoff to flow through vegetated buffer areas prior to entering the pond will provide the necessary water treatment. There will be a slight increase in runoff east of the tasting room improvements that will infiltrate into existing vegetation prior to exiting the Project site. The Best Management Practices incorporated into the Proposed Project, including the vegetated buffer areas, will provide the necessary treatment to meet the County's Low Impact Development (LID) requirements. These improvements as designed will reduce the potential impacts on water quality to a level of less than significant.

The industrial wastewater from the proposed winery processing will be collected, aerated and stored in a series of treatment tanks to be disposed of via an irrigation system to serve the on-site vineyard. Domestic sewage disposal from the tasting rooms, marketing accommodations, guest and employee restrooms will be disposed of via on-site septic systems adjacent to the tasting room buildings on the east side and near the existing farmhouse on the west side. Both the winery wastewater system and the domestic systems will be designed by an engineer to meet all applicable standards. The property consists of flat gentle sloping terrain with slopes ranging between 5-15 percent. The soil classification of the project site is "Yolo Loam," commonly found in the Russian River and Dry Creek Valleys and described as sandy loam, gravelly loam, silt loam, and clay loam surface layers in some areas. Yolo Loam is suitable for domestic and industrial wastewater disposal systems.

e. Traffic

The Final Traffic Study for the Proposed Project prepared by W-Trans, dated March 10, 2016, was reviewed and accepted by the Sonoma County Department of Transportation and Public Works.

A W-Trans Addendum dated April 21, 2017, explains that collision history for the study area indicates there were two collisions on the study segment in the most recent five-year period according to California Highway Patrol records. According to the W-Trans traffic engineer, the collision rate is below average and the segment appears to be operating within expected safety parameters. The Conditions of Approval require driveway improvements, right of way dedication, and provision of all parking on site with no parking allowed on Westside Road. The frequency and size of agricultural promotional events are limited, and industry wide events will be two days total.

Sight distances along Westside Road from the existing driveway locations were evaluated by W-Trans based on sight distance criteria contained in "A Policy on Geometric Design on

Highways and Streets," published by American Association of State Highways and Transportation Officials (AASHTO). The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet. Sight distance to the north of the tasting room driveway on the east side, after removal of the existing Westside Farms sign, is more than 400 feet. To the south of the tasting room driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic. The sight distance to the south of the winery driveway on the west side is 250 feet. To the north of the winery driveway, vegetation will be removed and the northwesterly hillside of the project site lowered and terraced to allow a sight distance of 250 feet, in accordance with a letter report, Grading and Cross Section Plan, and a Stopping Sight Distance plan prepared by the applicant's engineer, Adobe & Associates. Adobe & Associates also prepared a video simulation showing vehicles traveling along the project site with the sight distance improvements completed and sight stopping distance scenario. A further W-Trans addendum letter dated September 13, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway.

In addition, guest capacity for agricultural promotional events on the west side of the Proposed Project site is limited to a maximum of 30 guests which equals 12 vehicles using the standard ratio of 2.5 persons per vehicle. Industry wide events will not be held on this portion of the project site. A Traffic Control and Parking Management Plan has been prepared by the applicant to demonstrate queuing areas for guest vehicles along the two project driveways for the winery and tasting rooms and the locations of parking attendants on duty for the duration of events. The Traffic Study's sensitivity analysis was done to demonstrate that even with events happening at the same time at more than one winery, there would not be traffic conflicts or an overconcentration of use. However, a condition has been added to the Use Permit to require event coordination between the Ramey winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since these event days are set by the Russian River Valley Grape Growers Association. The conditions also prohibit scheduling larger events during large organized bicycle events. Furthermore, a standard condition is included in the Use Permit requiring the applicant to participate in a future event coordination program to be used for special events when that program is available.

A Caltrans comment letter in response to the MND circulation dated September 14, 2017, suggests that additional trips generated by the Proposed Project have the potential to create significant speed differentials and queuing which could potentially encroach on the mainline and ramps at the US 101/Westside Road interchange, leading to a significant conflict between exiting vehicles and highway traffic. W-Trans' response dated May 9, 2018 notes that trip generation and distribution was analyzed in the March 10, 2016 W-Trans Traffic Study ("March 016 TIS"), and that the Proposed Project generates fewer than 20 peak hour trips. To be conservative, W-Trans attributed all trips to and from the

Proposed Project to Healdsburg via Westside Road, although W-Trans expects that trips to the site would be drawn “fairly evenly from the north and south for daily operation, resulting in half as many trips being added as assumed for analysis purposes.” Even if all such trips used Westside Road to 101 in Healdsburg, this volume of added peak hour trips would not require analysis of the Proposed Project’s potential impacts on US 101, because Highway 101 north of Windsor is expected to operate at acceptable volumes in its present configuration. The Proposed Project site approximately 6.8 miles from the identified interchange and not all visitors will arrive or leave at the same time, even for the larger site-specific events.

The Caltrans September 14, 2017 letter also requested that the County perform a VMT (Vehicle Miles Traveled) analysis for the Proposed Project, using State Office of Planning and Research (OPR) Draft Guidelines. Some of the statements about the Draft Guidelines are incorrect. The letter suggests that automobile VMT per capita greater than 15% below county-wide or regional values for similar land uses would be a significant impact. The County has not adopted this standard, nor do the OPR Draft CEQA Guidelines, which are still in the rulemaking process. OPR technical documents suggest a 15% reduction but do not address this type of visitor-serving project. However, the greenhouse gas (GHG) analysis in the MND performed by Illingworth & Rodkin includes a quantitative analysis of VMT, using trip generation estimates from the W-Trans traffic studies. It concludes that VMT attributable to the Proposed Project create a less than significant impact.

The Proposed Project contributes to multi-modal transportation with the provision of bicycle parking on-site at a ratio of 1 bicycle space for every 5 vehicle spaces, as required by conditions of approval and County code.

f. Noise

Based on the results of the Noise Assessment, dated March 2017 and the Noise Addendum dated August 2017 prepared by Illingworth & Rodkin, Inc., due to the distance of sensitive receptors (residences) and consistency with Table NE 2 of the Noise Element of the General Plan, mitigation is required to reduce heavy truck noise and mechanical and bottling noise. By extending a proposed retaining wall on and along the southerly property line next to the winery building, placing solid walls in the area of the mechanical room and restricting nighttime truck use and nighttime bottling, the noise standards of the General Plan will be met.

Conditions of approval provide that temporary noise from construction activities will be mitigated by restrictions on equipment and mufflers; limit on construction hours to 7 a.m. to 7 p.m. weekdays and 9 a.m. to 5 p.m. on weekends and holidays; limit on pile driving activity to weekdays 7:30 a.m. to 7 p.m.; requiring stationary construction equipment to be placed away from residential areas or acoustically shielded; and designation of a project manager, with telephone contact information and allowed hours of construction at the project site.

Conditions of approval provide mitigation to reduce potential noise impacts from the different site features and buildings. The use of amplified music and sound, loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music is only permitted indoors in the two tasting room buildings during daytime hours until 9 P.M. with doors and windows closed. Amplified music within the tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet. No outdoor music or use of sound systems is permitted around the tasting room buildings. No amplified music or sound is permitted either indoors or outdoors at the winery building. Outdoor events can only occur within the Picnic Walnut Grove Area as depicted on the site plan until 9 P.M. and may use amplified speech limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. In the Picnic Walnut Grove Area, the use of quieter, non-amplified, acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations, is permitted outdoors, during daytime hours until 9 P.M. Prior to temporary or final occupancy of the winery building or tasting room buildings, a long term, on-going Noise Management and Monitoring Plan for event activities shall be submitted and cleared by the Permit Sonoma Health Specialist. The Plan shall be implemented for the project operations. The applicants have agreed to the Mitigation Measures and Monitoring program.

Section 3. General Plan and Zoning Compliance

3.1 General Plan Compliance.

All uses in the Proposed Project are subject to specific General Plan policies designed to protect and preserve agricultural lands, support a healthy and competitive local agricultural industry, balance agricultural processing, support and visitor serving uses with agricultural production and ensure that agricultural production and related processing, support and visitor service uses remain the primary use of land.

The Proposed Project is consistent with the General Plan land use designation of Land Intensive Agriculture, and General Plan objectives to facilitate County agricultural production by allowing agricultural processing facilities and uses, including a winery and wine cave, in the Agricultural Land Use categories. Processing of agricultural products of a type grown or produced primarily on site or in the local area and tasting rooms and other temporary, seasonal, or year-round sales and promotion of agricultural products grown or processed in the county, subject to the criteria of General Plan Policies AR-5c, AR-5g, AR-6d, and AR-6f, are uses permitted with a Use Permit in the LIA zoning district. The project is consistent with General Plan Goal AR-5, which states that agricultural support services should be conveniently and accessibly located to the primary agricultural activity in the area because the winery is located in an area producing wine grapes and located within the Russian River Appellation. Tasting rooms, agricultural promotional events and industry-wide events will promote the winery and the wines produced on the site, educate visitors on the making of wines, and increase wine club membership; all as part of the marketing of an agricultural product grown and processed in Sonoma

County. These activities are consistent with General Plan Objectives AR-1.1, AR 1.2, AR 5.1 and General Plan Policies AR-1a, AR-4a, AR-5c, AR-5g, AR-6a and AR-6d.

The General Plan policies listed in the relevant sections of the Zoning Ordinance for storage and processing activities at the winery are:

> **Policy AR-5c**: Permit storage, bottling, canning, and packaging facilities for agricultural products either grown or processed on site provided that these facilities are sized to accommodate, but not exceed, the needs of the growing or processing operation. Establish additional standards in the Development Code that differentiate between storage facilities directly necessary for processing, and facilities to be utilized for the storage of finished product such as case storage of bottled wine. Such standards should require an applicant to demonstrate the need for such on-site storage.
>
> General Plan Policy AR-5c relates to limiting the amount of finished product (case goods storage) on agriculturally zoned lands. Case goods storage of finished product will be off-site at a local warehouse. Barrel aging is part of processing and will occur in the wine cave.
>
> **Policy AR-5g:** Local concentrations of any separate agricultural support uses, including processing, storage, bottling, canning and packaging, agricultural support services, and visitor-serving and recreational uses as provided in Policy AR-6f, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and shall be avoided. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors:
>
>> (1) Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element's objectives for level of service on a site specific and cumulative basis.
>> (2) Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells.
>> (3) Whether the above uses would be detrimental to the rural character of the area. In cases where the proposed processing use would process only products grown on site, such use would not be subject to this concentration policy.*
>
> The Proposed Project winery would process grapes grown on-site, from the local area, and from surrounding counties as needed. 10 acres of pinot noir grapes are leased to another winery. 32 acres of chardonnay grapes will be processed on-site. The on-site vineyard produces about 250 tons of grapes and an additional 720 tons would be imported to the winery from local areas to reach maximum annual production capacity of 60,000 cases. The County has in the past found winery use permits that process grapes from neighboring counties to be consistent with this policy. In times of drought or other natural disasters such as fire and flood, allowing importation of grapes from neighboring counties is necessary for wineries to continue to operate.
>
> The new winery will be nestled into the hillside to create a low profile. The winery and the wine cave are located outside the scenic corridor and will be shielded by existing buildings and landscape. Light fixtures will be shielded with minimal glare or spillage of light onto neighboring properties. Vineyards, a winery, and tasting rooms are consistent with the rural character of the area which requires that agricultural production and related processing, support services and

visitor serving uses be the primary uses in the LIA districts and necessarily includes existing uses of that nature. In addition, this rural area includes the historic hop kiln buildings. The Proposed Project will protect this important part of the County's local agricultural heritage because the buildings will be preserved and restored as part of the Proposed Project, creating a benefit rather than a detriment to the rural character of the area.

For the Proposed Project's tasting rooms, marketing activities and special events, the General Plan policies listed in the Zoning Ordinance are:

Policy AR-6d: Follow these guidelines for approval of visitor serving uses in agricultural areas:

(1) The use promotes and markets only agricultural products grown or processed in the local area.
(2) The use is compatible with and secondary and incidental to agricultural production activities in the area.
(3) The use will not require the extension of sewer and water.
(4) The use is compatible with existing uses in the area.
(5) Hotels, motels, resorts, and similar lodging are not allowed.
(6) Activities that promote and market agricultural products such as tasting rooms, sales and promotion of products grown or processed in the County, educational activities and tours, incidental sales of items related to local area agricultural products are allowed.
(7) Special events on agricultural lands or agriculture related events on other lands in the Sonoma Valley Planning Area will be subject to a pilot event coordination program which includes tracking and monitoring of visitor serving activities and schedule management, as necessary, to reduce cumulative impacts.

The winery at the Proposed Project will process grapes grown on-site, from the local area, and from surrounding counties as needed. 10 acres of pinot noir grapes are leased to another winery. 32 acres of chardonnay grapes will be processed on-site. The on-site vineyard produces about 250 tons of grapes and an additional 720 tons would be imported to the winery from local areas to reach maximum annual production capacity of 60,000 cases. The County has in the past found winery use permits that process grapes from neighboring counties to be consistent with this policy. In times of drought or other natural disasters such as fire and flood, allowing importation of grapes from neighboring counties is necessary for wineries to continue to operate.

The Proposed Project will be compatible with existing uses in the area and long term agricultural use of the land because it is an agricultural use similar to other agricultural and winery uses in the area. No existing agriculture or vineyard would be removed for the Proposed Project. Conditions of approval limit detrimental impacts on nearby residential use, including but not limited to control of noise and requirements for new exterior lighting to be low mounted, downward casting, and fully shielded to prevent "wash out" onto adjacent properties or the night sky. As General Plan Policy AR-4a provides, in the LIA zone residential uses shall recognize that agricultural production and related processing, support services and visitor serving uses are the primary use of the land and may create some conflicts with residential or other uses The Proposed Project will be served by on-site well and septic and will not require expansion of sewer or water services. No lodging is proposed, and the marketing accommodations may not be offered to the general public or traded for any form of monetary compensation. The Proposed Project is conditioned to require participation when a special events coordination program is available for the area.

Policy AR-6f: Local concentrations of visitor serving and recreational uses, and agricultural support uses as defined in Goal AR-5, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and may constitute grounds for denial of such uses. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors:

(1) Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element's objectives for level of service on a site specific and cumulative basis.
(2) Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells.
(3) Whether the above uses would be detrimental to the rural character of the area.

No joint road access conflicts have been identified, and the traffic analysis for the Proposed Project shows that Proposed Project-generated traffic will not exceed General Plan objectives for levels of service on a site-specific or cumulative basis. See also Section 2.4(e) above. Based on the findings and facts in Section 2.4(d) above, the proposed radius of influence characteristics from the Proposed Project pumping operations will not reach neighboring properties or affect neighboring wells.

The new winery will be nestled into the hillside to create a low profile. The winery and the wine cave are located outside the scenic corridor and will be shielded by existing buildings and landscape. Light fixtures will be shielded with minimal glare or spillage of light onto neighboring properties. Vineyards, a winery, and tasting rooms are consistent with the rural character of the area which requires that agricultural production and related processing, support services and visitor serving uses be the primary uses in the LIA districts. In addition, this rural area includes the historic hop kiln buildings. The Proposed Project will protect this important part of the County's local agricultural heritage because the buildings will be preserved and restored as part of the Proposed Project, creating a benefit rather than a detriment to the rural character of the area.

3.2 Zoning Compliance.

a. The Proposed Project is consistent with the LIA (Land Intensive Agriculture) zoning designation, which allows the following under Section 26-040-020 (i) of the Zoning Ordinance with a Use Permit approval: tasting rooms and other temporary, seasonal or year-round sales and promotion of agricultural products grown or processed in the county. Sonoma County has a long history of permitting agriculture promotional events at wineries as a marketing tool that promotes the wine produced or grown on site. Project conditions of approval prohibit the winery facility from being rented out to third-parties for any activities, including events, weddings, or concerts.

b. The Proposed Project is consistent with the Scenic Resources and Scenic Corridor development standards in Article 26-64 of the Zoning Ordinance. Specifically, the project proposes to rehabilitate and repurpose the hop kiln and baling barn buildings which are historic resources located within the Scenic Corridor 200 foot setback from the centerline of Westside Road. To the extent that the project requires new construction or structures in the setback related to the hop kiln and baling barn buildings, this construction is allowed pursuant to an exception in Section 26-64-030 (a)(5)(i) for new structures subject to design review which are associated with existing structures. To the extent construction in the setback relates to the existing hop kiln and baling barn buildings, it is allowed under an exception in Section 26-64-020(a)(3) for the maintenance, restoration, reconstruction or minor expansion of existing structures.

c. The design of the Proposed Project meets the requirements of the flood plain combining zone for elevation of new structures and other flood resistant design criteria as required by Chapter 7B of the County code.

d. For the Proposed Project's marketing accommodations, the criteria listed in the Zoning Ordinance section 26-040-020(j) are:

Promotional or marketing accommodations for private guests, provided, that the use, at a minimum, meets all of the following criteria:

(1) The use promotes or markets agricultural products grown or processed on the site,
(2) The scale of the use is appropriate to the production and/or processing use on the site,
(3) The use complies with General Plan Policies AR-6d and AR-6f,
4) No commercial use of private guest accommodations is allowed,
(5) Any such use on a parcel under a Williamson Act contract must be consistent with Government Code Section 51200 et seq. (the Williamson Act) and local rules and regulations.

The proposed two guest rooms for overnight stays are located on the upper floor of the restored historic hop baling barn. They will be used for wine marketing only, and no form of monetary compensation can be charged or exchanged for their use. The rooms will not be available to the general public or for any commercial purpose and are do not constitute lodging as defined in County code. As found in Sections 2.4(a) above, all proposed uses are consistent with the Williamson Act. The marketing accommodations are part of the overall Proposed Project, which is consistent with General Plan Policies AR-6d and 6f, as analyzed above.

3.3 Use Permit General Welfare Finding.

The establishment, maintenance or operation of the use for which application is made will not, under the circumstances of this particular case, be detrimental to the health, safety, peace, comfort and general welfare of persons residing or working in the neighborhood of such use, nor be detrimental or injurious to property and improvements in the neighborhood or the general welfare of the area. The particular circumstances in this case include the factual analysis of lack of environmental impacts, General Plan consistency and zoning ordinance compliance set forth above.

a. In summary, exterior lighting must be low mounted, downward casting and fully shielded to prevent glare, lighting shall shut off automatically after closing and security lighting shall be motion-sensor activated; Westside Road is adequate to support the volume of traffic associated with the proposed land uses; improvements will be done on the project site to provide adequate northerly sight line on the winery side of the project site, the project will not compromise agricultural capability because the proposed use is related to agriculture and no vines will be removed to accommodate the project; and mitigations have been incorporated into the project to ensure that noise from construction, winery operations, and agricultural promotional event and industry wide event activities shall meet the Daytime Noise limit standards established in the General Plan, with limited hours of event activities, and the conditions placed on the project to control noise and restrict the use of any outdoor amplified music and sound systems. Other project related circumstances include that the project will not create a detrimental concentration of visitor-serving and recreational uses because the traffic generated by the project will not result in road access conflicts; the project will preserve historic resources important to the local agricultural heritage and the rural character of the neighborhood; the project applicant will coordinate agricultural promotional events with the two adjacent wineries to off-set event days and/or event times; and no event will be held the same time as a large bicycle event. The project site wells will not affect or cause a significant drawdown of neighboring wells in the area or the Russian River; a Traffic Control and Parking Management Plan will be implemented to control guest traffic entering and exiting the project site, and guest vehicle parking and movement on the project site. Use of amplified music or sound and loud musical instruments are only permitted indoors at the tasting room buildings during daytime hours with doors and windows closed. Outdoor events and activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the Site Plan. In the Picnic Walnut Grove area, amplified speech is limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. The winery's Use Permit is under a one-year review of event activities after commencement of the first event to determine condition compliance.

b. The design is compatible with the scenic corridor and scenic landscape unit requirements; the design meets requirements of the flood plain combining zone for elevation of new structures and other flood resistant design criteria as required by Chapter 7B of the county code.

c. Drainage improvements are required to ensure there will be no net increase in runoff, natural drainage patterns will be maintained and there will be no increased impact from stormwater or floodwater dispersal over the site and adjacent lands.

d. Agricultural and open space use will remain the primary use of the land;

e. The hydrogeologic report and supplemental information for the Proposed Project show that there is adequate water for the project, the potential for harmful salt water intrusion is minimal and horizontal and vertical separations between project wells and the nearest streams and neighboring wells are large, such that the project has minimal potential to cause significant well interference or stream impacts.

Section 4. Additional Finding

4.1 The findings and determinations set forth in this resolution are based upon the record of these proceedings. References to specific statutes, ordinances, regulations, standards, reports, or documents in a finding or determination are not intended to identify those sources as the exclusive basis for the finding or determination.

NOW, THEREFORE, Be It Further Resolved that based on the information contained in the full record of these proceedings and the findings and determinations set forth in this resolution, the Board hereby declares and orders as follows:

1. The findings and determinations set forth in this resolution are true and correct, supported by substantial evidence in the record, and adopted as set forth above.

2. The MND is adopted.

3. The Appeal of the Board of Zoning Adjustments approval of the Proposed Project is denied.

4. The use permit is granted for the Proposed Project as presented in [Site plan and drawings titled “Ramey Winery, 7097 Westside Road, Healdsburg CA,” prepared by Lundberg Design and dated August 24, 2017 and as described in the Conditions of Approval attached hereto as Exhibit A and incorporated herein, subject to design review as required by conditions of approval.

6. The Clerk of the Board is designated as the custodian of the documents and other material that constitute the record of the proceedings upon which the Board’s decisions herein are based. These documents may be found at the office of the Clerk of the Board of Supervisors, 575 Administration Drive, Room 100A, Santa Rosa, CA 95403.

SONOMA COUNTY BOARD OF SUPERVISORS

Draft Conditions of Approval and Mitigation Monitoring Plan
Exhibit A

Staff:	Traci Tesconi	**Date:**	December 11, 2018
Applicant:	David and Carla Ramey Trust	**File No.:**	UPE14-0008
Owner:	David and Carla Ramey Trust	**APN:**	110-240-031, -032 and -040
Address:	7097 Westside Road, Healdsburg		

Project Description: Approval of a Use Permit to construct a new winery building with a maximum annual case production of 60,000 cases and a new wine cave on the west side of the project site. On the east side of the project site is the conversion of a historic hop kiln building to a public tasting room and conversion of a historic hop bale barn to a reserve tasting room with marketing accommodations on the upper floor consisting of two-guest rooms each with full bathrooms. The request also includes 20 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests) and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this side of the project site. A four- year Use Permit term to activate the permit is requested under Section 26-92-130 of the Zoning Code. No weddings, receptions, concerts, or non-agricultural related events were proposed or approved under this Use Permit.

Prior to commencing the use, evidence must be submitted to the file that all of the following non-operational conditions have been met.

1. Within five working days after project approval, the applicant shall pay a mandatory Notice of Determination filing fee of $50.00 (or latest fee in effect at time of payment) for County Clerk processing, and $2,280.75 (or latest fee in effect at time of payment) because a Mitigated Negative Declaration was prepared, for a **total of $2,330.75 made payable to Sonoma County Clerk** and submitted to PRMD. If the required filing fee is not paid for a project, the project will not be operative, vested, or final and any local permits issued for the project will be invalid (Section 711.4(c)(3) of the Fish and Game Code.) NOTE: If the fee is not paid within five days after approval of the project, it will extend time frames for CEQA legal challenges.

BUILDING:

2. The applicant shall apply for and obtain building related permits from the Permit and Resource Management Department (PRMD). The necessary applications appear to be, but may not be limited to, site review, building permit, and grading permit.

3. Prior to initiation of the approved use, the project shall comply with the accessibility requirements set forth in the most recent California Building Code (CBC), as determined by the PRMD Building Division. Such accessibility requirements shall apply to all new construction and remodeling and, where required by the CBC, to retrofitting of the existing structure.

4. The business operator shall post a sign that includes the phone number for a current job manager for the benefit of neighbors. The job manager can be contacted if there are any problems associated with the construction process site such as dust, storm water runoff, hours of operation, equipment noise, traffic issues or lack of compliance with any project conditions of approval.

5. Any wine cave used for guided tours or public/private assembly shall comply with the model California Codes including, but not limited to exiting, fire suppression, lighting and accessibility regulations.

HEALTH:

“The conditions below have been satisfied BY ______________________________ DATE ________

PRIOR TO BUILDING PERMIT AND VESTING THE USE PERMIT:

Water:

6. Prior to building permit issuance the applicant shall have the proposed water supply system evaluated for potential contamination or pollution via backflow by an American Water Works Association certified Cross Connection Control Specialist. The recommendations for cross connection control shall, at a minimum, meet the requirements of the 2013 California Plumbing Code and subsequent editions adopted by Sonoma County. A copy of the report must be submitted to the Project Review Health Specialist for review.

   If the applicant has been required to do a cross-connection control survey by the California Department of Public Health, then a copy of that survey may be submitted to meet this condition within 120 days after occupancy.

7. Prior to building permit issuance and project operation, provide the Project Review Health Specialist with the bacteriological (E. Coli and total coliform) arsenic and nitrate analysis results of a sample of your water tested by a State-certified lab. If the analysis shows contamination, the applicant will be required to treat the well per County requirements and re-test the well. If the contamination cannot be cleared from the well destruction under permit of this Department may be required.

8. Prior to the issuance of building permits the applicant shall provide an engineered design of the water supply system, construct and/or develop the water sources (wells and/or springs), complete the appropriate water quality testing and apply for a water supply permit from the State Drinking Water Program because it has determined that more than 25 persons per day for 60 days within a year will be served by the water system. A copy of the Use Permit application and conditions must be provided to the State Drinking Water Program in order to obtain appropriate raw water source sampling requirements. (This process should begin as soon as possible, as the application, plan check and sampling will take some time.) Prior to the issuance of building permits, copies of the clearance letter must be submitted to the Project Review Health Specialist, or the State Drinking Water Program may e-mail clearance directly to PRMD.

9. The water supply well is required to have a 50-foot annular seal prior to vesting the Use Permit. Annular seals are installed at the time of construction of the water well, and are very difficult (and sometimes impossible) to retro-fit in an economic manner. If documentation of a 50-foot annular seal cannot be obtained, then a new water well may be required.

10. Prior to the issuance of any building permit an Easement is required to be recorded for this project to provide Sonoma County personnel access to any on-site water well serving this project and any required monitoring well to collect water meter readings and groundwater level measurements. Access shall be granted Monday through Friday from 8:00 a.m. to 5:00 p.m. All Easement language is subject to review and approval by PRMD Project Review staff and County Counsel prior to recordation.

11. Prior to building permit issuance, a water well serving this project shall be fitted with a groundwater level measuring tube and port, or electronic groundwater level measuring device. Water meter(s) to measure all groundwater extracted for the permitted use shall be installed on the water system. A Site Plan showing the location of the well with the groundwater level measuring device and the location of the water meter(s) shall be submitted to the PRMD Project Review Health Specialist.

Septic:

12. Prior to building permit issuance and vesting the Use Permit, the applicant shall obtain a permit for the sewage disposal system. The system may require design by a Registered Civil Engineer or Registered Environmental Health Specialist and both soils analysis, percolation and wet weather testing may be required. Wet weather groundwater testing may also be required. The sewage system shall meet peak flow discharge of the wastewater from all sources granted in the Use Permit and any additional sources

from the parcel plumbed to the disposal system, and shall include the required reserve area.

This project is approved for agricultural promotional events and shall provide septic system capacity in accordance with PRMD Policy 9-2-31 (available on PRMD's website under Policy and Procedures). The project septic system shall be designed to accommodate 100 % percent of the wastewater flow from an event with 60 guests, in addition to peak wastewater flows from all other sources plumbed to the septic system, including the 15 employees listed in the traffic study.

If a permit for a standard, innovative or experimental sewage disposal system sized to meet all peak flows cannot be issued, then the applicant shall revise the project (fees apply and a hearing may be required) to amend the Use Permit to a reduced size, not to exceed the on-site disposal capabilities of the project site and attendant easements. The Project Review Health Specialist shall receive a final clearance from the Well and Septic Section that all required septic system testing and design elements have been met.

13. Application for wastewater discharge requirements shall be filed by the applicant with the North Coast Regional Water Quality Control Board. Documentation of acceptance of a complete application with no initial objections or concerns by the Regional Water Quality Control Board shall be submitted to the Project Review Health Specialist prior to building, grading for ponds or septic permit issuance (if the Regional Water Board Water Resource Engineer or Environmental Specialist have objections or concerns then the applicant shall obtain Waste Discharge Requirements prior to building permit issuance).
A copy of the Waste Discharge Permit shall be submitted to the Project Review Health Specialist prior to issuance of a Certificate of Occupancy or project operation and vesting the Use Permit.

14. In-room Jacuzzi tubs, hot tubs or any other over-size tub designed for use by two or more persons, or any common area Jacuzzi or hot tub, or Vichy Shower shall not be allowed unless they are specified in the septic system analysis and additional capacity in the septic system is allocated for their use.

15. Toilet facilities shall be provided for patrons and employees prior to vesting the Use Permit. A copy of the Floor Plan showing the location of the restrooms shall be submitted to the Project Review Health Specialist prior to issuance of building permits.

16. Prior to building permit issuance and vesting the Use Permit, sewage disposal system(s) shall be evaluated relative to the proposed wine cave(s). If the floor of the wine cave(s) are lower than any wastewater disposal field or septic tanks, a minimum 50-foot setback from any tanks, sumps, and septic disposal field shall be maintained. The Project Review Health Specialist shall receive a Topographic Map created by a Civil Engineer, Surveyor or REHS depicting the septic system and wine cave components for review.

Consumer Protection:

17. Prior to the issuance of building permits and the start of any on-site construction, plans and specifications for any food facility that provides food or beverage to the public must be submitted to, and approved by the Department of Health Services, Environmental Health & Safety Section. Be advised that major expenses can be triggered relating to the need for commercial exhaust hoods, fire suppression systems, food storage space and walk in refrigerators/freezers dependent upon the scale of food service and the menu items selected. Early consultation with Environmental Health & Safety is recommended. All food service on this site shall be limited to the scale, scope, frequency and any menu limitations specified under the Planning conditions in this Use Permit.

If the project will operate under a Wine Tasting Room Exemption, the exemption requires:

a. Proof of a State Wine Grower License (Alcoholic Beverage Control 02 license).

b. A statement that the wine tasting facility will not offer for sale, food or beverage for onsite consumption (with the exception of the actual wine tasting, prepackaged non-potentially hazardous beverages and crackers).

c. Note that this Use Permit requires that if any of the following items are new or replacement installations they shall be built to CalCode standards: all flooring, counter tops, restrooms and sinks in the food or beverage service area. The goal is to minimize the need to replace new materials when a small change in the menu triggers the need for a Food Facility permit.

Contact the Department of Health Services, Environmental Health & Safety Section at 565-6565 for information and instructions. An e-mail of the approval from the Environmental Health & Safety Section or a copy of the Plan Check Approval shall be presented to the Project Review Health Specialist to verify compliance with requirements of the California Retail Food Code (CalCode).

Solid Waste:

18. Prior to building permit issuance, the applicant shall submit a design for trash enclosures and recycling areas for review and approval by the PRMD Building Plan Check Section. (Fees may apply.) Note that trash trucks must have at least a 32-foot turning radius at the trash enclosure and the dumpster must have 16 feet of overhead clearance.

Noise:

19. Prior to the issuance of building permits, noise mitigations shall be photocopied from the Noise Study Addendum and attached to the building plans submitted for plan check.

20. NOTE ON GRADING, IMPROVEMENT, AND BUILDING PLANS:

Construction activities associated with this project shall be restricted as follows:

a. All internal combustion engines used during construction of this project will be operated with mufflers that meet the requirements of the State Resources Code, and, where applicable, the Vehicle Code. Equipment shall be properly maintained and turned off when not in use.
b. Except for actions taken to prevent an emergency, or to deal with an existing emergency, all construction activities shall be restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays and 9:00 a.m. and 5:00 p.m. on weekends and holidays. If work outside the times specified above becomes necessary, the applicant shall notify the PRMD Project Review Division as soon as practical.
c. There will be no starting up of machines nor equipment prior to 7:00 a.m, Monday through Friday or 9:00 am on weekends and holidays; no delivery of materials or equipment prior to 7:00 a.m nor past 7:00 p.m, Monday through Friday or prior to 9:00 a.m. nor past 7:00 p.m. on weekends and holidays and no servicing of equipment past 7:00 p.m., Monday through Friday, or weekends and holidays. A sign(s) shall be posted on the site regarding the allowable hours of construction, and including the developer's phone number for public contact.
d. Pile driving activities shall be limited to 7:30 a.m. to 7:00 p.m. weekdays only.
e. Construction maintenance, storage and staging areas for construction equipment shall avoid proximity to residential areas to the maximum extent practicable. Stationary construction equipment, such as compressors, mixers, etc., shall be placed away from residential areas and/or provided with acoustical shielding. Quiet construction equipment shall be used when possible.
f. The Permit Holder shall designate a Project Manager with authority to implement the mitigation prior to issuance of each building/grading permit. The Project Manager's phone number shall be conspicuously posted at the construction site. The Project Manager shall determine the cause of noise complaints (e.g. starting too early, faulty muffler, etc.) and shall take prompt action to correct the problem.

Mitigation Monitoring: PRMD staff shall ensure that the note listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing)

Vector Control:

21. A Mosquito and Vector Control Plan acceptable to the Marin-Sonoma Mosquito and Vector Control District (telephone 707-285-2200) shall be submitted prior to bringing the public onto a property with ponds. The Project Review Health Specialist shall receive a copy of the Mosquito and Vector Control Plan and an acceptance letter from the Marin-Sonoma Mosquito and Vector Control District.

PRIOR TO OCCUPANCY:

Noise:

22. Prior to issuance of temporary or final occupancy of the winery building, or vesting the Use Permit, to reduce noise levels from heavy trucks using the truck loading and turn around area, and from bottling noise, the height of the retaining wall on the south side of the loading area shall be extended to 6- feet above existing grade (above the retaining wall as depicted on project plans) and shall consist of masonry materials to act as a noise barrier. This noise barrier/retaining wall with a height of 6-feet above the existing ground level shall extend for 100-feet parallel to the southerly property line boundary of the winery site. The barrier height in relation to building pad elevation must be certified by the project engineer. The sound consultant shall confirm in writing that the design, location, and final construction of the noise barrier/retaining wall complies with the required noise standards as described in the Noise Study Addendum, prepared by Illingworth and Rodkin, dated August 16, 2017. (Refer to Sheets A0.00, A1.02, and A2.04 of the Project Plans, dated September 2018).

    Mitigation Monitoring: Prior to temporary or final occupancy of the winery building or vesting of the Use Permit, a letter from the sound consultant shall be submitted to the Project Review Health Specialist confirming the noise barrier/retaining wall consisting of masonry materials has been located, designed, and constructed in accordance with the recommendations as described in the Noise Study Addendum, prepared by Illingworth and Rodkin, dated August 16, 2017.

23. The southern façade and part of the eastern façade of the Mechanical Equipment Room of the winery building shall be designed and constructed as solid walls with any and all materials recommended by the sound consultant to ensure a 28+ dBA reduction and meet 42dBA nighttime standard per adjusted Table NE-2 (Refer to Sheet A1.12 of the Project Plans, dated August 16, 2017).

    Mitigation Monitoring: Prior to issuance of any building permit for the winery building, project plans shall depict the southern façade and part of the eastern façade of the Mechanical Equipment Room of the winery building shall be installed with solid walls. Prior to temporary of final occupancy of the winery building, a letter from the sound consultant shall be submitted to the Project Planner confirming the solid walls have been constructed in accordance with the recommendations as described in the Noise Study Addendum dated August 16, 2017.

24. Prior to temporary or final occupancy of the winery building or tasting room buildings, a long term, on-going Noise Management and Monitoring Plan for event activities shall be submitted to the PRMD Project Review Health Specialist and found to be acceptable. The plan shall address potential cumulative noise impacts from all events in the area. Implementation of the on-going Noise Management and Monitoring Program shall be required upon operation of the project.

Septic:

25. Prior to building occupancy, all wastewater plumbing shall be connected to a sewage disposal system that has been constructed under permit for the proposed use by the PRMD Well and Septic Section. The Project Review Health Specialist shall receive a final clearance from the District Specialist that all required septic system testing, design elements, construction inspections and any required operating permits have been met.

Wine Caves and Radon Gas:

26. Prior to completion of wine cave excavation, radon gas exposure shall be tested by an Electret-Passive Environmental Radon Monitor (E-PERM) or other method as approved by PRMD. A copy of the lab report shall be submitted to the Project Review Health Specialist. If radon gas is found to be present in excess of 25 pCi/L, then mitigation methods shall be implemented into the wine cave design.

27. Following construction but prior to wine cave operation, radon gas exposure shall be re-tested by an E-PERM or other method as approved by PRMD. A copy of the lab report shall be submitted to the Project Review Health Specialist. Where radon is found to be in excess of 100 pCi/L in areas where winery workers or guests are exposed, appropriate mitigation measures (such as continuous ventilation during human occupancy) shall be taken to comply with OSHA regulations. Where radon is found to be in excess of 25 pCi/L (25% of the maximum allowable exposure limit), airborne radioactive area signs shall be posted to conform to OSHA regulations.

OPERATIONAL REQUIREMENTS:

Water:

28. The property owner or lease holder shall have the backflow prevention assembly tested by an American Water Works Association certified Backflow Prevention Assembly Tester at the time of installation, repair, or relocation and at least on an annual schedule thereafter.

29. A safe, potable water supply shall be provided and maintained.

30. (a) The location of the wells, and groundwater elevations and quantities of groundwater extracted for this use shall be monitored quarterly and reported to PRMD in January of the following year pursuant to Section WR-2d of the Sonoma County General Plan and County policies. Annual monitoring fees shall be paid at the rate specified in the County Fee Ordinance. If the County determines that groundwater levels are declining in the basin, then the applicant shall submit and implement a Water Conservation Plan, subject to review and approval by PRMD.

    (b) The Permit Holder/Applicant shall not grant any future well easements or agreements which would allow water from the project site wells to be used by third parties or to be transferred for off-site use.

31. Required water meters shall be calibrated, and copies of receipts and correction factors shall be submitted to PRMD Project Review staff at least once every five years.

Septic:

32. Maintain the Annual Operating Permit for any package treatment plant, alternative (mound or pressure distribution) or experimental sewage disposal system installed per Sonoma County Code 24-32, and all applicable Waste Discharge Requirements set by the Regional Water Quality Control Board.

33. Use of the on-site wastewater disposal system shall be in accordance with the design and approval of the system.

34. All future sewage disposal system repairs shall be completed in the Designated Reserve areas and shall meet Class I Standards. Alternate reserve areas may be designated if soil evaluation and testing demonstrate that the alternative reserve area meets or exceeds all of the requirements that would have been met by the original reserve area. If wastewater ponds or a package treatment plant are needed, then a modification of the Use Permit may be required, as determined by PRMD.

35. When permitted agricultural promotional events exceed 60 persons, the permit holder shall provide portable toilets meeting the following minimum requirements:

    a. An adequate number of portable toilets shall be provided, but in no case shall the number of portable toilets be less than one toilet per one hundred (100) event employees and visitors per day for day use.

    b. Portable hand washing facilities shall be provided with all portable toilets used for serving visitors or the public. Employees serving food to visitors or the public must have access to permanently plumbed running hot and cold water sinks plumbed to a permitted on-site wastewater treatment system or public sewer.

    c. Portable toilets shall be serviced as needed, but in no case less than once every seven days.

    d. The applicant shall provide an accessible portable restroom on the job site where required by Federal, State or local law, including but not limited to, requirements imposed under OSHA, the Americans with Disabilities Act or Fair Employment and Housing Act.

    e. Portable toilets shall not be brought on-site prior to 48 hours before the special event and shall be promptly serviced and removed within 48 hours after the special event.

    f. If complaints are received by PRMD regarding the number of available portable toilets that PRMD deems a valid complaint, the applicant or current operator of the Use Permit shall increase the number of portable toilets and/or increase the frequency of maintenance of the portable toilets for the remainder of the agricultural promotional event and at future agricultural promotional events as directed by PRMD. The property owner and/or his agent(s) are expected to maintain portable toilets and hand washing units so that:

        i) The holding tank does not leak or overflow.
        ii) Toilet paper is promptly replaced when the dispenser runs out.

        iii) Water, paper towels and soap are promptly replaced when the hand washing units run out.

        iv) The wait to use a portable toilet shall not be so long that people use alternatives to sanitary restroom facilities.

        v) Reliance upon portable toilets shall not create a public nuisance.

36. Portable toilets and portable hand-washing facilities shall be placed and maintained for employees as needed on the work sites, but in no case shall they be serviced less than once per three days when 24 hour operations are conducted, and once per seven days when only daytime operations are conducted. The permitee shall provide an accessible portable restroom on the job site where required by Federal, State or local law, including but not limited to, requirements imposed under OSHA, the Americans with Disabilities Act or Fair Employment and Housing Act.

Consumer Protection:

37. Obtain and maintain all required Food Facility Permits from the Sonoma County Environmental Health Division if required for the wine tasting activities approved in this Use Permit. State law

allows for a wine tasting exemption from a Food Facility Permit. However, in order to qualify for the wine tasting exemption State law requires that no food or beverage be sold for on-site consumption except for wine tasting, prepackaged non-potentially hazardous beverages and crackers. No food or beverage shall be sold for off-site consumption except for bottles of wine and prepackaged non-potentially hazardous beverages. Contact the Environmental Health Division at 565-6547 for information and instruction sheet. Note that no food service exceeding the limits specified under the planning conditions shall be authorized on this site by the issuance of any retail food facility permit, catering permit, mobile food vendor permit or building permit.

38. Obtain and maintain all required Food Industry Permits from the Sonoma County Environmental Health Division prior to serving any food.

Noise:

Noise shall be controlled in accordance with Table NE-2 (or an *adjusted* Table NE-2 with respect to ambient noise as described in General Plan 2020, Policy NE-1c,) as measured at the exterior property line of any affected residential or sensitive land use:

ABLE NE-2: *Adjusted* Maximum Allowable **Exterior Noise** Exposures

Hourly Noise Metric[1], dBA	Daytime[1] (7 a.m. to 10 p.m.)	Nighttime[1] (10 p.m. to 7 a.m.)
L50 (30 minutes in any hour)	45	40
L25 (15 minutes in any hour)	50	45
L08 (4 minutes 48 seconds in any hour)	55	50
L02 (72 seconds in any hour)	60	55
[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level. The L02 is the sound level exceeded 1 minute in any hour. [2] This table has been adjusted downward by 5dB for simple tone noises, music and speech.		

TABLE NE-2: *Adjusted* Maximum Allowable **Special Event** Noise Exposures

Hourly Noise Metric[1], dBA	Daytime[2] (7 a.m. to 10 p.m.)	Nighttime[2] (10 p.m. to 7 a.m.)
L50 (30 minutes in any hour)	45	40
L25 (15 minutes in any hour)	50	45
L08 (4 minutes 48 seconds in any hour)	55	50
L02 (72 seconds in any hour)	60	55
[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level. The L02 is the sound level exceeded 1 minute in any hour. [2]This table has been adjusted downward by 5 dB due to events with speech and music.		

39. No nighttime heavy truck deliveries and/or shipments is permitted, and no nighttime bottling is permitted between the hours of 10 P.M. and 7 A.M.)

Mitigation Monitoring: Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing

40. Based on the Noise Element of the General Plan, the Environmental Noise Assessment prepared by Illingworth and Rodkin, dated March 7, 2017, and the Addendum dated August 16, 2017; and the current Site Plan; the following operational noise limitations apply to each of the buildings or site features on the project site:

    1. At the **Winery building** (*west side* of Westside Rd):
        - The use of amplified music or sound systems is not permitted either indoors or outdoors. This does not restrict the use of small personal music devices or personal computer music devices used by employees of the winery.
        - Acoustical music is not permitted either indoors or outdoors.

    2. At the **two tasting room buildings** (*east side* of Westside Rd):
        - The use of amplified music and sound is permitted indoors during daytime hours up to 9 P.M., with doors and windows closed.
        - The use of loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music is permitted indoors with doors and windows closed.
        - Amplified music within the two tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet.
        - The use of outdoor music or sound systems is not permitted around the tasting room buildings.

    3. At **Picnic Walnut Grove** (*east side* of Westside Rd):
        - The use of outdoor amplified music or sound systems is not permitted in this area.
        - The use of loud instruments (drums, cymbals, horns, and similar instruments) is not permitted in this area.
        - The use of outdoor amplified speech is permitted, but limited to using a sound system mechanically set to limit the volume level to 78 dBA at 50 feet.
        - The use of quieter, **non-amplified,** acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations of 60 dBA at 3 feet, is permitted outdoors in the Picnic Walnut Grove, during daytime hours only, and when in compliance with the *Adjusted* Noise Element of the Sonoma County General Plan and shall cease by 9 P.M.

    4. Outdoor event activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the approved Site Plan.

    <u>Mitigation Monitoring</u>**:** If noise complaints are received from nearby residents, and they appear to be valid complaints in PRMD's opinion, then the applicant shall conduct a Noise Study to determine if the current operations meet noise standards and identify any additional noise Mitigation Measures if necessary. A copy of the Noise Study shall be submitted to the Project Review Health Specialist within sixty days of notification from PRMD that a noise complaint has been received. The owner/operator shall implement any additional Mitigation Measures needed to meet noise standards.

41. Agricultural promotional events shall not consist of weddings, concerts, dances or personal/business parties, but shall consist of wine marketing events, wine pairing meals or events promoting a specific aspect of Sonoma County agriculture.

    <u>Mitigation Monitoring</u>: If noise complaints are received from nearby residents, and they appear to be valid complaints in PRMD's opinion, then the applicant shall conduct a Noise Study to determine if the current operations meet noise standards and identify any additional noise

Mitigation Measures if necessary. A copy of the Noise Study shall be submitted to the Project Review Health Specialist within sixty days of notification from PRMD that a noise complaint has been received. The owner/operator shall implement any additional Mitigation Measures needed to meet noise standards.

Solid Waste:

42. All garbage and refuse on this site shall accumulate or be stored in non-absorbent, water-tight, vector resistant, durable, easily cleanable, galvanized metal or heavy plastic containers with tight fitting lids. No refuse container shall be filled beyond the capacity to completely close the lid. Garbage and refuse on this site shall accumulate or be stored for no more than seven calendar days, and shall be properly disposed of at a County Transfer Station or County Landfill before the end of the seventh day.

Smoking:

43. Smoking is prohibited at any public event, in any dining area, service area (including entry lines or ticket purchase lines) and in any enclosed area that is a place of employment (Sonoma County Code 32-6). “No Smoking” signs shall be conspicuously posted at the point of entry into every building where smoking is prohibited by Chapter 32 of the Sonoma County Code. The California Health and Safety Code (section 113978) also requires the posting of “No Smoking” signs in all food preparation areas, all retail food storage areas, and all food utensil washing areas. Note that Health and Safety Code section 113781 definition of food includes any beverage intended for human consumption.

44. A “Designated Smoking Area” may be established in unenclosed areas consistent with Sonoma County Code section 32-3. Designated Smoking Areas must be at least 25 feet away from any building or area where smoking is prohibited, must be conspicuously identified by signs as a smoking area, and shall be equipped with ash trays or ash cans.

GRADING AND STORM WATER:

“The conditions below have been satisfied BY ______________________________ DATE ________

45. Grading and/or building permits require review and approval by the Grading & Storm Water Section of the Permit and Resource Management Department prior to issuance. Grading permit applications shall abide by all applicable standards and provisions of the Sonoma County Code and all other relevant laws and regulations.

46. A drainage report for the proposed project shall be prepared by a civil engineer, currently registered in the State of California, be submitted with the grading permit application, and be subject to review and approval by the Grading & Storm Water Section of the Permit and Resource Management Department. The drainage report shall include, at a minimum, a project narrative, on- and off-site hydrology maps, hydrologic calculations, hydraulic calculations, pre- and post-development analysis for all existing and proposed drainage facilities. The drainage report shall abide by and contain all applicable items in the Drainage Report Required Contents (DRN-006) handout.

47. Drainage improvements shall be designed by a civil engineer, currently registered in the State of California, and in accordance with the Sonoma County Water Agency Flood Control Design Criteria. Drainage improvements shall be shown on the grading plans and be submitted to the Grading & Storm Water Section of the Permit and Resource Management Department (PRMD) for review and approval. Drainage improvements shall maintain off-site natural drainage patterns, limit post-development storm water levels and pollutant discharges in compliance with PRMD’s

best management practices guide, and shall abide by all applicable standards and provisions of the Sonoma County Code and all other relevant laws and regulations. Drainage improvements shall not adversely affect adjacent properties or drainage systems.

48. The applicant shall provide grading plans, prepared by a civil engineer currently registered in the State of California, which clearly indicate the nature and extent of the work proposed and include all existing and proposed land features, elevations, roads, driveways, buildings, limits of grading, adequate grading cross sections and drainage facilities such as swales, channels, closed conduits, or drainage structures. The grading plans shall abide by and contain all applicable items from the Grading Permit Required Application Contents (GRD-004) handout.

49. Portions of the proposed project are located within a Special Flood Hazard Area (SFHA) and is affected by flooding from the Russian River. No fill shall be placed within a SFHA, unless an engineering analysis demonstrates that no reduction in the flood storage capacity within the SFHA will result from the fill placement and related improvements. Any land subject to inundation by a SFHA shall be delineated and shown on the grading plans as “SUBJECT TO INUNDATION” in one-inch lettering. The base flood elevation is estimated to be at 79 feet above mean sea level. The lowest floor elevation of any habitable structure must be at 80 feet or higher above mean sea level. The grading plans shall show all elevations based upon the North American Vertical Datum of 1988 (NVGD 88).

50. As part of the grading plans, the applicant shall include an erosion prevention/sediment control plan which clearly shows best management practices to be implemented, limits of disturbed areas, vegetated areas to be preserved, pertinent details, notes, and specifications to prevent damages and minimize adverse impacts to the environment. Tracking of soil or construction debris into the public right-of-way shall be prohibited. Runoff containing concrete waste or by-products shall not be allowed to drain to the storm drain system, waterway(s), or adjacent lands. The erosion prevention/sediment control plan shall abide by and contain all applicable items in the Grading Permit Required Application Contents (GRD-004) handout.

51. Residue or polluted runoff from the crush pad or from production areas/activities shall not be allowed to drain directly to the storm drain system, waterway(s) or adjacent lands. Crush pads and production areas shall be covered or drain directly to a proper waste disposal system. No diversion valves shall be allowed.

52. Runoff from waste receptacles or outside washing areas shall not be allowed to drain directly to the storm drain system, waterway(s) or adjacent lands. Areas used for waste receptacles and outside washing areas shall be covered and be separated from the rest of the project site by grade breaks that prevent storm water run-on. Any surface water flow from a waste receptacle or outside washing area shall not be permitted to enter the storm drain system without receiving appropriate treatment.

53. If the cumulative land disturbance of the project is equal to or greater than one (1) acre, then the project is subject to National Pollutant Discharge Elimination System (NPDES) requirements and must obtain coverage under the State Water Resource Control Board’s General Construction Permit (General Permit). Documentation of coverage under the General Permit must be submitted to the Grading & Storm Water Section of the Permit and Resource Management Department prior to issuance of any grading permit for the proposed project.

54. Prior to grading or building permit issuance, construction details for all storm water best management practices (BMPs) shall be submitted for review and approved by the Engineering Section of Permit Sonoma. The construction plans shall be in substantial conformance with the conceptual plan reviewed and approved at the planning permit stage.

The applicant shall submit an Erosion and Sediment Control Plan prepared by a registered professional engineer as an integral part of the planning plan, including cave excavation and stockpiling, transfer and placement of cave spoils as fill. The Erosion and Sediment Control Plan shall be subject to review and approval by Permit Sonoma prior to the issuance of a grading permit. The Plan shall clearly show limits of disturbed areas, vegetated areas to be preserved, pertinent details, notes, and specifications to prevent damage and minimize adverse impacts to the environment.

Tracking of soil or construction debris into the public right-of-way shall be prohibited. Runoff containing concrete waste or by-products shall not be allowed to drain to the storm drain system, waterway(s), or adjacent lands. The Erosion and Sediment Control Plan shall abide by and contain all applicable items in the Grading Permit Required Application Contents (GRD-004) handout.

Storm water BMPs must be installed per approved plans and specifications, and working properly prior to each rainy season (October 15 each year) and remain functional throughout the rainy season, but may not be removed before April 15.

Storm water BMPs shall be designed and installed pursuant to the adopted Sonoma County Best Management Practice Guide.

Mitigation Monitoring**:** Permit Sonoma inspectors will ensure that selected erosion and sediment control measures are installed in a timely manner during project construction. The applicant shall be responsible for notifying construction contractors about erosion control requirements. Permit Sonoma will verify storm water best management practice installation and functionality, through inspections, throughout the life of the construction permit(s).

55. Excavation, handling, transport and/or any deposit of fill that involves soil or material containing naturally-occurring asbestos (serpentine) shall comply with all applicable State [and BAAQMD program] regulations, including but not limited to 17 CCR §93105.”

Mitigation Monitoring: The Permit Holder shall be responsible for ensuring that all excavation, handling, transport and/or any deposit of fill that involves soil or material containing naturally-occurring asbestos (serpentine) complies with all applicable State [and BAAQMD program] regulations. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate.

TRANSPORTATION AND PUBLIC WORKS:

"The conditions below have been satisfied" BY ________________________ DATE ________

56. The Applicant, his or her personal representatives, and project consultants are advised that the issuance of building permits is subject to the payment of a development fee (Traffic Mitigation Fee) as required by Section 26, Article 98 of the Sonoma County Code. The fee is computed multiplying project Average Daily Traffic (ADT) by the commercial fee in effect at the time of permit issuance. Project ADT is the sum of case production ADT and permitted event ADT.

57. To allow for the smooth and safe movement of passenger vehicles entering and exiting the public road that provides access to the property, entry to Westside Road shall conform to AASHTO recommendations. More specifically, the Applicant shall construct all driveway entrances to meet the following criteria:

    a. A minimum paved throat width of 24 feet;

    b. Return curves having a pavement radius sufficient to accommodate the wheel path of the largest vehicle entering the site; the design may incorporate paved tapers to insure right-turn movements are completed without the need to enter the opposing traffic lane.

c. The driveway shall enter Westside Road as close to perpendicular as possible, but in no case shall the driveway enter the public road at more than 20 degrees from perpendicular.

d. The entrance shall be surfaced with asphalt concrete a minimum distance of 25 feet from the edge of pavement.

e. The minimum sight distance for vehicles exiting the Project driveways shall be in accordance with the findings of the W-Trans traffic study dated March 10, 2016. Prior to issuance of a building permit for the winery building or wine cave, the Applicant shall implement all stopping sight distance improvements as recommended within the study. Improvement of the westerly driveway entry shall conform to the Winery Entry Grading Plan, dated June 26, 2017, prepared by Adobe Associates, Inc. The minimum finished grade shall be established 0.75 feet below the sightline. A hardscape shall be installed along this line to preserve sight distance. Alternatively, the finished grade shall be established 1.0' below the sightline with a low-growing ground cover planted on the surface. Any trees impacting the sight triangle shall be trimmed and maintained sufficiently above the ground surface to clear sight obstructions.

f. Refer to County of Sonoma Department of Transportation and Public Works Construction Standard Drawing 814, latest revision, for private road and driveway intersection details (http://sonomacounty.ca.gov/TPW/Roads/Services/Road-Data-and-Resources/Construction-Standards/).

g. An Encroachment Permit issued by PRMD shall be obtained prior to constructing any improvements within County road right-of-way.

h. All driveway entrance improvements shall be constructed prior to occupancy of any new structure.

58. Prior to PRMD issuance of temporary or final occupancy on building permits for the winery (on west side) or tasting room buildings (on east side), the Permit Holder shall obtain necessary permits to install an automated swing or rolling gate at the winery production facility (west side) project driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement. NOTE: Placement of temporary barricades in this driveway during events does not satisfy this requirement.

Mitigation Monitoring**:** PRMD shall not issue final or temporary occupancy on the winery or tasting room buildings, until the Permit Holder has obtained all necessary permits and has installed the automated swing or rolling gate at the winery production facility (west) project driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement.

59. To minimize pedestrian crossings at Westside Road, the winery production facility parking lot shall remain closed to the public, with the exception of the 30-person agricultural promotional events. During the 30-person events, a Parking Attendant shall monitor the gate to control vehicle and pedestrian access and egress of the winery facility.

60. All guest parking shall be provided on the tasting room side of the public road. The Department of Transportation and Public Works requires the installation of an automated swing or rolling gate at this driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement. Placement of temporary barricades in this driveway during events does not satisfy this requirement.

61. The Department of Transportation and Public Works recommends the Applicant update the project overflow parking plan to account for previously identified overflow spaces that are eliminated from the production facility parking lot.

62. Under the approval of an Encroachment permit and prior to issuance of any building permits for the winery building on the west side of the project site by PRMD, modifications to the embankment and vegetation on the Permit Holder's property on the northerly side of the project's west side driveway entrance shall be completed to allow a minimum of 250-feet of sight distance needed for the critical approach speed. The plans for the modification to the embankment shall be prepared by a Registered Civil Engineer and shown on the final grading plans for the project. The details of vegetation removal shall be done by a licensed landscape architect and depicted on the final landscape plans. This area shall be maintained with hardscape materials or low lying ground vegetation.

    Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading permit or building permit until the Encroachment permit has been approved to allow the modifications to the embankment and vegetation on the Permit Holder's property on the northerly side of the project's west side driveway entrance.

63. The existing Westside Farms sign shall be removed and this area left clear to provide adequate sight distance to the north.

    Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading permit until the Westside Farms sign has been removed.

64. Agricultural promotional events on the west side of the project site are limited to a maximum capacity of 30 guests. No industry wide events shall be held on the west side of the project site.

    Mitigation Monitoring: Failure by the Permit Holder to adhere to the 30-guest maximum on the west side of the project site or holding industry-wide events on the west side of the project site is considered a violation of the Use Permit conditions and subject to modification or revocation proceedings.

65. To minimize pedestrian crossings at Westside Road, the winery production facility (west) parking lot shall remain closed to the general public. All guest parking shall be provided on the tasting room side (east) of the public road. (On-going Condition).

    Mitigation Monitoring: Failure by the Permit Holder to keep the automated gate closed to the general public is considered a violation of the Use Permit conditions and subject to modification or revocation proceedings. (On-going Condition).

66. Parking of vehicles and/or trucks associated with this winery facility is not permitted along any public or private roadways, or shared vineyard roads.

    Mitigation Monitoring: If the Permit and Resource Management Department receives complaints that vehicles and/or trucks associated with this winery facility are being parked along public roadways, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification.

67. For the larger industry-wide events and agricultural promotional events of 100 guests or more, at least two parking attendants shall be on duty to direct traffic and guide the on-site parking of guest vehicles. Parking attendants shall remain on duty throughout the duration of the events.

    Mitigation Monitoring: If the Permit and Resource Management Department receives complaints that parking attendants are not on duty during the larger industry-wide events and agricultural promotional events, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification.

FIRE AND EMERGENCY SERVICES:

“The conditions below have been satisfied BY ______________________________ DATE ________

68. As a condition of approval by Sonoma County Fire and Emergency Services and the Local Fire Protection District, this project is subject to the Sonoma County Fire Safety Ordinance (Sonoma County Code). All applications for development approvals must be approved by the Sonoma County Fire Marshal, and shall be accompanied when required by code; plans, engineering calculations, and other data necessary to determine compliance with the provisions of the codes, and shall be in compliance with the following conditions: (Ref. California Code of Regulations Title-14, Division 1.5,Chapter 7, Subchapter 2, Articles 1 – 5, when located in the State Responsibility Area (SRA), & Sonoma County Code Chapter 13, Article IV, Section 13-17 & Sonoma County Code Chapter 13.

69. Prior to any construction, or changes in use of existing building or facilities, applicable Fire Code construction permits required by Chapter 1, Division II of the California Fire Code as adopted and amended by Sonoma County Code shall be obtained from the Sonoma County Fire and Emergency Services Department.
    a. The applicant or owner shall demonstrate all existing use permit conditions are in compliance and recommend changes to address previously approved conditions set by the Fire Code Official.

70. Applicant shall provide evidence to Sonoma County Fire that the fire service features for buildings, structures and premises will comply with the California Fire Code as adopted and amended by Sonoma County Code. Including but not limited to: fire apparatus access roads; access to building openings and roofs; premises identification and road naming; gate access & key boxes; fire protection water supplies; and building features.
    a. Access roads: minimum emergency access is required to provide safe access for emergency fire equipment and civilian evacuation concurrently, and to allow unobstructed traffic circulation during a wildfire or other emergency.
    i. Newly constructed access roads from every building to a public street shall be all-weather hard-surfaced (suitable for use by fire apparatus) right-of-way of an approved width and shall extend to within 150 feet (45 720 mm) of all portions of the exterior walls of the first story of buildings as measured by an approved route around the exterior of the building or,
    ii. Buildings occupying greater than 62,000 sqft in total area on the same lot shall have additional fire apparatus access roads from two separate locations or as approved by the fire code official. See appendix D section D104 the exception is deleted by county amendment.
    iii. Buildings with a average height of greater than 30-0 feet shall meet aerial access per D105
    iv. Buildings meeting the requirements of D106 and D107 shall have additional access roads as approved by the fire code official.
    b. Premises Identification and Road Naming: Approved road names & signs, address numbers, building numbers or approved building identification placed in a position that is plainly legible and visible from the street or road shall be provided.
    c. Gates: Where gates or similar barriers are installed across access roads, an approved lock shall be installed as required by the fire code official.
    d. Water Supply: An approved water supply capable of supplying the required fire flow for fire protection shall be provided to premises.
    e. Building features: Fire sprinklers are required and fire alarm system is required.

71. Applicant shall provide evidence to Sonoma County Fire that applicable Fire Code Operational Permits required by Chapter 1, Division II of the California Fire Code as adopted and amended by Sonoma County Code will be obtained from Sonoma County Fire or the local fire code official.

72. Applicant shall provide a written “Fire Safety and Evacuation Plan” (as required by Section 403 and 404 of the California Fire Code) to Sonoma County Fire for approval. This includes but not limited to medical trained staff, fire watch, crowd managers. This plan shall be re-evaluated at any

time when requested in writing by the fire code official.

a. This shall be also provided for the special events larger than 100 persons.

73. Applicant shall provide evidence to Sonoma County Fire that there are enough parking spaces to support the proposed activity without compromising emergency access. A ratio of two persons per vehicle shall be used in making such calculations.

74. Applicant shall provide to Sonoma County Fire evidence of the type of winery cave that is on the facility – either Type-1, 2, or 3. Type 1 Winery Caves are not permitted for public access. Type-2 winery caves permit limited public access. Unless the winery cave is a Type 2 or Type 3 winery cave, it shall not be permitted to be used for any events.

a. Wine caves may be required to be sprinklered and provide a fire alarm system

75. Prior to any business operation, applicant shall provide evidence to Sonoma County Fire that the prevention, control and mitigation of dangerous conditions related to storage, dispensing, use and handling of hazardous materials will be in accordance with Chapter 50 of the California Fire Code as adopted and amended by Sonoma County Code.

a. Provide CUPA Exemption form
b. Provide CERS ID Number
c. Contact Hazmat CUPA Division for inspection clearance 707-565-1152

76. Due to the scope of this project a Fire Services Pre-Construction meeting is required at the applicant's cost with the local fire authority included.

PLANNING:

"The conditions below have been satisfied BY ______________________________ DATE ________

77. This Use Permit approval is for construction of a winery with a maximum annual production capacity of 60,000 cases with a wine cave, a public tasting room, and a reserve tasting room with marketing accommodations on the upper floor consisting of two-guest rooms each with full bathrooms. The Use Permit approval also includes participation in two industry-wide events days per year with a maximum of 300 people on site per event and 20 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests). No weddings, receptions, or concerts were proposed or approved under this Use Permit.

On the west side of the project site at the winery, agricultural promotional event size is limited to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle. Industry-wide events will not be held on this side of the project site. The agricultural promotional events on the west side will be business and marketing related technical tastings.

The 20 authorized agricultural promotional events must promote and market agricultural products grown or processed in the County and be secondary and incidental to agricultural production. All event activities must be directly related to and promote agricultural products grown or processed on the property.

Hours of operation:

- Winery operations: Monday through Friday, 7:00 a.m. to 6:00 p.m. Non-Harvest Season
  Monday through Friday, 6:00 a.m. to 10:00 p.m. Harvest Season

- Tasting Room hours: 10:00 a.m. to 5:00 p.m., 7 days a week
- Industry- Wide events: 11:00 a.m. to 5:00 p.m., two event days per year

- Agricultural Promotional Events: Varies. 11 a.m. to 3 p.m., 9 a.m. to 9 p.m., or 6 p.m. to 9 p.m. with all clean up completed by 10:00 p.m.

Any proposed modification, alteration, and/or expansion of the use authorized by this Use Permit shall require the prior review and approval of PRMD or the Board of Zoning Adjustments, as appropriate. Such changes may require a new or modified Use Permit and additional environmental review. The use shall be operated in accordance with the proposal statement and site plan (as amended by this application) located in File No. UPE14-0008.

78. This Use Permit (UPE14-0008) shall supersede all prior Use Permits, upon implementation or when all the pre-operational conditions have been met and this Use Permit is vested.

79. Prior to temporary or final occupancy on either the hop kiln or hop bale barn, the applicant shall submit a complete application and current processing fee for Level 1 zone change to add the HD Combining Zone and Landmarks designation on APN 110-240-031 (east side of Westside Road) prior to issuance of any grading or building permit on that parcel. (Adding the HD overlay zone may be processed as a part of the Comprehensive Planning Division's semi-annual package of zone changes required as conditions of approval.)

Mitigation Monitoring: PRMD shall not allow temporary or final occupancy on either the hop kiln or hop bale barn until the applicant has submitted a complete application and current processing fee for Level 1 zone change to add the HD Combining Zone and Landmarks designation on APN 110-240-031 and-032 (east side of Westside Road).

Noise:

80. NOTE ON GRADING, IMPROVEMENT, AND BUILDING PLANS:

Construction activities associated with this project shall be restricted as follows:

a. All internal combustion engines used during construction of this project will be operated with mufflers that meet the requirements of the State Resources Code, and, where applicable, the Vehicle Code. Equipment shall be properly maintained and turned off when not in use.

b. Except for actions taken to prevent an emergency, or to deal with an existing emergency, all construction activities shall be restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays and 9:00 a.m. and 5:00 p.m. on weekends and holidays. If work outside the times specified above becomes necessary, the applicant shall notify the PRMD Project Review Division as soon as practical.

c. There will be no starting up of machines nor equipment prior to 7:00 a.m, Monday through Friday or 9:00 am on weekends and holidays; no delivery of materials or equipment prior to 7:00 a.m nor past 7:00 p.m, Monday through Friday or prior to 9:00 a.m. nor past 7:00 p.m. on weekends and holidays and no servicing of equipment past 7:00 p.m., Monday through Friday, or weekends and holidays. A sign(s) shall be posted on the site regarding the allowable hours of construction, and including the developer's phone number for public contact.

d. Pile driving activities shall be limited to 7:30 a.m. to 7:00 p.m. weekdays only.

e. Construction maintenance, storage and staging areas for construction equipment shall avoid proximity to residential areas to the maximum extent practicable. Stationary construction equipment, such as compressors, mixers, etc., shall be placed away from residential areas and/or provided with acoustical shielding. Quiet construction equipment shall be used when possible.

f. The Permit Holder shall designate a Project Manager with authority to implement the mitigation prior to issuance of each building/grading permit. The Project Manager's phone number shall be conspicuously posted at the construction site. The Project Manager shall determine the cause of noise complaints (e.g. starting too early, faulty muffler, etc.) and shall take prompt action to correct the problem.

Mitigation Monitoring : PRMD staff shall ensure that the note listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing)

Marketing Accommodations:

81. The two guest room marketing accommodations located on the upper floor of the reserve tasting room (hop bale barn) shall not be used for commercial purposes, including, but not limited to, transient occupancy, vacation rental, hosted vacation rental, or farm stay; and a form of monetary compensation shall not be accepted or exchanged. The marketing accommodations are limited to use by private guests of the winery operator or the winery owners.

Mitigation Monitoring: If the Permit and Resource Management Department receives a complaint that the marketing accommodations are being used for occupancy beyond private guests of the winery operator or the winery owners, PRMD staff shall investigate the complaint and if the condition is violated the Use Permit may be subject to modification or revocation

Planning Fees:

82. This "At Cost" entitlement is not vested until all permit processing costs and development fees are paid in full. Additionally, no grading or building permits shall be issued until all permit processing costs and development fees are paid in full.

83. Construction of new or expanded non-residential development on each lot shall be subject to Workforce Housing Requirements pursuant to 26-89-045 of the Sonoma County Code.

PRIOR TO BUILDING/GRADING PERMIT PHASE

84. Building permits for the winery building and east side tasting room conversions shall be filed simultaneously. The applicant expects the tasting room improvements to be completed before completion of the winery building and wine cave construction. The winery building construction shall begin prior to final occupancy of the tasting room buildings to ensure the project site does not convert to stand-alone tasting rooms. The winery building construction must be completed and granted final occupancy within two years of commencement of the tasting rooms operations, or all tasting room uses shall cease until such time the winery building receives final occupancy.

85. Prior to building permit issuance for the tasting rooms, the property owners shall execute and record a Right-to-Farm declaration on a form provided by PRMD.

Design Review:

86. Prior to issuance of any grading permit for the winery or tasting room development project, a joint meeting shall be held by the Design Review Committee and Sonoma County Landmarks Commission to review and grant final approval on the site plan, building elevations, circulation, parking, landscaping, fencing, irrigation, signage, and exterior lighting plans to minimize any visual impact through design and landscaping improvements. Also, as recommended by the Board of Zoning Adjustments, the installation of solar panels on the roof of the winery building

shall be reviewed and considered by DRC. The applicant shall comply with the recommendations listed on the joint DRC/Landmarks Commission Action Sheet, dated December 2, 2014, and any subsequent recommendations.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading, building, or other development permit until the required plans have been given final approval from the Design Review Committee and Sonoma County Landmarks Commission. PRMD shall not issue temporary or final occupancy for any related building permit until a site inspection of the project site has been conducted by the Project Planner to verify exterior building colors, landscape improvements, signage, and exterior lighting have been installed in accordance with approved plans.

87. Prior to issuance of building permits for the winery and/or tasting room buildings, an exterior lighting plan shall be submitted to the Design Review Committee and Sonoma County Landmarks Commission for a joint-committee review and approval. Exterior lighting is required to be fully shielded from off-site views, and directed downward to prevent "wash out" onto adjacent properties or the night sky. Generally, fixtures should accept sodium vapor lamps and not be located at the periphery of the property. Flood lights are not allowed. The lighting shall be installed in accordance with the approved lighting plan during the construction phase.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue building permits for the winery and/or tasting room buildings until an exterior lighting plan has been reviewed and approved by the Design Review Committee and Sonoma County Landmarks Commission in a joint-committee review, consistent with the above mitigation measures and County standards. The Permit and Resource Management Department shall not sign off temporary or final occupancy on any related Building Permit for the winery or tasting room buildings until a site inspection of the property has been conducted that indicates all lighting improvements have been installed according to the approved plans and conditions. If light and glare complaints are received, the Permit and Resource Management Department shall conduct a site inspection and, if warranted, require that the property be brought into compliance or initiate procedures to revoke the permit.

With implementation of the foregoing mitigation, potential impacts due to new sources of exterior lighting and glare would be reduced to a level of insignificance.

88. Additional measures for lighting impacts include: Lighting plans shall be designed to meet the Lighting Zone (LZ2 for rural) standards from Title 24 effective October 2005.

89. All exterior fixtures shall be limited to lamps (light bulbs not exceeding 100 watts.

90. The project site is subject to the VOH district requirements to mitigate for removal of any Valley Oak tree under Section 26-67-030 of the Zoning Code. Any removal of any large valley oak, or any small valley oaks having a cumulative diameter at breast height greater than sixty inches (60″), on any property within the VOH district, the Permit Holder shall mitigate the resulting valley oak loss by one of the following measures:
    (1) retaining other valley oaks on the subject property,
    (2) planting replacement valley oaks on the subject property or on another site in the county having the geographic, soil, and other conditions necessary to sustain a viable population of valley oaks,
    (3) a combination of measures (1) and (2), or
    (4) payment of an in-lieu fee, which shall be used exclusively for valley oak planting programs in the county.

The Permit Holder has the sole discretion under the VOH district criteria to determine which mitigation measure to use to mitigate the valley oak loss. The requirements for each mitigation measure are specified in the Table under Section 26-67-030 of the Zoning Code. Prior to occupancy of the winery or tasting room building whichever is first, the mitigation measure shall be implemented.

Mitigation Monitoring: Prior to issuance of any grading or building permits, or prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission, an appropriate form of mitigation set forth in the Table under Section 26-67-030 of the Zoning Code shall be incorporated into the project and the projects' final landscape plan. Prior to final occupancy on the winery or tasting room buildings whichever is first, the mitigation measure shall be implemented.

91**.** The spoils from the wine cave excavation shall be placed outside of the Scenic Highway Corridor and screened from the public road by existing structures and existing or proposed landscaping to the extent feasible.

Mitigation Monitoring: If the Permit and Resource Management Department staff observes during the development of the project that spoils are located within the Scenic Corridor setback, or receives a complaint, the applicant will be required to remove and relocate the spoils or the Use Permit may be subject to modification or revocation.

92. NOTE ON GRADING PLANS**:** "In the areas of project development, construction fencing shall be installed under the drip-line of all trees that will be retained. Construction fencing shall be placed to ensure that no construction equipment, fill, staging or storage will impact the root zone of these oaks. An arborist shall inspect the location of the construction fencing to insure the root zones of the trees to remain are protected."

Mitigation Monitoring**:** PRMD shall ensure the note has been placed on all grading plans. Also prior to any grading activities the Permit Holder shall submit to the Project Planner evidence through photographs and an arborist letter that construction fencing has been installed prior to issuance of any related grading or building permits for the project.

93. Prior to issuance of final occupancy of the winery and tasting room buildings for the project , native trees to be removed greater than 6" DBH should be replaced by planting same species Plantings of native oaks on site at a ratio of 5 to 1 should be installed within the project landscape plan. It is recommended that new landscape plantings utilize as many native species as possible (shrubs and trees).

Mitigation Monitoring: PRMD shall require any planting of any replacement native oaks trees is done prior to issuance of final occupancy of the winery and tasting room buildings for the project.

94. NOTES ON GRADING, IMPROVEMENT, AND BUILDING PERMIT PLANS:

"The following cultural resource protection measures shall be included in the project:

1. All employees or others on the project site/job site shall be told that no artifacts are to be removed from the area except through authorized procedures. In this usage "artifacts" means any item over fifty (50) years of age. As a general rule artifacts greater than 100 years of age should be considered important unless a specific evaluation determines otherwise.
2. If archaeological or paleontological resources are found, all earthwork in the vicinity of the find shall cease, and PRMD staff shall be notified so that the find can be evaluated by a qualified archaeologist. When contacted, a member of PRMD Project Review staff and project archaeologist shall visit the site to determine the extent of the resource and to develop proper mitigation measures required for the discovery. No further grading in the vicinity of the find shall commence until a mitigation plan is approved and completed subject to the review and approval of the archaeologist and Project Review staff.
3. All employees or others on the job site shall be educated and informed that no artifacts are to be

removed from the area except through authorized procedures. It should be made clear to all individuals and companies associated with any project that any artifacts found in the course of work are the property of the Agency. It is not up to the contractor to determine what the agency considers important.

4. Any artifacts that are found on or near the project area are to be turned over to, or brought to the attention of, the inspector, project manager, or the discoverer's immediate supervisor.
5. Whenever any artifact is found or reported, a tag should be included that indicates the following: (A) the identity of the finder and the date of discovery; (B) the identity of the inspector or other responsible individual to whom the artifact is given; (C) a description of the location where the artifact was found, such as the approximate distance and direction to the nearest measured point, identification of a point on the building plans, or other reliable, accurate method; and (D) a description of the artifact that will allow it to be identified if the tag and artifact are separated.
6. The inspector shall carry a small supply of plastic baggies and 3x5 cards for documentation of artifacts. The artifact, if portable, should be transported to a safe location where it can be kept until it can be inspected by an archaeologist. "

Mitigation Monitoring: PRMD staff shall ensure that the notes listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. The Permit Holder shall ensure the above protection measures are implemented during ground disturbing activities and project construction. If violations occur, PRMD shall seek voluntary compliance from the Permit Holder and thereafter may initiate an enforcement action and/or Use Permit revocation or modification proceedings, as appropriate. (Ongoing).

95. The Permit-Holder shall be responsible to ensure:

a. There shall be a qualified archaeological monitor and/or tribal monitor present during all initial ground- disturbing activities into native soils on the project. The tribal monitor shall be, but not limited to, a representative(s) of the Lytton Rancheria. The qualified archaeological monitor and/or tribal monitor shall have the authority to stop and redirect grading activities to evaluate any tribal cultural resources discovered on the property. Such evaluation shall be done in consultation with the appropriate tribe. However, if the archaeologist and tribal monitor determine, based on their knowledge and experience, that there is no further need for monitoring, the monitoring may cease.

b. All building and/or grading permits shall have the following note printed on plan sheets:

"In the event that archaeological resources such as pottery, arrowheads, midden or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. PRMD staff may consult and/or notify the appropriate tribal representative from tribes known to PRMD to have interests in the area. Artifacts associated with prehistoric sites include humanly modified stone, shell, bone or other cultural materials such as charcoal, ash and burned rock indicative of food procurement or processing activities. Prehistoric domestic resources include hearths, firepits, or house floor depressions whereas typical mortuary resources are represented by human skeletal remains. Historic artifacts potentially include all byproducts of human land use greater than 50 years of age including trash pits older than 50 years of age. When contacted, a member of PRMD project Review staff and the archaeologist shall visit the site to determine the extent of the resources and to develop and coordinate proper protection/mitigation measures required for the discovery. PRMD may refer the mitigation/protection plan to designated tribal representatives for review and comment. No work shall commence until a protection/mitigation plan is reviewed and approved by PRMD project Review staff. Mitigations may include avoidance, removal, preservation and/or recordation in accordance with California law. Archeological evaluation and mitigation shall be at the applicant's sole expense.

If human remains are encountered, all work must stop in the immediate vicinity of the discovered remains and PRMD staff, County Coroner and a qualified archaeologist must be notified immediately so that an evaluation can be performed. If the remains are deemed to be Native American, the Native American Heritage Commission must be contacted by the Coroner so that a "Most Likely Descendant" can be designated and the appropriate provisions of the California Government Code and California Public Resources Code will be followed."

Mitigation Monitoring: Prior to any ground disturbing or grading activities, the Permit Holder shall be responsible for ensuring a qualified archaeological monitoring and/or tribal monitor is present during all initial ground-disturbing activities into native soils on the project. The PRMD shall not issue any grading or building permit until staff has determined the above note has been placed on the plans. In the event that archaeological resources, tribal cultural resources, or cultural resources are discovered, such as pottery, arrowheads, midden, or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. Failure by the Permit-Holder to comply with these requirements shall be considered a violation of the Use Permit and may result in the modification or revocation proceedings of the said Use Permit.

96. The installation of adequate bicycle racks near the entrance to the proposed public tasting rooms. Please reference the bicycle parking standards provided on pages 19 and 20 of the 2010 Sonoma County Bicycle and Pedestrian Plan, which can be found via the following link; http://www.sonoma-county.org/prmd/docs/misc/bikeplandraft.pdf. Bicycle spaces are provided at a ratio of 1 bicycle space for every 5 vehicle spaces. Additional bicycle parking guidelines are also provided by the Association of Pedestrian and Bicycle Professionals (APBP), which can be found online at the following website; http://www.apbp.org/resource/resmgr/publications/bicycle_parking_guidelines.pdf. Please note that the SCBPAC recommends the installation of inverted-U style bicycle racks.

Construction Phase:

97. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS:

"The Permit Holder shall be responsible for controlling dust and debris during all construction phases. Consistent with BAAQMD guidance, the following measures shall be implemented by the permit holder on the project site during the construction period:

a. Water all active construction areas at least twice daily

b. Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least two feet of freeboard.

c. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas and staging areas at construction sites.

d. Sweep daily (preferably with water sweepers) all paved access roads, parking areas and staging areas at construction sites.

e. Hydro-seed or apply (non-toxic) soil stabilizers to inactive construction areas.

f. Enclose, cover, water twice daily or apply (non-toxic) soil binders to exposed stockpiles dirt, sand, etc.

g. Limit traffic speeds on unpaved access roads to 15 mph.

h. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.

i. Replant vegetation and ground cover in disturbed areas as quickly as possible. The Permit Holder shall be responsible for controlling dust and debris during all construction phases."

Mitigation Monitoring: If dust complaints are received, PRMD staff shall conduct an on-site investigation. If it's determined by PRMD staff that complaints are warranted, the Permit Holder shall implement greater or additional dust control measures as determined by PRMD or PRMD may issue a stop work order.

98. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS:
"The permit holder shall also be responsible for complying with provisions to avoid any impacts of naturally occurring asbestos. Prior to any construction or grading, further sampling of soil shall be conducted to verify whether naturally occurring asbestos is present. If naturally occurring asbestos is encountered, the project applicant shall prepare an asbestos dust mitigation plan that complies with the Airborne Toxic Control Measures required by 17 California Code of Regulations, Section 93105. These provisions require, but not limited to, such measures as limiting construction vehicle speeds to 15 miles per hour, wetting the site prior to and during grading, wetting or covering stockpiles, and washing equipment."

Mitigation Monitoring: If dust complaints are received, PRMD staff shall conduct an on-site investigation. If it's determined by PRMD staff that complaints are warranted, the Permit Holder shall implement greater or additional dust control measures as determined by PRMD or PRMD may issue a stop work order.

99. Prior to issuance of final occupancy on any related building permit, landscape planting and irrigation shall be installed in accordance with the plans approved by the Design Review Committee and Sonoma County Landmarks Commission. A site inspection by the Project Planner is required and a letter from the Landscape Architect or Contractor must be submitted verifying landscape and irrigation installation is in accordance with approved plans.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue final occupancy on any building related permit until it has been verified by a site inspection by the Project Planner and a letter from the Landscape Architect or Contractor that landscaping and irrigation have been installed in accordance with approved plans.

With the implementation of these mitigation measures, the project effect on scenic vistas and scenic resources would be reduced to a less than significant impact. (Also see item 1.d, below, regarding mitigation for night lighting.)

100. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**:** "To avoid or minimize potential impacts to passerines and raptors that may potentially nest in the trees**,** the following requirements shall be implemented during all stages of project development and construction:

1. Grading or removal of nesting trees should be conducted outside the nesting seasons, which occurs between approximately February 15 and August 15.
2. If grading between August 15 and February 15 is infeasible and groundbreaking must occur within the nesting season, a pre-construction nesting bird (both passerine and raptor) survey of the grasslands and adjacent trees shall be performed by a qualified biologist within 7 days of ground breaking. If no nesting birds are observed no further action is required and grading shall occur within one week of the survey to prevent "take" of individual birds that could begin nesting

after the survey.

3. If active bird nests (either passerine and/or raptor) are observed during the pre-construction survey, a disturbance free buffer zone shall be established around the nest trees until the young have fledged, as determined by a qualified biologist.

4. The radius of the required buffer zone can vary depending on species, (i.e., 75-100 feet for passerines and 200-300 feet for raptors), with the dimensions of any required buffer zones to be determined by a qualified biologist in consultation with CDFW.

5. To delineate the buffer zones around a nesting tree, orange construction fencing shall be placed at the specified radius from the base of the tree within which no machinery or workers shall intrude.

6. After protective construction fencing is in place around the buffer zones, there will be no restrictions on grading or construction activities outside the prescribed buffer zones."

Mitigation Monitoring: PRMD staff shall ensure that the above mitigation measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

101. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**:** "To prevent direct mortality of bats that may roost in tree cavities, crevices, exfoliating bark, or foliage of the trees identified on the site, the following requirements shall be implemented during all stages of project development and construction:

1. Potential habitat trees shall be removed only between approximately March 1 or when evening temperatures are above 45° F and rainfall less than ½ " in 24 hours occurs, and April 15, prior to parturition of pups. The next acceptable period is after pups become self-sufficient (September 1 through October 15), or prior to evening temperatures dropping below 45°F and onset of rainfall greater than ½" in 24 hours.

2. Tree removal shall be conducted using a two-stage process over two consecutive days. With this method, small branches and small limbs containing no cavity or crevice or exfoliating bark habitat on habitat trees, as identified by a qualified bat biologist are removed first on day 1, using chainsaws only (no dozers, backhoes, etc.). The following day (Day 2), the remainder of the tree is to be removed. The disturbance caused by chainsaw noise and vibrations, coupled with physical alteration, has the effect of causing colonial bat species to abandon the roost tree after nightly emergence for foraging. Removing the tree the next day prevents re-habitation and re-occupation of the altered tree.

3. Trees containing suitable potential habitat must be trimmed with chainsaws on Day 1 under initial field supervision by a qualified bat expert to ensure that the tree cutters fully understand the process, and avoid incorrectly cutting potential habitat features or trees. After tree cutters have received sufficient instruction.

4. All other vegetation other than trees within the Limit of Work should be removed prior to tree removal, according to the dates provided above. If vegetation must be removed outside those dates, a 50-ft buffer around each habitat tree should be observed to reduce likelihood of abandonment of the roost and young.

5. If non-habitat trees must be removed outside seasonal periods of bat activity as described above, a 50-ft. buffer around each habitat tree shall be observed to reduce likelihood of abandonment of the roost and young.

6. In order to minimize potential take of solitary bats, tree removal should begin with small trees and

vegetation on the site, followed by smaller trees in each location where trees are to be removed. Only chainsaws should be used, to create a noise disturbance that will be sufficient to cause roosting individual to abandon the site.

Mitigation Monitoring**:** PRMD staff shall ensure that the above mitigation measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

102. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**: "**To prevent direct mortality of bats that may roost in structures on the site, the following requirements shall be implemented during all stages of project development and construction:

A. Large Barn: Under direct supervision of a qualified bat biologist, and only during "seasonal periods of bat activity", conduct partial dismantling of portions of the exterior siding and roofing materials to increase light and airflow into structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this, but the upper loft will also require supplemental lights aimed up from the floor directly beneath the hop cars to cause bats to abandon the roost crevices.

"Seasonal periods of bat activity" are identified as:

1. Between March 1 (or when heavy rains [greater than ½" in 24 hrs.] cease and/or evening temperatures remain above 45F) and April 15 (after which time females will begin to give birth to pups.

2. Between September 1 (after all pups are self-sufficient) and approximately October 15 (or before heavy rains [greater than ½" in 24 hrs.] begin and/or evening temperatures fall below 45F)

B. South Hop Barn: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing materials to increase light and airflow into structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

C. North Hop Barn: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing material to increase light and airflow into the structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

D. Residence: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing materials to increase light and airflow into the structure, causing the bats to abandon the structure of their own volition. All walls and portions of the soffit boards will require some removal of material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

E. Chicken Shed: No further actions are required to prevent the use by bats or take of roosting bats.

F. Pump/Storage Barn: To reduce the likelihood of this building being used by bats abandoning the larger structures, all doors should be left open during the day and night hours. No further actions are required."

Mitigation Monitoring **:** PRMD staff shall ensure that the measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

103. To protect the potential presence of the western pond turtle and its habitat, the following terms are required:

a. Establish and maintain a minimum 50-foot wide setback around the reservoir prior to any ground disturbing activities or project construction. Any stockpiling of wine cave spoils on the project site shall also maintain a minimum of 50-foot wide setback around the reservoir. Except for the exclusions stated herein, no activities shall occur within the setback area. Excluded from the setback area required by this term are any features, and access to such features, that are currently in existence and are delineated on the proposed development map. Features are defined as including but not limited to: cropland and planted landscape areas, roads and roadways, bridges, equipment and material storage areas, buildings, structures, fences, wells, pipes, drainage facilities, utility lines and poles, pumps, sumps, and water diversion and storage facilities. Planting and irrigation of riparian vegetation within the setback area is allowed;

b. A qualified biologist shall conduct a pre-construction survey for western pond turtle, in those areas not already paved or graveled. If pond turtle is observed in the proposed construction area, the biologist shall notify CDFW and provide a relocation plan for the individual.

c. In the future, prior to dredging the reservoir, a plan should be created to avoid disturbing the emergent (wetland) vegetation around the reservoir during dredging operations. Approval of any dredging operations should be obtained from the California Department of Fish and Wildlife; a. Establish and maintain a minimum 50-foot wide setback around the reservoir.

Mitigation Monitoring**:** Prior to issuance of any grading permit or any ground disturbing activities, the Permit Holder shall be responsible for establishing a 50-foot wide setback from the existing reservoir. Under the guidance of a qualified biologist, Wildlife Exclusion Fencing (WEF) shall be installed at the edge of the 50-foot setback line and shall remain in place throughout the duration of the project and while construction activities are ongoing. Upon project completion the WEF can be completely removed and the areas returned to original condition or better.

104. A total of 21 trees are proposed for removal as part of the project development, they include: 6 coast live oak trees, 5 valley oaks, 4 cottonwoods and one redwood, all of which are native trees. Prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission and prior to PRMD issuance of any grading or building permit, a certified arborist shall submit a final tree survey and inventory to the Project Planner. The arborist shall provide the replacement value of the trees to be removed and the protection measures during construction activities for the remaining trees. A final landscape plan shall be based on the findings of the arborist report and address the replacement of any native specimens.

Mitigation Monitoring: Prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission and prior to issuance of any grading or building permits, the Project Planner shall review the arborist report and shall review the final design plans to ensure that the replacement trees are incorporated into the final landscape plan.

105. The project site is subject to the VOH district requirements to mitigate for removal of any Valley Oak tree under Section 26-67-030 of the Zoning Code. Any removal of any large valley oak, or any small valley oaks having a cumulative diameter at breast height greater than sixty inches (60″), on any property within the VOH district, the Permit Holder shall mitigate the resulting valley oak loss by one of the following measures:

(1) retaining other valley oaks on the subject property,

(2) planting replacement valley oaks on the subject property or on another site in the county having the geographic, soil, and other conditions necessary to sustain a viable population of valley oaks,

(3) a combination of measures (1) and (2), or

(4) payment of an in-lieu fee, which shall be used exclusively for valley oak planting programs in the county.

The Permit Holder has the sole discretion under the VOH district criteria to determine which mitigation measure to use to mitigate the valley oak loss. The requirements for each mitigation measure are specified in the Table under Section 26-67-030 of the Zoning Code. Prior to occupancy of the winery or tasting room building whichever is first, the mitigation measure shall be implemented.

106. The following dust control measures will be included in the project:

   a. Water or dust palliative shall be sprayed on unpaved construction and staging areas during construction as directed by the County.

   b. Trucks hauling soil, sand and other loose materials over public roads will cover the loads, or will keep the loads at least two feet below the level of the sides of the container, or will wet the load sufficiently to prevent dust emissions.

   c. Paved roads will be swept as needed to remove soil that has been carried onto them from the project site.

   d. Water or other dust palliative will be applied to stockpiles of soil as needed to control dust.

   PRMD staff shall ensure that the measures are listed on all site alteration, grading, building or improvement plans, prior to issuance of grading or building permits.

107. The applicant shall include these Conditions of Approval on separate sheets of plan sets to be submitted for building and grading permit applications.

108. All grading and development on site shall be done in compliance with the County Tree Protection Ordinance, including protection of trees during construction with a chain link fence at the drip-line, and replacement of damaged or removed trees. The project's grading and landscape plans shall detail all tree protection implementation measures.

   PRMD shall not sign off the grading or building permit for issuance until the project grading and landscape construction documents clearly show all tree protection measures (as required in the County Tree Protection Ordinance). PRMD shall not sign off the grading or building permit for occupancy until a site inspection has been conducted, and the applicant has provided written verification from the project's landscape architect or contractor, that the tree protection measures were complied with.

109. A Water Conservation Plan shall be submitted for all buildings and landscaping prior to building permit issuance, subject to PRMD review and approval. The Water Conservation Plan shall include all reasonably feasible measures to reduce water demand to the maximum extent feasible and enhance water resource recovery to maintain sustainable water supplies. Measures that must be evaluated include: installation of low-flow fixtures, best available conservation technologies for all water uses, rainwater and stormwater collection systems and graywater reuse. Landscaping plans must comply with the County Water Efficient Landscape Ordinance. Prior to Building Permit Issuance a Landscape Permit application shall be submitted for all new and rehabilitated landscapes, as required by the Water Efficient Landscape Regulations (Chapter

7D3 of the Sonoma County Building Code). Verification from a qualified irrigation specialist that landscaping plan complies with the County Ordinance shall be provided prior to building permit issuance. The measures in the plan shall be implemented by the applicant and verified by PRMD staff prior to Certificate of Occupancy or operation of the use.

110. Prior to final or temporary occupancy on the winery or tasting room buildings, the Permit Holder shall submit for approval to the Project Planner at PRMD a Traffic and Parking Management Plan prepared by a qualified traffic engineer. In order to provide orderly and efficient movement of vehicles entering the site and to minimize traffic impacts on the public road the Traffic and Parking Management Plan shall include; but not limited to, on-site traffic control measures for all events that exceed 125 guests. Traffic control shall be located off of the public road.

<u>Mitigation Monitoring:</u> The Permit and Resource Management Department shall not issue temporary or final occupancy on any building permit for the winery or tasting room buildings until the any grading permit until a Traffic and Parking Management Plan has been submitted and approved by the Project Planner at PRMD.

USE PERMIT OPERATIONAL REQUIREMENTS

111. If pomace is to be disposed of, it shall be disposed of in a manner that does not create a discharge to surface water, or create nuisance odor conditions, or attract nuisance insects or animals, according to the following priority:

1. Pomace shall be composted and land applied, or land applied and disced into the soil on vineyards or agricultural land owned or controlled by the applicant.

2. Pomace shall be sold, traded or donated to willing soil amendment or composting companies that prepare organic material for use in land application.

3. Pomace shall be transported to any County's composting facility in a fashion that allows the pomace to be used by the County’s composting program.

Pomace shall not be disposed of into the County solid waste landfill by direct burial, except where all possibilities to dispose according to priorities 1 through 3 above have been exhausted. In all cases, care shall be taken to prevent contamination of pomace by petroleum products, heavy metals, pesticides or any other material that renders pomace unsuitable for composting with subsequent land application. Land application, placement of pomace into a composting facility or disposal shall occur within two weeks of the end of wine grape crush.

<u>Mitigation Monitoring:</u> If the Permit and Resource Management Department receives complaints regarding objectionable odors from pomace stockpiling and/or disposal, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification. With implementation of the foregoing standard condition, project impacts associated with the creation of objectionable odors would be less than significant.

112. The Permit-Holder prior to scheduling any large agricultural promotional events of 100 guests or more on the project site shall coordinate events with the two adjacent winery operators within one-half mile to off-set event days and/or event times, with the exception of the two industry wide event days because these days are set by the Russian River Valley Grape Growers Association. Furthermore, the Permit Holder shall not hold larger agricultural promotional events of 100 guests or more when there is a large bike event sponsored by a bona-fide organization or group (on going).

<u>Mitigation Monitoring</u>: Failure by the Permit Holder to coordinate the larger agricultural promotional events of 100 guests or more on the project site with the two adjacent winery operators within one-half mile or holding a larger agricultural promotional event of 100 guests or

more during a large bike event ,as specified above, shall be considered a violation of the Use Permit conditions and subject to modification or revocation proceedings.

113. This permit shall be subject to revocation or modification by the Board of Zoning Adjustments if: (a) the Board finds that there has been noncompliance with any of the conditions or (b) the Board finds that the use for which this permit is hereby granted constitutes a nuisance. Any such revocation shall be preceded by a public hearing noticed and heard pursuant to Section 26-92-120 and 26-92-140 of the Sonoma County Code.

114. This use shall be constructed, maintained, and operated in conformance with all applicable county, state, and federal statutes, ordinances, rules, and regulations. A violation of any applicable statute, ordinance, rule or regulation shall be a violation of the Use Permit, subject to revocation or modification.

115. One-Year Review. A review of event activities under this Use Permit shall be undertaken by the director one year after commencement of the first event to determine compliance with the Conditions of Approval applicable to agricultural promotional events. The director shall give notice of this Use Permit review to all owners of real property within three hundred feet (300′) of the subject site plus any additional property owners who have previously requested notice. The director shall allow at least ten (10) days for comment. If the director determines that there is credible evidence of non-compliance with the Conditions of Approval applicable to events or that event activities constitute a public nuisance, the director shall refer the matter to the Board of Zoning Adjustments for possible revocation or modification of the Use Permit with regard to events. Any such revocation or modification shall be preceded by a public hearing noticed and heard in compliance with the Zoning Code. This Use Permit review shall not include any other aspect of the original Use Permit approval, unless other Conditions of Approval have not been met, violations have occurred, or the use constitutes a public nuisance.

116. The days and hours for special events shall be subject to review and approval by a Special Events Coordinator or similar program established by the County or at the County's direction.

The applicant shall submit to the County an annual request and schedule for special events for each calendar year including the maximum number of participants, times and dates. The applicant shall contribute, on an annual basis, a fair share towards the cost of establishing and maintaining the program. The program should consider the fairness for long established uses and establish reasonable costs for managing the program.

117. Annual Report. After commencement of event activities, the owner/operator shall submit a report each year to PRMD by January 15th describing the number of agricultural promotional events that occurred during the previous year, the day, date, time, and duration of each event, the number of persons attending each event, the purpose of each event, and any other information required by the director. The annual report shall also include the proposed events for the coming year.

118. Customer and Site Visitor Management. The operator of the establishment shall take all reasonable steps, including contacting law enforcement in a timely manner, to prevent customers or other persons from engaging in objectionable activities on the premises, parking areas under the control of the operator, and other public or quasi-public areas within site of the premises during business hours.

119. Staff Training. Within 90 days from issuance of a Certificate of Occupancy or if no building permit is required, within 90 days of issuance of the Use Permit, all owners, managers, and employees selling alcoholic beverages at the establishment shall complete a certified training program in responsible methods and skills for selling alcoholic beverages. The certified program shall meet the standards of the California Department of Alcoholic Beverage Control or other certifying/licensing body, which the State may designate. New owners, managers, and employees shall complete the training course within 30 days of the date or ownership or employment and

every third year thereafter. Records of successful completion for each owner, manager, and employee shall be maintained on the premises and presented upon request by a representative of the County.

120. Food Service Condition:

A restaurant, café, delicatessen or any other food service offering cooked-to-order food is prohibited. Table service, retail sales of cooked or prepared food or menu items are prohibited in the tasting room, except that within the **public** and reserve tasting room**s** for food and wine pairings as noted below. The following types of food service are allowed under this permit:

a. Samples or tastes of pre-packaged food, such as crackers, nuts or other palette cleansers, featuring local foods and food products offered in conjunction with wine tasting.

b. Prepared meals or appetizers featuring local foods and food products offered in conjunction with agricultural promotional events, such as wine club parties, and winemaker dinners, and with food and wine pairings as limited below. Such meals/appetizers may be prepared in a food preparation area prior to serving as described on the approved project floor plan. The preparation area can include counter space, a double sink, microwave oven(s), warming oven(s), refrigeration, a stove or range, and an exhaust hood.

c. Retail sales of pre-packaged food not associated with the activities described in a) and b) are allowed in conjunction with wine tasting subject to the following limitations:

   i) Retail sales of pre-packaged food featuring local foods and food products shall be permitted only during tasting room hours as approved by this Use Permit.

   ii) Retail sales of pre-packaged food available for on-site consumption only.

   iii) No indoor seating area or table service is permitted in conjunction with retail sales of pre-packaged food. Outdoor seating areas are permitted for use as outdoor picnic areas.

   iv) No off-site signs advertising retail sales of pre-packaged food is permitted. All project signage shall conform to the Zoning Code Sign Regulations.

Food and Wine Pairing:

Seating in the **public** and reserve tasting room**s** shall be limited to15 seats and no more than 15 persons.

Food and wine pairings shall be selected by the winery with no menu options allowed.

Such pairing shall be limited to small appetizer-like portions, are limited to no more than four days per week and no more than twice per day at specified times (11:00 a.m. and 2:00 p.m.) avoiding the lunch hour and shall not be open to drop in guests.

121. Any proposed modification, alteration, and/or expansion of the use authorized by this Use Permit shall require the prior review and approval of PRMD or the Board of Zoning Adjustments, as appropriate. Such changes may require a new or modified Use Permit and additional environmental review.

122. The Director of PRMD is hereby authorized to modify these conditions for minor adjustments to respond to unforeseen field constraints provided that the goals of these conditions can be safely achieved in some other manner. The applicant must submit a written request to PRMD

demonstrating that the conditions is infeasible due to specific constraints (e.g. lack of property rights) and shall include a proposed alternative measure or option to meet the goal or purpose of the condition. PRMD shall consult with affected departments and agencies and may require an application for modification of the approved permit. Changes to conditions that may be authorized by PRMD are limited to those items that are not adopted standards or were not adopted as mitigation measures or that were not at issue during the public hearing process. Any modification of the permit conditions shall be documented with an approval letter from PRMD, and shall not affect the original permit approval date or the term for expiration of the permit.

The owner/operator and all successors in interest, shall comply with all applicable provisions of the Sonoma County Code and all other applicable local, state and federal regulations.

Planning Commission/Board of Zoning Adjustments Appeal Form

PJR-021

To: Board of Supervisors
County of Sonoma, State of California

File # UPE14-0008

Appeal is hereby made by: See attached complete list of Appellants to UPE14-008

Mailing Address: See attached complete list of Appellants and their mailing addresses

Phone: 415-385-2385 Email: See attached complete list of Appellants and their email contacts

The Board of Zoning Adjustments on

September 21, 20 17, approved a request by

Westside Farms - 7097 Westside Road for

a Use Permit to construct a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, and a new wine cave (approx. 20,720 square feet).

located at 7097 Westside Road, Healdsburg, CA 95448

APN 110-240-031, -032, and -040 Zoned LIA B6-60, F1, F2, RC200/100, SR, VOH Supervisorial District 4 & 5

This appeal is made pursuant to Sonoma County Code Chapter 26 Section 26-92-160 for the following specific reasons:

1. Generates significant employee, public and truck traffic in an area with inadequate sight lines.
2. Large-scale project, with tasting rooms on both sides of the road, situated within an approx. 1000 ft. radius of three existing tasting rooms is detrimental to the rural character of the area.
3. Disproportionate focus on hospitality and promotional uses is inconsistent with the Williamson Act contract and the intent of the General Plan to preserve agriculture and rural character.
4. The overwhelming concentration of existing wineries on Westside Rd. and other similar County roadways is too great of a safety and county-wide issue for the BOS to ignore.

RE: PUBLIC HEARING **APPEAL OF WESTSIDE FARMS WINERY AND HOSPITALITY COMPLEX** Sonoma Co. UPE14-0008 **Intent to Adopt a Mitigated Negative Declaration at 7097 Westside Road**

August 9, 2018

To our Board of Supervisors,

We thank you for considering the appeal of the Westside Farms winery use permit, filed on October 2, 2017 by Maacama Watershed Alliance, Healdsburg Citizens for Sustainable Solutions, Forest Unlimited, Todd Everett (Westside area resident), Warren Watkins and Sonoma Coast Rural Preservation. Given grave policy errors, unstudied impacts and procedural missteps below, appellants request the County not approve a discretionary use permit for this project plan.

Our position is supported by the existing record. We are also submitting new items (comments, expert testimony) with this letter. Those **new items of evidence** are highlighted in **BOLD** for easy identification. All exhibits at set forth in the Table of Exhibits.

Approving this project would establish precedents that downgrade longstanding land use practices or policies outlined below designed to protect public safety and the health and welfare of the neighborhood. Moreover, the project fails to meet several requirements of the General Plan, zoning density requirements, Williamson Act facility size limits, the County Uniform Rules for Ag Preserves (Rules 2, 7, 8), and the California Environmental Quality Act. Appellants request that this project plan be denied, and the Applicant and staff tasked to revise the project to conform with the law. Importantly, we ask that you honor the broader community's desire for policies that protect the carrying capacity of our scenic wine valleys and balance the needs of wineries and residents.

PROJECT DESCRIPTION: The project site, known as Westside Farms, consists of 75 acres (one legal parcel) containing 42 acres of commercial vineyard. Westside Road bisects the parcel. Exhibit B is an overview of the proposed project at the site.

On the 6-acre west side of the road, the project will add a new 32,210-square-foot winery building with 60,000 annual case production, an unstudied 20,720-square-foot wine cave, administrative offices, employee kitchen/breakroom, employee shower and locker room, two technical tasting rooms, a wine library, a commercial kitchen, and employee and public restrooms. The area also includes a 3-acre pond, the primary dwelling unit and ancillary farm buildings.

On the east side (69 acres), the project will retain the grape acreage and construct a hospitality complex. The historic hop kiln building will be reconstructed as a public tasting building with two rooms with wine tasting bars, a commercial kitchen, public restrooms, case-good storage, general storage, and office space.

The 5,000 square foot historic hop baling barn will also be reconstructed with significant intensification of use. The middle floor will have a reserve wine tasting room used for tasting, food and wine pairing, and agricultural, promotional and industry wide events. There is a commercial kitchen and VIP lounge area. The upper floor has two guest room marketing accommodations with two full bathrooms and a common lounge. The lower floor is mechanical and storage.

The project will have 15 fulltime employees, 3 part time employees, and 6 seasonal employees for a total of 24 employees.

New parking areas: East side includes 20 standard spaces, 4 handicap accessible spaces, and 58 overflow parking spaces (unmarked gravel area). West side includes 25 standard spaces, 2 handicap accessible spaces, and 21 overflow parking spaces (unmarked).

Events: the proposed project would have 22 events: 20 agricultural events per year with a range of maximum guests (10 events with 30 guests in the winery tasting room, five events with 60 guests and 5 with 120 guests), and participation in two industry wide event days per year.

The existing Ramey winery facility in downtown Healdsburg currently makes 40,000 cases, with 36,000 cases sold into the distribution market.

COUNTYWIDE POLICY ISSUES: The potential precedents associated with the BZA's approval of a mitigated negative declaration (MND) and use permit for this project led to an appeal by a team representing a wide variety of interests: land use and road safety, agricultural land conservation contracts, bicycle joint road use conflicts,

noise, biological and geological experts. The team built on the work completed by the Westside Community Association Advisory Committee, who met with applicant Ramey early in the process and actively participated in every hearing.
(Exhibit A: Administrative Record: 2014 to 2017 Letters from WCA Advisory for all hearings up to BZA. February 4, 2014 County Letter on Baling Barn violations, County Map for Westside Area of Potential Concentration)

For some time, the public has voiced concern about unsustainable wine tourism development in rural lands. Since 2008, the General Plan has required policy standards in areas of concentration, but development of standards has been continuously delayed. In 2014 and 2016, the Board of Supervisors tasked County staff to prepare a winery event ordinance and associated local area guidelines for areas of concentration, such as the Westside area. Community groups actively participated in all stakeholder processes and briefings for the prospective ordinance, and for protective standards and siting criteria for areas of concentration.

Notwithstanding these concerns, the BZA approved what may the most impactful winery event center on County's agricultural lands – certainly, the proposed project is the largest winery and event center considered for approval in the Westside Area, an area of overconcentration identified by the County. **(Exhibit C: Map of Existing and Potential Tasting Room access roads within ½ mile and chart Large Project Comparison Westside Farms to 2012 Hop Kiln Project)**

The existing Ramey winery in Healdsburg produces 40,000 cases annually, with 36,000 cases sold into the distribution market. Until construction and full production of the proposed winery facilities, the hospitality component of the project is significantly oversized for 4,000 case direct to consumer marketing efforts.

Approval of this project, as is, would set the following <u>detrimental policy precedents</u>. Issues with technical expert testimony and additional information outlined below:

1. Downgrade the road safety standard for unsignalized intersections (including driveways) in an area with a detrimental concentration of tasting rooms

2. Approve a detrimental concentration of winery and tasting facilities given there are 29 permitted wineries or tasting rooms in the Westside Road Area. **And, there are four existing and proposed winery tasting rooms /event facilities, including a wedding venue, located within a ½ mile of the project site.**

3. Allow facilities on both sides of the road with two opposing driveways – truck turning movements and events at both increase joint road use conflicts.

And,
omit required procedure of review by Bicycle and Pedestrian Committee (BPAC) along a heavily traveled designated bikeway

4. Allow intense commercial uses on lands under Land Conservation Contract: three commercial kitchens, up to five separate hospitality and event spaces, 4,000 square feet of office space, and a second dwelling unit
5. Violate the 15 % hospitality-to-winery facility square footage guideline use ratio by counting unstudied, and thus, speculative "cave" space in processing facility
6. Approve a winery design plan, and proposed 6 foot walls that do not mitigate the noise impacts to adjacent sensitive receptors.
7. Approve the baling barn as a second dwelling unit, with a commercial kitchen and bedrooms, not marketing accommodations alone per Government Code Section 8.2 B.2 and in violation of County zoning density. This unnecessary intensification of use in a historic district and scenic corridor violates General Plan elements.
8. Approve a potential breach of the Williamson Act as baling barn structure and uses do not comply with Williamson Act building size limits, several County Uniform Rules, especially Rule 2 (non compliant with guest quarters or dwelling unit rules) and other rules.
9. Allow hospitality facilities to become operational, creating a potential "stand alone" tasting room before production facilities are operational. Approve a potential cave with insufficient geological feasibility analyses, and no designation as to its future use (processing storage only or added hospitality uses).

In short, the Supervisors should not approve this project plan as there is substantial evidence of potentially significant public safety, noise, and geological impacts, a potential breach of the Williamson Act, as well as cumulative impacts.

SIGNFICANT ENVIRONMENTAL AND PUBLIC POLICY ISSUES

1. <u>Public safety</u>: <u>Deviation from "sight distance" standard and opposing driveways</u>

Public safety is a primary responsibility of government, and the Supervisors must address a recent policy that downgrades road safety standards. There are significant public safety implications associated with this "under the radar" policy change.

Until just a few years ago, winery and tasting room traffic impact studies evaluated and mitigated impacts to meet the "safe sight distance" standard for projects that require a traffic impact study. However, recent studies (which now need approval by the Director of Transportation) have downgraded that safety standard to a different one known as "safe stopping distance for private driveways."

The change is clear. In 2010, the County published its "Guidelines for Traffic Impact Studies" that define CEQA thresholds, clarify that the unsignalized intersection standard applies to driveways, and set the AASHTO "safe sight distance" standard.

"Sight distance" standard requires a clear line of sight and adequate time for the waiting vehicle to turn left or right. It means drivers should have enough sight distance to not be forced to hit the brakes or take other evasive action to avoid a collision with customers leaving a tasting room The project does not meet that standard.

The lesser "sight stopping distance" standard states the approaching vehicle must alter speed and potentially take evasive action, and that the actual distance varies based on a number of factors (although it may not address drivers with impaired reaction time). In the present case, the project cannot meet even that lesser standard – here, a minimum 250 feet stopping distance—without road improvements.

Below is the County's stated requirement for clear line of sight distance for access to projects requiring a traffic study, as set forth in the Sonoma County Guidelines for Traffic Impact Studies, the W-Trans reports and September 2107 Staff Report (Page 24 Paragraph 6):

> *"At driveways, a clear line of sight needs to be maintained for drivers of a vehicle waiting at the driveway and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle either to turn left or right without requiring the through traffic to radically alter speed."*

Versus the downgraded stopping sight distance as defined below:

> *"Stopping Sight Distance is the distance traveled during perception-reaction time (while the vehicle driver perceives the situation requiring a stop, realizes that stopping is necessary, and applies the brakes), and maneuver time (while the driver decelerates and comes to a stop). Actual stopping distances are also affected by road conditions, the mass of the car, the incline of the road and numerous other factors."*

The downgraded standard should *not* be applied until the Board evaluates the risks of this policy change to public safety. These standards are designed to protect public safety and should be a high priority for the Board.

At Westside Farms the downgraded standard issue is even more complex. We urge the County officials to develop a **density standard to address safety risks from multiple commercial driveways in close proximity.**

The Adobe Report (Exhibit D) states the current driveway sight distance to the North is not even safe for residential traffic, let alone commercial traffic for a 60,000 case winery. Adobe used a video simulation to demonstrate that once the hill is cut back and heritage trees removed, and based on certain assumptions that have not been field tested, the minimum 250 feet stopping distance would be available for this residential driveway.

Only after the hill and trees are cut away and the actual sight distance measured, should the Supervisors make a CEQA finding of significance on this issue. Because the data are incomplete, a discretionary use permit should not be issued until Supervisors have addressed this important public safety and policy issue.

The W-trans 2017 traffic report states that the prevailing speed is 35 mph for vehicles passing the winery exit and further states that after the road improvements are implemented there will be 250 feet of sight distance for vehicles traveling south on Westside Road to see and react to vehicles leaving the driveway on the west side of Westside Road, and bring their vehicle to a stop before a collision. (Exhibit E)

As stated in the Technical Expert peer review by Alta Planning and Design dated September 14, 2017 (Exhibit F) attached to this letter, the required distance to meet the County's required sight distance standard is 390 feet for left hand turns and 335 feet for right hand turns. Therefore, the proposed mitigation is insufficient to provide adequate sight distance as required by the County's standard stated on page 24 of the Staff Report and addressed in the CEQA Thresholds identified in the Sonoma County Traffic Study Guidelines.

Public safety cannot be ensured until road improvements, required to make the current residential use safe, are completed.

The project is in an area of potential over concentration, and along a stretch of road with a detrimental concentration of winery/ tasting room commercial driveways. Turning movements with inadequate sight lines given blind hills and curves exposes the public to significant public safety risks. **Exhibit C Map and Exhibit G: Todd Everett Letter with Attachment 1: Existing and Proposed Winery/Tasting Rooms** that show that adjacent wineries (20,000 cases and 35,000 cases) are permitted to hold 39 events with up to 200 people, and host large pick up parties and weddings.

The proposed project is a *60,000 case winery with 22 events* and would add turning vehicles and winery trucks at two opposing access roads. Exhibit H: Traffic Management Plan Queuing Graphic dated August 2017, shows the "Queuing Plan" for West/East Driveways. This is a complex plan involving guest vehicles queuing up along both driveways (West and East) to access the hospitality areas. The plan does not show the mitigation plan for winter industry-wide events, where overflow parking in the vineyard may not be possible, which raises another public safety issue associated with people walking across the road.

The Board must decide whether to downgrade the road safety standard in an area where multiple driveways do not have adequate sight distance, with potential queuing situations on event days at both the existing Williams Selyem winery, and this proposed project with two opposing winery and tasting room access roads. This is not a policy decision that can be deferred to the Director of Transportation, based on incomplete analyses.

2. <u>Public safety</u>: <u>Joint road use conflicts in area of overconcentration</u>

Todd Everett's letter (Exhibit G: Attachment 2: Procedural error given no Bicycle and Pedestrian Committee review and conditioning of project per General Plan requirements.) describes the detrimental concentration of wineries and tasting rooms in the area, and joint road use conflicts with bicycles. The letter includes Attachment 1, a table of wineries in a 1.5-mile radius and associated assessor's parcel map showing locations and ownership of nearby parcels.

Attachment 2 demonstrates a significant procedural error in the lack of evaluation of impacts on bicycle traffic and bicycle safety. Westside Road is a designated bikeway per County plans, has significant bicycle traffic and hosts over 20 large-scale bike events.

The Applicant failed to obtain review and conditions from the Bicycle and Pedestrian Committee, as required by the 2010 Bicycle and Pedestrian Plan in compliance with the State's Complete Streets Act of 2008 (AB 1358). The proposed use permit for this project on a Class III bikeway was not reviewed and conditioned by the Bicycle and Pedestrian Committee as per policies in the General Plan.

3. <u>Project inconsistent with certain General Plan policies and factors</u>

The project meets all three general plan factors for denial. The proposed project will result in the commercialization of Ag lands, a public safety problem and a detrimental concentration of commercial facilities in the 6000-7000 block of Westside Road. The proposed project meets all three of the factors identified in General Plan Policy AR-6F as constituting grounds for project denial, even when project is supportive of agriculture: 1) joint road use conflicts; 2) draws water from the zone of influence of area wells; or 3) scale and intensity is detrimental to rural character.

/

Factor 1: **Joint road use conflicts - See Issues 1 and 2 above**.

Factor 2: **Draws water from the zone of influence of area wells**: Exhibit I: The EBA Engineering January 2017 report for the proposed project, with vineyard irrigation, the project will require about 5 million gallons of water annually, is clear that two of the five wells on the property serve neighboring properties to the west. Yet, there is no analysis of potential impacts to water delivered to these properties.

Even through the project wells draw from the underflow of the Russian River, an additional policy issue that should be addressed by the Supervisors, studies to determine whether the project requirements would "draw water from the zone of influence of area wells" were not completed for wells serving adjacent properties. These studies must be completed before discretionary use permit approval.

The EBA Engineering Analysis is based on Exhibit J: Adobe Associates, December 30, 2015 projected water use study, which stated the net annual water demand for the project is 4.4 million gallons or 14.06 acre feet (plus 1 million gallons annually provided by winery wastewater irrigation of the vineyards).

Factor 3: Scale/intensity detrimental to rural character: Beginning in 2014, community groups requested that this project be downscaled to fit with the rural character and historic heritage of the Westside Area. These are the unique qualities that bring tourists to Sonoma County in the first place.

The proposed project may be the largest event center in our rural lands, and the largest hospitality complex considered for approval in the Westside Area, an area of over concentration. As shown in **Exhibit C "Large Project Comparison - Westside Farms to Hop Kiln,"** in many ways the Westside Farm project has scale and scenic corridor issues similar to the original Hop Kiln proposal, and hospitality uses that **exceed** the intensity of use in the 2012 Hop Kiln project, which was denied by the BZA (5-0) and summarily rejected by the public.

The proposed project has three commercial kitchens, twice daily food service in the public and private tasting rooms, and up to five separate hospitality and event spaces: 1) winery building tasting and food pairing rooms - 2) potential for hospitality and events in cave, when a future determination is made as to Type I or II cave, 3) hop kiln tasting room(s) and food service facilities - 4) baling barn dwelling unit with kitchen, tasting and food service facilities, and 5) the walnut grove.

Our General Plan specifically prohibits restaurants on Ag-zoned lands. The County has acknowledged the risk that food service can turn into de-facto restaurants that are prohibited on Ag land. (Staff report, September 21, 2017, p. 18) Approval of the project sets a County-wide precedent with its proposed three commercial kitchens with food service rooms as well as about 4,000 square feet of commercial office space.

Road improvement requirements to cut back a hill and remove heritage trees, as well as other information provided by appellants provides compelling evidence that a detrimental concentration of wineries and tasting rooms exists in this area and the project scale and intensity will be detrimental to rural character.

4. Project inconsistent with Williamson Act and County's Uniform Rules

The potential breach of the Williamson Act is set forth in **Exhibit K, Janis Grattan Watkins, Esq., June 12, 2018 letter to California Department of Conservation, Division of Land Resource Protection.**

In this case, Supervisors face a policy decision regarding the Williamson Act. The outcome of that decision will affect local operation of the Williamson Act and, potentially, our property tax structure going forward. This may require a determination to amend the Uniform Rules for Ag Preserves and zoning code density to permit more hospitality facilities and second dwelling units on parcels under prime land conservation contract.

The size of the baling barn and scale of commercial and hospitality uses are potential breaches of the parcel's prime land conservation contract under the Williamson Act. (Gov. Code sec. 41250(b)) which states:

"... a material breach is a commercial, industrial or residential structure, exceeding 2,500 square feet, that is not permissible under the Williamson Act contract, local uniform rules or ordinances."

As also discussed in detail in the letter, the "marketing accommodations" are a second dwelling unit that does not conform to the Uniform Rules for Ag Preserves or the Zoning Code density requirements for LIA zoned land. (Sonoma County Uniform Rule 2; Exhibit A (6): February 4, 2014 County staff letter)

- In 2014, the County informed the Applicant that addition of a building with a kitchen, bedrooms and bathrooms was a dwelling unit, which is not allowed under the Uniform Rules or the zoning density allowance.

- This structure is not required to meet the objectives of the project, as there is adequate square footage in the winery complex for requested and compliant "marketing accommodations."
    - The baling barn is about 5,000 square feet, with over 3,700 square feet (well over the State's 2,500 square foot limit) devoted to residential and commercial uses, and exceeds Uniform Rule 2 size limits as well.

  - Sonoma's Uniform Rules do allow "marketing accommodations," but the baling barn does not meet the requirements for "guest quarters, " and given the kitchen and food service lounges, it is a dwelling unit, which is not allowed.

- Reconstruction of the baling barn also violates provisions of the General Plan Open Space Element relative to structures in the Scenic Corridor, and will lead to potentially significant mortality for its resident bat species.

The project's disproportionate focus on food service (3 commercial kitchens and multiple food/wine tasting rooms), 22 events and significant commercial office space raises the question as to whether the project is secondary and incidental to agriculture, and should retain the tax reductions afforded by the Land Conservation Contract.

5. Departure from practice risks a "stand alone" hospitality complex

The project approval requires the *building permits* for the winery or wine cave and the tasting rooms be filed simultaneously and allows a four year vesting period. **It does *not* require completion of the winery at the same time as the hospitality/event facilities.** This increases the risk of a "stand alone" hospitality complex, not supported by on-site agricultural processing. Timing of hospitality operation before winery operation and the four year vesting period are departures from the County's long-standing practice.

Just like the 2012 Hop Kiln proposal where it was determined that the subterranean winery could never be built, the project's winery design has *not* been approved by the Design Review Board. Note the applicant's comment during the 2014 Design Review hearing, stating that the west side and east side of the project will "operate as separate businesses." So, the hospitality business could be running while the winery building or caves are mired in construction delays.

According to **a letter from Jane E. Nelson, PhD Geologist, Exhibit L,** the cave proposal has many deficiencies in geologic data and analysis. It is telling that the proposed cave is barely mentioned in the staff report and there are no studies or analysis of the 20,720 square feet cave construction in the MND. The staff report did not require the applicant to even state whether the cave will be a Type I or II, which calls into question whether the applicant intends to build the cave or whether it will be used for public access/ hospitality uses. It is unknown whether the cave is even viable. **The lack of geologic analysis is a significant deficiency in the MND.**

6. Cave and winery design deficiencies allow violation of 15% hospitality rule

There is inadequate information or analysis to determine the feasibility of constructing the winery and cave on the west six acres of the parcel. The guideline is set so the processing facility square footage determines the allowed size of hospitality facilities. The standard is 15 %, and the proposed project is at 14 % even though the actual size of the processing facilities are not known and design review is not complete. There is a concern that "phantom" square footage of processing facilities was used to gain approval of the large hospitality complex.

Regarding the cave, it is unknown whether its construction and disposition of spoils is even viable, given the complete lack of geologic analysis. **(Exhibit L: Jane E. Nelson, PhD Geologist Letter)** Dr. Nielson recommends the project be sent back for recommended studies on the cave and a plan for disposition of excess spoils.

As to the winery, Exhibit M: "Design Review Committee Record of Action" December 2, 2014, is clear that the site plan, architecture and landscaping plan of the winery need significant revision, and there is not enough specificity in the staff report or MND to verify that there's a viable building plan for the west area.

The Design Review Board has not approved a design for the winery that fits with the scale of the lot and historic character of the property. Design review stated that completely modern office type structure is not the appropriate aesthetic for historic and rural character of site. Yet, the staff report uses the winery /cave square footage of agricultural processing to justify over 10,000 square feet of hospitality space. Approval of this *large* hospitality complex is based on flawed assumptions.

In sum, the design and mitigation of this industrial-scale complex must be known and studied for impacts before a discretionary use permit is approved.

7. Noise impacts are not mitigated

The lack of an approved winery design debunks the applicant's noise analysis. A winery building, with well-documented noise profiles for pumps, motors, trucks and forklifts, etc. is located within 10 feet of a property line. According to appellants' noise expert, without an approved winery design, there are no assurances that the proposed noise mitigation measures will work.

Exhibit N: Graphic of winery design with overhangs for truck Exhibit N: Graphic of winery design with overhangs for truck back-up and unloading determines noise abatement.

According to **Exhibit O: Vibra-Accoustics Expert Letter - Peer Review dated July 2018, winery operations and truck turn around noise has not been mitigated:**

" With the proper application of the Noise Element of the Sonoma County 2020 General Plan and correction of other technical deficiencies there is reasonable evidence that the proposed Ramey Winery Operation will create noise impacts in exceedence of the Noise Element. We do not believe that the mitigation measures proposed in the I&R August 2017 Addendum to the March 2017 Environmental Noise Assessment would be sufficient to attenuate noise from the winery [operations

including trucks] such that the noise limits ...would be met."

Six-foot sound walls are unlikely to adequately mitigate the noise from large trucks and winery equipment, and noise levels from trucks and equipment were underestimated. Noise analysis is a significant deficiency in the MND.

Also, the conditions of approval depart from precedent on noise. Amplified sound is allowed in the Walnut Grove and amplified music in the hop kiln and baling barn dwelling unit, and the conditions *uncharacteristically* state that "drums, horns and other loud instruments" will be allowed vs. prohibited. Thus, noise is a potentially significant impact on neighbors on the east side hospitality complex as well, as it is an unenforceable mitigation measure to require windows and doors remain shut during amplified music.

Last words: This letter attaches appellants' *new* information as exhibits, and also refers to and lists additional evidence *already in the record*. That additional record evidence will be emailed tomorrow, resulting in one set of comprehensive exhibits. We note that we asked for a September hearing date given conflicts and the need to procure expert testimony; this request was denied by Supervisor Gore. We have waited for the staff report and recommended corrected Conditions of Approval for Tuesday's hearing, and have not received this information from the County.

Sincerely,
Appellants

Non-event trip generation	92 per day, excluding events	150 per day including events	75 per day
Hours of events	Up to 9 pm with clean up before 10 pm	Up to 9 pm with clean up before 10 pm	Indoor events up to 9 pm with clean up before 10 pm Outdoor end 5 PM
Food pairing	Yes – 3 rooms	Yes – 1 room	Yes – 1 room
Commercial Kitchen	Yes - 3	No	No
Amplified sound in **tasting room/ baling barn**	Allows drums, horns and instruments. No outdoor amplified sound at winery. Amplified speech permitted in Grove	No outdoor amplified sound and no loud instruments – drums, horns, etc.	**No outdoor amplified sound or** loud instruments – drums, horns, etc.
Marketing Accommodations	Yes – 2 units, with kitchen and dining rooms creating second dwelling unit	Yes – 4 units in single dwelling unit on Williamson Act property	**None, as amended by Landmark**

Large Project Comparison - Westside Farms to Hop Kiln

Discretionary Use Permits run with the land, with future owners granted all allowed uses. A Use Permit must be evaluated based on the characteristics of the project within the context of its physical setting - the Supervisors are to evaluate the project impacts, not the intent or character of the current owner/applicant.

KEY COMMUNITY CONCERNS WITH WESTSIDE FARMS PROJECT

- **Significant road safety issues - large winery with hospitality complexes on both sides of the road**
    - Two opposing commercial driveways create unsignalized intersections near curves; applicant must cut away a hillside and remove trees. Insufficient safe sight distance with truck turning movements create dangerous situation for vehicles and cyclists
    - Operations on both sides of road will create confused turning movements, leading to queuing and potential pedestrian crossing
    - Fourth winery in 0.25 miles - drivers have to deal with 5-6 project driveway intersections along a road with blind hills and curves
    - Increased speeding and illegal passing of cyclists and slower moving vehicles on Westside Road is leading to a significant number of single car accidents creating road safety, power outage and vegetation fire impacts
- **Too large in Scale and Intensity for the Westside Area**
    - 60,000 cases is approximately three times the average of wineries on Westside Road
    - 15,000 square feet of Hospitality facilities and office space proposed on agricultural preserve, Williamson Act lands
    - Events, with amplified music, are larger in size and intensity than recent approvals and twice the number as recommended in the draft Westside Local Area Guidelines
    - Three commercial kitchens with dining areas, 4-5 separate event and tasting facilities/ outdoor areas, and a second dwelling unit (non-compliant with Zoning Code or Williamson Act), creates a large hospitality complex with significant unstudied impacts
- **Detrimental Concentration:** Permitting 4 or 5 adjacent projects, without other limiters or a long-term build-out plan for the area, sets precedent for commercial concentrations along one of the County's premier agricultural, rural corridors.
    - Approval would result in four (4) winery/tasting rooms permitted within 0.25 miles on contiguous parcels, with 5th project on a parcel developed with multiple homes and barns, requesting the addition of winery/tasting room in the application review phase.

MEMORANDUM

100 Webster Street, Suite 300
Oakland, CA 94607
(510) 788-6880
www.altaplanning.com

To: Marc Bommersbach

From: Hugh Louch, Principal, Alta Planning + Design

Amy Jackson, PE, PTOE, Alta Planning + Design

Date: September 14, 2017

Re: Review of Ramey Winery Project Traffic Impact Analysis

Alta Planning + Design has reviewed the traffic study conducted by W-Trans for the Ramey Winery Project in Sonoma County, CA. This memorandum summarizes the results of this review. The traffic study performed by W-trans provides thorough explanation regarding the methodology used to assess the anticipated impacts of the Ramey Winery project. W-trans used a conservative approach to assume the existing traffic volumes, and applied the appropriate level of service methodology for the existing conditions analysis, which uses percent time spent following thresholds to determine levels of service. W-trans also appropriately used Sonoma County's Winery Trip Generation form, as the ITE Trip Generation Manual does not include data for wineries.

There is concern regarding the reported 85th percentile speed that could impact the required sight distance for vehicles leaving the winery driveways from a stop condition. The 85th percentile speed plays a large role in determining the required sight distance for the driveways later in the report.

The report indicates there is not currently a posted speed limit on Westside Road. Based on a spot speed study performed by W-Trans, the 85th percentile travel speed on Westside Road is reported as 35 mph. However, the calculation for determining the 85th percentile speed from the data provided is not clear. The average speed for each hour is provided in the attachment, instead of a full set of speed captures for an entire hour. A spot study should be conducted during a non-peak hour when vehicles are expected to travel at free flow conditions rather than a peak hour when vehicles could be experiencing congestion. Vehicle speeds should be captured for an entire hour, or during the time it takes to capture 100 vehicle speeds, whichever occurs first. Based on a set of data from either 100 vehicles or an hour of vehicles, the 85th percentile speed can be calculated.

Based on the average speed data provided in the attachment, it appears that the 85th percentile speed could be higher than 35 mph. It would be reasonable to request that the calculations or data set used to determine the 85th percentile speed be provided.

The 85th percentile speed should be used to determine the sight distance for vehicles exiting the winery driveway from a stop condition. This type of sight distance is referred to in AASHTO's *A Policy on Geometric Design of Highways and Streets* as "departure sight triangles" and referred to in the California Highway Design Manual as "corner sight distance".

Assuming the speed is 35 mph, the left turn sight triangle and right turn sight triangle from stop should be 390' and 335', respectively. However, if the 85th percentile speed is higher, as speculated, these sight triangles would be increase. **Therefore, the 85th percentile speed should be calculated based on a speed study as discussed above in order to accurately determine the minimum intersection sight distance for passenger cars exiting the winery, making left and right turns onto Westside Road.**

August 1, 2018

Letter to the County of Sonoma Board of Supervisors,

As a resident of the Westside community, I am requesting you deny the Westside Farms Application to create a large hospitality complex with three separate tasting rooms, overnight accommodations, daily food service, and 22 events on its property at 7097 Westside Rd (UPE14-0008). The project should be denied because the Westside Road Area has reached its carrying capacity and cannot accommodate such intensive commercial development. No cumulative impact analysis was conducted to consider the high concentration of wineries in the immediate vicinity (attachment 1 maps and table showing driveways in 0.25 miles), and the Bicycle and Pedestrian Committee did not review the project as required by County policy (attachment 2).

The Westside Road area has 29 permitted wineries or tasting rooms, and has reached its carrying capacity.

1. four wineries or tasting rooms with events, including weddings, are located within six tenths of a mile of the proposed tasting rooms,

2. traffic on Westside Road during large industry-wide or winery-specific event weekends already is altering scenic character of this rural area. The draft condition of approval that the Applicant will voluntarily agree to coordinate with the neighboring wineries is inadequate to avoid a detrimental concentration of winery-related traffic.

3. the addition of 22 promotional events each year, some with up to 120 people, to the nearly 200 permitted events at Westside area wineries will result in thousands of people driving down Westside Road principally on weekends when up to 20 large bicycle events are held as well; and

4. traffic and limited sight distances at driveway intersections are already imperiling the safety of our country roads for cyclists.

We need to ask ourselves: when enough is enough. Either, the County can continue to approve permits for wine tasting facilities on an incremental basis and discover at a later date our rural areas are so degraded that they no longer attract tourists or retain their property values. Unfortunately for future generations, the County will not be able to restore the landscape to its current condition.

Or, the County can adopt comprehensive guidelines that strike the right balance between private property interests and the public interest in sustaining our agricultural lands and open spaces. The County can encourage wine tasting rooms to be located in the places where they fit in with the surrounding uses and services like along the 101 corridor or "city centered" growth encouraged in our General Plan.

This latter approach, comprehensive guidelines and location-appropriate growth, are the most prudent and responsible actions Supervisors should take prior to any more approvals of new wineries and events in saturated areas.

Agricultural property owners can earn a fair return on their property by engaging in the growing of crops and selling their products directly or indirectly. However, proposing to operate three tasting rooms, provide marketing accommodations, prepare food in three separate commercial kitchens, holding winery events in up to five separate locations, and operating industrial scale processing facilities on agricultural property appears to be focused on earning a profit based on hospitality services, not agriculture. Or, worse yet, speculating on higher purchase real estate prices. These are not valid reasons for granting approval of this permit along a rural by-way.

Please adopt a winery event ordinance and guidelines and protective standards for new wineries and associated events as soon as possible so that everyone, winery owners and residents, know the ground rules and our community does not have to contest developments that exceed the carrying capacity of our beautiful countryside.

Sincerely,

Todd Everett
5400 Wallace Creek Rd.

Attachments
County Assessor's Parcel Map of project area
Corrected MND Table of wineries or tasting rooms in 1.5 mile area
Procedural Error: Failure to take proposed project to the Bicycle and Pedestrian Committee

Attachment 2

Lack of Bicycle and Pedestrian Committee (BPAC) review of this project is a violation of County General Plan policies related to bikeways.

The Board of Supervisors adopted Resolution #10-0636 on August 26, 2010 amending the Sonoma County General Plan and adopting the 2010 Bicycle and Pedestrian Plan brought the County of Sonoma into compliance with the Complete Streets Act of 2008 (AB 1358), and the Plan is currently in effect.

Policy 2.14 of the Plan states:

> *"Refer the following projects to the BPAC to review consistency with Bikeways Plan to evaluate potential for creating hazards or barriers to walking or bicycling:*
>
> *7. Discretionary project anticipated to be conditioned with roadway improvements along existing or proposed Class I, II, or III bikeways."*

Westside Road is a Class III bikeway under the above referenced Plan. The proposed project seeks a discretionary use permit from the County and includes proposed conditions for roadway alterations and significant vehicle traffic hazards. Therefore, per Policy 2.14, this project should have been referred to the BPAC for their consideration, yet there is no record of this project being brought before the BPAC in Committee's minutes or statement in the MND for the project

Westside Road is one of the most popular bicycle routes in Sonoma County. Thousands of local cyclists enjoy Westside Road for recreation and it is part of several nationally recognized events, including the Vineman triathlon, the Wine Country Century, Healdsburg Harvest Century and the Giro Bello. Over 20,000 people travel to Sonoma County to participate in these events, contributing an estimated $15 million to the local economy.

As proposed, the project access is located on a section of Westside Road between two sharp turns where inadequate sight distance exists to ensure the safety of cyclists (and motorists). This concern is compounded by the fact that the project proposes two driveways on opposite sides of the road, and is expected to generate an average of 153 vehicle trips daily, not including special event traffic or harvest traffic.

Review of this type of project is precisely what the BPAC was commissioned to do. The bicycling community should have been given an opportunity to weigh in on this project due the potential for significant impacts to the safety of cyclists.

Clearly the County did not follow its own regulations regarding review of this project.

Furthermore, Policy 2.09.8 of the Standards for Class III Bikeways states:

> *"Where a Class III Bikeway is designated along a Scenic Corridor, avoid grading and tree removal and/or grading wherever possible if these activities appear likely to affect the scenic resource."*

In addition to not having the BPAC and the cycling public an opportunity to review this project, there is no consideration in the MND that impacts from grading or tree removal along this Bikeway, or to determine if other less impactful mitigations for the bikeway were considered.

Finally, the W-Trans March 10, 2016 study states that the level of service for bicycles is "D". Such a low score for bicycles on this bikeway suggests further review by the BPAC.

Attachment 1

County's MND incorrectly states the number of promotional events held at neighboring wineries.

The table below correctly lists the events and case production of the nearby wineries on Westside Road. No cumulative impact analysis was performed to consider these winery events, industry wide events and bicycle events on Westside Road.

Winery Name	File Number	Address	Production	Events
Landmark (Hop Kiln)	UPE13-0011	6050 Westside Rd	21,026 cases	12 @ up to 100
Rochioli	UPE03-0019	6192 Westside Rd	15,000 cases	
Allen Family	UPE04-0018	6575 Westside Rd	16,000 cases	
Gracianna (Amador)	UPE10-0021	6914 Westside Rd	N/A	Not allowed
Arista (McWilliams)	UPE04-0113	7015 Westside Rd	20,000 cases	15 @ up to 200, incl. weddings
Proposed Project				
William-Selyem (Pebble Ridge)	PLP04-0062	7227 Westside Rd	35,000 cases	24 @ up to 125
Thomas George	UPE10-0019	8075 Westside Rd	20,000 cases	16@ up to 125
Porter Creek	UPE86-0136	8735 Westside Rd	9,000 cases	

Proposed Projects	File Number	Address	Production	Events
Westside Farms	UPE14-008	7097 Westside Rd	60,000 cases	22 @ up to 125 proposed
DuMol (Flax)	UPE16-0102	6677 Westside Rd	492 cases	18 @ up to 100 proposed

The above table indicates that in the approximately1.5 mile area there are 107 event days permitted or being proposed with up to 125-200 people attending. In addition there are about 13 industry-wide event days that add considerable traffic and about 20 known bicycle event days.

Average case production of the 8 wineries within 1.5 miles is 17,064. The proposed Westside Farms project would be over three times this average.

RE: Breach of Williamson Act and Sonoma County's Uniform Rules for Ag Preserves on a parcel under a Prime Land Conservation Contract

Project Parcel: 7097 Westside Road, Healdsburg, CA 95448. APNs 110-240-031, 032, 040 are one 75-acre legal parcel of record per Lot Line Adjustment 04-0088.

Dear Ms. Wilber,

Sonoma County citizen groups and residents request that the Department review the pending *Ramey Winery* project for consistency with the Williamson Act and local rules and regulations. If there are potential inconsistencies, we request you notify us and Sonoma County officials by early August. The County Board of Supervisors is set to review the project approval at a hearing on August 14.

As discussed below, the approved project allows intense visitor-serving commercial uses on Land Intensive Agriculture (LIA) land under a Williamson Act contract (Ag. Preserve 1-397; OR# 2007-037936). The project includes: 1) a large, stand-alone overnight accommodations building with commercial kitchen and VIP tasting room; 2) three tasting rooms at the one site; and 3) two additional commercial kitchens serving food at events, wine club parties, dinners and regular food and wine pairings at both winery/event complex and public tasting room We are concerned the project approval sets a bad precedent for excessive visitor-serving uses and large hospitality buildings on Williamson Act land. We would like your interpretation of how the Act and local rules apply to this project — and whether any of the proposed commercial and residential activities threaten a material breach of the Act, under Gov. Code sec. 51250(b).

Project description

The project site, known as Westside Farms, consists of 75 acres (one legal parcel) containing 42 acres of commercial vineyard, single family residences, historic hop kiln, historic baling barn, and agricultural accessory buildings. Westside Road bisects the parcel. (See A5 - A7Staff Report and Conditions of Approval)

On the West side of the road, the project will add a new winery building with 60,000 annual case production, a commercial kitchen, tasting rooms and a wine cave.

On the East side, the two historic buildings will be repurposed for hospitality uses. The hop kiln building will be converted to a public tasting building, with a commercial kitchen, multiple tasting/food service rooms, storage and office.

The baling barn is a three story structure containing about 5,000 square feet. The upper floor is proposed for two "guest room marketing accommodations" with two full bathrooms (759 square feet) and a common lounge area (513 square feet) – a total area of 1,372 square feet. Condition of Approval #79 limits the accommodations to noncommercial use by "private guests" of the winery operator or owner; however, it does not prohibit use during promotional events. The middle floor of the baling barn has a reserve tasting room with commercial kitchen and VIP lounge area. The lower floor is proposed as storage and a mechanical room.

In addition to twice daily food service in the public and private tasting rooms, the proposed project allows 22 agricultural events per year with a range of maximum guests (10 events with 30 guests in the winery tasting room, five events with 120 guests, and two events with 300 guests in the public hospitality complex), and participation in industry wide events totaling two event days per year with a maximum of 300 guests.

Overnight accommodations as additional dwelling units are incompatible with Uniform Rules and the Williamson Act

Sonoma County allows marketing accommodations for sales and marketing of agricultural products as an "agricultural support use." (A4: Sonoma County Uniform Rule for Agricultural Preserves 8.3 B.2)

However, the two overnight accommodations for "private guests" of the *Ramey Winery* violate the Uniform Rules, which set specific limits for detached guest quarters. The floor area for detached guest quarters must not exceed 640 square feet, including any storage area (excluding garage). Also, the guest quarters shall be located not more than 100 feet from the primary dwelling on the parcel. (A4: Sonoma County Uniform Rule2)

Here, the two overnight accommodations occupy an entire floor of a separate building and have a total area of 1,372 square feet. This far exceeds the 640 square foot limit. Also, the building is more than 100 feet from the primary dwelling. The proposed accommodations are not allowed under Uniform Rule 2.

In 2014, planning staff found this proposed use violated the Williamson Act contract. Staff stated the baling barn building has all the components of a "dwelling unit" under the zoning code: it has bedrooms, bathrooms, marketing area, commercial kitchen and general storage area on the lower floor. This meets the requirements for the structure to be classified as a "dwelling unit." Staff concluded:

> For the project site, neither the density [60 acres per dwelling unit], nor the Williamson Act contract allows another dwelling unit on the parcel. Therefore, the marketing accommodations as designed are inconsistent with the zoning density allowance and the Williamson Act contract. (A1: February 4, 2014 staff letter)

Despite this, the 2017 staff report, pp. 17-18, contains no analysis of the dwelling unit issue. The project approval also failed to address the violation of Uniform Rule 2 size limits. Residents raised the Williamson Act inconsistency concerns in a letter to the Planning Director dated October 2014 (A2), again in 2015 and at the Board of Zoning Adjustments hearing in September 2017.

In previous approvals, if a kitchen is included, the structure is usually identified as a dwelling unit. Also, unlike other approvals, this project approval allows the use of the marketing accommodations in association with Ag promotional events. (See A3 BZA Staff Report - for Silver Oak Winery PLP 14-0004 versus A5 Staff Report for UPE 14-0008)

It now appears there is a pattern and practice of approving marketing accommodations in Sonoma County that intensify residential and/or hospitality activities in Sonoma County's prime farmlands. This increases the human population on the land. A core tenet of the Williamson Act is to limit the density of permanent or temporary human population in order to protect crop-growing lands. We request an interpretation of whether the proposed overnight accommodations in this case are compatible with the Williamson Act and local rules.

<u>Baling barn structure is a material breach of the Williamson Act contract.</u>

The Williamson Act recognizes the enormous costs to both the economy and the environment of opportunistic and sprawling patterns of development on agricultural lands. One of the most important stated goals of the Act is the discouragement of such patterns through tax incentives to keep land in agriculture and open space preservation. The Act declares that this goal is a matter of public interest and will be of benefit to urban dwellers themselves by discouraging discontiguous urban development patterns, which unnecessarily increase the costs of community services to community residents. (Gov. Code sec. 51220(c))

As noted above, overnight accommodations occupy the entire third floor of the baling barn and greatly exceed the size limit of Uniform Rule 2. In addition, the second floor is entirely occupied by nonagricultural, visitor-serving uses: reserve tasting room, commercial kitchen and VIP lounge area. Altogether, the residential and hospitality uses occupy over 3,700 square feet. Per Sonoma County Planning Department letter (A1), the uses in this structure qualify as a dwelling unit under the Sonoma County zoning code; yet a primary residence already exists on this parcel and another dwelling unit is not allowed. The uses are comparable to urban development (dwelling units, restaurants, bars and entertainment lounges) rather than agriculture.

Significant urban uses in an accessory building, i.e., the baling barn, appear to constitute a material breach of the Williamson Act. Under Gov. Code sec. 51250 (b), "... a material breach is a commercial, industrial or residential structure, exceeding 2,500 square feet, that is not permissible under the Williamson Act contract, local uniform rules or ordinances."

The Williamson Act does not allow bed and breakfasts, hotels, resorts, restaurants, bakeries, and cafés. Sonoma County's Uniform Rules allow guest quarters limited to 640 square feet, and visitor-serving uses designed to help market products created on-site so long as they are compatible with agricultural uses. *However*, accessory uses and structures must be incidental, related, and subordinate to a compatible use. Cities and counties may determine the types of uses to be deemed "compatible uses," but must do so in a manner that recognizes a permanent or temporary population increase often hinders or impairs agricultural operations. (Gov. Code sec. 51220.5; Uniform Rule 8.2)

Here, the intense visitor-serving uses in the baling barn are not incidental and subordinate to the primary agricultural use. We request your opinion on this issue.

<u>Three commercial kitchens show this project exceeds appropriate boundaries for food service</u>

Planning staff recognizes there is a long-standing policy question about food service at wineries and tasting rooms:

> Food service has been a major concern for conversion of agricultural lands to more intense commercial uses. However, food and wine pairing is a popular industry trend.
>
> [W]hat boundaries should be placed on this type of food service to avoid further intensifying the commercial land use? (A5: Staff report, September 21, 2017, p. 18)

Sonoma's General Plan specifically prohibits restaurants on Ag lands, as well as hotels, motels, resorts and similar lodging.

There now appears to be an emerging pattern and practice of approving commercial kitchens on agricultural land. This is a controversial issue that calls for interpretation and clarity on the allowed boundaries for food service on Williamson Act farm lands.

What sort of development is allowed? Three commercial kitchens, combined with three to four tasting rooms, lounges and 22 events on a narrow road in an already over-concentrated area, are outside any reasonable boundary for urban uses on prime agricultural lands. Similar to weddings and concerts, large structures or multiple commercial kitchens should be deemed incompatible with the purpose of the Act.

Thank you for considering our comments.

Sincerely,

Craig Enyart

To: Sonoma County Board of Supervisors
Re: Proposed Westside Farms winery and event center, 7097 Westside Road

This proposed new winery is to be built on the tightest curve of Westside Road, across and upslope from an older winery that was housed in historic hops-processing buildings. The older building is on a narrow terrace directly above the Russian River, east of Westside Road. Apparently the new winery (or cave?) is to be imposed upon, or incised into a property west of Westside Road.

The current application is not apparently supported by technical studies of the site. Only a Mitigated Negative Declaration has been executed, which does not reference a geologic study of the site, nor does it specify how the new winery is to be constructed. As the Maacama Watershed Alliance has pointed out, "the Staff Report did not require the Applicant to even state whether the cave will be a Type I or II, which calls into question whether the Applicant intends to build the winery or cave."

If the structure is to be a cave, winery construction will require substantial excavation, producing spoils that will require some storage on site if the excavation will be partly backfilled, and a full geologic report should be required. The required report should include:

1. a professionally prepared geologic map showing the surface distribution of all rock units present in the general area, which the MND identifies as basal Franciscan formation, overlain sequentially by Miocene Sonoma Volcanics, and surface sediments, and the relative positions of all units;
2. a map showing the locations of drill core sites in the area to be excavated,
3. a 3-dimensional (block) diagram showing the apparent subsurface distribution of all geologic units actually intercepted by the drillers at the building site, based on the drill core samples, including both suspected and unexpected units, such as vegetative debris,
4. Engineering studies on both surface and drill core samples from the site to be excavated, and a plan for disposal of the excavations, assuming that the "wine cave" building's floor will be underlain and the walls surrounded by drain rock, sand, or some other appropriate material.

I recommend that the Board of Supervisors send this permit application back to Permit Sonoma, with a request for a report based on completion of the studies recommended in the foregoing. Assuming that a cave actually is to excavated on this extreme v-loop in Westside road, the Supervisors also should require a plan for disposal of excess excavation spoils, and should severely limit the times of waste removal to those of lowest likely traffic loads, to reduce substantial interference with normal use of Westside Road.

Sincerely,

Jane E. Nielson Ph.D, PG 9011

MEMORANDUM

Date: 7 August, 2018
To: Craig Enyart, Warren Watkins — **Email:** craigenyart@gmail.com, owlwo@sonic.net
From: Keith Kimberling, VACC — **Email:** keith@va-consult.com
Subject: Ramey Winery – Peer Review of Environmental Noise Assessment (01567)

Dear Craig and Warren,

We have completed our peer review report of the March 7, 2017 Environmental Noise Assessment (ENA) of Ramey Winery and the August 16, 2017 Addendum to the Assessment, both produced by Illingworth and Rodkin, Inc. The proposed winery is at 7079 Westside road, Sonoma County, CA.

We found multiple flaws with the methodologies and assumptions used in the documents which led us to question the validity of the conclusions made in the documents regarding the noise impact of the winery and the efficacy of the proposed mitigations.

1. General Plan Noise Element

Our understanding is that the Noise Element of the Sonoma County 2020 General Plan provides the appropriate regulatory guidance. The Plan has adopted several measures in regards to controlling noise from new non-transportation related projects, as summarized in Section NE-1c and Table NE-2, which is reproduced below in Table 1. Table NE-2 presents the maximum permitted noise levels allowed **at the property line** of the adjacent noise sensitive land use. The table is based on the L50, L25, L08, and L02 metrics, which define a noise level in dBA which is not to be exceeded for more than 50%, 25%, 8%, and 2% of the time in an hour. For example, table NE-2 specifies that a noise source cannot produce a noise level higher than 55 dBA for more than 15 minutes per hour during daytime hours, measured at the property line of any noise-sensitive land.

Hourly Noise Metric[1], dBA	Daytime (7 a.m. to 10 p.m.)	Nighttime (10 p.m. to 7 a.m.)
L50 (30 minutes in any hour)	50	45
L25 (15 minutes in any hour)	55	50
L08 (4 minutes 48 seconds in any hour)	60	55
L02 (72 seconds in any hour)	65	60

[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level.

Table 1: Table NE-2 from the Noise element of the Sonoma County 2020 General Plan specifying daytime and nighttime noise limits.

There are five exceptions to the values in table NE-2 stated in the General Plan, three of which are pertinent to this project:

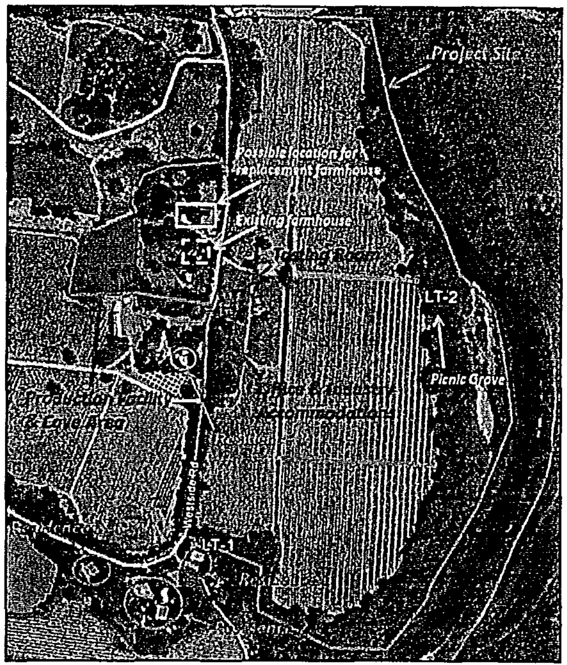
- (2) Reduce the applicable standards in Table NE-2 by five dBA for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises, such as pile-driving and dog barking at kennels
- (3) Reduce the applicable standards in Table NE-2 by 5 decibels if the proposed use exceeds the ambient level by 10 or more decibels
- (5) Noise levels may be measured at the location of the outdoor activity area of the noise sensitive land use instead of the exterior property line of the adjacent noise sensitive land use where:

  (a) the property on which the noise sensitive use is located has already been substantially developed pursuant to its existing zoning, AND

  (b) there is available open land on these noise sensitive lands for noise attenuation.

2. Comments

We have reviewed the Illingworth & Rodkin ENA, and the August 16 Addendum to the ENA, and found multiple flaws with the methodologies and assumptions used in both of these documents. To our knowledge, the August 16 Addendum was added after Illingworth & Rodkin realized that a residence near the proposed winery was not included in the earlier ENA. Since this residence (referred to as Residence 4) is located much closer to the proposed winery than the three residences that were considered, an addendum was necessary. The August 16 Addendum is dedicated to addressing Residence 4; however, it contains several significant flaws in methodology. The flaws that we found in the March 7 ENA and the August 16 Addendum are detailed below.



Project Site Map showing the proximity of Residence 4 to the proposed winery

2.1 Deficiencies in Environmental Noise Assessment – 7 March, 2017

2.1.1 Noise Source Levels

- The ENA states that the "maximum noise levels generated by heavy-duty (i.e., semi-tractor trailer type) trucks" would range from 70 dBA at constant speeds and 75 dBA when maneuvering and backing up, measured at 50 feet. We find these noise levels to be unrealistically low for heavy trucks and would expect levels around 75-85 dBA for heavy trucks at constant speeds and 80-85 dBA for heavy trucks maneuvering, when measured at 50 feet.

- Similarly, we find that the noise levels given for light vehicles of 53-63 dBA to also be unrealistically low. We would expect levels between 60 and 70 dBA for light vehicles measured at 50 feet, depending on the vehicle type and speed.
- We found the stated noise levels for winery equipment and operations to be generally reasonable. For crush activities, it is important to note that the peak noise levels of 70-80 dBA measured at 50 feet should be used to assess noise impacts under worst-case conditions (during crush activities).
- For maintenance and forklift operations, we note that backup alarm noise is both tonal and "repetitive and irritating by design", as stated by Illingworth & Rodkin in the ENA. Therefore, noise limits applied to forklift noise should be reduced by five dBA according to exception number 2 of the Noise Element of the Sonoma General Plan.
- Table 4 of the ENA shows typical noise source levels for promotional events. While the stated values in this chart seem reasonable, the ENA does not specify how large the events from which these values were derived are in terms of number of people. This is troublesome because the table of proposed events at the Ramey Winery show four events per year where up to 300 people are expected to attend. (ENA Table 1) Clearly, the noise level coming from conversations at an event largely depends on the number of people at the event. For a 300 person event, we find that the value of 65 dBA measured at 50 feet for "Raised Conversation" stated in Table 4 is unrealistically low.

2.1.2 Omission of Residence 4

- The March 7, 2017 does not address Residence 4 in its assessment of the noise impact of the proposed winery. Since Residence 4 is significantly closer to the proposed winery than the other three residences, conclusions based on the impact to the other three residences cannot be applied to Residence 4.

Our overall assessment of the March 7, 2017 Environmental Noise Assessment is that it used a number of unrealistically low noise source levels, and it completely omitted the assessment of noise impacts to Residence 4. An addendum was added on August 16, 2017 which addresses Residence 4; however, it uses the same questionably low noise source levels in the March 7 ENA. Additionally, there are multiple flaws with the methodology used in The Addendum, described below.

2.2 Deficiencies in Addendum – August 16, 2017

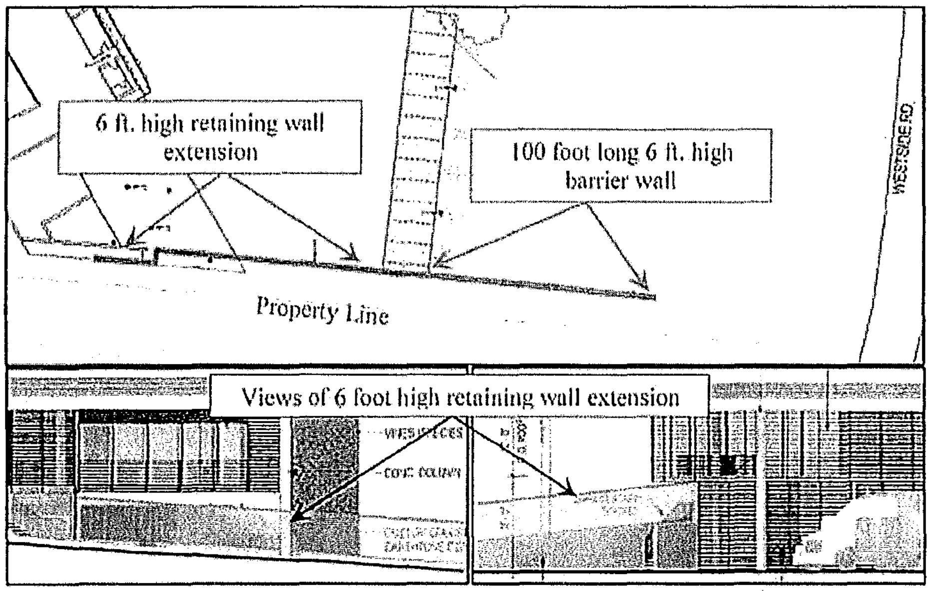
We will address issues with the 6 noise impact/mitigation sections in The Addendum, each addressing a different type of noise source.

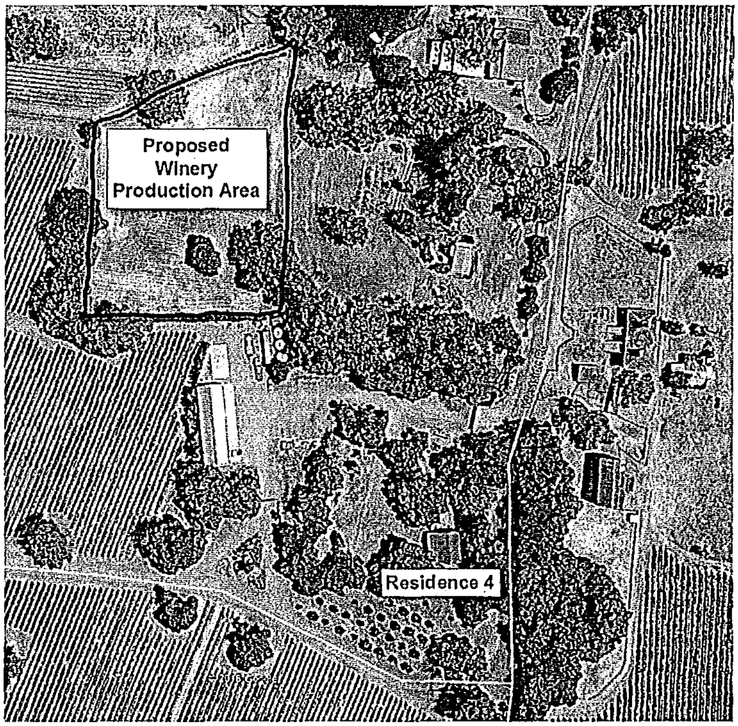
2.2.1 Noise Impact 1: Traffic, Parking Lot, and Truck Noise

- Here, and in several other sections, Illingworth & Rodkin characterize a noise-producing area such as a parking lot as if all of the sound is emitted from the geometric center of the area. In this section, they state: "Based on review of the current site plans the acoustic center of the 12 regular parking stalls in this area will be 75 feet from the property line of Residence 4." This methodology is not commonly used in acoustics because even if a number of noise sources are distributed evenly across an area, they would not act the same way as a point source located in the center of the area producing the same total energy. This "acoustic center" model underestimates the distance of sound sources to the receptor, and thus underestimates the noise level at the receptor.

- Illingworth & Rodkin state that automobile and light vehicle noise would be between 49 and 59 dBA at the property line of Residence 4. They state that "given the expected visitor and employee use, these activities are expected to occur for less than five minutes out of an hour on a typical day and fall in the L02 NE-2 daytime category of 65 dBA." **The use of the L02 metric for activity that is "expected to occur for less than five minutes" is a misapplication of the Noise Element of the Sonoma General Plan.** The L02 metric is to be used when the noise level is exceeded for less than one minute and twelve seconds per hour. For an activity which may occur for up to five minutes out of a typical hour, the correct metric is the L08, which gives a noise limit of 60 dBA according to table NE-2. **The effect of this incorrect interpretation is that The Addendum uses a noise limit for light vehicle traffic which is 5 dBA higher than the actual limit, and the projected vehicle noise of 49-59 dBA falls barely within the correct daytime limit of 60 dBA.**
- Furthermore, Illingworth & Rodkin state that "during events or on busy weekends, such activities may occur more frequently and fall in the L08 daytime category." It is reasonable to assume that this activity would last for longer than five minutes per hour during events and busy weekends. Therefore, the appropriate metric to be used is the L25 metric which gives a noise limit of 55 dBA. Again, **this incorrect interpretation of the Noise Element of the Sonoma General Plan results in the use of a noise limit which is 5 dBA higher than the appropriate noise limit, and the projected vehicle noise of 49-59 dBA will exceed the correct daytime limit of 55 dBA.**
- This incorrect interpretation of the Noise Element of the Sonoma General Plan is also applied to heavy truck noise. Illingworth & Rodkin state that "truck operations are expected to occur during daytime hours only and on a basis of one to five minutes per hour… thus, truck operations would fall into the L02 NE-2 category of 65 dBA." The correct metric to be used is the L08 metric of 60 dBA. **This incorrect interpretation results in the use of a noise limit which is 5 dBA higher than the appropriate noise limit when applied to heavy truck noise, and the projected truck noise of 65-70 dBA will exceed the correct daytime limit of 60 dBA.**
- Based on the incorrect noise limits, The Addendum notes that heavy truck noise would be 5 dB above the limit. The mitigation measure proposed is to extend a 6-foot retaining wall and to use the extension as a 6-foot sound barrier. Based on the correct noise limit, **this barrier wall would need to provide a minimum of 10 dB of attenuation. There is no evidence presented in The Addendum as to how the barrier would provide this attenuation.**

- The predicted noise level at the property line due to heavy truck noise is also based on questionably low source levels, as noted earlier in this report. This means that the 6-foot barrier wall proposed as a mitigation measure would likely need to provide significantly more than 10 dB of attenuation to heavy truck noise. We could not analyze the effectiveness of a 6-foot wall as a sound barrier in this situation because there was very little detail in The Addendum as to the location of the proposed wall. There is a diagram of the barrier wall in The Addendum, but it is very unclear. The diagram in question, as well as a Google Earth map of the area around Residence 4 is shown below:





Overall, the flaws in the first impact/mitigation section include misinterpretation of the Sonoma Noise Ordinance, the use of questionably low noise source levels, and lack of details about the proposed mitigation measure and its effectiveness. Considering this, **we do not believe that there is sufficient evidence to support the efficacy of the 6-foot retaining wall extension in attenuating truck noise such that sound levels from trucks do not exceed the noise ordinance limits at the property line of Residence 4.**

2.2.2 Noise Impact 2: Mechanical Equipment Noise

- The August 16 Addendum notes that equipment in the mechanical room of the proposed winery would result in noise levels at the property line of Residence 4 that exceed the Sonoma General Plan noise limit by 23-28 dB. The L50 metric is used since the Noise Element of the Sonoma General Plan does not specify a limit for continuous noise sources, and the L50 represents the median sound level over a duration of time. In this case, we believe that the ordinance was applied correctly.
- This problem in this section is that the structural attenuation of the mechanical room walls was essentially double-counted. Originally, the mechanical room was planned to be a semi-open area. As a mitigation measure, Illingworth & Rodkin propose that the mechanical room have solid walls on the southern side, between the equipment and Residence 4. The issue is that the predicted noise levels at the property line were reduced based on 6 dB of structural attenuation due to the semi-open mechanical room. Since the mitigation measure is to change the walls of this room from semi-open to solid, this 6 dB of attenuation cannot be added onto whatever level of attenuation the solid walls are expected to provide. This means that the solid walls need to provide 6 dB more attenuation in addition to the 23-28 dB. **The solid walls between the mechanical room and Residence 4 would need to provide 34 dB of attenuation in order to ensure that noise from the mechanical room measured at the property line of Residence 4 does not exceed Sonoma County noise limits.** The Addendum did not specify how much attenuation the solid wall would need to provide.

2.2.3 Noise Impact 3: Crush-Related Noise

- This section does not contain any significant methodological flaws. However, we feel it is important to note that the predicted noise level at the property line due to crush activities falling into the L50 metric is only 1 dB below the noise limit. Similarly, the predicted noise level at the property line due to sporadic crush events falling into the L02 metric is exactly at the noise limit. **While The Addendum states that no mitigation is needed, the predicted noise levels come very close to the Sonoma General Plan noise limits. (within 1 dB)**

2.2.4 Noise Impact 4: Crush-Related Noise

- As with the first impact/mitigation section, Illingworth & Rodkin make the assumption that sound coming from multiple sources in an area acts like a single point source in the center of the area producing the same sound levels. We reiterate that this is not a reasonable assumption to make, and is not common practice in acoustics.

- According to the predicted noise levels in The Addendum, the noise from the bottling area measured at the property line would exceed the daytime noise limit by 3 dB and the nighttime limit by 6 dB. The mitigation measure proposed is to use the same 6-foot retaining wall extension described in the first impact/mitigation section as a sound barrier for the bottling noise. **As with the first section, Illingworth & Rodkin do not provide any evidence of the efficacy of this wall in providing the needed attenuation.**

2.2.5 Noise Impact 5: Maintenance and Forklift Noise

- In this section, the L08 metric is used as the noise limit for forklift and maintenance operations. **There is no justification given for why this metric was chosen, and it is not reasonable to assume that maintenance and forklift noise would only occur for less than five minutes in a typical hour.**
- Once again, Illingworth & Rodkin make the questionable assumption that sound coming from multiple sources in an area acts like a single point source in the center of the area producing the same sound levels.
- As mentioned in our analysis of the March 7 ENA, **forklift backup alarms are tonal and annoying by design, and would be subject to a reduction of the noise limit by 5 dB,** per exception 2 of the Noise Element of the Sonoma General Plan. This is not addressed in The Addendum.
- In the calculations for the predicted forklift/maintenance noise levels at the property line, Illingworth & Rodkin state that the 6-foot retaining wall would provide 6 dB of attenuation. This attenuation level of 6 dB is not mentioned in any of the other sections where the retaining wall and/or the extension of the retaining wall were discussed, and **no evidence is provided to support the claim that this wall would provide 6 dB of attenuation.**
- The predicted forklift/maintenance noise level measured at the property line is exactly at the L08 daytime limit of 60 dB. **Considering that questionable assumptions were made, the fact that the 60 dB L08 limit is used without justification, and the fact that the predicted noise level is exactly at the limit, we are not convinced by the claim that no mitigation is needed for forklift/maintenance noise.**

2.2.6 Noise Impact 6: Event Noise

- The noise source levels used in this section are based on Table 4 of the ENA, which provides typical noise source levels for promotional events. While these levels seem reasonable for small-to-medium sized events, they do not address the four 300-person events per year planned at the winery, which will inevitably produce a higher noise level.
- The noise impact of the automobile traffic due to a 300-person event is also not addressed. While impact/mitigation section 1 does mention "events and busy weekends," it uses the L08 metric for these "busy" times. We noted earlier that the L25 metric would be more appropriate, since it is not reasonable to assume that traffic noise during "busy" times would

only be present for less than five minutes in a typical hour. For 300-person events, we believe that the L50 is the only appropriate metric, since the traffic noise of 300 people showing up to an event cannot reasonably be expected to last for less than 15 minutes in an hour. **Using the L50 metric, the predicted automobile and light vehicle noise levels at the property line would exceed the noise limit by up to 9 dB,** based on the light vehicle noise levels used by Illingworth & Rodkin. We also note that these light vehicle noise levels of 49 to 59 dB measured at the property line (75 feet from the parking lot) are questionably low, especially for the number of vehicles expected for such a large event.

- The mitigation measures proposed in this section address amplified speech, amplified music, and non-amplified music, and are as follows:
  - 1) "Indoor events with amplifies speech or non-amplifies music should only occur within the baling barn or tasting room buildings with closed windows and doors."
  - 2) "Amplified music within the baling barn or tasting room should be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet."
- **These two mitigation measures do not address the heightened automobile and light vehicle noise likely to occur during the large events.**

Our overall assessment of the 16 August 2017 addendum to the ENA is that it contains significant methodological flaws, questionable assumptions, and questionable conclusions about the efficacy of the mitigation measured proposed within. **We do not believe that these mitigations would sufficiently limit the predicted noise levels at the property line of Residence 4.**

3. CONCLUSION

With the proper application of the Noise Element of the Sonoma County 2020 General Plan and correction of other technical deficiencies, **there is reasonable evidence that the proposed Ramey Winery operations will create noise impacts in exceedance of the Noise Element of the Sonoma County 2020 General Plan.** We do not believe that the mitigation measures proposed in the Illingworth & Rodkin August 16, 2017 Addendum to the March 7, 2017 Environmental Noise Assessment would be sufficient to attenuate noise from the Winery such that the noise limits of the Noise Element of the Sonoma County 2020 General Plan would be met.

MEMORANDUM

Date: 10 August 2018

To: Sonoma County Board of Supervisors

CC: Maacama Watershed Alliance

From: Jules Evens, Principal, ARA

Re: Westside Farms Winery and Hospitality Complex [UPE14-0008]

These comments are in response to a request from Maacama Watershed Alliance to review the "Habitat Assessment—Ramey Winery" prepared by Wildlife Research Associates and Jane Valerius Environmental Consultants, received by the Permit and Resource Management Department 17 September 2014 and the corrected version dated May 5, 2017.

Avocet Research is currently involved in a biological assessment of the Hanson Property on the east side of the Russian Rive located 1.2 miles NNE of the proposed project site. This effort includes reconnaissance wildlife surveys for a large wetland restoration project with a focus on special status wildlife species; therefore we are familiar with the local fauna.

I've reviewed the Habitat Assessment documents (hereafter "Assessment") and offer the following comments, observations and recommendations. These comments are limited to special status wildlife species, but these selected species serve as "umbrella" or "surrogate" species, that is, improvement of their habitat requirements will benefit a suite of other species that compose the local ecological community.

The Assessment (2017) states "No special status species surveys were conducted" as part of the assessment (2017 report p. 8). Also, the field visits and coverage referenced in those reports was minimal (two dates: 28 April and 12 May 2014) therefore insufficient to accurately assess the status of several special status species (discussed below). A thorough literature review and database search was conducted in these assessments, however the some of the documents referenced to evaluate special status animal species are out-of-date (e.g. CDFG 2013 and 2014). More recent references are cited below (CDFW 2018, USFWS2018)

Because of these limitations, it would be premature for the Board of Supervisors to approve a mitigated negative declaration. Protocol-level surveys for several special status animal species should be required before permitting. Several examples of potentially impacted species follow.

> *A formal delineation of wetlands and waters of the U.S. and the state was not conducted for the site as part of this habitat assessment. However the project*

> *has been designed to avoid any impacts to the existing drainages in the project area therefore no permits will be needed . . . (Habitat Assessment 2017, p.12)*

The location of the subject property in close proximity to the Russian River and associated wetlands indicates the necessity for conducting protocol-level surveys for several special status animal species potentially occurring on site. The following species are representative of potentially occurring or impacted special-status species, but not a comprehensive treatment of all species potentially impacted by the project.

California Red-legged Frog (*Rana draytonii*): Federally threatened (ESA).

As the Habitat Assessment states, "No surveys were conducted (Assessment 2017, p. 16) . . . No CRF were detected during the daytime survey. A nighttime survey would provide the best way of determining presence." Given the project site's proximity to the Russian River and associated wetlands, protocol-level surveys following the "Revised Guidance of Site Assessments and Field Surveys for the California Red-legged Frog (USFWS 2005) and other guidelines (Fellers and Kleeman 2006) should apply to this project. The species account in the Assessment says that the "nearest reported presence occurs more than 3 miles west of the project area in Austin Creek (CNDDB) (p. 17). In fact, CRLF has been reported <1 m E of the site.

> *The long-term probability of the survival and recovery of the California red-legged frog is dependent upon the protection of existing breeding habitat and associated uplands (Fellers and Kleeman 2005, pp. 1, 17-18*)

California Tiger Salamander (*Ambystoma californiense*)*: Federally threatened (ESA); State threatened (CESA).*

This salamander is not mentioned in the Habitat Assessment and no surveys were conducted. The project site's proximity (<2 miles) to the western boundary of the Potential Range of the Sonoma County California Tiger Salamander (Windsor Creek) should require consideration before approval of a negative declaration is issued.

> *The California tiger salamanders around Sonoma County and Santa Barbara are endangered, which means they are in danger of extinction throughout all or a significant portion of its range. (USFWS 2018)*

Western Pond Turtle (*Emys marmorata*): Species of Special Concern (CDFW 2018); Federal Candidate Species (USFWS 2015).

"No surveys were conducted" (Assessment 2017, p. 17). The Western Pond Turtle, a CDFW Species of Conservation Concern (CDFW 2018), is in decline throughout 75 - 80% of its range. (Stebbins, 2003.) In order to save both species of western pond turtle, the Center for Biological Diversity petitioned the U.S. Fish and Wildlife Service in 2012 for their protection under the Endangered Species Act, along with 52 other amphibians and reptiles. On April 9, 2015, the Service announced that Endangered Species Act protection may be warranted for the western pond turtle and initiated a full status (5-year) review. (FWS–R8–ES–2015–0024)

In my professional opinion, the aforementioned species (and several others) should be subjected to thorough assessment and protocol-level surveys before a mitigated negative declaration is approved and the project permitted.

Thank you for your consideration of these comments.

Jules Evens

Errata in the Assessments:

- The references to "Black-capped Chickadee" and "Plain titmouse" (Assessment 2014, p. 12) are in error. Chestnut-backed Chickadee (*Poecile rufescens*) is the only locally nesting chickadee species. (Burridge et al. 1995). "Plain Titmouse (formerly *Parus inornatus*) was spilt into separate species in 1997 (AOU 1997); the locally nesting species is the Oak Titmouse (*Baeolophus inornatus*). Oak titmouse is a special status species a USFWS Bird of Conservation Concern (CDFW 2018).
- White-tailed Kite (Assessment, 2017, Appendix C): Under "occurrence potential," the statement "None; would have been detected during field surveys" is in error. This raptor, a microtine obligate, is irruptive and highly nomadic, not nesting in the same location every year, rather moving in response to prey densities of California voles (*Microtis californicus*) (Evens and Tait 2005). As with several other species, site visits in a single year are not adequate to assess status or presence/absence.

CURRICULUM VITAE

Jules Evens, P.O. Box 839, Point Reyes Station, CA 94956.

Jules Evens, Principal of Avocet Research Associates, began his research as a field biologist with the Point Reyes Bird Observatory Conservation Science (now "Point Blue") in 1974 and continues as a Research Associate with PRBO and Audubon Canyon Ranch, Inc. (ACR). Since 1981 Evens has acted as the Principal Investigator and Senior Field Biologist with a focus on the San Francisco Bay Area tidal wetlands and riparian systems. His research evaluates the population dynamics of rare, threatened, and endangered marsh birds, particularly the California Clapper Rail, California Black Rail, and Saltmarsh Common Yellowthroat. Other focal species include Osprey, Marbled Murrelet, Northern Spotted Owl and neotropicl migrant passerines. He is the author of several books in the California Natural History Guide series published by the University of California Press as well as various scientific papers and technical reports (*see* Selected Bibliography, below).

RE: Concern – Potential Breach of Williamson Act Contract – UPE14-0008

Dear Planning Director Wick,

The Westside Association to Save Agriculture (WASA) is responding to the Referral to Agencies for the Initial Study of the subject project. And, are requesting that your department review the information outlined below (documents attached), and respond as to whether the project description included in the Initial Study constitutes a "material breach" of the Williamson Act contract.

Department of Conservation – Definition of Material Breach: " Government Code Section 512250(b) defines a material breach on land subject to a Williamson Act contract as a commercial, industrial or residential building (s), exceeding 2,500 square feet that is not permissible under the Williamson Act, contract, local uniform rules or ordinances. "

Project: Ramey Vineyards LLC 7097 Westside Road Healdsburg, CA 95448
APN: 110-240-031 -032 -040
Ag Preserve 397-07-037936 Type 1 Prime – with 50% planted in vineyard

Sonoma County Williamson Act Considerations: The project site is under a Williamson Act Contract for prime land (Type 1), which provides a tax break to the owner for land restricted to agricultural and open space uses, as outlined in the County Uniform Rules for Agricultural Preserves. In order to comply with the contract, land must meet the following standards:

1) The land must be devoted to an agricultural or open space use as defined in the Williamson Act; the County has required at least 50% of the land be devoted to agriculture or open space use to meet this standard;
2) The land must have a minimum parcel size of 10 acres for a type 1 or 40 acres; and
3) **Compatible uses may be permitted provided that they are incidental to the primary use of the land for agriculture and they meet the criteria for compatibility.**

Permit Application History:

A. January 21, 2014 Original Application Proposal Statement: Baling Barn building defined as primarily event/ entertaining space: "…refurbish three story baling barn as a marketing reception area: equipment storage on the ground level, kitchen and meeting area for marketing purposes on mid-level; and 2 bedrooms as marketing accommodations on the top level, and two work stations."

B. February 4, 2014 Letter from PRMD Staff to Applicant: Page 2 -3, Item 4 addresses Williamson Act Consistency relative to dedicated "marketing center": County questions the separate Baling Barn structure given uses include a commercial kitchen, private dining and tasting space, 2 bedrooms and baths and 2 work spaces – primarily event-related activities.

The planner cites Category G, attaches policy for dwelling units, and then concludes the Proposal does not comply: "Category G: Miscellaneous: Special events, when directly related to ag…promotion; provided that: a) events last no longer than two consecutive days and **do not provide overnight accommodations; b) No permanent structure dedicated to events is constructed or maintained on the contracted land."**

Finding: " For the project site, **neither the density, nor the Williamson Act contract allows another dwelling unit on the parcel.** Therefore, the marketing accommodations as designed are inconsistent with the zoning density allowance and the Williamson Act contract. Appropriate revisions to the project and plans are required prior to further processing the request."

C. September 17, 2014 Meeting Re-cap between Ramey owners, Traci Tesconi, PRMD, Adobe Associates and Earthtone Construction: Paragraphs 3 -4: The Applicant is proposing three to four separate tasting areas on the Williamson Act lands: (1-2) public in Hop Kiln(s), (3) private Club Member only Baling Barn with commercial kitchen, large event room, 2 bedrooms with bath and work spaces or lounge; and (4) winery location across the road for distributor and high end club member tastings.

The County generally only allows one tasting room, yet the PRMD planner advised the Applicant to label the building: **Parcel 110-240-031-032:** "Discussion about uses of Baling Barn as tasting – Tesconi recommends labeling it as …"private tasting by invitation only…" This would separate it from the public tasting room which will be located in the current Hop Kiln."

D. October 7, 2014 PRMD sends out the referral packet for UPE 14-0008: Ramey Vineyards LLC that describes the project as follows. **A significant deficiency in the application is the lack of clear square footages for its event and entertaining space.**

Conservatively, the Baling Barn has about 2,800 square feet of event-related and "dwelling" space on two stories, including a kitchen, dining area, several lounges, and 2 to 4 bedrooms with 2 baths. The Hop Kilns add between 2,500 – 5,000 square feet of

public tasting and food service facilities, depending on whether just one or both will have tasting. And, all the buildings are joined by outdoor entertaining space.

See Figure A1.01 which labels certain spaces as "retail" or "restaurant" or "lounge" for Hop Kilns and Baling Barn – one item missing from the description is the player piano and the chandeliers:

- **68+ acre parcel: 2 Hop Kilns** *(approximately 2,000 to 2,500 sq feet each)* **converted to public and private tasting:** (Tasting Rm 795 sq. ft.; Tasting Bar / Kitchen 397 sq. feet) and Case Storage 813 sq. feet)
- **2 story Baling Barn** (*approximately 1,500 sq. ft. per floor* **with two floors converted to a "Private Club and Lounge"** (second floor: Private tasting room 595 sq. feet, Retail bar and Kitchen 295 sq. feet, Private Club 545 square feet. Third Floor" 2 Bedrooms with bath, 2 " Work Spaces or Lounges
- **22 Promotional Events of up to 300 people**, with 10 in the Baling Barn including "on-site food preparation" with dinners lasting until 9 pm.
- 6+ acre parcel: 23,000 square feet of Winery Production facilities, with private tastings and some events, and Wine cave for storage.

From the above, and as further documented in the attachments, it does not appear that the Applicant changed the project to address the Williamson Act concerns about another "dwelling unit" – as the kitchens and bedrooms remain – nor the concern that the Baling Barn building is dedicated to Events and Entertaining.

The Westside Association to Save Agriculture thanks you in advance for your review and assessment of this situation. The Applicant is early in the process, and this is the time for adjustments to be made to the project.

Sincerely,

Westside Association to Save Agriculture
Cc: Planner Traci Tesconi, with Attachments

A. January 21st: Original Ramey Vineyards LLC Proposal
B. February 4th: PRMD Letter – Williamson Act concerns
C. September 17th: Meeting Re-Cap – PRMD Planner suggests labeling Baling Barn a "Tasting for Club Members only" or "Tasting by Invitation only" – but does not address the concerns with consistency with Williamson Act

RE: 7097 Westside Road, UPE14-0008

Dear Commissioners

This letter is on behalf of the Westside Community Association (WCA) regarding the proposed use of the existing hop kiln structures for entertainment and visitor serving uses, which is included the Ramey Use Permit application.

The WCA does not believe that constructing a tasting room and other visitor serving facilities in the location of the current hop kiln structures complies with either Sonoma County zoning ordinances, the General Plan Scenic Resource Element or Section 65567 of the State Planning and Zoning law.

Section 65567 of the State Planning and Zoning law prohibits issuance of a building permit in contravention of the General Plan's Open Space Element. The proposed new tasting room, entertainment and parking facilities intrude into the 200 foot setback and may not be built consistent with either State law or the General Plan requirements.

The existing hop kiln structures are non-conforming structures because they are located within the 200 ft. scenic corridor setback. The provision of Section 26-64-030 Scenic Resource Combining District apply to properties along scenic corridor, and delineates the conditions whereby construction may be permitted on the properties covered by this provision The proposed project is located in a scenic corridor and thus subject to the provision of this section. Since the proposed project is a not a maintenance, restoration or reconstruction of the existing hop kiln, but rather a new use, requiring virtually all new construction, there is no provision that would permit such new construction and new use within the 200 foot setback.

The provision of Section 26-64-030 allowing construction new barns and similar agricultural support services would also not apply as agricultural support services are spelled out in Policy AR-5f as processing, storage, bottling, canning, and packaging. The proposed use is clearly visitor serving.

Similarly Article 94 – Nonconforming Uses of the Sonoma County Zoning Code delineates the circumstances under which a non-conforming use may be continued or reconstruction may be permitted. Again, the proposed new use and construction does not comply with County codes. Under section 26-94-010 the non-conforming use may be replaced by a use of the same or less intensity upon obtaining a use permit. The proposed project does not qualify under this provision for two reasons. First, the use of the hop kiln structure has been abandoned for a sufficiently long time that any new use would not be replacing a current use. Second, the proposed use is not "the same or less intensity". A tasting room, VIP lounge, marketing accommodations, and two kitchens and dining areas is certainly not a less intensive use.

Section 26-94-020 delineates how a non-conforming use can be reconstructed. Under this provision, the need for reconstruction would have to be as the result of several enumerated circumstances – explosions, acts of god and the like, and presumably be replacement of an existing, non-commercial use. The proposed project does not meet these standard for a reconstruction.

Finally, even if the proposed new construction and use were a continuation of an existing non-conforming use, which is not the case, the proposed modifications, in addition to being a more intense use, would increase the foot print of the structures by more than 10% limitation contained in Section 26-94-010. Based on drawing A1.10 of the application the existing hop kiln structures would be increased by approximately 19%.

Therefore, for the above stated reasons, the WCA requests that the Landmarks Commission not recommend approval of this new construction because is does not comply with the County's General Open Space Element and the County's Zoning Ordinances.

Thank you for your consideration of the important matter.

Sincerely,

Westside Community Association Advisory Board

RE: UPE14-0008; 7097 Westside Road Healdsburg, Ramey Vineyards LLC

Dear Mr. Wick,

The Westside Community Association (WCA) submits the following comments regarding the proposed Use Permit for a new winery and entertainment facilities at 7097 Westside Road (Project).

The Project, which includes a large winery, several tasting rooms, restaurant related facilities, lounge and overnight accommodations, is:

1. Too large in scale,
2. Disproportionately focused on entertainment and events,
3. Located within the scenic corridor,
4. Situated in a high concentration of existing wineries and tasting rooms, and
5. Has cumulative impacts that have not been assessed.

1. Too Large in Scale: This is the most intense project ever proposed for Westside Road, and is out of scale with other recently permitted projects. The project consists of over 46,000 square feet of new construction plus the construction of wine caves, four (4) separate tasting rooms, including a VIP lounge, three (3) kitchens, and two (2) overnight accommodations.

A 60,000 case operation would be significantly larger than neighboring facilities. Westside Road has 23 permits for grape processing. While decades ago two facilities were permitted for more, the average maximum permitted production of the other 21 faculties is 20,000 cases. The 42 acres of grapes planted on the Project site translates into roughly 7,000 to 9,000 cases of production utilizing on-site fruit.

The Project proposes to import fruit from as far away as Lake, Mendocino, Napa and Marin counties. Since the vast bulk of the fruit will be transported to the winery, there is no justification for a winery size in this rural location much larger than the 20,000-case average in the area.

In addition, a 60,000 case winery, importing the bulk of its fruit from far away does not appear to have a strong agricultural justification for re-locating a processing facility currently located within the City of Healdsburg to an already impacted and important rural roadway.

Furthermore, the existing winery in Healdsburg employs a staff of 15 people. Moving the existing operation out of town will mean that 15 people that now work in a location with access to transportation and other services will have to commute out to the far reaches of Westside Road, and in addition to the extra truck trips for importing fruit, will add yet more traffic on this already impacted rural roadway.

2. Disproportionate focus on entertainment: A large proportion of the Project's square footage is geared around entertainment, events and commercial office space, and calls into question whether the visitor serving and administrative components of the project are truly incidental and secondary to agriculture. With the 3-story baling barn, tasting rooms in the hop kilns, and tasting rooms and kitchen located within the winery as well, there is more than 11,700 square foot of entertainment and visitor serving facilities, and 6,000 square feet of office space. Actual winery processing space is 27,050 square feet, which means that entertainment and office space is equal to approximately 65% of the space dedicated to actual wine processing. The County has determined that amount of marketing and administrative office uses should not exceed 15% of the winery size to be considered "incidental" in use.

The proposed lounge, commercial kitchen, food service facilities, and lodgings together, effectively represent a restaurant or resort facility, which is not allowed in neither LIA zoning nor on Williamson Act lands, and these features should be removed from the project.

The strong hospitality and entertainment orientation weakens the agricultural connection justifying a location in a very rural area on Westside Road. It suggests that the main reason for moving the existing processing facilities from a location in Healdsburg, with good highway and transportation access for it operations and employees, to Westside Road; is to exploit the location on this rural roadway, for commercial marketing purposes.

3. Scenic Corridor and Non-Conforming Use Restrictions: Westside Road is a designated Scenic Corridor under the Open Space Element of the County General Plan. The proposed project would result in several structures, parking and other development within the 200-foot setback. (See Attached WCA Letter submitted on December 2, 2014 to the Design Review Committee.)

The WCA does not believe that constructing tasting rooms and other visitor serving facilities in the location of the current hop kilns and bale barn complies with either Sonoma County zoning ordinances, the General Plan Open Space Element or Section 65567 of the State Planning and Zoning law.

Westside Road embodies Healdsburg's rich agricultural heritage, with scenic vistas and historic structures, which provide continuity with our past and enhance our quality of life. The Project threatens this heritage. This Project includes large structures and parking adjacent to historic buildings and viewscapes, and includes intense visitor serving uses that will be degrade the rural character of the area.

4. **Situated in a high concentration of existing facilities**: Per General Plan Ag Resource Elements AR – 5F(3), 5G, and AR-6F, a detrimental concentration of wineries, tasting rooms and event facilities is a rationale for the County to deny a discretionary Use Permit.

There are already three (3) other facilities with visitor serving uses within the quarter mile stretch of Westside Road where the Project is proposed to be located[1]. Adding a fourth, very large project in this particular stretch of road, in close proximity to several other event facilities, will create traffic issues that have not been assessed. In addition, Westside Road is a designated County bicycle way. It is one of the most popular bicycle routes in the County, and is used by farm equipment and many local and visiting motorists as well. Such a tight concentration of event facilities will also greatly impact the rural character and rural landscapes on this already impacted and important rural scenic byway.

Also, having the winery across the street from the tasting room and entertainment facilities will create additional road safety issues with visitors and employees forced to cross the narrow roadway with limited sight lines.

5. Cumulative Impacts: The cumulative impacts for an additional and very large project as proposed in the area will be significant. Westside Road currently has 27 permitted tasting rooms, entertainment facilities, and wineries. It is an area that has one of the highest concentrations of events and event facilities in the County, and already has a detrimental concentration of events and event facilities.

---

[1] Other three facilities - Arista UPE09-0026, William Seylem UPE04-0074, Gracianna Family Winery UPE10-0021,

As a consequence, the cumulative impacts of any additional projects will degrade the rural character of the area. A project proposing a 60,000 case, 46,000 square foot facility with 10,700 square feet of entertainment facilities, 6000 square feet of office space, hosting 44 event days, public tasting and lodging facilities, will have a detrimental impact on the neighborhood.

In addition, the project site is located in a cluster of tasting rooms and wineries that, with the addition of the proposed Project would result in four facilities within approximately one-quarter mile along Westside Road.

Conclusion: The Project is simply too large, and commercially oriented for a rural area such as Westside Road, and will be detrimental to the rural character of the area. In addition, having restaurant facilities and buildings located within the scenic corridor, the Project violates Sonoma County Zoning Code and General Plan requirements. For these reasons, the WCA does not support the County granting a discretionary use permit for the Project. The WCA is also concerned that features of this Project do not comply with the zoning code or Rule 8 of the Williamson Act, and calls into question why the Project was sent for Initial Study review before the non-compliant features are removed.

For the above reasons, the WCA believes that this Project is not suited for the proposed location on Westside Road and should be denied.

Respectfully Submitted,

Westside Community Association Advisory Committee

RE: UPE14-0008, 7079 Westside Road

Dear Ms. Tesconi:

This letter supplements our letter dated January 14, 2015, on the above referenced application; a copy of that letter is appended (attachment #1).

For the reasons stated in the January 2015 letter and as augmented and reinforced in this letter, the Westside Community Association (WCA) requests that the County staff recommend to the BZA a denial of this application because at this location the proposed project will be detrimental to the health and safety of persons residing, working or visiting the area and detrimental to the general welfare of our community. (CEQA Mandatory Finding of Significance)

Specific concerns are:

1. Inadequate sight lines and close proximity to several adjacent tasting rooms access roads would cause traffic safety and joint road use conflicts
2. Minimum setbacks to adjacent properties will create significant unmitigated noise impacts
3. 60K case winery, office and hospitality complex/ operation and is out of scale other facilities on Westside Road and incompatible with the neighborhood
4. Disproportionate focus on hospitality and promotional uses which is inconsistent with the General Plan
5. Location within the scenic corridor would be inconsistent with the Open Space - Scenic Corridor Element
6. Situated in a high concentration of existing wineries/tasting rooms detrimental to the rural character

1. Significant impacts to public safety would result from the two opposing driveways with insufficient sight distances located in close proximity to three other tasting rooms.

The W-Trans traffic study dated March 10, 2016 does not adequately address the traffic safety and joint road use impacts associated with this project.

First, the project is on two sides of the road, with driveways directly opposing each other on a section of Westside Road with very limited sight distance. Attachment #2 shows a sign for an event at a winery located next door, warning drivers of stopped traffic during an event. This sign was placed at the location of the existing driveways for the proposed Project, and illustrates the challenging sight distances that currently exist for drivers visiting the three (3) existing wineries located in the quarter mile (1/4 mile) stretch of road where the Project is to be located.

Second, the prevailing speed analysis, indicating a speed of 35 mph, appears to be inaccurate. The prevailing speed study should be independently verified because is does not reflect speeds of drivers actually using this section of roadway.

Third, The W-Trans study did not apply the correct standard for a significance threshold and mitigations required for Discretionary Use Permit projects per the *Sonoma County Guidelines for Traffic Impact Studies*. As required by Section 6 of these guidelines, projects requiring traffic impact studies must meet 11 thresholds of significance. The County document states:

> "A project would have a significant traffic impact if it results in any of the following conditions:
>
> 9. Sight Lines: The project constructs an unsignalized **intersection (including driveways)** and/or adds traffic to an existing unsignalized intersection approach that does not have adequate sight lines based on Caltrans criteria for state highway intersections and AASHTO criteria for County **roadway intersections.**" (Emphasis added)

The requirement for Staff to use the AASHTO **roadway intersection** standards was confirmed in the June 1st hearing for a proposed project at 4603 Westside. The W-trans study uses the shorter "stopping distance criteria for private driveways". Unless the proper sight distance significance threshold is achieved and the impacts mitigated, the County cannot approve a mitigated negative declaration for a project with a significant **unmitigated** impact.

At the prevailing speed assumed in the W-trans study of 35 mph, a sight distance of 390 feet is necessary in both directions. At 40 mph the required sight distance is 445 feet. The W-Trans study must be redone using the correct AASHTO roadway intersection standard – Attachment # 3. The Department of Transportation and Public Works is requiring removal of a hillside to increase the sight distances to the north, but even with this mitigation, it is not sufficient to create adequate sight distances.

Fourth, even if the County relies on stopping distance as opposed to sight distances for assessing traffic safety, the possibility of queuing onto Westside Road must be considered. With events of up to 300 people entering and exiting the two opposing driveways there are likely to be backups on Westside. Queuing was also considered by the BZA as a reason for denial of 4603 Westside that had similar issues using the minimum stopping distance standard. Meeting the minimum stopping distance standard is simply not sufficient to ensure the safety of the public in this stretch of Westside Road with limited visibility and three other winery/tasting room access roads in close proximity.

Finally, joint road use conflicts with visitors, local traffic, large trucks and bicycles all using this stretch of Westside Road were not addressed at all. Westside Road is a heavily used bicycle route with a bicycle "Level of Service (LOS) E. The April 2017 Level of Service Analysis shows that Westside is already at Level of Service C, with at least three (3) known projects in addition to the subject project, the Level of Service Analysis should address cumulative impacts of existing and known projects as well as the potential of increased visitation at existing wineries when permits are modified to add promotional and hospitality activities.

2. Noise assessment does not appear to adequately mitigate winey equipment and truck noise impacts on adjacent sensitive land uses.

The potential for noise environmental impacts from the project located at 7097 Westside Road (UPE14-0008) was assessed and reported by Illingworth & Rodkin (I&R) in four *Environmental Noise Assessment* documents dated October 9, 2013, September 4, 2015, March 7, 2017 and August 16, 2017.

According to General Plan Noise Element Policy NE-1c, *the total noise levels resulting from new sources shall not exceed the standards in Table NE-2 as measured at the exterior property line of any adjacent noise sensitive land use.*

The October 9, 2013 document was prepared with two major (critical) General Plan Policy NE-1c inconsistencies:

- The adjacent noise sensitive land use (APN 110-240-024) south of the proposed winery and wine cave location was omitted; and
- Noise levels for the noise sensitive land use (APN 110-240-020) south of the proposed wine tasting and events location were measured at the "residences" rather than the exterior property line.

An addendum was prepared dated September 4, 2015 assessing amplified music and speech generated at the Walnut Grove measured at the exterior property line of the APN 110-240-020 property. Yet, the March 7, 2017 *Environmental Noise Assessment*, which was prepared and described as twice revised contained the same original Policy NE-1c inconsistencies and critical omissions noted in the original 2015 document. This was brought to the attention of planner Traci Tesconi in a meeting held on August 10, 2017. As a result, a fourth assessment was prepared dated August 16, 2017, which included the adjacent noise sensitive land use (APN 110-240-024) immediately south of the proposed winery location.

Given the close proximity to sensitive land uses, a peer review should be required.

Further comments will be submitted under separate cover.

3. The 60K case size and intensity of winery, hospitality and office complex is out of scale with other Westside Road facilities and are incompatible with the neighborhood

As stated in the WCA January 14 letter, the Project is simply too large in scale compared to other winery/tasting rooms recently permitted on Westside Road. Attachment #6 is a summary of the other production facilities permitted in the Westside Area, which indicates an average of less than 20,000 cases.

Attachment #7 is a calculation of the square footage of various project components based on the preliminary design drawings.

Based on the most recent search of the files, the WCA believes the Project features include: Overall construction of 46,000 sq. ft., four (4) tasting rooms, three (3) kitchens, two (2) overnight lodgings, 6,000 sq. ft. of office space and 11,700 sq.ft. of hospitality area is simply too much commercial development for a rural area. This is particularly the case given the other 29 permitted facilities in the Westside Area.

4. The large land area and facilities dedicated to non-agricultural activities is not consistent with the general plan requirement that such uses and facilities be limited in scale and intensity, and secondary to agriculture.

General Plan policy AR6 states that visitor serving uses should be secondary and incidental to local agriculture. As stated in the WCA January 14 letter, the scale of visitor serving uses is disproportionate to the processing facilities and as mentioned above, out of scale with surrounding operations. Attachment # 8 shows the approximate area of the primary hospitality operation, and covers nearly 3 acres. The four tasting rooms, three kitchens, lodgings and other event space comprise nearly 65% of the size of the processing area.

The 24 Ag promotional event-days for up to 300 guests is much larger than for neighboring wineries. The average number of events per facility on Westside Road is 11, including industry events. The most recent project approval on Westside was for 12 events, which included 8 days of industry events.

5. The reconstruction of abandon hop kiln structures to tasting rooms, food service facilities and lodgings within the scenic corridor conflicts with the General Plan Scenic resource element, and detrimental to rural character.

See WCA January 14, 2015 and December 2, 2014 letters regarding the inappropriateness of reconstruction and intensification of use of existing farm structures within the scenic corridor.

As stated in these letters, Westside Road embodies Healdsburg's rich agricultural heritage. Keeping these old structures located within the scenic corridor in their natural state should be a priority. Attachment #9 is a picture of an old barn in the scenic corridor on Westside Road is one of the most recognizable scenes of Sonoma County agriculture. Converting such structures as the one shown in the photo, or the hop kilns at the Project into a tasting rooms, surrounded by parking with big signage and very commercial oriented uses should not be permitted. Such buildings could be used as barns for equipment storage for example.

Also, the County was not willing to allow conversion of an agricultural building in the scenic corridor to be converted to a tasting room for a recent project proposal on Westside Road.

6. The location of the winery, food service and logging and entertainment facilities in such close proximity to three (and potentially four such facilities) within a half mile will constitute a detrimental concentration under the General Plan.

The proposed project would result in the fourth tasting room in 0.25 miles. Attachment # 10 is an aerial view of this concentration of tasting rooms.

The BZA is considering concentration in its approvals of applications for visitor serving facilities and activities. In a recent denial of a project in the same vicinity as the Project (4603 Westside Road PLP14-0031), the BZA resolution denying the project states:

> *"2. Event and Tasting Room Traffic .... Westside Road has 29 permitted wineries along the roadway, and traffic on Westside Road includes operational traffic from wineries, travel to/from tasting rooms and winery event traffic. The Project would result in four wineries with tasting rooms and events within 0.6 miles. The proposed winery is adjacent to MacRostie Winery at 4603 Westside Road to the south and near three tasting rooms to the north: VML Winery and Alysian Wines at 4035 Westside Road and Baccigalupi Winery at 4353 Westside Road."*
>
> *"The proposed addition of another winery and tasting room in close proximity to the existing tasting rooms would contribute to a concentration of uses that would be incompatible with the neighborhood character and deleterious to the rural character of the immediate area."*

In addition, as the attachment to the January 18 letter shows, that with 29 permitted facilities on Westside Road, any additional facilities or events would have a significant cumulative impact on the number of events and visitor serving activities.

For the above reasons, and site constraints, the WCA requests that the Project be denied.

Sincerely,

Westside Community Association Advisory Committee

Ramey Vineyards LLC
Attention: Mr. David Ramey
P.O. Box 788
Healdsburg, Ca. 95448

RE: UPE14-0008; 7097 Westside Road, Healdsburg. APN 110-240-031,-032,-040.

Dear David:

On January 21, 2014, PRMD received the above referenced application for a Use Permit. The Use Permit request includes a new 60,000 case winery with wine caves and to include public tasting, events, and marketing accommodations on 75 acres. The application has been reviewed and the file has begun to be processed. The Use Permit was submitted with the following studies: Traffic study, Greenhouse Gas study, and Sound study. However, it has been determined that other required application materials were not submitted with the application, therefore, referrals cannot be sent out to other governmental agencies and public interest groups until the following information has been submitted, as explained below:

1. **Administrative Design Review required:** On the east side of Westside Road, the project includes the conversion of an existing hop kiln building and bale barn into the tasting room and marketing accommodations building, respectively. Both buildings are located within the 200-foot *Scenic Corridor* setback; therefore, preliminary and final Design Review is required as part of the processing of the Use Permit. On the west side, the new winery building and wine caves will be located outside of the *Scenic Corridor* setback, but will still be included in the design review process.

   In addition, the two existing buildings exceed the 35-foot height requirement of the LIA zoning district. Therefore, under Section 26-040-030 of the LIA zoning district, and Section 26-64-030 (3) of the Scenic Corridor criteria, Design Review is required.

   In reviewing the application materials, please submit the following items, prior to further processing of the Use Permit and preliminary Design Review:

   a. A list with the total square footage for all existing and proposed buildings to be part of the project.

   b. Please provide the percentage of office space in relationship to the processing and storage areas (wine caves) for the winery. The amount of marketing and administrative office uses must be incidental in use and size to the winery use and should not exceed 15% to be considered incidental.

   c. Color samples and materials. Provide samples of roof, siding, trim, and window materials. Color photographs of the materials are acceptable. Also provide proposed exterior paint and finish for roof, siding, trim, accents, and around windows. These should be small enough to fit into the planning file (8 1/2 in. x 14 in. max.).

   d. Photo montages showing existing and proposed views and elevations of existing structures to be converted to new uses, and views of said structures from the public roadways, and including proposed landscape improvements added to project site to provide screening.

2. **Importation of grapes:**

According to your Use Permit application, the on-site vineyard produces 240 tons of grapes per year. Typically for white wine the ratio is one ton of grapes produce 64-66 cases of wine. The request is for an annual maximum production capacity of 60,000 cases. The Zoning Ordinance allows processing of grapes grown on the site and processing of locally grown grapes. Please describe in detail where grapes imported to the site for processing are grown.

3. **Clarification on types of events:**

There is a distinction between *agricultural promotional events* hosted by just one winery as opposed to *industry wide events* which are held at several wineries throughout an entire appellation. In reviewing the Use Permit proposal statement and studies, the events proposed need clarification:

a. List the number of *agricultural promotional events* proposed just for the Ramey winery, along with the maximum number of guest per each event, the hours for each event, and the location for each event.

b. List the number of *industry wide events* the winery proposes to participate in per year , along with the maximum number of guests expected for each of the events, the number of total event days, and where the location(s) for each event. Based on past winery projects, several industry wide events occur over two consecutive weekends, which consist of four event days, so that must be listed. In the Use Permit proposal, you state a maximum of 120 guests for industry wide events, which is quite low when compared to other wineries in the area. Based on other winery projects, 300 maximum guests per day for an industry wide event is most common for this region.

4. **Williamson Act consistency:**

The project site is under a Type I prime Williamson Act contract with over 50% of the total parcel planted with an existing vineyard. Under the Uniform Rules, Rule 8.0 - *Compatible and Incompatible Uses*, it requires contracted land to be devoted to agricultural or open space uses. However, the County allows other uses of contracted land that are compatible with the agricultural or open space uses on the land and the following two categories apply to this project:

Category B, Agricultural Support Uses: *Sale and marketing of agricultural commodities in their natural state or beyond, including winery tasting rooms, promotional activities, marketing accommodations, farmer's markets, stands for the sampling and sale of agricultural products, livestock auction or sale yards, and related signage.*

Category G, Miscellaneous: *Special events, when directly related to agricultural education or the promotion or sale of agricultural commodities and products produced on the contracted land, provided that:*

a. *The events last no longer than two consecutive days and do not provide overnight accommodations; and*
b. *No permanent structure dedicated to the events is constructed or maintained on the contracted land.*

As proposed, the "marketing center" structure contains two bedrooms and bathrooms on the upper floor, a marketing area (open area) and commercial kitchen on the middle floor, and a general storage area on the lower floor, all the components for the structure to be classified as a dwelling unit (residence). (Refer to Policy 1-4-5: *Definition of a Kitchen and Determination of a Dwelling Unit)*

Dwelling units are defined in the zoning code as *"a permanent building or portion thereof including manufactured and mobile homes designated or used exclusively as the residence, sleeping room or quarters with kitchen facilities which constitutes an independent housekeeping unit, for one (1) or more persons*". Similarly, the Building Code defines a dwelling unit as "A single unit providing complete independent living facilities for one or more persons, including permanent provisions for living, sleeping, eating, cooking and sanitation".

For the project site, neither the density, nor the Williamson Act contract allows another dwelling unit on the parcel. Therefore, the marketing accommodations as designed are inconsistent with the zoning density allowance and the Williamson Act contract. Appropriate revisions to the project and plans are required prior to further processing the request.

5. **Biological Assessment required:**

The project site is located along the Russian River, contains a grove of walnut trees, and involves the conversion of an inhabitable building and barn to habitable space; therefore, a complete Biological Assessment is required for the project site to identify biological resources that may be impacted by the proposed project, including, but not limited to bats, nesting birds, raptors, and their habitats; as well as other plant and animal species. Nesting habitat for raptors or other birds are protected by the *Migratory Bird Treaty Act*. The assessment must be done by a qualified wildlife biologist or ecologist, and must determine the level of impact to species', species' habitat(s), and recommend mitigation measures to reduce potential impacts.

6. **Historical Evaluation and Cultural Resource Survey required:**

Please provide a historical evaluation for the hop kiln and bale barn structures and a Cultural Resource Survey for the project site.

7. **Replacement of existing dwelling unit(s):**

It states in the application that you intend to replace existing dwelling unit(s) located on the project site. The site plan shows three existing dwelling units, whereas, the current density (60 acres per dwelling unit) allows for one dwelling unit. This means that two of the dwelling units may be legal non-conforming, and thereby are limited in expansions and can only be replaced if they are destroyed or damaged by flood, fire, etc. or if they are mobile homes; or replaced with housing intended for agricultural employee(s), or farm family members . Although this is not part of the Use Permit application, I recommend that we discuss this matter further before you demolish any of the dwelling units on the project site.

Please contact me to discuss this matter further and to set up a site visit. Prior to the file being sent out on referrals, items 1 through 5 must be submitted to complete the application. Additional information and studies may be required once referrals are able to be sent to other agencies and public interest groups. Also the studies that have been submitted may need to be revised if there are revisions to the project and/or plans. Please advise all your consultants of any revisions made to the project in order for them to provide any appropriate revisions or updates to the plans and studies. If you have any questions or need further information, please contact me at (707) 565-1903 or Traci.Tesconi@sonoma-county.org. I appreciate your cooperation in this matter.

Sincerely,

Traci Tesconi

Large Project Comparison - Westside Farms to Hop Kiln

Features	**Approved Westside Farms 9/21/17**	**Denied Hop Kiln 6/21/12**	**Approved Hop Kiln in 2015 as amended by Landmark in 2017**
Winery Capacity	60,000 cases	60,000 cases	30,000 cases
Parcel size and On-site grape production	76 acres, 32 acres vineyard to estate (plus 10 acres under long term lease) = 8,000 -12,000 estate produced cases	97 acres owned and planted to estate – produces 24,000 - 35,000 cases	97 acres owned and planted to estate – 24,000 - 35,000 cases
Square footage of Winery Facilities	**52,930** 32,210 winery and 20,720 wine cave for storage and unspecified uses	**56,424** (including 6,200 case storage in barn)	**24,755** (including 6,200 case storage in barn)
Square footage of hospitality, event and office space (not historic displays)	**15,000** - with 10,500 hospitality and 4,500 office space square footage Not including outdoor event space	**18,000** - Up to 9,000 in Hop Kiln structure (2,750 tasting room) 6,500 new tasting room/office, plus 2500 marketing accommodations.	**6,520** in 3 story Hop Kilns and 2,750 existing tasting room. New 770 food/wine pairing room and approx. 2-3,000 other in basement
Parking	130 total 51 marked 79 unmarked overflow	120 total 60 marked (existing) 60 unmarked overflow	60 marked (existing) Unspecified overflow parking
Employees	15 full time, (plus 3 part time, and 6 seasonal)	18 employees	18 full time
Number of events - Road Safety Issues at driveway intersection	22 total - road safety not mitigated 20 promotional and 2 industry 10 with up to 30 people 5 with up to 60 people 5 with up to 120 people	37 total - road safety not mitigated 29 promotional and 8 industry 12 events with up to 50 people 7 events with up to 100 people, 7 events with up to 175 people, 3 events with up to 300 people. .	**Road safety mitigated** 12 total 8 industry and 4 Ag promotional Up to 150 people
Non-event trip generation	92 per day, excluding events	150 per day including events	75 per day
Hours of events	Up to 9 pm with clean up before 10 pm	Up to 9 pm with clean up before 10 pm	Indoor events up to 9 pm with clean up before 10 pm Outdoor end 5 PM
Food pairing	Yes – 3 rooms	Yes – 1 room	Yes – 1 room
Commercial Kitchen	Yes - 3	No	No
Amplified sound in **tasting room/ baling barn**	Allows drums, horns and instruments. No outdoor amplified sound at winery. Amplified speech permitted in Grove	No outdoor amplified sound and no loud instruments – drums, horns, etc.	**No outdoor amplified sound or** loud instruments – drums, horns, etc.
Marketing Accommodations	Yes – 2 units, with kitchen and dining rooms creating second dwelling unit	Yes – 4 units in single dwelling unit on Williamson Act property	**None, as amended by Landmark**

Large Project Comparison - Westside Farms to Hop Kiln

Discretionary Use Permits run with the land, with future owners granted all allowed uses. A Use Permit must be evaluated based on the characteristics of the project within the context of its physical setting - the Supervisors are to evaluate the project impacts, not the intent or character of the current owner/applicant.

KEY COMMUNITY CONCERNS WITH WESTSIDE FARMS PROJECT

- **Significant road safety issues - large winery with hospitality complexes on both sides of the road**
  - Two opposing commercial driveways create unsignalized intersections near curves; applicant must cut away a hillside and remove trees. Insufficient safe sight distance with truck turning movements create dangerous situation for vehicles and cyclists
  - Operations on both sides of road will create confused turning movements, leading to queuing and potential pedestrian crossing
  - Fourth winery in 0.25 miles - drivers have to deal with 5-6 project driveway intersections along a road with blind hills and curves
  - Increased speeding and illegal passing of cyclists and slower moving vehicles on Westside Road is leading to a significant number of single car accidents creating road safety, power outage and vegetation fire impacts
- **Too large in Scale and Intensity for the Westside Area**
  - 60,000 cases is approximately three times the average of wineries on Westside Road
  - 15,000 square feet of Hospitality facilities and office space proposed on agricultural preserve, Williamson Act lands
  - Events, with amplified music, are larger in size and intensity than recent approvals and twice the number as recommended in the draft Westside Local Area Guidelines
  - Three commercial kitchens with dining areas, 4-5 separate event and tasting facilities/ outdoor areas, and a second dwelling unit (non-compliant with Zoning Code or Williamson Act), creates a large hospitality complex with significant unstudied impacts
- **Detrimental Concentration:** Permitting 4 or 5 adjacent projects, without other limiters or a long-term build-out plan for the area, sets precedent for commercial concentrations along one of the County's premier agricultural, rural corridors.
  - Approval would result in four (4) winery/tasting rooms permitted within 0.25 miles on contiguous parcels, with 5th project on a parcel developed with multiple homes and barns, requesting the addition of winery/tasting room in the application review phase.

Att: Traci Tesconi

Re: Ramey Winery, UPE14-0008

Dear Traci:

This letter follows up my emails to you about the sight distance requirements for the entrance to Westside Road from the property on the west side of the Road (APN 110-240-040). The existing driveway does not meet safe sight distance requirements as outlined in Caltrans Design Manual. Based upon a design speed of 35 mph the stopping site distance required is 250 feet. The attached Exhibits show the grading necessary to provide the required safe sight distance for this existing entrance proposed landscaping to restore that area to provide an enhanced vegetative buffer to onsite improvements. Whether the existing driveway is used for the existing residential use or a new proposed commercial use this driveway is not safe and should be improved. I trust this information will be of assistance as you plan on processing the Use Permit application. Please let me know if you need any additional information.

Very truly,

Traffic Study for the Ramey Winery Project

Dear Mr. Ramey;

Whitlock & Weinberger Transportation, Inc. (W-Trans) has completed a focused traffic analysis addressing potential traffic impacts associated with a proposed winery project at 7097 Westside Road outside Healdsburg in the County of Sonoma. The project as proposed would include production of 60,000 cases of wine, a tasting room, retail sales and up to 24 special events annually. The site was previously occupied by Westside Farms.

Existing Conditions

The study area consisted of the section of Westside Road providing access to the project site. Westside Road is a two-lane rural roadway with a paved width of approximately 25 to 26 feet in the vicinity of the project site. It is marked with a double yellow centerline, and there is not a posted speed limit, though the curvilinear alignment keeps speeds lower than the *prima facie* 55 mph speed limit that would apply in the absence of a lower limit established by the County of Sonoma, though a speed survey performed at the driveway indicates that in the vicinity of the project site drivers are generally traveling about 30 to 35 mph. The current volume on Westside Road is about 3,000 ADT near Felta Road based on counts performed by the County in August 2012, but drops to about 1,050 vehicles per day near the project site based on counts obtained on July 16, 2013 specifically for this analysis. A copy of the traffic count taken near the site driveway is enclosed for reference.

Collision History

The collision history for the study area was reviewed to determine any trends or patterns that may indicate a safety issue. Collision rates were calculated based on records available from the California Highway Patrol as published in their Statewide Integrated Traffic Records System (SWITRS) reports. The most current five-year period available is July 1, 2006 through June 30, 2011.

One collision was reported on Westside Road during the study period within a half-mile of the project site. This translates to a calculated collision rate of 0.55 collisions per million vehicle miles (c/mvm). This was compared to the average collision rate for similar segments statewide, as indicated in *2009 Collision Data on California State Highways*, California Department of Transportation, which is 1.58 c/mvm. Since the collision rate was determined to be below average, and there was only one crash reported during this time period, the segment appears to be operating within expected safety parameters. A copy of the collision rate calculations is enclosed.

Project Description

The proposed project includes activities spread among a number of buildings located on both sides of Westside Road. The production of wine would take place in buildings on the west side of the roadway, with access via an existing driveway serving a residence at that location. Only activities typically associated with production and sales of wine would occur at the winery and attached caves. Parking for production employees, sales staff, and commercial visitors would be provided at the winery building. The tasting room and spaces for marketing events would be located on the east side of the road. Parking for tasting room employees and visitors as well as event guests would be provided on the same site.

Trip Generation

For purposes of estimating the number of new trips that proposed projects can be expected to generate, *Trip Generation Manual*, 9th Edition, Institute of Transportation Engineers, 2012, is typically used. Since this publication does not contain information for wineries, Sonoma County's Winery Trip Generation form was used to determine the potential trip generation for the proposed project. A copy of the Winery Trip Generation form for the proposed project is enclosed.

It is anticipated that the proposed new winery including the tasting room would have a total of 15 employees, each generating an average of three trips per day. Truck traffic associated with winery operations is expected to consist of five trips per day, on average. An average of 52 visitors per day is expected for tasting, generating 42 trips daily assuming average vehicle occupancy of 2.5 visitors per vehicle. As shown in Table 1, the proposed project is expected to generate an average of 92 vehicle trips per day.

Table 1
Trip Generation Summary

Trip Type	**Average Daily Trips**		
	Unit	**Rate**	**Trips**
Employees	12	3.0	36
Tasting Visitors	52	0.8	42
Tasting Room Employees	3	3.0	9
Trucks	n/a	n/a	5
Total			**92**

Special Events

The project application includes provisions for 24 special events per year, including 10 events with 30 persons in attendance, five 60-person catered events, five 120-person events and four 300-person outdoor events, two of which would be industry-wide. It is assumed that a maximum sized 300-person event would require a staff of 14. Using an occupancy of 2.5 vehicles per guests and solo occupancy for staff, a maximum sized event would be expected to generate 254 trip ends at the driveway, including 127 inbound trips at the start of the event and 127 outbound trips upon its conclusion. Copies of the special event forms are enclosed.

It should be noted that Westside Farms, the previous use of this site, held a harvest market each fall which included a pumpkin patch, hay rides, and sales of hand-crafted foods and gift items. This event, which lasted for approximately the month of October each year, drew up to 600 persons on a peak day. This prior use generated substantially more event traffic during the month of October than the currently proposed project will generate over the course of an entire year.

Access and Circulation

Field conditions at the site driveway were field evaluated to determine adequacy of sight distance as well as to identify any potential for conflict between the opposing driveways for the winery site and tasting room site. The tasting room driveway is on the easterly side of the roadway, opposite and offset from the winery driveway. Conflicts with traffic to and from the opposing driveways are not expected.

Sight Distance

At driveways a substantially clear line of sight should be maintained between the driver of a vehicle waiting on the driveway and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either turn left, or right, without requiring the through traffic to radically alter their speed. Sight distances along Westside Road from the existing driveway locations were evaluated based on sight distance criteria contained in *A Policy on Geometric Design on Highways and Streets* published by American Association of State Highway and Transportation Officials (AASHTO). These guidelines are based upon approach travel speeds, and take into account which direction a vehicle would turn onto the major approach, with greater sight distance needed for the more time-consuming task of turning left as compared to turning right. Although sight distance requirements are not technically applicable to driveways, the stopping sight distance criterion for private street intersections was applied for evaluation purposes.

The prima facie speed is 55 mph, but based on a radar speed survey performed at the driveway, the curves at either side of the site effectively reduce speeds to an average of 30 mph and 85th, or critical speed of 35 mph approaching the driveway. A copy of the speed survey is enclosed. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet.

Sight distance was measured from a 3.5-foot height at the location of the driver on the minor road to a 4.25-foot object height in the center of the approaching lane of the major road. Sight lines were field measured from a point 15 feet back from the edge of pavement. The Westside Farms sign currently restricts sight lines toward the north from the tasting room driveway on the easterly side of the road. This sign will need to be removed to provide adequate sight line; once removed there will be more than 400 feet of sight distance to the north. To the south of the driveway there is more than 400 feet of sight distance, which is more than adequate for the speed of traffic.

While existing sight lines to the south are adequate for the winery driveway on the westerly side of Westside Road, the curve north of the driveway limits sight lines to less than the 250 feet recommended. However, as shown on the attached exhibit, measures are to be taken to remove and/or trim vegetation and shave back the hillside as necessary to achieve the 250 feet of sight distance needed for the critical approach speed.

It is noted that there is a mirror on the east side of the road that provides adequate visibility of oncoming traffic to drivers exiting the driveway. Mirrors are not typically recommended along public roadways, in part because the mirror would either need to be in the public right-of-way or on another person's property. In this case, the property on both sides of the road belongs to the same owner, so the mirror can be maintained on private property and outside the public right-of-way. Because the mirror may further extend sight lines beyond the minimum needed, it is suggested that the mirror be retained so that the infrequent vehicle traveling at higher speeds can be seen approaching from an adequate distance.

Pedestrian Access

Based on the project proposal it is anticipated that pedestrian trips between the winery and tasting room will be infrequent, and limited to employees. The operation as proposed is not expected to result in any need for guests to cross from one side of Westside Road to the other. Recommended sight lines are shown on the enclosed exhibit.

Turn Lane Warrants

The need for turn lanes on Westside Road was evaluated based on criteria contained in the *Intersection Channelization Design Guide*, National Cooperative Highway Research Program (NCHRP) Report No. 279, Transportation Research Board, 1985, as well as a more recent update of the methodology developed by the Washington State Department of Transportation. Traffic counts for both the a.m. and p.m. peak hours were used for the evaluation.

For this analysis it was conservatively assumed that all project related traffic would access the site via southbound left turns as this condition represents the greatest potential need for a left-turn pocket. Although special events would not typically start during a peak hour, to evaluate worst case conditions, inbound trips to a time-specific event (one that would have its arriving traffic consolidated into a short time period) were used along with the higher peak hour volumes near Felta Road. Even using this conservative approach a left-turn lane is not warranted.

Based on the evaluation performed as well as the lack of left-turn pockets for any of the other wineries on Westside Road, a left-turn pocket is not recommended. A copy of the Turn Lane Warrant spreadsheet is enclosed.

Conclusions and Recommendations

- Based on the review and analysis performed, it is anticipated that the proposed project will have a limited impact on traffic operation along Westside Road, and will actually generate fewer special event trips that the previous use for Westside Farms.
- Westside Road has experienced collisions at a rate below the statewide average, so exhibits an acceptable safety condition.
- Sight distance from the tasting room driveway on the east side of Westside Road is generally adequate, though the existing "Westside Farms" sign should be removed and this area left clear to provide acceptable sight distance to the north.
- Sight distance to the north from the winery driveway on the west side of the road is adequate to the south, but inadequate to the north. The proposed measures, including removing and/or trimming vegetation together with shaving back the hillside as necessary, should be implemented.
- Very little pedestrian traffic is expected between the winery and tasting room, and that will be limited to staff. However, should other pedestrian traffic be generated, sight lines will be adequate for such crossings upon implementation of the proposed measures noted above.

- A left-turn lane is neither warranted nor recommended on Westside Road at the project's driveways. We hope that the above information adequately addresses the proposed winery project's potential impacts. Feel free to contact me if you have any questions or comments. Thank you for allowing us to provide these services.

Sincerely,

Dalene Whitlock

Addendum to the Traffic Study for the Ramey Winery Project

Dear Mr. Ramey;

The collision analysis prepared in 2016 for the Ramey Winery Project and included in the "Traffic Study for the Ramey Winery Project" dated March 10, 2016, was updated to reflect more current data. It is noted that although the study was finalized in 2016, at the time the analysis was originally prepared in late 2013, the most current data available was for the period of July 1, 2006 through June 30, 2011. Further, the California Highway Patrol has improved their system so that crash data is generally available within just a few months, so this update reflects much more recent data.

Collision History

The collision history for the study area was updated to reflect the collision history for January 1, 2012, through December 31, 2016. Records available from the California Highway Patrol, as published in their Statewide Integrated Traffic Records System (SWITRS), indicate that there were two collisions on the study segment during the most recent five-year period for which data is available.

The segment of Westside Road within a half-mile of the project site had a calculated collision rate of 1.10 collisions per million vehicle miles (c/mvm). This was compared to the average collision rate for similar segments statewide, as indicated in *2013 Collision Data on California State Highways*, California Department of Transportation, which is 1.58 c/mvm. Since the collision rate was determined to be below average, and there were only two crashes reported during this time period, the segment appears to be operating within expected safety parameters. A copy of the collision rate calculations is enclosed.

Feel free to contact me if you have any questions or comments. Thank you for allowing us to provide these services.

Sincerely,

Dalene J Whitlock

Traffic Study for the Ramey Winery Project

Dear Mr. Ramey;

W-Trans has completed a focused traffic analysis addressing potential traffic impacts associated with a proposed winery project at 7097 Westside Road outside Healdsburg in the County of Sonoma. The project as proposed would include production of 60,000 cases of wine, a tasting room, retail sales and up to 24 agriculture promotion events annually. The site was previously occupied by Westside Farms.

Existing Conditions

The study area consisted of the section of Westside Road providing access to the project site. Westside Road is a two-lane rural roadway with a paved width of approximately 25 to 26 feet in the vicinity of the project site. It is marked with a double yellow centerline, and there is not a posted speed limit, though the curvilinear alignment keeps speeds lower than the *prima facie* 55 mph speed limit that would apply in the absence of a lower limit established by the County of Sonoma, though a speed survey performed at the driveway indicates that in the vicinity of the project site drivers are generally traveling about 30 to 35 mph. The current volume on Westside Road is about 3,000 ADT near Felta Road based on counts performed by the County in August 2012, but drops to about 1,050 vehicles per day near the project site based on counts obtained on July 16, 2013 specifically for this analysis. A count performed by the County in late July 2015 indicates that volumes have dropped 12 to 15 percent since 2012, though the higher 2012 volumes were used for analysis purposes. A copy of the traffic count taken near the site driveway is enclosed for reference along with the summary sheets of the County's counts.

Collision History

The collision history for the study area was reviewed to determine any trends or patterns that may indicate a safety issue. Collision rates were calculated based on records available from the California Highway Patrol as published in their Statewide Integrated Traffic Records System (SWITRS) reports. The most current five-year period available is July 1, 2006 through June 30, 2011.

One collision was reported on Westside Road during the study period within a half-mile of the project site. This translates to a calculated collision rate of 0.55 collisions per million vehicle miles (c/mvm). This was compared to the average collision rate for similar segments statewide, as indicated in *2009 Collision Data on California State Highways*, California Department of Transportation, which is 1.58 c/mvm. Since the collision rate was determined to be below average, and there was only one crash reported during this time period, the segment appears to be operating within expected safety parameters. A copy of the collision rate calculations is enclosed.

Roadway Segment Analysis

Level of Service Methodology

The roadway segment Level of Service methodology found in Chapter 15, "Two-Lane Highways," of the *Highway Capacity Manual* is the basis of the automobile LOS analysis. The methodology considers traffic volumes, terrain, roadway cross-section, the proportion of heavy vehicles, and the availability of passing zones. The LOS criteria for two-lane highways differs depending on whether the highway is considered "Class I", "Class II", or "Class III". Class I highways are typically long-distance routes connecting major traffic generators or national highway networks where motorists expect to travel at high speeds. Motorists do not necessarily expect to travel at high speeds on Class II highways, which often function as scenic or recreational routes and typically serve shorter trips. Class III highways may be portions of Class I or Class II highways that pass through towns and communities and have a mix of local traffic and through traffic. Westside Road is considered a Class II highway for the purpose of this analysis.

The measure of effectiveness by which Level of Service is determined on Class II highways is percent time spent following (PTSF), or the proportion of time that drivers on the highway are limited in their speed by a driver in front of them. A summary of the PTSF breakpoints is shown in Table 1.

Table 1 – Automobile Level of Service Criteria

LOS	Class II Highways PTSF (%)
A	≤40
B	>40-55
C	>55-70
D	>70-85
E	≤85

Notes: LOS = Level of Service; PTSF = Percent Time Spent Following
Reference: *Highway Capacity Manual*, Transportation Research Board, 2010

The Level of Service Standard for County roadway operations per Policy CT-4.1 is to maintain a Level of Service C.

Existing Roadway Segment Analysis

Under existing p.m. peak hour volumes, Westside Road is operating acceptably at LOS A or B. A summary of the roadway segment level of service calculations is shown in Table 2, and copies of the Level of Service calculations are enclosed.

Table 2 – Existing Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	54.9	B
Southbound	39.7	A

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

Cumulative Conditions

Future traffic volumes were developed based on information produced by the County's traffic model, which is maintained by the Sonoma County Transportation Authority. The increment of new traffic projected by comparing the model's 2040 data with the 2010 data indicates only one to four percent growth total over the entire thirty years. Review of historical count data provided by the County shows that volumes increased by less than 2 percent for the nine-year period between 2006 and 2015 and less than 4 percent for the 13 years between 2002 and 2015. Substantial additional growth is not anticipated as there is not much opportunity for further development along the roadway.

Future Roadway Segment Analysis

Under the projected future volumes applied for the analysis, the roadway study segment is expected to continue operating acceptably at LOS C or better in both directions. These results are summarized in Table 3.

Table 3 – Cumulative Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	55.4	C
Southbound	40.2	B

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

Project Description

The proposed project includes activities spread among a number of buildings located on both sides of Westside Road. The production of wine would take place in buildings on the west side of the roadway, with access via an existing driveway serving a residence at that location. Only activities typically associated with production and sales of wine would occur at the winery and attached caves. Parking for production employees, sales staff, and commercial visitors would be provided at the winery building. The tasting room and spaces for agriculture promotion events would be located on the east side of the road. Parking for tasting room employees and visitors as well as event guests would be provided on the same site.

Trip Generation

For purposes of estimating the number of new trips that proposed projects can be expected to generate, *Trip Generation Manual*, 9th Edition, Institute of Transportation Engineers, 2012, is typically used. Since this publication does not contain information for wineries, Sonoma County's Winery Trip Generation form was used to determine the potential trip generation for the proposed project. A copy of the Winery Trip Generation form for the proposed project is enclosed.

It is anticipated that the proposed new winery including the tasting room would have a total of 15 employees, each generating an average of three trips per day. Truck traffic associated with winery operations is expected to consist of five trips per day, on average. An average of 52 visitors per day is expected for tasting, generating 42 trips daily assuming average vehicle occupancy of 2.5 visitors per vehicle. In order to determine the project trips generated during the p.m. peak hour, it was assumed that one trip would be generated for every employee and ten percent of the daily visitor trips would occur during the p.m. peak hour. For directionality split, two-thirds of the trips were assumed to be outbound since most of the trips would be associated with employees and customers leaving at closure of the winery. Truck trips typically occur during off-peak hours and were therefore not included in the p.m. peak hour. As shown in Table 4, the proposed project is expected to generate an average of 92 vehicle trips per day, including 19 during the p.m. peak hour.

Table 4 – Trip Generation Summary

Trip Type	Unit	Average Daily Trips		PM Peak Trips	
		Rate	Trips	In	Out
Employees	12	3.0	36	4	8
Tasting Visitors	52	0.8	42	1	3
Tasting Room Employees	3	3.0	9	1	2
Trucks	n/a	n/a	5	n/a	n/a
Total			**92**	**6**	**13**

Trip Distribution

For the purpose of this analysis, it was conservatively assumed that all trips generated by the project would be going to and/or coming from Healdsburg to the North via Westside Road. It is, in fact, expected that trips to the site would be drawn fairly evenly from the north and south for daily operation, resulting in half as many trips being added as were assumed for analysis purposes.

Roadway Segment Operation

Existing plus Project

Under Existing plus Project volumes the study roadway is expected to operate acceptably in both directions. These results are summarized in Table 5.

Table 5– Existing plus Project Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	56.4	C
Southbound	41.0	B

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

Cumulative plus Project

With project-generated traffic added to the anticipated Future volumes under the conservative assumption that all trips would come from the same direction, the study roadways are expected to continue operating acceptably at the same levels of service as without the project. The Cumulative plus Project operating conditions are summarized in Table 6.

Table 6 – Cumulative plus Project Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	57.0	C
Southbound	41.3	B

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

Agriculture Promotional Events

The project application includes provisions for 24 agriculture promotional events per year, including 10 events with 30 persons in attendance, five 60-person catered events, five 120-person events and four 300-person outdoor events, two of which would be industry-wide events. It is assumed that a maximum-sized 300-person event would require a staff of 14. It is understood that the largest site-specific event would be scheduled to ensure that no more than 150 people are on-site at any one time, and attendance of an industry-wide event would be expected to spread out even more, resulting in fewer guests on-site at any given time. Using an occupancy of 2.5 guests per vehicle and solo occupancy for staff, a maximum sized event would be expected to generate 268 trip ends at the driveway, including 134 inbound trips and 134 outbound trips at the driveway, though these trips would be spread out such that no more than 60 trips in either direction would occur during a single hour, with staff arriving before and departing after the guests. The distribution of trips for special events is expected to be weighted more heavily to the south, with 75 percent of trips coming from/returning to this direction. A copy of the special event form is enclosed.

It should be noted that Westside Farms, the previous use of this site, held a harvest market each fall which included a pumpkin patch, hay rides, and sales of hand-crafted foods and gift items. This event, which lasted for approximately the month of October each year, drew up to 600 persons on a peak day. This prior use generated substantially more event traffic during the month of October than the currently proposed project will generate over the course of an entire year.

Sensitivity Analysis

Using the same roadway segment Level of Service methodology found in the *Highway Capacity Manual*, it was determined that 208 vehicle trips could be added in *each* direction on Westside Road before the northbound direction would experience unacceptable LOS D operation. Using 2.5 guests per vehicle, it is estimated that vehicles carrying more than 500 guests could arrive at winery agricultural promotional events during one hour and another 500 depart from the same or a different winery event, and operation would remain acceptable under the standards established by Sonoma County. This exceeds the size of the largest event proposed at this winery, but even with the 300-person event, and assuming that as many as 150 guests arrive or depart during a single hour from the same direction, the road would retain capacity for other events having a combined total of more than 350 guests.

Given that the site is more quickly accessed from the south for visitors coming from Santa Rosa and points south or from the north for visitors coming from Healdsburg and the surrounding valleys, it appears reasonable to expect that up to 75 percent of event traffic would come from the south. Assuming this split, the largest project event would generate 75 visitors arriving from the north, or 30 vehicles, leaving capacity for the cumulative demand associated with nearly 450 visitors arriving at and departing from other area wineries during the same, single hour. It is again emphasized that all of these trips would need to occur ***during a single hour*** for the cumulative impact to be experienced; if the trips are spread out over more than an hour's time, the cumulative effect is diluted. Based on this review it appears that there is adequate capacity for multiple events to generate trips simultaneously without having a significant negative impact on operation of Westside Road. However, to avoid the potential of multiple large events occurring simultaneously it would be desirable for vintners in the area to coordinate their event schedules, which we understand is being proposed.

Access and Circulation

Field conditions at the site driveway were field evaluated to determine adequacy of sight distance as well as to identify any potential for conflict between the opposing driveways for the winery site and tasting room site. The tasting room driveway is on the easterly side of the roadway, opposite and offset from the winery driveway. Conflicts with traffic to and from the opposing driveways are not expected.

Sight Distance

At driveways a substantially clear line of sight should be maintained between the driver of a vehicle waiting on the driveway and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either turn left, or right, without requiring the through traffic to radically alter their speed. Sight distances along Westside Road from the existing driveway locations were evaluated based on sight distance criteria contained in *A Policy on Geometric Design on Highways and Streets* published by American Association of State Highway and Transportation Officials (AASHTO). These guidelines are based upon approach travel speeds, and take into account which direction a vehicle would turn onto the major approach, with greater sight distance needed for the more time-consuming task of turning left as compared to turning right. Although sight distance requirements are not technically applicable to driveways, the stopping sight distance criterion for private street intersections was applied for evaluation purposes.

The *prima facie* speed is 55 mph, but based on a radar speed survey performed at the driveway, the curves at either side of the site effectively reduce speeds to an average of 30 mph and 85th, or critical speed of 35 mph approaching the driveway. A copy of the speed survey is enclosed. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet.

Sight distance was measured from a 3.5-foot height at the location of the driver on the minor road to a 4.25-foot object height in the center of the approaching lane of the major road. Sight lines were field measured from a point 15 feet back from the edge of pavement. The Westside Farms sign currently restricts sight lines toward the north from the tasting room driveway on the easterly side of the road. This sign will need to be removed to provide adequate sight line; once removed there will be more than 400 feet of sight distance to the north. To the south of the driveway there is more than 400 feet of sight distance, which is more than adequate for the speed of traffic.

While existing sight lines to the south are adequate for the winery driveway on the westerly side of Westside Road, the curve north of the driveway limits sight lines to less than the 250 feet recommended. However, as shown on the attached exhibit, measures are to be taken to remove and/or trim vegetation and shave back the hillside as necessary to achieve the 250 feet of sight distance needed for the critical approach speed.

It is noted that there is a mirror on the east side of the road that provides adequate visibility of oncoming traffic to drivers exiting the driveway. Mirrors are not typically recommended along public roadways, in part because the mirror would either need to be in the public right-of-way or on another person's property. In this case, the property on both sides of the road belongs to the same owner, so the mirror can be maintained on private property and outside the public right-of-way. Because the mirror may further extend sight lines beyond the minimum needed, it is suggested that the mirror be retained so that the infrequent vehicle traveling at higher speeds can be seen approaching from an adequate distance.

Pedestrian Access

Based on the project proposal it is anticipated that pedestrian trips between the winery and tasting room will be infrequent, and limited to employees. The operation as proposed is not expected to result in any need for guests to cross from one side of Westside Road to the other. Recommended sight lines are shown on the enclosed exhibit.

Turn Lane Warrants

The need for turn lanes on Westside Road was evaluated based on criteria contained in the *Intersection Channelization Design Guide*, National Cooperative Highway Research Program (NCHRP) Report No. 279, Transportation Research Board, 1985, as well as a more recent update of the methodology developed by the Washington State Department of Transportation. Traffic counts for both the a.m. and p.m. peak hours were used for the evaluation.

For this analysis it was conservatively assumed that all project related traffic would access the site via southbound left-turns as this condition represents the greatest potential need for a left-turn pocket. Although special events would not typically start during a peak hour, to evaluate worst case conditions, inbound trips to a time-specific event (one that would have its arriving traffic consolidated into a short time period) were used along with the higher peak hour volumes near Felta Road. Even using this conservative approach a left-turn lane is not warranted.

Based on the evaluation performed as well as the lack of left-turn pockets for any of the other wineries on Westside Road, a left-turn pocket is not recommended. A copy of the Turn Lane Warrant spreadsheet is enclosed.

Conclusions and Recommendations

- Based on the review and analysis performed, it is anticipated that the proposed project will have a limited impact on traffic operation along Westside Road, and will actually generate fewer special event trips that the previous use for Westside Farms.
- Westside Road is expected to operate acceptably under volumes including project-generated traffic and traffic associated with agriculture promotional events both in the short-term and long-range. Further, multiple events could occur simultaneously without triggering unacceptable operating conditions under the County's standards.

- Westside Road has experienced collisions at a rate below the statewide average, so exhibits an acceptable safety condition.

- Sight distance from the tasting room driveway on the east side of Westside Road is generally adequate, though the existing "Westside Farms" sign should be removed and this area left clear to provide acceptable sight distance to the north.

- Sight distance to the north from the winery driveway on the west side of the road is adequate to the south, but inadequate to the north. The proposed measures, including removing and/or trimming vegetation together with shaving back the hillside as necessary, should be implemented.

- Very little pedestrian traffic is expected between the winery and tasting room, and that will be limited to staff. However, should other pedestrian traffic be generated, sight lines will be adequate for such crossings upon implementation of the proposed measures noted above.

- A left-turn lane is neither warranted nor recommended on Westside Road at the project's driveways. We hope that the above information adequately addresses the proposed winery project's potential impacts.

Feel free to contact me if you have any questions or comments. Thank you for allowing us to provide these services.

Addendum No. 2 to the Traffic Study for the Ramey Winery Project

Dear Mr. Ramey;

We have again reviewed the sight distance analysis performed for your project. As stated in the "Traffic Study for the Ramey Winery Project," March 10, 2016, 250 feet of sight distance is needed to the north to provide adequate visibility for oncoming drivers to react to and stop for traffic exiting the project driveway on the westerly side of Westside Road. Upon constructing the improvements proposed, which will increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway under the conditions evaluated. For the east side driveway serving the proposed tasting rooms, the 400-foot sight distance requirement can be met under existing conditions upon removal of the existing Westside Farms sign.

Feel free to contact me if you have any questions or comments. Thank you for allowing us to provide these services.

MEMORANDUM

100 Webster Street, Suite 300
Oakland, CA 94607
(510) 788-6880
www.altaplanning.com

To: Marc Bommersbach

From: Hugh Louch, Principal, Alta Planning + Design

Amy Jackson, PE, PTOE, Alta Planning + Design

Date: September 14, 2017

Re: **Review of Ramey Winery Project Traffic Impact Analysis**

Alta Planning + Design has reviewed the traffic study conducted by W-Trans for the Ramey Winery Project in Sonoma County, CA. This memorandum summarizes the results of this review. The traffic study performed by W-trans provides thorough explanation regarding the methodology used to assess the anticipated impacts of the Ramey Winery project. W-trans used a conservative approach to assume the existing traffic volumes, and applied the appropriate level of service methodology for the existing conditions analysis, which uses percent time spent following thresholds to determine levels of service. W-trans also appropriately used Sonoma County's Winery Trip Generation form, as the ITE Trip Generation Manual does not include data for wineries.

There is concern regarding the reported 85th percentile speed that could impact the required sight distance for vehicles leaving the winery driveways from a stop condition. The 85th percentile speed plays a large role in determining the required sight distance for the driveways later in the report.

The report indicates there is not currently a posted speed limit on Westside Road. Based on a spot speed study performed by W-Trans, the 85th percentile travel speed on Westside Road is reported as 35 mph. However, the calculation for determining the 85th percentile speed from the data provided is not clear. The average speed for each hour is provided in the attachment, instead of a full set of speed captures for an entire hour. A spot study should be conducted during a non-peak hour when vehicles are expected to travel at free flow conditions rather than a peak hour when vehicles could be experiencing congestion. Vehicle speeds should be captured for an entire hour, or during the time it takes to capture 100 vehicle speeds, whichever occurs first. Based on a set of data from either 100 vehicles or an hour of vehicles, the 85th percentile speed can be calculated.

Based on the average speed data provided in the attachment, it appears that the 85th percentile speed could be higher than 35 mph. It would be reasonable to request that the calculations or data set used to determine the 85th percentile speed be provided.

The 85th percentile speed should be used to determine the sight distance for vehicles exiting the winery driveway from a stop condition. This type of sight distance is referred to in AASHTO's *A Policy on Geometric Design of Highways and Streets* as "departure sight triangles" and referred to in the California Highway Design Manual as "corner sight distance".

Assuming the speed is 35 mph, the left turn sight triangle and right turn sight triangle from stop should be 390' and 335', respectively. However, if the 85th percentile speed is higher, as speculated, these sight triangles would be increase. **Therefore, the 85th percentile speed should be calculated based on a speed study as discussed above in order to accurately determine the minimum intersection sight distance for passenger cars exiting the winery, making left and right turns onto Westside Road.**

EXHIBIT G

August 1, 2018

Letter to the County of Sonoma Board of Supervisors,

As a resident of the Westside community, I am requesting you deny the Westside Farms Application to create a large hospitality complex with three separate tasting rooms, overnight accommodations, daily food service, and 22 events on its property at 7097 Westside Rd (UPE14-0008). The project should be denied because the Westside Road Area has reached its carrying capacity and cannot accommodate such intensive commercial development. No cumulative impact analysis was conducted to consider the high concentration of wineries in the immediate vicinity (attachment 1 maps and table showing driveways in 0.25 miles), and the Bicycle and Pedestrian Committee did not review the project as required by County policy (attachment 2).

The Westside Road area has 29 permitted wineries or tasting rooms, and has reached its carrying capacity.

1. four wineries or tasting rooms with events, including weddings, are located within six tenths of a mile of the proposed tasting rooms,

2. traffic on Westside Road during large industry-wide or winery-specific event weekends already is altering scenic character of this rural area. The draft condition of approval that the Applicant will voluntarily agree to coordinate with the neighboring wineries is inadequate to avoid a detrimental concentration of winery-related traffic.

3. the addition of 22 promotional events each year, some with up to 120 people, to the nearly 200 permitted events at Westside area wineries will result in thousands of people driving down Westside Road principally on weekends when up to 20 large bicycle events are held as well; and

4. traffic and limited sight distances at driveway intersections are already imperiling the safety of our country roads for cyclists.

We need to ask ourselves: when enough is enough. Either, the County can continue to approve permits for wine tasting facilities on an incremental basis and discover at a later date our rural areas are so degraded that they no longer attract tourists or retain their property values. Unfortunately for future generations, the County will not be able to restore the landscape to its current condition.

Or, the County can adopt comprehensive guidelines that strike the right balance between private property interests and the public interest in sustaining our agricultural lands and open spaces. The County can encourage wine tasting rooms to be located in the places where they fit in with the surrounding uses and services like along the 101 corridor or “city centered” growth encouraged in our General Plan.

This latter approach, comprehensive guidelines and location-appropriate growth, are the most prudent and responsible actions Supervisors should take prior to any more approvals of new wineries and events in saturated areas.

Agricultural property owners can earn a fair return on their property by engaging in the growing of crops and selling their products directly or indirectly. However, proposing to operate three tasting rooms, provide marketing accommodations, prepare food in three separate commercial kitchens, holding winery events in up to five separate locations, and operating industrial scale processing facilities on agricultural property appears to be focused on earning a profit based on hospitality services, not agriculture. Or, worse yet, speculating on higher purchase real estate prices. These are not valid reasons for granting approval of this permit along a rural by-way.

Please adopt a winery event ordinance and guidelines and protective standards for new wineries and associated events as soon as possible so that everyone, winery owners and residents, know the ground rules and our community does not have to contest developments that exceed the carrying capacity of our beautiful countryside.

Sincerely,

Todd Everett
5400 Wallace Creek Rd.
Healdsburg, CA 95448

Attachments
County Assessor's Parcel Map of project area
Corrected MND Table of wineries or tasting rooms in 1.5 mile area
Procedural Error: Failure to take proposed project to the Bicycle and Pedestrian Committee

Attachment 1

County's MND incorrectly states the number of promotional events held at neighboring wineries.

The table below correctly lists the events and case production of the nearby wineries on Westside Road. No cumulative impact analysis was performed to consider these winery events, industry wide events and bicycle events on Westside Road.

Winery Name	File Number	Address	Production	Events
Landmark (Hop Kiln)	UPE13-0011	6050 Westside Rd	21,026 cases	12 @ up to 100
Rochioli	UPE03-0019	6192 Westside Rd	15,000 cases	
Allen Family	UPE04-0018	6575 Westside Rd	16,000 cases	
Gracianna (Amador)	UPE10-0021	6914 Westside Rd	N/A	Not allowed
Arista (McWilliams)	UPE04-0113	7015 Westside Rd	20,000 cases	15 @ up to 200, incl. weddings
Proposed Project				
William-Selyem (Pebble Ridge)	PLP04-0062	7227 Westside Rd	35,000 cases	24 @ up to 125
Thomas George	UPE10-0019	8075 Westside Rd	20,000 cases	16@ up to 125
Porter Creek	UPE86-0136	8735 Westside Rd	9,000 cases	

Proposed Projects	File Number	Address	Production	Events
Westside Farms	UPE14-008	7097 Westside Rd	60,000 cases	22 @ up to 125 proposed
DuMol (Flax)	UPE16-0102	6677 Westside Rd	492 cases	18 @ up to 100 proposed

The above table indicates that in the approximately1.5 mile area there are 107 event days permitted or being proposed with up to 125-200 people attending. In addition there are about 13 industry-wide event days that add considerable traffic and about 20 known bicycle event days.

Average case production of the 8 wineries within 1.5 miles is 17,064. The proposed Westside Farms project would be over three times this average.

Attachment 2

Lack of Bicycle and Pedestrian Committee (BPAC) review of this project is a violation of County General Plan policies related to bikeways.

The Board of Supervisors adopted Resolution #10-0636 on August 26, 2010 amending the Sonoma County General Plan and adopting the 2010 Bicycle and Pedestrian Plan brought the County of Sonoma into compliance with the Complete Streets Act of 2008 (AB 1358), and the Plan is currently in effect.

Policy 2.14 of the Plan states:

> *"Refer the following projects to the BPAC to review consistency with Bikeways Plan to evaluate potential for creating hazards or barriers to walking or bicycling:*
>
> *7. Discretionary project anticipated to be conditioned with roadway improvements along existing or proposed Class I, II, or III bikeways."*

Westside Road is a Class III bikeway under the above referenced Plan. The proposed project seeks a discretionary use permit from the County and includes proposed conditions for roadway alterations and significant vehicle traffic hazards. Therefore, per Policy 2.14, this project should have been referred to the BPAC for their consideration, yet there is no record of this project being brought before the BPAC in Committee's minutes or statement in the MND for the project

Westside Road is one of the most popular bicycle routes in Sonoma County. Thousands of local cyclists enjoy Westside Road for recreation and it is part of several nationally recognized events, including the Vineman triathlon, the Wine Country Century, Healdsburg Harvest Century and the Giro Bello. Over 20,000 people travel to Sonoma County to participate in these events, contributing an estimated $15 million to the local economy.

As proposed, the project access is located on a section of Westside Road between two sharp turns where inadequate sight distance exists to ensure the safety of cyclists (and motorists). This concern is compounded by the fact that the project proposes two driveways on opposite sides of the road, and is expected to generate an average of 153 vehicle trips daily, not including special event traffic or harvest traffic.

Review of this type of project is precisely what the BPAC was commissioned to do. The bicycling community should have been given an opportunity to weigh in on this project due the potential for significant impacts to the safety of cyclists.

Clearly the County did not follow its own regulations regarding review of this project.

Furthermore, Policy 2.09.8 of the Standards for Class III Bikeways states:

> *"Where a Class III Bikeway is designated along a Scenic Corridor, avoid grading and tree removal and/or grading wherever possible if these activities appear likely to affect the scenic resource."*

In addition to not having the BPAC and the cycling public an opportunity to review this project, there is no consideration in the MND that impacts from grading or tree removal along this Bikeway, or to determine if other less impactful mitigations for the bikeway were considered.

Finally, the W-Trans March 10, 2016 study states that the level of service for bicycles is "D". Such a low score for bicycles on this bikeway suggests further review by the BPAC.

EBA JOB No. 16-2366**

Dear Staff:

This Geologic Report presents the results of a groundwater availability study conducted for the property at 7097 Westside Road, located approximately five miles south of Healdsburg, California (see Figure 1, Appendix A for site location). The groundwater availability study was requested by the County of Sonoma, Permit and Resource Management Department (CS-PRMD) in association with the use permit process for the winery and tasting room operation proposed by the Applicant. The work presented herein was performed to comply with the California Environmental Quality Act (CEQA). The purpose of CEQA is to identify the significant impacts of the project and to avoid or mitigate those impacts, if feasible. The scope of work also included an assessment of potential depletion effects on the Russian River as a result of groundwater pumping associated with the proposed project and estimate the effects of drawdown, if any, on adjoining and nearby properties.

1.0 BACKGROUND INFORMATION

1.1 Site Description

The existing property consists of an approximate 75-acre (AC) parcel identified as Assessor's Parcel No. (APN) 110-240-031. A site plan illustrating the primary site features is presented as Figure 2 (Appendix A). As shown on Figure 2, the site straddles Westside Road. The portion of the property east of Westside Road encompasses approximately amount of surface water flow in the river. In this regard, the closest gauge data station corresponds to USGS Station 11465390, located less than 500 feet downstream from the site's southern property boundary. The approximate location of this station is shown on Figure 2 (Appendix A). Data for this station covers the period from April 2013 to October 2016 and is presented in a graphical format in Appendix E. As shown on the graph, flows over the monitoring period have ranged from approximately 87 to 1,000 cubic feet per second (CFS). Due to data gaps that coincide with the winter periods, an accurate determination of total annual flows at this station could not be calculated. In response to this limitation, the minimum flow rate of 87 CFS was used in the analysis, which is highly conservative since it corresponds to the lowest recorded reading over the 3.5-year data period and coincides with the 2015 drought. Based on the 87 CFS unit flow rate projected over a 365-day period, the total flow volume equates to 62,983 AF. Comparison of this flow to the combined flow volumes presented in Table 2 for Scenarios 1 and 3 (2.56 AF) over an equal period of time reveals that the Scenarios 1 and 3 volume equates to only 0.004 percent of the flow in the river, thereby demonstrating that the projected depletion is de minimis. As previously noted, this comparison is highly conservative in that the actual average flow rate in the Russian River is higher than the assumed minimum flow rate used in the analysis.

The same approach as described above was used to evaluate depletion characteristics during the 60-day crush period (Scenario 2). Based on the minimum flow rate of 87 CFS, the corresponding total flow over this period equates to 10,353 AF as compared to 0.59 AF for Scenario 2. This translates to 0.006 percent of the flow in the river over the period analyzed. As was the case for Scenarios 1 and 3, this projected amount of depletion is considered de minimis.

5.0 CONCLUSIONS

The water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the proposed improvements and will not result in negative impacts to local groundwater or surface water resources. This conclusion is based on the following variables: 1) the site is located within a Class 1 water area, which is identified in the Sonoma County General Plan as a major groundwater basin; 2) the underlying aquifer is comprised of alluvial deposits associated with the Russian River, which is a managed water system that ensures perennial flow throughout the year and serves as a continuous source of recharge to the aquifer; 3) well capacity test results for Well #1 demonstrated a sustainable yield of 45 GPM while only inducing 1.5 feet of drawdown. This is indicative of a highly prolific aquifer system; 4) based on the yield characteristics of the on-site wells, the wells will only have to pump for less than two hours (Well #1) and six minutes (Well #3) per day to accommodate the peak water flow demands; and 5) the projected radius of influence characteristics induced by the pumping operations will not encroach onto neighboring properties. In addition, the proposed water use is projected to induce no measureable changes in surface water flows in the Russian River.

Job Number: 13077

Dear Becky:

This letter is to transmit projected water use for the proposed Ramey Winery application, UPE14-0008. The proposed winery includes a production facility for 60,000 cases of wine, tasting rooms, marketing accommodations, and twenty two agricultural promotional events. The landscape architect has provided projections for water use associated with the proposed landscape and water demand for irrigation and frost protection for the vineyards.

Total annual water demand for the project is estimated to be 5,445,272 gallons or 16.7 acre-feet. The winery production wastewater will be recycled for irrigation purposes so the annual demand on the water wells would be reduced to 4,581,272 gallons or 14.06 acre-feet.

Please let us know if you have any questions regarding this information.

RE: Breach of Williamson Act and Sonoma County's Uniform Rules for Ag Preserves on a parcel under a Prime Land Conservation Contract

Project Parcel: 7097 Westside Road, Healdsburg, CA 95448. APNs 110-240-031, 032, 040 are one 75-acre legal parcel of record per Lot Line Adjustment 04-0088.

Dear Ms. Wilber,

Sonoma County citizen groups and residents request that the Department review the pending *Ramey Winery* project for consistency with the Williamson Act and local rules and regulations. If there are potential inconsistencies, we request you notify us and Sonoma County officials by early August. The County Board of Supervisors is set to review the project approval at a hearing on August 14.

As discussed below, the approved project allows intense visitor-serving commercial uses on Land Intensive Agriculture (LIA) land under a Williamson Act contract (Ag. Preserve 1-397; OR# 2007-037936). The project includes: 1) a large, stand-alone overnight accommodations building with commercial kitchen and VIP tasting room; 2) three tasting rooms at the one site; and 3) two additional commercial kitchens serving food at events, wine club parties, dinners and regular food and wine pairings at both winery/event complex and public tasting room We are concerned the project approval sets a bad precedent for excessive visitor-serving uses and large hospitality buildings on Williamson Act land. We would like your interpretation of how the Act and local rules apply to this project -- and whether any of the proposed commercial and residential activities threaten a material breach of the Act, under Gov. Code sec. 51250(b).

Project description

The project site, known as Westside Farms, consists of 75 acres (one legal parcel) containing 42 acres of commercial vineyard, single family residences, historic hop kiln, historic baling barn, and agricultural accessory buildings. Westside Road bisects the parcel. (See A5 - A7Staff Report and Conditions of Approval)

On the West side of the road, the project will add a new winery building with 60,000 annual case production, a commercial kitchen, tasting rooms and a wine cave.

On the East side, the two historic buildings will be repurposed for hospitality uses. The hop kiln building will be converted to a public tasting building, with a commercial kitchen, multiple tasting/food service rooms, storage and office.

The baling barn is a three story structure containing about 5,000 square feet. The upper floor is proposed for two "guest room marketing accommodations" with two full bathrooms (759 square feet) and a common lounge area (513 square feet) -- a total area of 1,372 square feet. Condition of Approval #79 limits the accommodations to noncommercial use by "private guests" of the winery operator or owner; however, it does not prohibit use during promotional events. The middle floor of the baling barn has a reserve tasting room with commercial kitchen and VIP lounge area. The lower floor is proposed as storage and a mechanical room.

In addition to twice daily food service in the public and private tasting rooms, the proposed project allows 22 agricultural events per year with a range of maximum guests (10 events with 30 guests in the winery tasting room, five events with 120 guests, and two events with 300 guests in the public hospitality complex), and participation in industry wide events totaling two event days per year with a maximum of 300 guests.

Overnight accommodations as additional dwelling units are incompatible with Uniform Rules and the Williamson Act

Sonoma County allows marketing accommodations for sales and marketing of agricultural products as an "agricultural support use." (A4: Sonoma County Uniform Rule for Agricultural Preserves 8.3 B.2)

However, the two overnight accommodations for "private guests" of the *Ramey Winery* violate the Uniform Rules, which set specific limits for detached guest quarters. The floor area for detached guest quarters must not exceed 640 square feet, including any storage area (excluding garage). Also, the guest quarters shall be located not more than 100 feet from the primary dwelling on the parcel. (A4: Sonoma County Uniform Rule2)

Here, the two overnight accommodations occupy an entire floor of a separate building and have a total area of 1,372 square feet. This far exceeds the 640 square foot limit. Also, the building is more than 100 feet from the primary dwelling. The proposed accommodations are not allowed under Uniform Rule 2.

In 2014, planning staff found this proposed use violated the Williamson Act contract. Staff stated the baling barn building has all the components of a "dwelling unit" under the zoning code: it has bedrooms, bathrooms, marketing area, commercial kitchen and general storage area on the lower floor. This meets the requirements for the structure to be classified as a "dwelling unit." Staff concluded:

> For the project site, neither the density [60 acres per dwelling unit], nor the Williamson Act contract allows another dwelling unit on the parcel. Therefore, the marketing accommodations as designed are inconsistent with the zoning density allowance and the Williamson Act contract. (A1: February 4, 2014 staff letter)

Despite this, the 2017 staff report, pp. 17-18, contains no analysis of the dwelling unit issue. The project approval also failed to address the violation of Uniform Rule 2 size limits. Residents raised the Williamson Act inconsistency concerns in a letter to the Planning Director dated October 2014 (A2), again in 2015 and at the Board of Zoning Adjustments hearing in September 2017.

In previous approvals, if a kitchen is included, the structure is usually identified as a dwelling unit. Also, unlike other approvals, this project approval allows the use of the marketing accommodations in association with Ag promotional events. (See A3 BZA Staff Report - for Silver Oak Winery PLP 14-0004 versus A5 Staff Report for UPE 14-0008)

It now appears there is a pattern and practice of approving marketing accommodations in Sonoma County that intensify residential and/or hospitality activities in Sonoma County's prime farmlands. This increases the human population on the land. A core tenet of the Williamson Act is to limit the density of permanent or temporary human population in order to protect crop-growing lands. We request an interpretation of whether the proposed overnight accommodations in this case are compatible with the Williamson Act and local rules.

<u>Baling barn structure is a material breach of the Williamson Act contract.</u>

The Williamson Act recognizes the enormous costs to both the economy and the environment of opportunistic and sprawling patterns of development on agricultural lands. One of the most important stated goals of the Act is the discouragement of such patterns through tax incentives to keep land in agriculture and open space preservation. The Act declares that this goal is a matter of public interest and will be of benefit to urban dwellers themselves by discouraging discontiguous urban development patterns, which unnecessarily increase the costs of community services to community residents. (Gov. Code sec. 51220(c))

As noted above, overnight accommodations occupy the entire third floor of the baling barn and greatly exceed the size limit of Uniform Rule 2. In addition, the second floor is entirely occupied by nonagricultural, visitor-serving uses: reserve tasting room, commercial kitchen and VIP lounge area. Altogether, the residential and hospitality uses occupy over 3,700 square feet. Per Sonoma County Planning Department letter (A1), the uses in this structure qualify as a dwelling unit under the Sonoma County zoning code; yet a primary residence already exists on this parcel and another dwelling unit is not allowed. The uses are comparable to urban development (dwelling units, restaurants, bars and entertainment lounges) rather than agriculture.

Significant urban uses in an accessory building, i.e., the baling barn, appear to constitute a material breach of the Williamson Act. Under Gov. Code sec. 51250 (b), "... a material breach is a commercial, industrial or residential structure, exceeding 2,500 square feet, that is not permissible under the Williamson Act contract, local uniform rules or ordinances."

The Williamson Act does not allow bed and breakfasts, hotels, resorts, restaurants, bakeries, and cafés. Sonoma County's Uniform Rules allow guest quarters limited to 640 square feet, and visitor-serving uses designed to help market products created on-site so long as they are compatible with agricultural uses. *However*, accessory uses and structures must be incidental, related, and subordinate to a compatible use. Cities and counties may determine the types of uses to be deemed "compatible uses," but must do so in a manner that recognizes a permanent or temporary population increase often hinders or impairs agricultural operations. (Gov. Code sec. 51220.5; Uniform Rule 8.2)

Here, the intense visitor-serving uses in the baling barn are not incidental and subordinate to the primary agricultural use. We request your opinion on this issue.

Three commercial kitchens show this project exceeds appropriate boundaries for food service

Planning staff recognizes there is a long-standing policy question about food service at wineries and tasting rooms:

> Food service has been a major concern for conversion of agricultural lands to more intense commercial uses. However, food and wine pairing is a popular industry trend.
>
> [W]hat boundaries should be placed on this type of food service to avoid further intensifying the commercial land use? (A5: Staff report, September 21, 2017, p. 18)

Sonoma's General Plan specifically prohibits restaurants on Ag lands, as well as hotels, motels, resorts and similar lodging.

There now appears to be an emerging pattern and practice of approving commercial kitchens on agricultural land. This is a controversial issue that calls for interpretation and clarity on the allowed boundaries for food service on Williamson Act farm lands.

What sort of development is allowed? Three commercial kitchens, combined with three to four tasting rooms, lounges and 22 events on a narrow road in an already over-concentrated area, are outside any reasonable boundary for urban uses on prime agricultural lands. Similar to weddings and concerts, large structures or multiple commercial kitchens should be deemed incompatible with the purpose of the Act.

Thank you for considering our comments.

Sincerely,

Craig Enyart

SEBASTOPOL CA 95472

August 7, 2018

To: Sonoma County Board of Supervisors
Re: Proposed Westside Farms winery and event center, 7097 Westside Road

This proposed new winery is to be built on the tightest curve of Westside Road, across and upslope from an older winery that was housed in historic hops-processing buildings. The older building is on a narrow terrace directly above the Russian River, east of Westside Road. Apparently the new winery (or cave?) is to be imposed upon, or incised into a property west of Westside Road.

The current application is not apparently supported by technical studies of the site. Only a Mitigated Negative Declaration has been executed, which does not reference a geologic study of the site, nor does it specify how the new winery is to be constructed. As the Maacama Watershed Alliance has pointed out, "the Staff Report did not require the Applicant to even state whether the cave will be a Type I or II, which calls into question whether the Applicant intends to build the winery or cave."

If the structure is to be a cave, winery construction will require substantial excavation, producing spoils that will require some storage on site if the excavation will be partly backfilled, and a full geologic report should be required. The required report should include:

1. a professionally prepared geologic map showing the surface distribution of all rock units present in the general area, which the MND identifies as basal Franciscan formation, overlain sequentially by Miocene Sonoma Volcanics, and surface sediments, and the relative positions of all units;
2. a map showing the locations of drill core sites in the area to be excavated,
3. a 3-dimensional (block) diagram showing the apparent subsurface distribution of all geologic units actually intercepted by the drillers at the building site, based on the drill core samples, including both suspected and unexpected units, such as vegetative debris,
4. Engineering studies on both surface and drill core samples from the site to be excavated, and a plan for disposal of the excavations, assuming that the "wine cave" building's floor will be underlain and the walls surrounded by drain rock, sand, or some other appropriate material.

I recommend that the Board of Supervisors send this permit application back to Permit Sonoma, with a request for a report based on completion of the studies recommended in the foregoing. Assuming that a cave actually is to excavated on this extreme v-loop in Westside road, the Supervisors also should require a plan for disposal of excess excavation spoils, and should severely limit the times of waste removal to those of lowest likely traffic loads, to reduce substantial interference with normal use of Westside Road.

Sincerely,

Jane E. Nielson Ph.D, PG 9011

DESIGN REVIEW COMMITTEE RECORD OF ACTION

December 2, 2014

Item No.1 Time: 3:00 p.m.
File: UPE14-0008
Applicant: David and Carla Ramey
Staff: Traci Tesconi
Cont'd from: N/A
Env. Doc: N/A
Proposal: Request for a Use Permit and Administrative Design Review for a winery (two story, approx. 23,000 sq ft) with a maximum annual case production of 60,000 cases with a wine cave (approx. 20,720 sq ft) and conversion of hop kiln building to public and private tasting rooms open from 10 am to 5 pm, 7 days a week, and conversion of a hop baling barn to a public and private tasting room with a two-guest room marketing accommodation unit on the upper floor and to include 22 agricultural promotional events with a range of guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests) and participation in industry wide events totaling two event days with a maximum of 300 guests on 75 acres. A four- year Use Permit term is requested under Section 26-92-130 of the Zoning Code. No weddings or concerts are proposed. The parcel is under a prime Land Conservation Contract. The project site is located along a Scenic Corridor.
Location: 7097 Westside Road, Healdsburg
APN: 110-240-031, -032, and 040 Supervisorial Districts: 4 & 5
Zoning: LIA B6, 60 acre density, BR (Biotic Resource), SR (Scenic Resource), VOH (Valley Oak Habitat), F1 (Primary Floodplain), F2 (Secondary Floodplain)

Public Hearing: No

PEOPLE PRESENT:
Design Review Committee: Don MacNair, Jim Henderson, Melinda Grosch
Staff: Traci Tesconi
Applicant: David and Carla Ramey and their consultants
Others: Landmarks Committee and Staff, Denise Peter

PROJECT DESIGN: [ ] Final Review [ ] Referral [X] Preliminary Review

ACTION:	Project Design Needs Revision (see attached comments)	Project Design Approved (subject to comments and conditions attached)	Bring Back on Consent Prior to Issuance of Building Permit	Project continued to: ________	Bring Back to Staff Prior to Issuance of Building Permit
Site Plan	X				
Architecture	X

Grading	N/A				
Exterior Lighting	X				
Fence Design	X				

VOTE: The Design Review Committee (DRC) approved the existing height of the Hop Kiln and Bale Barn buildings which exceeds 35 feet. The DRC also approved maintaining these two structures in their current footprint within the Scenic Corridor setback.

	Don McNair: Aye	Jim Henderson: Aye	Melinda Grosch: Aye
Ayes: 3	Noes: 0	Absent: 0	Abstain: 0

The Land Marks Commission (LRC) and DRC took the following actions together:

- Final review of the project (after the Board of Zoning Adjustments decision) to be by the Joint LRC / DRC.
- The Joint LRC / DRC recommend that the HD (Historic Combining District) be added to the property.

DESIGN REVIEW RECORD OF ACTION SHEET
COMMENTS & CONDITIONS

Applicant: David and Carla Ramey **File:** UPE14-0008
Address: 7097 Westside Road, Healdsburg **Date:** December 2, 2014

NOTE: the applicant is urged to respond under each comment as to how plans have been revised. If a recommended change is not made, please indicate why. Please submit your responses with plans for Joint Landmarks Commission and Design Review Committee Final Design Review.

SITE PLAN

1. Parking on new winery (west) side of Westside Road the parking/drive seems to be a huge expanse of asphalt.

Response: ____.

2. Flip parking stalls to opposite side of lot so that they are adjacent to building rather than having people cross the drive aisle.

Response: ____.

3. Trash enclosure – where is it?

Response: ____.

ARCHITECTURE: Building Elevations, Colors, Materials, etc.

1. New winery building is so completely divergent from the historic nature of the Hop Kiln, etc. Completely modern office type structure out in the rural area. Not the appropriate aesthetic for this location. How do you soften the building without relying only on the vines?

Response: ____.

2. Should not really be able to see solar panels as you approach the building or from above (adjacent properties).

Response: ____

3. Consider design elements or re-massing to soften the front Hop Kiln elevation. The ramp and elevator structure look ultra modern in contrast to the rural character of the Hop Kilns.

Response: ____

LANDSCAPING: Design, Plant Types and Sizes, Irrigation, etc.

1. Rethink the "rosemary garden" as it has a very rigid geometric structure and detracts from the Hop Kiln building. The retaining walls along the edges of this area are particularly distracting, but may need to be maintained to preserve characteristics of Hop Kiln buildings.

Response: ____.

2. Need tree islands in the parking lot – one every eight spaces.

Response: ____.

3. Consider framing but not obscuring view of north end of Hop Kiln building with vegetation.

Response: ____.

4. Put oaks in the roundabout middle of new winery (west side) parking lot rather than olives. Oaks are part of the vernacular of the landscape.

Response: ____.

5. Don't want the landscaping to change the character of the view as you come around the corner – iconic view of Hop Kiln building. Soften the retaining walls along edge of "rosemary" garden. Plant something more natural and not so rigid rather than the rosemary.

Response: ____.

6. DRC Committee member MacNair: Urges the use of oaks near Hop Kiln as this would have been an oak woodland.

Response: ____.

7. LC Committee member McAllister: New landscaping is too strident in front of the Hop Kiln building. Would like to see the grades and mood of the front the same as they are currently – retain the ramp as historic but garden doesn't work. Garden is a good idea but needs to be elsewhere. Front of Hop Kiln and Baling Barn needs to stay quieter. Landscape plans need to be more fully developed. Espalier apples may be problematic – too hot? And need shade in the parking area which they don't really provide.

Response: ____.

8. LC Committee member Much: Historic view of Hop Kiln is very important so make sure landscaping doesn't interfere with that. Leave ramp but replace rosemary with grasses. Berms to hide or soften retaining wall would be good.

Response: ____.

9. LC Committee member Simpson: Liked open landscaping; likes agricultural use in parking lot (apples, olives); don't obscure the view; don't "over polish" – keep the feel authentic.

Response: ______________________________.

SIGNS

1. Are Corten letters going to be back lit?

Response: No.

2. Need full set of sign plans for all internal and directional signs and any signs that will be along Westside Road.

Response: ______________________________.

ROAD

1. Crossing by pedestrians?

Response: Not going to be an issue as operating as two separate businesses.

2. Concerned about potential employee crossing road.

Response: ______________________________.

EXTERIOR LIGHTING

1. Need lighting plans

Response: ______________________________.

FENCE DESIGN

1. Need gate and entry designs and elevations

Response: ______________________________.

MEMORANDUM

DATE: 7 August, 2018
TO: Craig Enyart, Warren Watkins
EMAIL: craigenyart@gmail.com, owlwo@sonic.net
FROM: Keith Kimberling, VACC
EMAIL: keith@va-consult.com
SUBJECT: Ramey Winery – Peer Review of Environmental Noise Assessment (01567)

Dear Craig and Warren,

We have completed our peer review report of the March 7, 2017 Environmental Noise Assessment (ENA) of Ramey Winery and the August 16, 2017 Addendum to the Assessment, both produced by Illingworth and Rodkin, Inc. The proposed winery is at 7079 Westside road, Sonoma County, CA.

We found multiple flaws with the methodologies and assumptions used in the documents which led us to question the validity of the conclusions made in the documents regarding the noise impact of the winery and the efficacy of the proposed mitigations.

1. General Plan Noise Element

Our understanding is that the Noise Element of the Sonoma County 2020 General Plan provides the appropriate regulatory guidance. The Plan has adopted several measures in regards to controlling noise from new non-transportation related projects, as summarized in Section NE-1c and Table NE-2, which is reproduced below in Table 1. Table NE-2 presents the maximum permitted noise levels allowed **at the property line** of the adjacent noise sensitive land use. The table is based on the L50, L25, L08, and L02 metrics, which define a noise level in dBA which is not to be exceeded for more than 50%, 25%, 8%, and 2% of the time in an hour. For example, table NE-2 specifies that a noise source cannot produce a noise level higher than 55 dBA for more than 15 minutes per hour during daytime hours, measured at the property line of any noise-sensitive land.

Hourly Noise Metric[1], dBA	**Daytime (7 a.m. to 10 p.m.)**	**Nighttime (10 p.m. to 7 a.m.)**
L50 (30 minutes in any hour)	50	45
L25 (15 minutes in any hour)	55	50
L08 (4 minutes 48 seconds in any hour)	60	55
L02 (72 seconds in any hour)	65	60

[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level.

Table 1: Table NE-2 from the Noise element of the Sonoma County 2020 General Plan specifying daytime and nighttime noise limits.

There are five exceptions to the values in table NE-2 stated in the General Plan, three of which are pertinent to this project:

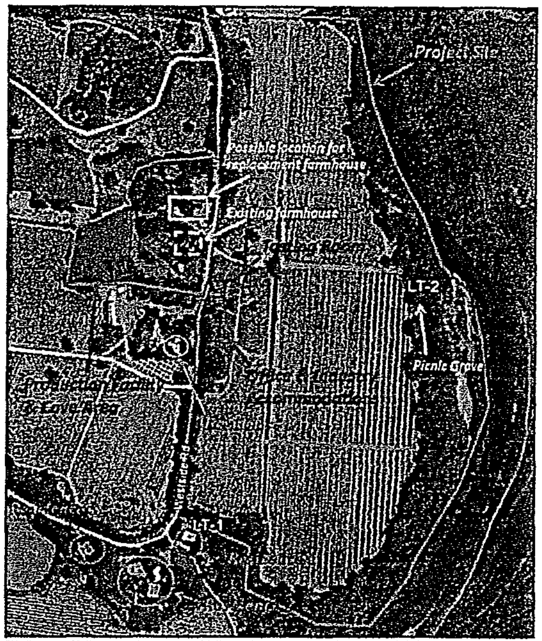
- (2) Reduce the applicable standards in Table NE-2 by five dBA for simple tone noises, noises consisting primarily of speech or music, or for recurring impulsive noises, such as pile-driving and dog barking at kennels
- (3) Reduce the applicable standards in Table NE-2 by 5 decibels if the proposed use exceeds the ambient level by 10 or more decibels
- (5) Noise levels may be measured at the location of the outdoor activity area of the noise sensitive land use instead of the exterior property line of the adjacent noise sensitive land use where:

  (a) the property on which the noise sensitive use is located has already been substantially developed pursuant to its existing zoning, AND

  (b) there is available open land on these noise sensitive lands for noise attenuation.

2. Comments

We have reviewed the Illingworth & Rodkin ENA, and the August 16 Addendum to the ENA, and found multiple flaws with the methodologies and assumptions used in both of these documents. To our knowledge, the August 16 Addendum was added after Illingworth & Rodkin realized that a residence near the proposed winery was not included in the earlier ENA. Since this residence (referred to as Residence 4) is located much closer to the proposed winery than the three residences that were considered, an addendum was necessary. The August 16 Addendum is dedicated to addressing Residence 4; however, it contains several significant flaws in methodology. The flaws that we found in the March 7 ENA and the August 16 Addendum are detailed below.



Project Site Map showing the proximity of Residence 4 to the proposed winery

2.1 Deficiencies in Environmental Noise Assessment – 7 March, 2017

2.1.1 Noise Source Levels

- The ENA states that the "maximum noise levels generated by heavy-duty (i.e., semi-tractor trailer type) trucks" would range from 70 dBA at constant speeds and 75 dBA when maneuvering and backing up, measured at 50 feet. We find these noise levels to be unrealistically low for heavy trucks and would expect levels around 75-85 dBA for heavy trucks at constant speeds and 80-85 dBA for heavy trucks maneuvering, when measured at 50 feet.

- Similarly, we find that the noise levels given for light vehicles of 53-63 dBA to also be unrealistically low. We would expect levels between 60 and 70 dBA for light vehicles measured at 50 feet, depending on the vehicle type and speed.
- We found the stated noise levels for winery equipment and operations to be generally reasonable. For crush activities, it is important to note that the peak noise levels of 70-80 dBA measured at 50 feet should be used to assess noise impacts under worst-case conditions (during crush activities).
- For maintenance and forklift operations, we note that backup alarm noise is both tonal and "repetitive and irritating by design", as stated by Illingworth & Rodkin in the ENA. Therefore, noise limits applied to forklift noise should be reduced by five dBA according to exception number 2 of the Noise Element of the Sonoma General Plan.
- Table 4 of the ENA shows typical noise source levels for promotional events. While the stated values in this chart seem reasonable, the ENA does not specify how large the events from which these values were derived are in terms of number of people. This is troublesome because the table of proposed events at the Ramey Winery show four events per year where up to 300 people are expected to attend. (ENA Table 1) Clearly, the noise level coming from conversations at an event largely depends on the number of people at the event. For a 300 person event, we find that the value of 65 dBA measured at 50 feet for "Raised Conversation" stated in Table 4 is unrealistically low.

2.1.2 Omission of Residence 4

- The March 7, 2017 does not address Residence 4 in its assessment of the noise impact of the proposed winery. Since Residence 4 is significantly closer to the proposed winery than the other three residences, conclusions based on the impact to the other three residences cannot be applied to Residence 4.

Our overall assessment of the March 7, 2017 Environmental Noise Assessment is that it used a number of unrealistically low noise source levels, and it completely omitted the assessment of noise impacts to Residence 4. An addendum was added on August 16, 2017 which addresses Residence 4; however, it uses the same questionably low noise source levels in the March 7 ENA. Additionally, there are multiple flaws with the methodology used in The Addendum, described below.

2.2 Deficiencies in Addendum – August 16, 2017

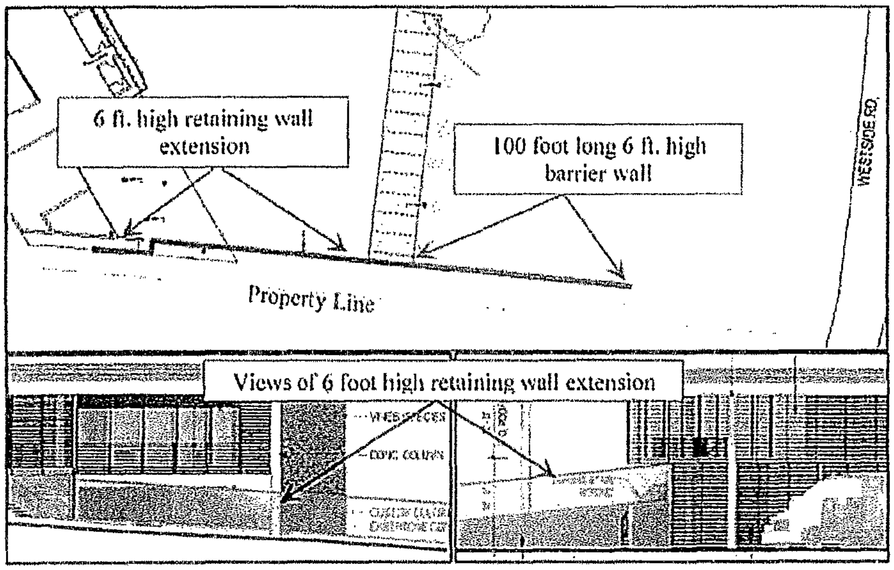
We will address issues with the 6 noise impact/mitigation sections in The Addendum, each addressing a different type of noise source.

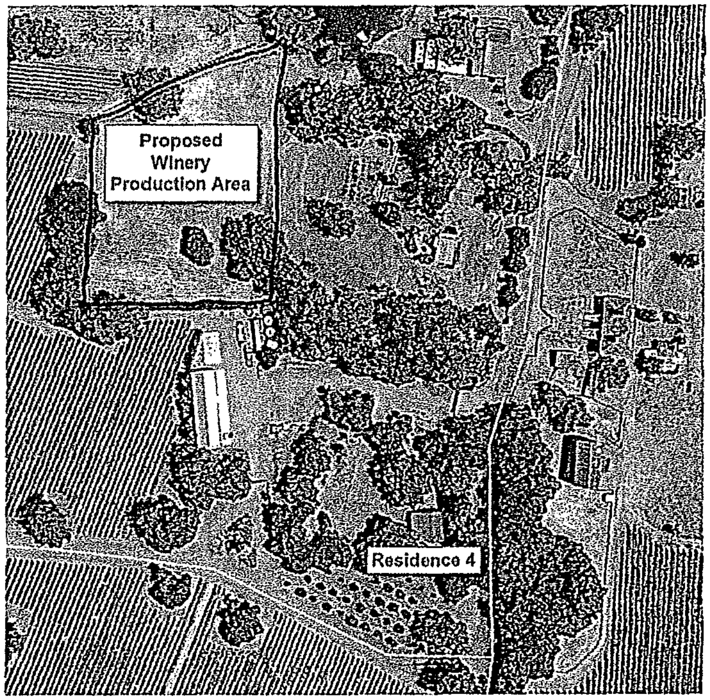
2.2.1 Noise Impact 1: Traffic, Parking Lot, and Truck Noise

- Here, and in several other sections, Illingworth & Rodkin characterize a noise-producing area such as a parking lot as if all of the sound is emitted from the geometric center of the area. In this section, they state: "Based on review of the current site plans the acoustic center of the 12 regular parking stalls in this area will be 75 feet from the property line of Residence 4." This methodology is not commonly used in acoustics because even if a number of noise sources are distributed evenly across an area, they would not act the same way as a point source located in the center of the area producing the same total energy. This "acoustic center" model underestimates the distance of sound sources to the receptor, and thus underestimates the noise level at the receptor.

- Illingworth & Rodkin state that automobile and light vehicle noise would be between 49 and 59 dBA at the property line of Residence 4. They state that "given the expected visitor and employee use, these activities are expected to occur for less than five minutes out of an hour on a typical day and fall in the L02 NE-2 daytime category of 65 dBA." **The use of the L02 metric for activity that is "expected to occur for less than five minutes" is a misapplication of the Noise Element of the Sonoma General Plan.** The L02 metric is to be used when the noise level is exceeded for less than one minute and twelve seconds per hour. For an activity which may occur for up to five minutes out of a typical hour, the correct metric is the L08, which gives a noise limit of 60 dBA according to table NE-2. **The effect of this incorrect interpretation is that The Addendum uses a noise limit for light vehicle traffic which is 5 dBA higher than the actual limit, and the projected vehicle noise of 49-59 dBA falls barely within the correct daytime limit of 60 dBA.**
- Furthermore, Illingworth & Rodkin state that "during events or on busy weekends, such activities may occur more frequently and fall in the L08 daytime category." It is reasonable to assume that this activity would last for longer than five minutes per hour during events and busy weekends. Therefore, the appropriate metric to be used is the L25 metric which gives a noise limit of 55 dBA. Again, **this incorrect interpretation of the Noise Element of the Sonoma General Plan results in the use of a noise limit which is 5 dBA higher than the appropriate noise limit, and the projected vehicle noise of 49-59 dBA will exceed the correct daytime limit of 55 dBA.**
- This incorrect interpretation of the Noise Element of the Sonoma General Plan is also applied to heavy truck noise. Illingworth & Rodkin state that "truck operations are expected to occur during daytime hours only and on a basis of one to five minutes per hour... thus, truck operations would fall into the L02 NE-2 category of 65 dBA." The correct metric to be used is the L08 metric of 60 dBA. **This incorrect interpretation results in the use of a noise limit which is 5 dBA higher than the appropriate noise limit when applied to heavy truck noise, and the projected truck noise of 65-70 dBA will exceed the correct daytime limit of 60 dBA.**
- Based on the incorrect noise limits, The Addendum notes that heavy truck noise would be 5 dB above the limit. The mitigation measure proposed is to extend a 6-foot retaining wall and to use the extension as a 6-foot sound barrier. Based on the correct noise limit, **this barrier wall would need to provide a minimum of 10 dB of attenuation. There is no evidence presented in The Addendum as to how the barrier would provide this attenuation.**

- The predicted noise level at the property line due to heavy truck noise is also based on questionably low source levels, as noted earlier in this report. This means that the 6-foot barrier wall proposed as a mitigation measure would likely need to provide significantly more than 10 dB of attenuation to heavy truck noise. We could not analyze the effectiveness of a 6-foot wall as a sound barrier in this situation because there was very little detail in The Addendum as to the location of the proposed wall. There is a diagram of the barrier wall in The Addendum, but it is very unclear. The diagram in question, as well as a Google Earth map of the area around Residence 4 is shown below:





Overall, the flaws in the first impact/mitigation section include misinterpretation of the Sonoma Noise Ordinance, the use of questionably low noise source levels, and lack of details about the proposed mitigation measure and its effectiveness. Considering this, **we do not believe that there is sufficient evidence to support the efficacy of the 6-foot retaining wall extension in attenuating truck noise such that sound levels from trucks do not exceed the noise ordinance limits at the property line of Residence 4.**

2.2.2 Noise Impact 2: Mechanical Equipment Noise

- The August 16 Addendum notes that equipment in the mechanical room of the proposed winery would result in noise levels at the property line of Residence 4 that exceed the Sonoma General Plan noise limit by 23-28 dB. The L50 metric is used since the Noise Element of the Sonoma General Plan does not specify a limit for continuous noise sources, and the L50 represents the median sound level over a duration of time. In this case, we believe that the ordinance was applied correctly.
- This problem in this section is that the structural attenuation of the mechanical room walls was essentially double-counted. Originally, the mechanical room was planned to be a semi-open area. As a mitigation measure, Illingworth & Rodkin propose that the mechanical room have solid walls on the southern side, between the equipment and Residence 4. The issue is that the predicted noise levels at the property line were reduced based on 6 dB of structural attenuation due to the semi-open mechanical room. Since the mitigation measure is to change the walls of this room from semi-open to solid, this 6 dB of attenuation cannot be added onto whatever level of attenuation the solid walls are expected to provide. This means that the solid walls need to provide 6 dB more attenuation in addition to the 23-28 dB. **The solid walls between the mechanical room and Residence 4 would need to provide 34 dB of attenuation in order to ensure that noise from the mechanical room measured at the property line of Residence 4 does not exceed Sonoma County noise limits.** The Addendum did not specify how much attenuation the solid wall would need to provide.

2.2.3 Noise Impact 3: Crush-Related Noise

- This section does not contain any significant methodological flaws. However, we feel it is important to note that the predicted noise level at the property line due to crush activities falling into the L50 metric is only 1 dB below the noise limit. Similarly, the predicted noise level at the property line due to sporadic crush events falling into the L02 metric is exactly at the noise limit. **While The Addendum states that no mitigation is needed, the predicted noise levels come very close to the Sonoma General Plan noise limits. (within 1 dB)**

2.2.4 Noise Impact 4: Crush-Related Noise

- As with the first impact/mitigation section, Illingworth & Rodkin make the assumption that sound coming from multiple sources in an area acts like a single point source in the center of the area producing the same sound levels. We reiterate that this is not a reasonable assumption to make, and is not common practice in acoustics.

- According to the predicted noise levels in The Addendum, the noise from the bottling area measured at the property line would exceed the daytime noise limit by 3 dB and the nighttime limit by 6 dB. The mitigation measure proposed is to use the same 6-foot retaining wall extension described in the first impact/mitigation section as a sound barrier for the bottling noise. **As with the first section, Illingworth & Rodkin do not provide any evidence of the efficacy of this wall in providing the needed attenuation.**

2.2.5 Noise Impact 5: Maintenance and Forklift Noise

- In this section, the L08 metric is used as the noise limit for forklift and maintenance operations. **There is no justification given for why this metric was chosen, and it is not reasonable to assume that maintenance and forklift noise would only occur for less than five minutes in a typical hour.**
- Once again, Illingworth & Rodkin make the questionable assumption that sound coming from multiple sources in an area acts like a single point source in the center of the area producing the same sound levels.
- As mentioned in our analysis of the March 7 ENA, **forklift backup alarms are tonal and annoying by design, and would be subject to a reduction of the noise limit by 5 dB,** per exception 2 of the Noise Element of the Sonoma General Plan. This is not addressed in The Addendum.
- In the calculations for the predicted forklift/maintenance noise levels at the property line, Illingworth & Rodkin state that the 6-foot retaining wall would provide 6 dB of attenuation. This attenuation level of 6 dB is not mentioned in any of the other sections where the retaining wall and/or the extension of the retaining wall were discussed, and **no evidence is provided to support the claim that this wall would provide 6 dB of attenuation.**
- The predicted forklift/maintenance noise level measured at the property line is exactly at the L08 daytime limit of 60 dB. **Considering that questionable assumptions were made, the fact that the 60 dB L08 limit is used without justification, and the fact that the predicted noise level is exactly at the limit, we are not convinced by the claim that no mitigation is needed for forklift/maintenance noise.**

2.2.6 Noise Impact 6: Event Noise

- The noise source levels used in this section are based on Table 4 of the ENA, which provides typical noise source levels for promotional events. While these levels seem reasonable for small-to-medium sized events, they do not address the four 300-person events per year planned at the winery, which will inevitably produce a higher noise level.
- The noise impact of the automobile traffic due to a 300-person event is also not addressed. While impact/mitigation section 1 does mention "events and busy weekends," it uses the L08 metric for these "busy" times. We noted earlier that the L25 metric would be more appropriate, since it is not reasonable to assume that traffic noise during "busy" times would

only be present for less than five minutes in a typical hour. For 300-person events, we believe that the L50 is the only appropriate metric, since the traffic noise of 300 people showing up to an event cannot reasonably be expected to last for less than 15 minutes in an hour. **Using the L50 metric, the predicted automobile and light vehicle noise levels at the property line would exceed the noise limit by up to 9 dB,** based on the light vehicle noise levels used by Illingworth & Rodkin. We also note that these light vehicle noise levels of 49 to 59 dB measured at the property line (75 feet from the parking lot) are questionably low, especially for the number of vehicles expected for such a large event.

- The mitigation measures proposed in this section address amplified speech, amplified music, and non-amplified music, and are as follows:
  - 1) "Indoor events with amplifies speech or non-amplifies music should only occur within the baling barn or tasting room buildings with closed windows and doors."
  - 2) "Amplified music within the baling barn or tasting room should be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet."
- **These two mitigation measures do not address the heightened automobile and light vehicle noise likely to occur during the large events.**

Our overall assessment of the 16 August 2017 addendum to the ENA is that it contains significant methodological flaws, questionable assumptions, and questionable conclusions about the efficacy of the mitigation measured proposed within. **We do not believe that these mitigations would sufficiently limit the predicted noise levels at the property line of Residence 4.**

3. CONCLUSION

With the proper application of the Noise Element of the Sonoma County 2020 General Plan and correction of other technical deficiencies, **there is reasonable evidence that the proposed Ramey Winery operations will create noise impacts in exceedance of the Noise Element of the Sonoma County 2020 General Plan.** We do not believe that the mitigation measures proposed in the Illingworth & Rodkin August 16, 2017 Addendum to the March 7, 2017 Environmental Noise Assessment would be sufficient to attenuate noise from the Winery such that the noise limits of the Noise Element of the Sonoma County 2020 General Plan would be met.

Resolution Number 17-010

County of Sonoma
Santa Rosa, California

September 21, 2017
UPE14-0008 Traci Tesconi

RESOLUTION OF THE BOARD OF ZONING ADJUSTMENTS, COUNTY OF SONOMA, STATE OF CALIFORNIA, ADOPTING A MITIGATED NEGATIVE DECLARATION AND GRANTING A USE PERMIT APPROVAL TO RAMEY VINEYARDS, LLC FOR A NEW WINERY WITH A PUBLIC AND A RESERVE TASTING ROOM WITH TWO-GUEST ROOM MARKETING ACCOMMODATIONS ON THE UPPER FLOOR, AGRICULTURAL PROMOTIONAL EVENTS, AND INDUSTRY WIDE EVENTS LOCATED AT 7097 WESTSIDE ROAD, HEALDSURG; APN'S 110-240-031, -032, and -040.

WHEREAS, the applicant, David and Carla Ramey, on behalf of Ramey Vineyards LLC, filed a Use Permit application with Permit Sonoma to construct a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, a new wine cave (approx. 20,720 square feet), a conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and a conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation unit on the upper floor. The request includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this portion of the project site. A four- year Use Permit term is requested under Section 26-92-130 of the Zoning Code. No weddings, receptions, or concerts are proposed. The parcel is under a prime Land Conservation Contract. No vines will be removed to accommodate the winery facility or related site infrastructure. The property is located at 7097 Westside Road, Healdsburg; APN APNs: 110-240-031, -032, and -040; Land Intensive Agriculture 60 acres per dwelling unit (east of Westside Road) and Land Intensive Agriculture 100 acres per dwelling unit (west of Westside Road); Supervisorial District No. 4 and 5.

WHEREAS, a Mitigated Negative Declaration was prepared for the Project and noticed and made available for agency and public review in accordance with the California Environmental Quality Act ("CEQA") and the State and County CEQA Guidelines; and

WHEREAS, in accordance with applicable provisions of law, the Board of Zoning Adjustments held a public hearing on September 21, 2017, at which time the Board of Zoning Adjustments heard and received all relevant testimony and evidence presented orally or in writing regarding the Mitigated Negative Declaration and the Project. All interested persons were given an opportunity to hear and be heard regarding the Mitigated Negative Declaration and the Project; and

WHEREAS, on September 21, 2017, the Board of Zoning Adjustments approved the project with modifications, approving the construction of a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, a new wine cave (approx. 20,720 square feet), a conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and a conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodations on the upper floor. Including 20 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, and 5 events with 120 guests) and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this portion of the project site. A four-year term to activate the Use Permit was approved as allowed under Section 26-92-130 of the Zoning Code. No weddings, receptions, or concerts were proposed and were not approved under this Use Permit.

The Board of Zoning Adjustments eliminated from the project the two agricultural promotional events with a maximum of 300 guests; recommended solar panels be installed on the winery building roof; required the winery building be completed and granted final occupancy within two years of commencement of the tasting rooms operations, or the tasting rooms uses shall cease until such time the winery building receives final occupancy; and prohibited the Permit Holder/Applicant from granting any future well easements or agreements of the project site wells.

WHEREAS, the Board of Zoning Adjustments has had an opportunity to review this Resolution and finds that it accurately sets forth the intentions of the Board regarding the Mitigated Negative Declaration and the Project.

NOW, THEREFORE, BE IT RESOLVED that the Board of Zoning Adjustments makes the following findings:

1. The Board of Zoning Adjustments has considered the Mitigated Negative Declaration prepared to address environmental impacts of the project, together with all comments received during the public review process. Based upon the full record of proceedings (including the Initial Study and all comments received), there is no substantial evidence that the project as approved will have a significant environmental effect because Mitigation Measures have been incorporated into the Project as Conditions of Approval and agreed upon by the project applicant. Changes or alterations have been required of or incorporated into the project through the Conditions of Approval that mitigate or avoid the potentially significant environmental effects of the proposed project. These changes or alterations have been agreed to by the applicant and are subject to the Mitigation Monitoring Program contained in the Conditions of Approval. The Mitigated Negative Declaration has been completed in compliance with State and County CEQA guidelines and reflects the independent judgment and analysis of the County of Sonoma.

2. The project is consistent with the General Plan land use designation of Land Intensive Agriculture, and General Plan objectives to facilitate County agricultural production by allowing agricultural processing facilities and uses, including a winery and wine cave, in the Agricultural Land Use categories (Objectives AR 1.1, AR 1.2 and AR 5.1). Processing of agricultural products of a type grown or produced primarily on site or in the local area and tasting rooms and other temporary, seasonal, or year-round sales and promotion of agricultural products grown or processed in the county, subject to the criteria of General Plan Policies AR-5c, AR-5g, AR-6d, and AR-6f, are uses permitted with a Use Permit in the LIA zoning district. The project is consistent with General Plan Goal AR-5, which states that agricultural support services should be conveniently and accessibly located to the primary agricultural activity in the area because the winery is

located in an area producing wine grapes and located within the Russian River Appellation. Tasting rooms, agricultural promotional events and industry-wide events will promote the winery and the wines produced on the site, educate visitors on the making of wines, and increase wine club membership; all as part of the marketing of an agricultural product grown and processed in Sonoma County. These activities are consistent with General Plan Objectives AR-1.1, AR 1.2, AR 5.1 and General Plan Policies AR-1a, AR-4a, AR-5c, AR-5g, AR-6a and AR-6d.

3. The primary potential land use conflicts associated with the proposed agricultural processing and visitor-serving uses, including the winery, tasting rooms, agricultural promotional events, and industry-wide events are aesthetics, exterior lighting, traffic, parking, hydrology and water use, water quality, and noise. Conditions of approval have been incorporated into the project to reduce these and all other potential impacts to a less than significant level. The proposed design plans to convert the two existing hop kiln buildings into tasting rooms received preliminary approval in a joint session of the Sonoma County Landmarks Commission and the Design Review Committee. The two hop kiln buildings are dilapidated and unless they are rehabilitated, the County could lose an important part of the local agricultural heritage. The joint committee also recommended approval of allowing the two hop kiln buildings to remain within the scenic corridor setback along Westside Road and to be kept at their present height, which exceeds the 35-foot height limit in the LIA zoning district. A condition of approval requires that HD (Historical District) zoning be placed on the east side of the project site where the hop kiln buildings are located. The winery building and wine caves on the west side are located outside the 200-foot scenic corridor setback and meet other setback requirements and the 35-foot height limit in the LIA zoning district. All elements of the final site plan and design require final approval by the Design Review Committee and the Landmarks Commission prior to issuance of building permits, to ensure compliance with conditions of approval and mitigation measures related to aesthetics, neighborhood compatibility and preservation of historic and cultural resources. New exterior lighting shall be low mounted, downward casting, and fully shielded to prevent glare. Lighting shall be shut off automatically after closing and security lighting shall be motion-sensor activated.

The Final Traffic Study prepared for the project by the traffic engineer from W-Trans, dated March 10, 2016, was reviewed and accepted by the Sonoma County Department of Transportation and Public Works. An Addendum letter prepared by W-Trans, dated April 21, 2017, explains that collision history for the study area indicates there were two collisions on the study segment in the most recent five-year period according to California Highway Patrol records. The collision rate is below average and according to the traffic engineer of W-Trans, the segment appears to be operating within expected safety parameters. The Conditions of Approval require driveway improvements, right of way dedication, and provision of all parking on site with no parking allowed on Westside Road. The frequency and size of agricultural promotional events are limited, and industry wide events will be two days total. Sight distances along Westside Road from the existing driveway locations were evaluated by W-Trans based on sight distance criteria contained in “A Policy on Geometric Design on Highways and Streets,” published by American Association of State Highways and Transportation Officials (AASHTO). The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet. Sight distance to the north of the tasting room driveway on the east side, after removal of the existing Westside Farms sign, is more than 400 feet. To the south of the tasting room driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic. The sight distance to the south of the winery driveway on the west side is 250 feet. To the north of the winery driveway, vegetation will be removed and the northwesterly hillside of the project site lowered and terraced to allow a sight distance of 250 feet, in accordance with a letter report, Grading and Cross Section Plan, and a Stopping Sight Distance plan prepared by the applicant's engineer, Adobe & Associates. Adobe & Associates also prepared a video simulation showing vehicles traveling along the project site with the sight distance improvements completed and sight stopping distance scenario. An Addendum letter from the traffic engineer of W-Trans, dated September 13, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway. Also, an existing mirror across Westside Road on the project site will remain and will extend sight lines.

In addition, a mitigation has been incorporated into the project to limit guest capacity for agricultural promotional events on the west side of the project site to a maximum of 30 guests which equals 12 vehicles using the standard ratio of 2.5 persons per vehicle. Industry wide events will not be held on this portion of the project site. A Traffic Control and Parking Management Plan has been prepared by the applicant to demonstrate queing areas for guest vehicles along the two project driveways for the winery and tasting rooms and the locations of parking attendants on duty for the duration of events. A Traffic Study's sensitivity analysis was done to demonstrate that even with events happening at the same time at more than one winery, there would not be traffic conflicts or an overconcentration of use. However, a condition has been added to the Use Permit to require event coordination between the Ramey winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since these event days are set by the Russian River Valley Grape Growers Association. The conditions also prohibit scheduling larger events during large organized bicycle events. Furthermore, a standard condition is included in the Use Permit requiring the applicant to participate in a future event coordination program to be used for wineries.

Based on the results of the Noise Assessment, dated March 2017 and the Noise Addendum dated August 2017 prepared by Illingworth & Rodkin, Inc., due to the distance of sensitive receptors (residences) and consistency with Table NE 2 of the Noise Element of the General Plan, mitigation is required to reduce heavy truck noise and mechanical and bottling noise. By extending a proposed retaining wall on and along the southerly property line next to the winery building, placing solid walls in the area of the mechanical room and restricting nighttime truck use and nighttime bottling, the noise standards of the General Plan can be met. Conditions of approval provide mitigation to reduce potential noise impacts from the different site features and buildings. The use of amplified music and sound, loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music are only permitted indoors in the two tasting room buildings during daytime hours until 9 P.M. with doors and windows closed. Amplified music within the tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet. No outdoor music or use of sound systems is permitted around the tasting room buildings. No amplified music or sound is permitted either indoors or outdoors at the winery building. Outdoor events can only occur within the Picnic Grove Area until 9 P.M. and may use amplified speech limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. In the Picnic Grove Area, the use of quieter, non-amplified, acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations, is permitted outdoors, during daytime hours until 9 P.M. Prior to temporary or final occupancy of the winery building or tasting room buildings, a long term, on-going Noise Management and Monitoring Plan for event activities shall be submitted and cleared by the Permit Sonoma Health Specialist. The Plan shall be implemented for the project operations. The applicants have agreed to the Mitigation Measures and Monitoring program.

The Groundwater Availability Study prepared by EBA Engineering concludes that the water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the proposed project and will not result in negative impacts to local groundwater or surface water resources. This conclusion is based on the fact that the project site is located within a Class 1 water area, identified in the Sonoma County General Plan as a major groundwater basin, and the underlying aquifer is comprised of alluvial deposits associated with the Russian River, which is a managed water system that ensures perennial flow throughout the year and serves as a continuous source of recharge to the aquifer. The projected radius of influence characteristics induced by the pumping operations will not encroach onto neighboring properties. In addition, the proposed water use is projected to induce no measurable changes in surface water flows in the Russian River. A Condition of Approval for the project prohibits the Permit Holder/Applicant from granting any future well easements or agreements which would allow water from the project site wells to be used by third parties or transferred for off-site uses.

All project development will be over 800-feet from the Russian River. According to the Plan, there will be a slight increase in runoff for the 2-year 24-hour storm as a result of the proposed improvements. The increase in the runoff in the area of the winery improvements will be captured in the existing pond. The existing pond will have adequate capacity to capture increase. Water treatment will be achieved by allowing the runoff to flow through vegetated buffer areas prior to entering the pond. There will be a slight increase in runoff east of the tasting room improvements that will infiltrate into the existing vegetation prior to exiting the property. The Best Management Practices incorporated into the proposed project, including the vegetated buffer areas, will provide the necessary treatment to meet the County's Low Impact Development (LID) requirements. . These improvements as designed would reduce the potential impacts on water quality to a level of less than significant.

The industrial wastewater from the proposed winery processing will be collected, aerated and stored in a series of treatment tanks to be disposed of via an irrigation system to serve the on-site vineyard. Domestic sewage disposal from the tasting rooms, marketing accommodations, guest and employee restrooms will be disposed of via on-site septic systems adjacent to the tasting room buildings on the east side and near the existing farmhouse on the west side. Both the winery wastewater system and the domestic systems will be designed by an engineer to meet all applicable standards. The property consists of flat gentle sloping terrain with slopes ranging between 5-15 percent. The soil classification of the project site is "Yolo Loam" which is commonly found in the Russian River and Dry Creek Valleys and described as sandy loam, gravelly loam, silt loam, and clay loam surface layers in some areas. Yolo Loam is suitable for domestic and industrial wastewater disposal systems. The Russian River forms the eastern boundary to the property. Both the winery wastewater system and domestic septic systems will be more than 800 feet from the Russian River.

4. The proposal is consistent with the LIA (Land Intensive Agriculture) zoning designation, which allows the following under Section 26-040-020 (i) of the Zoning Ordinance with a Use Permit approval: tasting rooms and other temporary, seasonal or year-round sales and promotion of agricultural products grown or processed in the county. Sonoma County has a long history of permitting agriculture promotional events at wineries as a marketing tool that promotes the wine produced or grown on site. Project conditions of approval prohibit the winery facility from being rented out to third-parties for any activities, including events, weddings, or concerts.

5. The project is consistent with the Scenic Resources and Scenic Corridor development standards in Article 26-64 of the Zoning Ordinance. Specifically, the project proposes to rehabilitate and repurpose the hop kiln and baling barn buildings which are historic resources located within the Scenic Corridor 200 foot setback from the centerline of Westside Road. To the extent that the project requires new construction or structures in the setback related to the hop kiln and baling barn buildings, this construction is allowed pursuant to an exception in Section 26-64-030 (a)(5)(i) for new structures subject to design review which are associated with existing structures. To the extent construction in the setback relates to the existing hop kiln and baling barn buildings, it is allowed under an exception in Section 26-64-020(a)(3) for the maintenance, restoration, reconstruction or minor expansion of existing structures.

6. The project is consistent with the Land Conservation Act because: 1) the project will be supportive of agricultural production on the project and in the local area; 2) the project would not affect the agricultural use on adjacent properties because noise will be controlled and all parking needs can be accommodated on the project site; 3) the project site will continue to be devoted to agricultural use because well over fifty percent of the property is planted in vines; 4) all other uses, including the winery building, tasting rooms, associated parking, landscaping and outdoor activity area, and existing residence are compatible with the agricultural use of the property and are consistent with the Land Conservation Act's Principles of Compatibility and the County's Uniform Rules for Agricultural Preserves. The existing and proposed development will collectively occupy no more than 3.75 acres of the 75 acre site, which meets the threshold to ensure that they remain incidental to the primary use of the land for agriculture; 5) there will be no removal or displacement of vines; 6) operation of the tasting rooms and hosting agricultural promotional events are consistent with the Land Conservation Act because they are marketing tools to help sell the wine produced on-site and ensure the long term viability of the vineyard and processing facility; 7) no permanent structures solely devoted to the agricultural promotional event activities will be constructed on the site, and none of the events will last more than two consecutive days; 8) the marketing accommodations for two guest rooms are consistent with the local Uniform Rules; and 9) the agricultural promotional events and industry-wide events are annually limited in number, duration, and scope to ensure that the increase in the temporary human population drawn to the site will not hinder or impair agricultural operations.

7. The establishment, maintenance or operation of the use for which application is made will not, under the circumstances of this particular case, be detrimental to the health, safety, peace, comfort and general welfare of persons residing or working in the

neighborhood of such use, nor be detrimental or injurious to property and improvements in the neighborhood or the general welfare of the area. As discussed in Finding 2 above, in summary, the particular circumstances in this case are: exterior lighting must be low mounted, downward casting and fully shielded to prevent glare, lighting shall shut off automatically after closing and security lighting shall be motion-sensor activated; Westside Road is adequate to support the volume of traffic associated with the proposed land uses; improvements will be done on the project site to provide adequate northerly sight line on the winery side of the project site, the project will not compromise agricultural capability because the proposed use is related to agriculture and no vines will be removed to accommodate the project; and mitigations have been incorporated into the project to ensure that noise from construction, winery operations, and agricultural promotional event and industry wide event activities shall meet the Daytime Noise limit standards established in the General Plan, with limited hours of event activities, and the conditions placed on the project to control noise and restrict the use of any outdoor amplified music and sound systems. Other project related circumstances include that the project will not create a detrimental concentration of visitor-serving and recreational uses because the traffic generated by the project will not result in road access conflicts; the project will preserve historic resources important to the local agricultural heritage and the rural character of the neighborhood; the project applicant will coordinate agricultural promotional events with the two adjacent wineries to off-set event days and/or event times , and no event will be held the same time as a large bicycle event. The project site wells will not affect or cause a significant drawdown of neighboring wells in the area or the Russian River; a Traffic Control and Parking Management Plan will be implemented to control guest traffic entering and exiting the project site, and guest vehicle parking and movement on the project site. Use of amplified music or sound and loud musical instruments are only permitted indoors at the tasting room buildings during daytime hours with doors and windows closed. Outdoor events and activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the Site Plan. In the Picnic Walnut Grove area, amplified speech is limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. The winery’s Use Permit is under a one-year review of event activities after commencement of the first event to determine condition compliance.

BE IT FURTHER RESOLVED that the Board of Zoning Adjustments hereby adopts the Mitigated Negative Declaration and Mitigation Monitoring Program set forth in the Conditions of Approval. The Board of Zoning Adjustments certifies that the Mitigated Negative Declaration has been completed, reviewed, and considered, together with comments received during the public review process, in compliance with CEQA and State and County CEQA Guidelines, and finds that the Mitigated Negative Declaration reflects the independent judgment and analysis of the Board.

BE IT FURTHER RESOLVED that the Board of Zoning Adjustments hereby grants the requested Use Permit, subject to the Conditions of Approval in Exhibit ‘’A‘’, attached hereto.

BE IT FURTHER RESOLVED that the Board of Zoning Adjustments designates the Secretary as the custodian of the documents and other material which constitute the record of proceedings upon which the Board’s decision herein is based. These documents may be found at the office of the Sonoma County Permit and Resource Management Department, 2550 Ventura Avenue, Santa Rosa, CA 95403.

BE IT FURTHER RESOLVED that the Board of Zoning Adjustments' action shall be final on the 11th day after the date of the Resolution unless an appeal is taken.

THE FOREGOING RESOLUTION was introduced by Commissioner Mauritson, who moved its adoption, seconded by Commissioner Reed, and adopted on roll call by the following vote:

Commissioner	Carr	No
Commissioner	Reed	Aye
Commissioner	Davis	Aye
Commissioner	Mauritson	Aye
Commissioner	Shahhosseini	Absent

Ayes: 3 Noes: 1 Absent: 1 Abstain: 0

WHEREUPON, the Chair declared the above and foregoing Resolution duly adopted; and

SO ORDERED.

BOARD OF ZONING ADJUSTMENTS REGULAR CALENDAR

Item No.:	2
Time:	1:30 PM
File:	UPE14-0008
Applicant:	David and Carla Ramey
Owner:	David and Carla Ramey Trust
Cont. from:	N/A
Staff:	Traci Tesconi, Project Planner
Env. Doc:	Mitigated Negative Declaration
Proposal:	Request for a Use Permit to construct a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, and a new wine cave (approx. 20,720 square feet) on the west side of the project site. On the east side, is the conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation on the upper floor. The request also includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30

guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this side of the project site. A four- year Use Permit term to activate the permit is requested under Section 26-92-130 of the Zoning Code. No weddings, receptions, or concerts are proposed. The parcel is under a prime Land Conservation Contract. No vines will be removed to accommodate the winery facility or related site infrastructure.

Location: 7097 Westside Road, Healdsburg
APN: 110-240-031, -032, and -040
District: 4 & 5
Zoning: LIA B6-60; F1, F2, RC200/100, SR, VOH (Land Intensive Agriculture: Flood Plain; Riparian Corridor 200/100; Scenic Resources; Valley Oak Habitat Combing Districts – east of Westside Road); LIA B6-100; SR (Land Intensive Agriculture: Scenic Resources – west of Westside Road).

Staff Presentation: Traci Tesconi summarized the staff report, which is incorporated herein by reference.

David Ramey, Applicant, Sonoma County resident for 40 years, has helped to establish many wineries. He has been operating in leased buildings in Healdsburg since 2002. He wishes to purchase property to have better control over their business and pass it down to his children. The subject property is ideal for their growing business. The emphasis will be on a mid-sized winery. They are not asking for an event center. They want to improve safety on the west side turn into the property and replace the existing trees.

Allen Ramey, **Healdsburg and property owner,** is committed to the project and the property. They purchased the site in 2012 and have spent 4.5 years planning the winery. Denial of the project will have a negative financial impact on the family. Ramey considers the project to be a family commercial farm and tasting room. They would like a kitchen to be able to prepare hot meals for their team in the hop kiln building.

Carla Ramey, Healdsburg, stated that she uses the back of the house to do bookkeeping, payroll, permitting, taxes, etc. Regarding concern expressed about the “office complex,” there are two offices below and 10 offices above. They have 11 employees who need office space. She did not feel that this is excessive, as they employ sales people. Another comment called the project a distribution center. They are part of the Vintners Co Op, so the wine goes there once it’s bottled. Direct-to-consumers orders go through a fulfillment center.

Claire Ramey, Westside Farms, stated that the 60,000 cases proposed for the site is below the case average for the area. Ramey discussed other winery permits on Westside Road. They are asking for 22 events per year, are not proposing parties. The events will promote agriculture in the county. The owners want to work with neighbors along the road and bicycle events so there is no overlap.

Public Hearing Opened at 3:09

Ariel Kelly, Healdsburg, lives near the property. She supported the project and is excited about the plans for historic restoration.

Kim Wallace, a second generation owner of a winery, supported the project, and appreciates the sustainability measures being incorporated.

Stuart Brian, Santa Rosa, has known the applicant for 30 years and attests to his wine making skills and integrity. The wines he produces are some of the highest quality. He supported the project and said it would be a fine use for the property.

Laura Morgan, Sebastopol, opposed the project because of the cumulative impact from similar projects on the rural road. The Winery Working Group goal is preserve rural Sonoma County. It is not the subject application, but the overall concentration that need to be regulated.

Jean Larson, Redwood Empire Food Bank, which provides millions of meals in the region, and couldn't do it without the support of businesses in the area. The Ramey family are excellent supporters and as their business grew so did their support of the community. Their support is consistent and has helped to expand programs, build buildings. Their generosity over the years has helped to give over 100,000 meals per year. For their size, the Ramey family is one of the most generous and supportive donors.

Nancy Bailey, Sebastopol, knew people who were prior owners of Farrell Winery and were anxious about who might purchase the property. They were extremely relieved when the Ramey family purchased the property, and could not think of a better neighbor. The family is involved in the community, has a family history, are in it for the long haul, and for the right reasons.

Tom Bonomi, Sebastopol, stated that the Ramey family are the right owners for the property and value the importance of commercial enterprise while seeing the need to preserve the historic buildings.

John Blucher, Westside Road, a life-long farmer and resident of Westside Road has seen the decline of the buildings on the property. He looked forward to seeing this project approved and feels the Ramey family will be great neighbors. It will retain the rural character. The scenic corridor is scenic because of the wineries, but the biggest detraction to rural character are the large homes built on agricultural land.

Tom Klein, owner of Rodney Strong Vineyards, said he that the applicant is honest, pragmatic, humble, and one of the geniuses of wine making in the county. He will live up to what he says he will do, he will work with the county to come up with solutions, and Mr. Klein supported the project.

Judith Olney, Westside Road, long time Sonoma County resident, expressed concern about the allowed uses, scale and impact of such a large project. The Chair should remind people what is being considered. The integrity of the family is not pertinent to the discussion. The Use Permit goes with the land as it is passed to new owners. We are reviewing a winery with different tasting rooms. The hop kilns and bailing barns are in the Scenic Corridor. Design Review and Landmarks Commission were clear about stated that permitted uses must be consistent with the General Plan.

Mark Bommersbach, Westside Road, stated that the BZA should deny the permit because public safety issues. The traffic review is insufficient for the sight distance portion. Apart from the CEQA issue, cars may drive faster, and it is a popular road for bicyclists. There are too many tasting rooms already located on Westside Road, and the BZA recently denied two other projects on the road.

Lisa Amador, Healdsburg, supported the project. She expressed confidence that the project should move forward with all the studies and the years that have passed.

Joan Ramsay had to leave but submitted her printed talking points.

John Balletto, Sebastopol, supported the project. The applicants have completed all required studies, it is consistent with General Plan policies to support agricultural heritage. There is a Right to Farm Ordinance in this county, and the project falls under this ordinance. Balletto stated that they were blessed to have David Ramey running his winery in this county. Mr. Ramey helps promote Sonoma County around the world.

Lee Martinelli, Forestville, grows apples and grapes and sells some of their grapes to the Ramey Winery. He has done this for a couple of decades. He supported the restoration as commendable and stated that agricultural processing facilities are needed whether for apples, wineries, or chickens. Processing plants are vital to agriculture, and without them, farming cannot continue.

Nancy Citro, Westside Road, stated that average case production is 20,000 and this is 3 times that size. The relevant comparison should be to those wineries on Westside Road rather than the Russian River appellation. Visitor serving uses have been super-sized with all the events and commercial kitchens. There have been 200 wineries opened. The BZA should not deny the changes because they are in the Scenic Corridor, as was done recently with another project. Citro also expressed concern about road safety. The proposed modern winery building will be detrimental to the rural character of our county.

Eric Grams, Healdsburg, owns the vineyard on the south side of the Ramey property. He stated that the Ramey family has given much to the wine business in the county and has added to the prosperity of the county. They are a family operation and have been forthcoming about plans with neighbors. Grams was pleased that the dilapidated buildings will be refurbished and will help memorialize the county's long agricultural history. He is pleased to have the Ramey family as neighbors and supports the project.

Bryan Scott, Brentwood, also supported the project. It fits well in the surrounding area, and is consistent with traditional agriculture in the area. The project will be a high quality undertaking and will fit on the site in a crisp, balanced manner.

Lisabeth Holmefjord, Healdsburg, supported the project and asked for the permit to be approved. The owner is supportive of the local community, and the family is generous and supports local businesses in the community.

Trini Amador, Healdsburg, is next door neighbors of the Ramey family. He supported the project. Westside Road is not a residential area, it is an agricultural/business area. 90% of Westside Road is taken up by agricultural activities. This project is accentuating the rural character of the area. This zoned agricultural area is not any busier than other agricultural areas. Wine tasters in the area use Uber or professional drivers.

George Hamel, Kenwood, went through the application process himself. He believes that Sonoma County residents should embrace this project without hesitation. He believes in the value of the entire family working together, it's a throwback to a different era. The Ramey family listened to the community and their application reflects their consideration of the community requests.

Doug McIlroy, Healdsburg, supported the project. His family owned property before there were any tasting rooms on Westside road. He could not think of a better project than that which the Ramey family is proposing. The historic reconstruction is valuable.

William Campbell, Healdsburg long-time resident, recalled what it was like before all the wine development. While thankful for the wine industry, the hop kilns are dying. The project would be good for Healdsburg.

Sue Christiansen, Westside Road, works part time for a winery. She expressed concern about the proliferation of wineries on the road. She was concerned that five events with 120 people and the other events with 300 people is too great and will greatly impact the area when there are cumulative events taking place. Traffic is always a problem when there are events.

Greg Dexter, Healdsburg, supported the project. They employ 16 people, and they support the community where they live and work. Dexter said the project will rejuvenate Westside Farms and ensure that the hop kilns will be there for us to enjoy for generations.

Cameron Frey, Healdsburg, is employed by the Ramey Winery in 2002. He stated that the employees are an extended family and what motivates them is the story behind the wine: It expresses the soil, the region, etc.

Mike Martini, Santa Rosa, supported the project and holds the Ramey family in high esteem.

Lockie Gillies, Healdsburg, has been employed by the Ramey family for 11 years. It says a lot about the Ramey family that their employees feel like family. He supported the project 100 percent.

Mike Haney, Director of Membership of Sonoma County Vintners supported the project and attested that the family is generous, active in the community, and the project is well thought out and perfectly compatible with the character of the area. The historic restoration will add to the character.

Al McWilliams, immediate neighbor, stated that there is probably no one in this room would be impacted more than him. They will see the winery outside their kitchen window, and they are in full support of the project.

Mark McWilliam, owner, Arista Winery, Westside Road, commented that public safety, noise and density are a concern. Traffic is already bad and a new winery will only add to congestion. A significant amount of the traffic is unrelated to the wineries on the road. During bicycle races, public safety is the real issue, not the winery business. He fully supported the project.

Kevin Barr, Geyserville, commented that when the pumpkin patch was located at the site, traffic was not a problem. He thinks it is great that the hop kilns will be restored and supported the project.

Larry Martin, Forestville, Founder of Food and Wine trails, stated that he is a former planner and it is his opinion that land owners have not been able to use their land as designated because of citizen groups.

Judy Temblock, Santa Rosa, wondered why the report chose to use weekend hours which were the loudest to determine noise impacts.

Olle Lundberg, Cazadero, is the architect of the building. He expressed hope that their work shows their passion and Lundberg feels it will be an extraordinary piece of architecture for the county. Wineries are one of the few architectural opportunities to work with the relationship between landscape and building. Respect has been given to the historic nature of the site, and there is a chance to save the hop kilns with an architectural solution.

Fred Swinth, Illingworth and Rodkin, is co-author of the noise study. His firm has worked on many noise studies in the county. Most proposed events are far away from the neighbors. They used weekend hours in their analysis because there will be more activities going on at that time. All of the activities of this project meet county standards for noise levels. **Commissioner Carr** asked if all the winery noise would meet standards at the property line. Mr. Swinth stated that noise impacts were mitigated at the property line. Parking right next to the cut slope that the building is cut into was an issue.

Terry Harrison, representing CAFF, disagreed with the staff report which indicated that this winery will not result in an overconcentration. There are 9 existing wineries/tasting rooms in a nearby radius, and this is overconcentration. Grapes will be brought from outside the county-this could eventually impact Sonoma County's reputation for fine wines. There will a lot of foot traffic and this is in proximity to the blind curve. Greenhouse gas emissions do not include those associated with the building structures or equipment. Harrison urged denial of the application.

Andy Bannister, Sebastopol, General Contractor for Ramey, stated that the historic buildings are getting worse every year and area in need of repair. It would be a shame if they were to collapse. The project is an authentic and supports agriculture on that property. He urged for support of the project.

Kathy Pons, Valley of the Moon Alliance, Kenwood, stated that preservation of real agriculture and processing is important, but it is the visitor serving and marketing uses that are hard to absorb in these districts. The character is impacted by the visitors and it commercializes agriculture. It goes into tourism. Road safety, concentration and noise should be the primary concerns for these projects, followed by the uses and conditions and how they fit on the parcel and the area.

Tom Rochioli, Westside Road, supported the project. Has expressed concern about events, but stated that Westside Road will benefit from this project.

Public Hearing Closed at 4:59

Bill Carle – Carle, Mackie, Power and Ross , spoke about the driveway and safety. There will be no forklifts going across the road. There won't be any people walking across the road. No member of the public will go across the road. The modern building is not an issue because it is not visible from Westside Road. Consideration of the size of the site is a better judge for case capacity. From a scale standpoint, the request is not out of proportion. If the project is denied the hop kiln buildings will not be renovated. There are mitigation measures established for noise. Regarding comments about speed on Westside Road, the W-Trans traffic report presents valid evidence and the rest is anecdotal.

Mr. Carle commented that issues of cumulative impact and overconcentration have not been defined yet. The Board of Supervisors will have to make policy at some point. The largest event is for 300 people, and the W-trans report give solid evidence that an addiitonal 350 people could be added without impacting the traffic to a substantial degree. They have identified other events in the county and they will not have events that coincide with events on Westside road that would cause impacts.

The applicant believes he can fit in with the existing neighborhood relative to other wineries in the area. He is willing to have conditions in place to make sure that events that are hosting 100 people or more don't have an impact. The staff report addresses the issue that are brought up in regards to large events.

Condition #82 needs to be clarified as it relates to stand alone tasting. The tasting room may be completed before the rest of the winery is complete. The county does not want stand alone tasting rooms. If they don't complete the winery within a certain time frame, the tasting room shuts down until such time as the winery is completed an occupied. This should be added to the condition. Everything they are requesting fits within General Plan Policy AR4a.

Commissioner Questions:

Commissioner Mauritson asked for a clarification of what would be done with winery wastewater. **Staff Tesconi** stated that it water would go into a treatment system and be used for vineyard irrigation.

Commissioner Mauritson asked what type caves are proposed, **Staff Tesconi** replied Type 2. **Commissionser Mauritson** asked if there would be tasting in the caves. **Staff Tesconi** said no, that there will only be access for employees. No public entry and no tasting are permitted.

Commissioner Mauritson asked about water easements on the property, and **Staff Tesconi** indicated that there are five wells on the property. **Commissioner Mauritson** then asked if there were conditions on new water easements. **Staff Tesconi** stated that there were not.

Commissioner Mauritson asked what percentage of grapes are imported. The applicant responded that the county requires that grapes be primarily from the local area and from adjacent counties. Ramey imports grapes from Napa and Sonoma, but they are focusing on using Sonoma grown grapes. 70 percent of the fruit used now is from Sonoma County.

Commissioner Mauritson asked if the applicant feels he needs large events be successful in business. The applicant stated that he was unsure where to draw the line. It is hard to imagine having 300 people there at the same time.

Daylene Traffic Consultant (W-trans) stated that Westside road does not have very good sight lines. The traffic study looks at the speed of traffic when it comes around the curve to where they would see someone waiting at the driveway of the winery. Sight distances and sight lines are CEQA issues. The study recommended that trees be removed to help sight distance. When measuring, W-trans always measures 15 feet back from the edge of a driveway.

Commissioner Carr asked what the determination of 390 feet was based on. And Ms. Whitlock stated that the guidelines come from AASHTO. Commissioner Carr stated that 250 feet would give the driver enough time to see someone and stop.

Commissioner Davis wondered if the road cut would impact anything further down the road. Ms. Whitlock indiacated that the advisory speed for the curve is about the sharpness of the curve and the steepness of the road. Improvement of sight lines doesn't change the speed at which people can drive. There is solid evidence that when people can see farther, they drive faster.

Commissioner Davis asked how they came up with the number of persons per vehicle in trip generation. And Ms. Whitlock stated it comes from the county.

Commission Carr asked if the traffic analysis included cumulative traffic impacts for events occurring at other wineries in the area. Ms. Whitlocks stated that they looked at volume going in both directions and took into account that you cannot pass anywhere on this road. Then they determined the capacity of the road way and kept upping it until they hit the next level of service (D). It's not about having events on the same day, if you have a bunch of people coming for an event, once they are there you can have another event because all the cars for the first event are already there. Commissioner Carr asked how they know that everyone arrives at different times during an event and asked what the worst case scenario would be. Mr. Whitlock stated that it's about how the traffic is spaced. The reason there are no weddings is because there is a specific start time and that increases traffic impacts. Wine events are spread over time during the day, by appointment.

Commissioner Carr asked if permits have been conditioned to avoiding a worst case scenario, and **Staff Tesconi** stated that she did not recall ever doing a time slot thing, except to state when events have to end.

Commissioner Reed asked if this is looked at during the one year event review, and **Staff Tesconi** stated yes, it checks to assure that the applicant is meeting the conditions of their Use Permit. Commission Reed asked how it is tracked, and Staff Tesconi stated that the applicant is required to come back to the BZA with that informatoin.

Commission Carr asked staff to show where the fence and noise barrier were located and to clarify the justification of repurposing the buildings in the scenic corridor. **Staff Tesconi** said that on that particular section of the scenic corridor, her rationale was to use the fence. Design review and Landmarks looked at the changes to the hop kilns and determined they were minor.

Commissioner Carr wanted to see Condition 20, edited to state that construction could go until 7 pm Commissioner Carr asked if there is another winery coming down the pike in this area**. Staff Tesconi** indicated that the Dumol Winery is in the pike.

Commissioner Davis asked for clarification about the three parcels on the site. **StaffTesconi** stated that there were lot line adjustments done, and there is no ability to resurrect the underlying parcels or to subdivide. **Commissioner Davis** asked the applicant is he would accept the HD zoning designation. Mr. Ramey said that he accepted that at Landmarks Committee.

Commissioner Mauritson asked about Williamson Act Compliance. **Staff Tesconi** stated that the Uniform Rules specifically list marketing accomodations under rule 8.3 B-2. If they chose to move to vacation rental, they'd have to change the tasting room to a house because vacation rentals have to start with a residence. This is reflected in Condition 79.

Commissioner Davis asked the applicant if he would work with the neighbors to coordinate events. Mr. Ramey said it made sense to him.

Commissioner Mauritson asked if the conditions require the applicant to notify the county when they are having an event. **Staff Tesconi** responded that it does not require the applicant to notify the county or neighbors. **Staff Parsons** added that there is a standard condition that the event coordinator participate in the program, but it is not on line now.

Commission Discussion

Commissioner Mauritson commented that the site is zoned LIA, is a large property, and is exactly the kind of project we like to see in this land designation. He was comfortable with the project. He would like to restrict importation of grapes to 51%. Regarding coordination of events, he was inclined to consider no industry wide events. He questioned whether they need 300 people at an event.

Commissioner Davis also supported the project and the idea of restoring the hop kilns. She expressed concern about the scope and scale of the events. She liked the multi-generational aspect of the project. But added that the project needs to be conditioned for future owners. Commercial kitchens seemed excessive, as is a stand-alone tasting room. She expressed concern about the impact of 300 person events on water. She would like to see solar on the roof.

Commissioner Reed was impressed with the Ramey standing in the county and their dedication to agriculture. This is a big parcel and there are advantages to having a large parcel. There are advantages to managing traffic and events better. They did a great job of integrating the design with the environment and it will have little visual impact on the land. Looking at the overall sustainability, the commissioner was impressed about the project and its sustainability features. There is great commitment to restore the hop kilns which will add to the rural character of the neighborhood. Commissioner Reed stated that the way the buildings were placed reduces the aesthetic impact, and felt better t noise and traffic after hearing from the experts.

Commissioner Carr expressed appreciation for the winery and preservation of the barns, adding that sometimes a project is good but in the wrong time or place. Over-concentration is elusive, it's about land use and economic occurrence. If you get enough of a particular land use you attract a similar use. He felt that the project is in an over-concentrated area, he would like to see less of a commitment to the hospitality piece and focus on the winery and production. Would like to see the events drop down on the 100 and 300 people events. Commissioner Carr was troubled by the site distance issue, but maybe the grading will improve that.

Action:	Commissioner Mauritson motioned to adopt the Mitigated Negative Declaration and approve the request for Use Permit, eliminating the two agricultural promotional events with 300 guests and with modified conditions and revised findings to add Section 26-64-030 5 (i) and (ii) of the Scenic Corridor to the exception criteria and findings. Specifically modifying conditions #20, 58, 82, 84 & 99 and adding the option to install solar panels on winery building roof and adding a condition to preclude the granting, by the applicant, of additional water easements on the project site. Seconded by Commissioner Reed and passed with a 3-1-1 vote.
Appeal Deadline:	10 days
Resolution No.:	17-010

Vote:

Commissioner Carr	No
Commissioner Reed	Aye
Commissioner Davis	Aye
Commissioner Mauritson	Aye

STAFF REPORT

FILE: UPE14-0008
DATE: September 21, 2017
TIME: 1:30 pm
STAFF: Traci Tesconi, Project Planner

Appeal Period: 10 calendar days

SUMMARY

Applicant: David and Carla Ramey
Owner: David and Carla Ramey Trust
Location: 7097 Westside Road, Healdsburg,
APNs: APNs: 110-240-031, -032, and -040
Supervisorial District No.: 4 & 5
Subject: Use Permit
PROPOSAL: Request for a Use Permit to construct a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, and a new wine cave (approx. 20,720 square feet) on the west side of the project site. On the east side, is the conversion of an existing historic hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and conversion of an existing historic hop baling barn to a reserve tasting room with a two-guest room marketing accommodation on the upper floor. The request also includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this side of the project site. A four- year Use Permit term to activate the permit is requested under Section 26-92-130 of the Zoning Code. No weddings, receptions, or concerts are proposed. The parcel is under a prime Land Conservation Contract. No vines will be removed to accommodate the winery facility or related site infrastructure.

Environmental Determination: Mitigated Negative Declaration

General Plan:	Land Intensive Agriculture 60 acres per dwelling unit (east of Westside Road) and Land Intensive Agriculture 100 acres per dwelling unit (west of Westside Road).
Specific/Area Plan: **Land Use**:	None
Ord. Reference:	Section 26-04-020 (f) and (i)
Zoning:	LIA B6-60; F1, F2, RC200/100, SR, VOH (Land Intensive Agriculture: Flood Plain; Riparian Corridor 200/100; Scenic Resources; Valley Oak Habitat Combing Districts – east of Westside Road); LIA B6-100; SR (Land Intensive Agriculture: Scenic Resources – west of Westside Road).
Land Conservation Contract:	Prime (Type I) contract
Application Complete for Processing:	May 5, 2017

RECOMMENDATION: Staff recommends the Board of Zoning Adjustments adopt the Mitigated Negative Declaration and approve a Use Permit for a new winery with tasting rooms and agricultural promotional and industry wide events, subject to the recommended conditions of approval.

EXECUTIVE SUMMARY: The project site is located in an agricultural zone and consists of 75 acres containing 42 acres of commercial vineyard, single family residences, a historic hop kiln and bale barn, a reservoir, and agricultural accessory buildings. The 75-acre parcel is one legal parcel of record bisected by Westside Road and contains three Assessor Parcel Numbers (110-240-031, -032, and -040). The parcel is served by private wells and on-site septic system. On the west side, a new winery is proposed with a maximum annual case production of 60,000 cases and a new wine cave. On the east side, an existing hop kiln will be converted to a public tasting room and the existing hop bale barn will be converted to a reserve tasting room with a two-guest room marketing accommodations on the upper floor. The project includes 22 annual agricultural promotional events with a range of guests and participation in two industry wide event days. The winery, tasting rooms, agricultural promotional events, and industry wide events are all land uses permitted in the Land Intensive Agricultural Zoning district with a Use Permit approval. The Sonoma County Landmarks Commission and the Design Review Committee reviewed the project proposal and plans in a joint meeting and made recommendations to site layout, architecture, landscape, and signage. The Sonoma County Landmarks Commission voted unanimously to recommend addition of the HD Combining Zone and Landmark Designation on APN 110-240-031 in its entirety (east side of Westside Road). The project site can accommodate all on-site parking needs and wastewater disposal. Site improvements are required to improve sight distance on the west side of the road and event sizes have been limited on the west side of the project site. Food and wine pairing will be limited consistent with adopted food-service conditions for approved wineries and tasting rooms. There will be no significant environmental impacts because mitigation measures have been incorporated into the project under the draft Conditions of Approval in Exhibit A. Besides the discussion in the Mitigated Negative Declaration, issues further discussed in this staff report include: General Plan and Zoning consistency, Land Conservation Act compliance, Cultural and Historical Resources, Traffic and Parking, Sight Distance, Noise, Water Use and Water Availability, Greenhouse Gas analysis, and Neighborhood Compatibility.

ANALYSIS

Background: Since the 1800's the project site has been used for agriculture, including orchards, hops and currently wine grapes. In 1988, the project site was known as Westside Farms, a vegetable farm and pumpkin patch with hay rides. In 1990, 32 acres of Chardonnay grapes and 10 acres of Pinot Noir grapes were planted. The farm continues to keep its namesake. The vineyard and winery operations are operated by two generations of the Ramey family.

The project site is one legal parcel consisting of three Assessor Parcel Numbers. A Lot Line Adjustment (LLA04-0088) was approved and recorded in 2005 describing one legal parcel of record, merging all underlying parcels. The project site is bisected by Westside Road and the Assessor will not issue the land one Assessor Parcel Number. However, the current AP page depicts tie line connecting the land on both sides of the road. The project site cannot be further subdivided or sold off separately.

On January 21, 2014, the Use Permit application was filed with PRMD. The Use Permit was filed with the following studies: Traffic study, Greenhouse Gas study, and Sound study. However, on February 4, 2014, the project was deemed incomplete for processing because further design review information and additional studies were required for the project. On December 2, 2014, the proposed project went before a joint review with the Design Review Committee and the Sonoma County Landmarks Commission to review the project proposal and project plans. Overall, the DRC and Landmarks Commission liked the project, but had minor changes to the project's design and required a joint, final review of the project before issuance of any related grading or building permits. A condition of the project requires the HD (Historical District) zoning overlay zone be placed on the east side of the project site where the existing hop kiln buildings are located.

Project Description:

A Use Permit for:

West side of project site:

- A new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases. The winery building would be built into the hillside meadow in front of the wine caves, using a cut-and-fill, low-profile design. Grapes will be locally sourced from on-site, Sonoma County, and bordering counties. Case-good storage will be done off site at a local warehouse. All crushing, processing, aging, bottling, and storing of wine will be done indoors. Features include processing area, bottling area, mechanical room, wine storage and tank areas, administrative offices, employee kitchen/breakroom, employee shower and locker room, two technical tasting rooms, a wine library, a commercial kitchen, employee and public restrooms.

- Wine cave (approx. 20,720 square feet) for "wine vault storage", meaning long-term aging of wine in barrels.

East side of project site:

- Conversion of the historic hop kiln building to public tasting building with two rooms with wine tasting bars, a commercial kitchen, public restrooms, case-good storage, general storage, and office. Includes an elevator.

- Conversion of the historic hop baling barn to a reserve tasting room with wine bar, commercial kitchen, and VIP lounge area on middle floor. The upper floor contains a two guest room marketing accommodation with two full bathrooms for a total area of 759 square feet with a lounge area 513 square feet in size. The lower floor is used for general storage and a mechanical room. The reserve tasting room is for customers who prefer to do wine tasting and food and wine pairing in a private setting with more one on one education of wine and the wine-making processes. The reserve tasting room will also be used for agricultural promotional events, industry wide events, and tastings with food and wine pairings for wine industry guests staying in the marketing accommodations.

- 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests. No weddings, receptions, or concerts are proposed.

- On the west side at the winery, event size is limited to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle. Industry-wide events will not be held on this side of the project site. At the winery, agricultural promotional events will be business and marketing related tastings and food and wine pairings for distributors, restaurant owners, and chefs.

- Food and wine pairing is proposed in the public and reserve tasting rooms on the east side, consistent with approval of similar requests and during agricultural promotional events.

- 15 fulltime employees, 3 part time employees, and 6 seasonal employees for a total of 24 employees.

- New parking areas: East side includes: 20 standard spaces, 4 handicap accessible spaces, and 58 overflow parking spaces (unmarked gravel area). West side includes: 25 standard spaces, 2 handicap accessible spaces, and 21 overflow parking spaces (unmarked).

- New winery wastewater disposal system with pre-treatment system and disposal via on-site vineyard irrigation system. The process waste will be pre-screened at collection points in the facility and directed to an aerobic treatment unit (manufacturer to be determined). The treatment unit will reduce waste strength and suspended solids to levels approved by the State Water Quality Control Board for surface irrigation. Treated wastewater will be pumped to a point of connection to the vineyard irrigation system. The process system will be subject to a Waste Discharge Permit issued by the State Water Quality Control Board, North Coast Region.

- New domestic septic systems on east and west side of project site to serve all employee and guest restrooms. The septic systems will be subject to a Septic Permit and Plans issued by the Well and Septic Section of PRMD.

- Two existing driveways on east and west side of the project site will be used with improvements required by the Department of Transportation and Public Works. On the west driveway, sight distance improvements are proposed by removing trees and vegetation, lowering and terracing the berm located on the project site just north of the existing driveway on Westside Road. Driveway and sight distance improvements will be subject to plans approved by the Department of Transportation and Public Works and an Encroachment Permit issued by the Engineering Section of PRMD.

- Existing on-site wells to be used for all winery and domestic uses.

- None of the existing vineyard will be removed to accommodate the proposed use or related site infrastructure.

- The 42 acres of vineyard consists of Chardonnay (32 acres) and Pinot Noir (10 acres) grapes. The on-site vineyard produces 250 tons of grapes. The 32 acres of Chardonnay grapes will be processed on site. The 10 acres of Pinot Noir grapes remain under a long term lease by another local winery. The Winery Trip Generation Form prepared by W-Trans, states approximately 720 tons of grapes would be imported to the project site from local areas in order to reach the maximum annual production capacity of 60,000 cases. This calculates to approximately 62 cases/ton, consistent with industry standards which range between 58 to 65 cases/ton based on grape variety and processing operations.

Hours of operation:

- Winery operations: Monday through Friday, 7:00 a.m. to 6:00 p.m. Non-Harvest Season.
  Monday through Friday, 6:00 a.m. to 10:00 p.m. Harvest Season

- Tasting Room hours: 10:00 a.m. to 5:00 p.m., 7 days a week
- Industry- Wide events: 11:00 a.m. to 5:00 p.m. , two event days per year
- Agricultural Promotional Events: 11 a.m. to 3 p.m., 9 a.m. to 9 p.m., or 6 p.m. to 9 p.m. (refer to Table below for specific event hours)

The following Table provides the proposed events and locations on the project site:

Ramey Wine Cellars Proposed Ag Promotional Events UPE14-0008

Event Type	**No. of Events per Year**	**Hours**	**Maximum number of guests**	**Event Location on the property**
Industry-wide Event	2 event days per year	10 am - 5 pm **(*)**	300	Tasting rooms, or outdoor walnut grove (East side)
New wine release tastings – by invitation only	2	9 am - 9 pm	300	Tasting rooms, or outdoor walnut grove (East side)
Wine tastings	5	9 am - 9 pm	120	Tasting rooms, or outdoor walnut grove (East side)
Wine tastings	5	11 am - 3 pm; or 6 pm - 9 pm	60	Tasting rooms, or outdoor walnut grove (East side)

Winemaker lunches or dinners with on-site food preparation, and food and wine pairings	10	11 am - 3 pm; or 6 pm - 9 pm	30	Baling barn, outdoor walnut grove, or winery (East and West side)

(*) Industry wide events must occur during the public tasting room hours.

Site Characteristics:

The project site is located approximately 7.2 miles southwest of the City of Healdsburg, along both sides of Westside Road. The project site is one legal parcel comprised of three Assessor's Parcel Numbers (110-240-031; 110-240-032; and 110-240-040) totaling 75 acres in area. The subject property is bisected by Westside Road, with approximately 6.5 acres on the west of Westside Road and 68.5 acres on the east side of Westside Road. The westerly 6.5 acres is currently developed with two single family residences, a barn, a pole barn two out buildings and a 3 ½ acre-foot reservoir.

The easterly 68.5 acres is planted with approximately 42 acres of vineyard (32 acres Chardonnay and 10 acre Pinot Noir grapes) and contains an existing historic hop kiln structure (6,850 sq. ft.) and hop baling barn (5,290 sq. ft.). Under the Use Permit, these structures are to be converted to tasting rooms as part of the project proposal. There is a 1,250 sq. ft. residence to be removed located east of the hop kiln and baling barn. The eastern portion of the property gently slopes downward and eastward toward the Russian River to the east. The hop kiln and baling barn tasting rooms are located approximately 950 feet west of the Russian River. Additionally, on the eastern end of the property near the Russian River is a grove of walnut trees. This area is not proposed for development, but, will be used for outdoor agricultural promotional events. The property also contains oak woodland, grassland, and landscaped areas.

Surrounding Land Use and Zoning:

Westside Road runs approximately 12 miles from Hacienda Bridge in Forestville to Highway 101 in Healdsburg. Land use in the project vicinity is primarily vineyard, wineries, tasting rooms, small family farms, and single family residences. Lands surrounding the subject property are residential and agricultural with vineyards and wineries. To the east is the Russian River, which includes riparian habitat and oak woodland along with vineyards. On the other side of the Russian River is Riverfront Regional Park. The zoning designation in the project vicinity is LIA (Land Intensive Agriculture) due to its rich farming soils. There are several winery and tasting rooms located along Westside Road. The project referral was sent to the public interest groups of Westside Community Association (WSA) and Westside Association to Save Agriculture (WASA). The project site is located outside of the Dry Creek Valley Citizens Advisory Committee referral area.

Surrounding parcels are zoned:

North/Northwest:

Land Uses: Winery and tasting room (Arista), commercial vineyards, and single family residences.

Zoning: Land Intensive Agriculture 20 acre density, Z (Second Unit Exclusion)

South/Southwest:

Land Uses: Winery and tasting room (Williams-Seylem), commercial vineyards, and single family residences.

Zoning: Land Intensive Agriculture, 20 acre density, Z (Second Unit Exclusion)

East:

Land Uses: Russian River and Riverfront Regional Park

Zoning: PF (Public Facilities), F1, F2, MR, RC, VOH

Since 2014, on Westside Road there have been three winery projects filed besides this proposed project:

- PLP14-0031; 4603 Westside Rd, 10,000 case winery, public tasting room, and 12 promotional event days with a maximum of 180 people and 13 industry-wide event days, plus winemaker meals not proposed as events. No weddings are proposed. North of proposed project. Located approximately 2.5 miles from this project site. On July 6, 2017, the Use Permit was denied by the Board of Zoning Adjustments. The decision is on appeal to the Board of Supervisors.

- PLP15-0032; 4075 Westside Rd, public tasting room with on-site barrel ageing and storage for 65 to 85 barrels on 1.7 acres. No special events, including agricultural events, promotional events, industry-wide events and/or tours are proposed. North of proposed project. Located approximately 3 miles from this project site. On August 17, 2017; the request was denied by the Board of Zoning Adjustments. The applicant filed an appeal, but, recently withdrew the appeal.

- UPE16-0102; 6677 Westside Rd, 492 case winery, public tasting, tours, appointment only food and wine tasting service, and annual agricultural promotional events (four w/ 100 guests, and 14 w/ 50 guests with no outdoor amplified music. Adjacent parcel to the north of proposed project. Located approximately .40 miles from the project site. *Incomplete- Status Pending.*

DISCUSSION OF ISSUES

Issue #1: General Plan Consistency

The project site is located in the Land Intensive Agriculture Genera Plan designation.

The General Plan Land Intensive Agricultural Areas policy (Section 2.7.1) allows for wineries, defining them as "*Agricultural Processing: Facilities for the processing of any agricultural product grown or produced primarily on site or in the local area, storage of agricultural products grown or processed on site, and bottling or canning of any agricultural product grown or processed on site*." The winery would process grapes grown on the site and from other vineyards within the local area.

The proposal is also consistent with the General Plan's Agricultural Element Goals, Objectives and Policies, which include the following policies and objectives:

Goal AR 2.1 "*Successful promotion and marketing of agricultural products grown in Sonoma County can both enhance the County's image and reduce economic pressure on farmers and ranches to subdivide or convert the land to nonagricultural uses*."

Goal AR-1: "*Promote a healthy and competitive agricultural industry whose products are recognized as being produced in Sonoma County*."

Objective AR-1.1: "*Create and facilitate opportunities to promote and market all agricultural products grown or processed in Sonoma County*."

Objective AR-1.2: "*Permit marketing of products grown and/or processed in Sonoma County in all areas designated for agricultural use*."

"***Policy AR-4a***: *The primary use of any parcel within the three agricultural land use categories shall be agricultural production and related processing, support services, and visitor serving uses. Residential uses in these areas shall recognize that the primary use of the land may create traffic and agricultural nuisance situations, such as flies, noise, odors, and spraying of chemicals*."

Staff analysis: The project site is 75 acres within the Land Intensive Agriculture General Plan land use designation and the existing primary use of the project site will remain agriculture production with over 50 percent planted in vineyard. The request is to process locally grown grapes, and promote, market, and sell the wine at the winery, tasting rooms, and through agricultural promotional events and industry wide events on the project site. None of the existing vineyard will be removed to accommodate the proposed uses or related site infrastructure. The project site is located within the Russian River appellation. To avoid conflicts with residences in the project vicinity, conditions have been incorporated into the proposed project to reduce potential land use conflicts in the area. All exterior lighting shall be low mounted, downward casting and fully shielded to prevent glare. Winery production noise will be reduced by a noise barrier retaining wall and fence, and no night-time truck use or night-time bottling is permitted. For events, the use of amplified music and sound is only allowed in the tasting room buildings during daytime hours with doors and windows closed. Outdoor events can only be held in the back Picnic Grove Area with a controlled sound system and no use of amplified music is permitted. The outdoor events taking place in the picnic grove area would be approximately 1,525 feet from Residence 1, 1,775 feet from Residence 2, 1,900 feet from Residence 3, and 1,000 feet from Residence 4. The parking analysis and Site Plan demonstrate the project site can support all the parking needs on-site for the proposed land uses. Frequency and hours of annual agricultural promotional events would be limited to 22 that must end by 9 P.M., and two industry wide event days held from 11 A.M. to 5 P.M.

"***GOAL AR-5***: *Facilitate agricultural production by allowing agriculture-related support uses, such as processing, storage, bottling, canning and packaging, and agricultural support services, to be conveniently and accessibly located in agricultural production areas when related to the primary agricultural production in the area*."

Staff analysis: The proposed winery, tasting rooms, and agricultural promotional events would be located in an agricultural area. The proposal would create a consolidated facility with the growing of grapes, and the processing, marketing, and selling of the product grown on-site.

"***Objective AR-5.1***: *Facilitate County agricultural production by allowing agricultural processing facilities and uses in all agricultural land use categories*."

Staff analysis: The subject site is designated as Land Intensive Agriculture, considered one of the primary agricultural land use categories.

"***Policy AR-5a***: *Provide for facilities that process agricultural products in all three agricultural land use categories only where processing supports and is proportional to agricultural production on site or in the local area."*

Staff analysis: The site has an agricultural land use designation. The grapes produced on-site and from the local area would processed and bottled on-site within the proposed winery and associated wine cave. Of the 75 acre parcel, approximately 42 acres are currently planted in grapes, of the remaining 33 acres, 3.75 total acres is comprised of existing and proposed development, which is 5 % (percent) of the total parcel size. The processing component is in proportion to the on-site agricultural production. None of the existing vineyard will be removed to accommodate the proposed uses or related site infrastructure.

"Policy AR-5c"*: Permit storage, bottling, canning, and packaging facilities for agricultural products either grown or processed on site provided that these facilities are sized to accommodate, but not exceed, the needs of the growing or processing operation. Establish additional standards in the Development Code that differentiate between storage facilities directly necessary for processing, and facilities to be utilized for the storage of finished product such as case storage of bottled wine. Such standards should require* *an applicant to demonstrate the need for such on-site storage."*

Staff analysis: The proposed project would result in the construction of a 60,000 case winery and wine caves. Wine processed on site would be marketed and sold on-site directly to consumers through the tasting rooms and wine club membership, and through website sales and distributors. The above policy relates to limiting the amount of finished product (case good storage) on agricultural zoned lands. The proposed project has case good storage approximately 843 square feet within the tasting room building to serve the tasting rooms. The long term case-good storage is done at off-site at a local warehouse. The winery and wine cave contain tank storage and barrel storage, respectively, for the aging of the wine which is a component of the processing operation. No vines will be removed to accommodate the proposed project.

The applicant expects the tasting rooms' improvements to be completed sooner than the construction of the new winery building and wine cave. Condition No.83 requires the Building permits for the winery building or wine cave, and the tasting rooms be filed simultaneously. The winery building or wine cave construction shall begin prior to final occupancy of the tasting rooms building by Permit Sonoma to ensure the winery is developed and the project site does become stand-alone tasting rooms.

Permit Sonoma requires that office and administration areas do not exceed 15 percent of the square footage of the winery's production and aging areas to ensure these uses are incidental to the winery. The proposed administration/office area for the entire project is 14 percent of the total winery production facility, consistent with the threshold.

Determining concentration of uses is explained under General Plan ***Policy AR-5g*** which states: *"Local concentrations of any separate agricultural support uses, including processing, storage, bottling, canning and packaging, agricultural support services, and visitor-serving and recreational uses as provided in **Policy AR-6f**, even if related to surrounding agricultural activities, are detrimental to the primary use of the land for the production of food, fiber and plant materials and shall be avoided. In determining whether or not the approval of such uses would constitute a detrimental concentration of such uses, consider all the following factors:*

1. *Whether the above uses would result in joint road access conflicts, or in traffic levels that exceed the Circulation and Transit Element's objectives for level of service on a site specific and cumulative basis*.

Staff analysis: A Traffic Impact Study, prepared by W-Trans, was reviewed and accepted by the Sonoma County Transportation and Public Works Department (DTPW). W-Trans concludes the project would not exceed the level of service established in the Circulation and Transit Element's objectives and generated traffic would not result in road access conflicts with improvements to the sight line distance along the west side of the project site. The applicant's engineer, Adobe & Associates, prepared a Stopping Sight Distance plans demonstrating a sight distance of 250 feet can be achieved at the winery driveway to the north by removing trees and lowering/terracing the berm on the project site. The traffic engineer of W-Trans explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway (refer to Exhibit U). This area will be replanted with low-lying vegetation with rocks placed on the upper terrace. Adobe & Associates also prepared a video simulation showing vehicle traveling along the project site with the sight distance improvements completed and sight stopping distance scenario. A condition limits the event size on the west side to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle; and no industry-wide events will be held at the winery on the west side. Sight distance is met at the tasting rooms' driveway on the east side.

The closest existing wineries with tasting rooms and events are Williams-Seylem Winery to the south and Arista Winery to the north, located approximately 725 feet and 830 feet from driveway to driveway, respectively. Both the Williams Seylem parcel of 39.10 acres and the Arista parcel of 34.3 acres are large parcels that disperse development. Farther north is a stand-alone tasting room (Gracianna) opened seasonally, but, does not have events, located approximately 1,100 feet from driveway to driveway. Also to the north, filed under UPE16-0102 (DuMOL Winery/Flax Vineyards), is a proposed winery and tasting room with events located approximately 1,758 feet, on the west side of Westside Road. Within a 1.5 miles radius of the project site there are nine existing wineries with tasting rooms and events along Westside Road.

Policy AR-6a: *Permit visitor serving uses in agricultural categories that promote agricultural production in the County, such as tasting rooms, sales and promotion of products grown or processed in the County, educational activities and tours, incidental sales of items related to local area agricultural products, and promotional events that support and are secondary and incidental to local agricultural production*.

Staff analysis: The project site is located in an agricultural region and the Russian River Appellation with vineyards, wineries, tasting rooms, single family residences, and small family farms. Westside Farms was the previous owner who held a harvest market each fall which included a pumpkin patch, hay rides, and sales of hand-crafted foods and gift items. W-Trans explains that each year in the month of October the pumpkin patch drew up to 600-persons on a peak day which generated more event traffic during the month of October than the proposed project will generate over an entire year. Further analysis of traffic and parking is under Issue # 5 below in the staff report.

W-Trans prepared a *sensitive analysis* using the same roadway segment Level of Service methodology in the Highway Capacity Manual. W-Trans determined that 208 vehicle trips could be added in each direction on Westside Road *before* the northbound direction would experience unacceptable LOS D operation. W-Trans, using 2.5 guest per vehicle ratio, estimated that 200 vehicles carrying more than 500 guests could arrive at an event during one hour and another 500 guests (i.e. 200 vehicles) could depart from the same event or different winery event, and the operation would remain acceptable level of service standards. Using an actual proposed event size of 300-guests, and assuming that as many as 150 guests arrive and depart during a *single* hour from the same direction, the road would retain the capacity for another event having a combined total of more than 350 guests. Based on their review, W-Trans concludes there is adequate capacity for the multiple events to generate trips simultaneously without having a significant negative impact on operation of Westside Road.

A Traffic Control and Parking Plan (Plan) prepared by the applicant demonstrates that the long length of the driveways for both the winery (west side) and tasting rooms (east sides) allow for on-site vehicle queing for nine and seven vehicles, respectively, with entry gates remaining open during events allowing direct access to parking attendants and onto the designated parking areas. The written Plan explains that at the tasting rooms, during large agricultural promotional events and industry wide events, three parking attendants will remain on duty to monitor the gates. Modernized operations of the tasting rooms prevent the need for pedestrian crossing of Westside Road by employees or guests. Daily sales receipts, employees' timecards, and communications are sent electronically to the administrative office at the winery. Case-good storage deliveries to the tasting rooms would come from the off-site warehouse. Staff training will be done for all employees serving wine at the tasting rooms.

To avoid the potential for multiple large events occurring simultaneously in close proximity to each other, Permit Sonoma encourages wineries to coordinate event schedules amongst each other. A standard condition has been placed on Use Permits for wineries to participate in an event coordinator program, but, such a program has yet to be implemented (refer to Condition No.115). Under this Use Permit, the applicant is willing to implement such coordination with adjacent wineries. A condition of approval requires the Permit Holder, prior to scheduling any large agricultural promotional events of 100 guests or more, to coordinate event planning with the two closest, existing wineries (Williams-Selyem and Arista) approved for events to off-set event days and/or event times. Also the Permit-Holder shall not schedule the larger events during large organized bicycle events (refer to Condition No.111). A one year review is also required for the Use Permit to monitor condition compliance (refer to Condition No. 114). A member of the Ramey family lives on the site and wants to keep a peaceful neighborhood.

2. *Whether the above uses would draw water from the same aquifer and be located within the zone of influence of area wells*.

Staff analysis: The total annual water demand for the proposed project is estimated to be approximately 5.4 million gallons or 16.7 acre feet. The winery wastewater will be recycled for irrigation purposes so the annual demand on the water wells would be reduced to 4.6 million gallons or 14.06 acre feet based on the water balance analysis prepared by Adobe & Associates.

On January 5, 2017, a Geologic Report (Report) was prepared for the project by EBA Engineering. The Report explains the property has five wells located along the eastern margin of the property (see Figure 2 identified as Wells #1 through #5). These wells provide water for the on-site operations, and for two neighbors to the west. EBA concludes that the water supply from Wells #1 and #3 are more than adequate to accommodate the water demands for the proposed project and will not have a negative impact to local groundwater or surface water resources.

3. *Whether the above uses would be detrimental to the rural character of the area.*

Staff analysis: The third criterion is whether the use is detrimental to the rural character. This is more difficult to determine since it's more subjective in nature. The issue of overconcentration has been raised with tasting rooms and with several wineries host events all on the same day. The accumulation of traffic, noise, and the large gatherings of people can be considered inconsistent with the rural character of the area. In this case, agricultural promotional events will be held indoors within tasting rooms and smaller events held in the rear of the property in the Picnic Grove. The applicant agreed to coordinate the agricultural promotional events held at the site with the two adjacent wineries to prevent events from occurring at the same time. A one-year review after operation of the use is required to ensure coordination is being done.

The project includes the refurbishing of the existing hop kiln and baling barn with no significant change to the exterior of the two buildings. The two hop kiln buildings are desperate need of repair or risk the loss of an important part of the local agricultural heritage. The original architecture of the hop buildings will be retained and the new parking area will be screened by the existing buildings and landscaping in an effort to not drastically alter the character of the property and surrounding properties.

The new winery will be nestled into the hillside to create a low profile. The winery and the winery cave are located outside of the scenic corridor setback and would be shielded by existing buildings and landscape. The maximum height of the winery building will be 29-feet. There will be a total of 12 trees removed in order to accommodate the new winery, however, the landscape plan proposes new trees and ground cover that will serve to screen the building from the public right-of-way. Much of the vegetation between Westside Road and the new winery building will remain. Trees will be removed for the new winery and along the roadway frontage to improve sight distance. Although there will be new exterior lighting introduced, the fixtures will be shielded and down-casted with minimal glare and spillage of light onto adjacent properties. No vines would be removed to accommodate the project.

Based on the size of the winery's annual case capacity and sensitivity analysis done by the traffic engineer for events, there are no significant traffic impacts. In the traffic study's sight distance analysis, the traffic engineer from W-Trans recommended that the old farm sign be removed, vegetation be trimmed, and project site's berm on the west side be terraced and lowered to improve sight line distance, which is further discussed under Issue 5 of the staff report and in the conditions of approval. Events on the west side will be limited to a maximum capacity of 30 guests, equating to 12 vehicles. Industry wide events will only take place on the east side of the project site in direct association with the tasting rooms and are limited to two event days per year. Parking and traffic control measures will be implemented at the project site for events of 100 guests or more. Amplified music is limited to indoor use only within the tasting room buildings with doors and windows closed. No outdoor amplified music or sound is permitted on the project, with the exception of the Picnic Grove area where amplified speech is allowed by using a sound system mechanically set to limit the volume level. Outdoor events held in the Picnic Grove area would be approximately 1,525 feet from Residence 1, 1,775 feet from Residence 2, 1,900 feet from Residence 3, and over 1,000 feet from Residence 4.

Overall, the project will retain an important part of the local agricultural heritage through the renovation of the two hop kiln buildings. The winery and wine cave are located outside of the scenic corridor setback. Annual agricultural promotional events and the two industry wide events are limited in frequency and hours of operation.

Neighbors raised concerns that winery's production capacity is too large for Westside Road. The project site is within the Russian River Appellation Area. According to the County's Winery Database, the average annual case production capacity is 82,230 cases for wineries in this appellation. This even excludes the three largest wineries (Industry West Commerce Center LLC (UPE07-0133) at 3,000,000 cases; Korbel (PLP95-0003) at 2,500,000 cases; and Rodney Strong Vineyards (UPE97-0110B) at 1,500,000 cases.

Based on the above information, with limits on case capacity and events, and mitigation measures incorporated into the project to improve road safety and sight line distance, to control noise sources with levels acceptable under the General Plan, to preserve the historic character of the two hop buildings, to coordinate events with the two adjacent wineries, and to not hold events during large bicycle events; the proposed project will not be detrimental to the community character or result in an over concentration of wineries in the near vicinity.

"***Policy AR-6d"***: Follow these guidelines for approval of visitor serving uses in agricultural areas:

"1. *The use promotes and markets only agricultural products grown or processed in the local area*."

Staff analysis: The applicant explains Ramey Winery is currently operated in the City of Healdsburg producing 40,000 annual cases. The wine is distributed nationally and internationally. The proposed winery would process on site the 32- acres of Chardonnay grapes from the site and wine produced on site will be promoted and sold in the tasting rooms and during agricultural promotional events and industry wide events. The 10 acres of Pinot Noir are sold under contract to another local winery.

"2. *The use is compatible with and secondary and incidental to agricultural production activities in the area.*"

Staff analysis: The proposed winery and tasting room uses will comprise of 5 % of the project site. The majority of the site and primary use of the site will remain as vineyards. No vines would be removed to accommodate the winery use.

"3. *The use will not require the extension of sewer and water*."

Staff analysis: The use will be served by on-site septic system and water. Extension of sewer and water lines will not be required.

"4. *The use is compatible with existing uses in the area."*

Staff analysis: The tasting room will operate only during normal daytime business hours. Also requested are agricultural promotional events and industry wide events, with a maximum of up to 300 people per event. These events would occur throughout the year and will not be concentrated in any one month. Concerts, receptions, and weddings are not requested. All parking will be done on site and the use of any amplified music and speech is only permitted indoors within the tasting rooms with doors and windows closed. There are similar existing uses in the area such as, wineries and tasting rooms in the area that hold agricultural promotional events and industry wide events.

"5. *Hotels, motels, resorts, and similar lodging are not allowed*."

Staff analysis: The proposed project does not include any overnight marketing accommodations open to the public. The winery will provide marketing accommodations, located on the upper floor of the reserve tasting room (bale barn) with two guest rooms. The rooms will be available to wine industry representatives on a limited basis. A fee for the accommodations cannot be charged.

“6. *Activities that promote and market agricultural products such as tasting rooms, sales and promotion of products grown or processed in the County, educational activities and tours, incidental sales of items related to local area agricultural products are allowed*.”

Staff analysis: The project includes the establishment of a new tasting rooms for sales and promotion of the wines produced on site. The agricultural promotional events and industry-wide events are held for the purpose of promoting the wine processed on site and educating consumers on the growing of grapes and making wine. On-site wine tasting and events are marketing tools proven to increase direct to consumer sales, label recognition, and wine-club memberships in a competitive market.

Staff researched recent *winery approvals* in the nearby area and *recent winery approvals* County-wide. Tables 1 and 2 below reflect that research.

Table 1: Approvals in Project Vicinity (within ½ mile)

Winery Name/File Number	Location	Approved	Annual Case Production	Tasting Room/Hours	Events Yes/No
Williams-Selyem Winery PLP04-0062	7227 Westside Rd APN:110-240-024	Modification 6/2007	35,000 cases	Tasting hours 10AM -5 PM	Yes. 24 annual ag promo events w/110 max. guests per event. Four wine pick weekends/year.
Arista Winery UPE04-0113B	7014 Westside Rd APN:110-240-039	Modification 10/2012	20,000 cases	10 AM – 5 PM	Yes. 15 annual ag promo events w/200 max. guests per event
Gracianna Wines Tasting room-(stand-alone) with 1.1 acres of vineyard. 300 cases of wine processed off site. UPE10-0021	6914 Westside Rd APN: 110-240-011	Modification 3/2014	Not applicable	10 AM – 6 PM April 1 thru November 30th each year	No events
Allen Family Vineyards	6575 Westside Rd APN: 110-240-006	10/2004	16,000 cases	No tasting	No events

UPE04-0018					

*Distance from subject site is measured from existing project site driveway to winery driveway using Google driving directions. ½ mile distance is consistent with recent winery projects before the BZA. Table 1 identifies two wineries approved with promotional activities located within ½ mile of the project site. The Allen winery and Gracianna tasting room were not approved for events.

Table 2: Winery Approvals June 1, 2015 to Present

Name/File No.	Address/APN	Approval Date	Tasting?	Events?
Hinkle UPE14-0036	21800 River Rd., Geyserville 141-180-022	12/17/15	Yes	Public and private tasting rooms. 23 promotional events, including weddings/receptions, with 75 to 150 guests and 12 industry wide event days
Twin Hill Vineyard UPE14-0086	1689 Pleasant Hill Rd., Sebastopol 076-093-024	11/5/15	Yes	10 promotional events with 50 to 200 guests
Freeman* UPE13-0035	1300 Montgomery Rd., Sebastopol 061-220-020	6/18/15	Yes	10 promotional events with 50 guests
Roy and Covert* UPE14-0057	7171 W. Dry Creek Rd., Healdsburg 139-160-061, 062, 063, 064	6/4/15	Yes	8 promotional events with 80 guests and 8 industry wide event days
Sonoma Wine Company Tasting Room	2120 Olivet Rd., Santa Rosa, 057-030-072	7/15/15	Yes	No
Char Vale Winery* UPE14-0071	9280 Occidental Rd., Sebastopol 061-040-038	5/19/16	Yes	2 industry wide events and 4 private promotional events with up to 75 people
Hellocello Tasting Room UPE16-0011	23570 Arnold Drive, Sonoma 128-461-081	5/25/16	Yes	No

Spann Vineyards Tasting Room* UPE16-0031	8910 Highway 12, Kenwood 050-162-031	6/30/16	Yes	No
Hafner Vineyards* UPE15-0112	4280 Pine Flat Rd Healdsburg 131-160-034	8/18/16	No	10 non industry, 4 events with a maximum of 175 and 6 with a max of 150
Due Ruscelli Winery UPE14-0055	996 Limerick Ln, Healdsburg 086-080-027	2/16/17	Yes	1 non industry, 3 industry with 50 people
Fathia Vineyards Tasting Room UPE16-0072	8910 Highway 12, Kenwood 050-162-031	3/16/17	Yes	No

*Use Permit Modification for existing wineries

Historically industry-wide events have been considered part of regular tasting room operations. However, more recently industry wide events are occurring separately from tasting room operations, thus the number of industry-wide events have been specified in recent winery's Use Permit Conditions of Approval. Neither the General Plan, nor the Zoning Code limit the number of agricultural promotional events allowed on a parcel or limit the case capacity per parcel; but rather require a use permit to determine if the project site can support the use based on site-specific factors. Using the current Winery Database prepared by Permit Sonoma staff, the average number of events approved at wineries in Sonoma County is 20 events.

A standard condition of approval (Condition No. 117) requires event coordination by winery operators as follows:

"The days and hours for special events shall be subject to review and approval by a Special Events Coordinator or similar program established by the County or at the County's direction. The applicant shall submit to the County an annual request and schedule for special events for each calendar year including the maximum number of participants, times and dates. The applicant shall contribute, on an annual basis, a fair share towards the cost of establishing and maintaining the program. The program should consider the fairness for long established uses and establish reasonable costs for managing the program."

Another condition of approval requires the Permit Holder to coordinate with the two closest wineries (Williams-Seylem and Arista) approved to hold agricultural promotional events to coordinate event days and hours and to not hold an event during a large, organized bicycle event (Condition No. 111). There is a good working relationship amongst the three winery owners.

Issue #2: Zoning Code Consistency

The project site is zoned LIA (Land Intensive Agriculture) and the applicant has filed a Use Permit for a winery and tasting rooms. The purpose of LIA is stated as follows: "*To enhance and protect lands best suited for permanent agricultural use and capable of relatively high production per acre of land; and to* *implement the provisions of the land intensive agriculture land use category of the General Plan and the policies of the agricultural resources element*." In the LIA (Land Intensive Agriculture) zoning, with a Use Permit approval, under Section 26-04-010(g); it allows processing and preparation of agricultural products. Section 26-04-010 (f); it allows:

"*Tasting rooms and other temporary, seasonal or year-round sales and promotion of agricultural products grown or processed in the county subject to the minimum criteria of general plan Policies AR-6d and AR-6g. This subsection shall not be interpreted so as to require a use permit for uses allowed by Section 26-04-010(g)*";

Staff analysis: Tasting rooms and agricultural promotional events have been found consistent with agricultural zoning districts, including the LIA zoning district, if the tasting room and events are to promote agricultural products grown or processed on the site. In addition, such events can be found compatible with surrounding agricultural activities if the hours, size, and frequency of the events are limited and if there are no substantial noise or traffic impacts as a result of the activities. The project site is located directly off of Westside Road, a County maintained roadway. According to the Traffic Impact Study prepared by W-Trans, the traffic generated by the project would not cause traffic concerns. The project engineer, Adobe & Associates, provided cross sections showing a clear line of sight can be provided on the west side of Westside Road by removing trees and vegetation, and terracing/lowering the berm along the applicants' property. A mitigation measure limits the guest capacity for agricultural promotional events to a maximum of 30 guests on the west side of the project site which equals 12 vehicles using the standard 2.5 persons per vehicle ratio.

In terms of noise, mitigation measures have been incorporated into the project. The tasting room operating hours would be limited and agricultural promotional events are limited per year in frequency, size, and hours. Also, the use of amplified music and sound is permitted indoors only. Amplified sound, music, and the very loud musical instruments (such as horns, drums and cymbals) are not permitted outdoors. The Picnic Grove area is allowed amplified speech by using a sound system mechanically set to limit the volume level to 78 dBA at 50 feet. Agricultural promotional events shall consist of wine marketing events, wine pairing meals or events promoting a specific aspect of Sonoma County agriculture. The project does not include weddings, receptions, concerts, or other non-agricultural events.

Marketing Accommodations:

The request includes the reserve tasting room's upper floor used for a two-guest room marketing accommodations with two full bathrooms and a common lounge area. The request for marketing accommodations is consistent with the following Zoning Code section (26-04-020.j):

"1. The use promotes or markets agricultural products grown or processed on the site."

Staff analysis: The marketing accommodations will provide overnight accommodations for private guests of the winery in conjunction with promoting and marketing the wine processed on the site.

"2. The scale of the use is appropriate to the production and/or processing use on the site."

Staff analysis: An existing building (hop bale barn) would be used by converting the upper floor to the two guest room marketing accommodations with two full bathrooms for a total area of 759 square feet with a lounge area 513 square feet in size. The existing 2,300 square foot structure would continue to be subordinate to the large commercial vineyard and winery operations.

"3. The use complies with General Plan Policies AR-6d and AR-6f."

Staff analysis: The above responses regarding tasting room compliance to General Plan Policy AR-6d and AR-6f are applicable to marketing accommodations.

"4. No commercial use of private guest accommodations is allowed."

Staff analysis: The project description states the marketing accommodations would be for private guests. A condition requires the marketing accommodation not be used for commercial purposes, including, but not limited to, transient occupancy, vacation rental, hosted vacation rental, or farm stay; and a form of monetary compensation shall not be accepted or exchanged. The marketing accommodations are limited to use by private guests of the winery operator or the winery owners.

"5. Any such use on a parcel under a Land Conservation contract must be consistent with Government Code Section 51200 et seq. (the Williamson Act) and local rules and regulations."

Staff analysis: The property is subject to a Land Conservation Act (Williamson Act) contract. Marketing accommodations are an allowed use under Rule 8.3 (B)-(2) of the local Uniform Rules for Agricultural Preserves. The marketing accommodations contain two guest bedrooms with full bathrooms located on the upper floor of the reserve tasting room building (hop bale barn).

The request for marketing accommodations is consistent with prior approved marketing accommodations at the following wineries:

Silver Oak Winery: A residence used for three marketing accommodations, expansion of an existing winery facility to 120,000 annual cases, a maximum of 25 agricultural promotional event days per year with a range of 50 to 200 guests, and one event day per year with a maximum of 1,000 guests with a limited term of five years is permitted, under a Land Conservation Contract. PLP14-0004; 7370 Highway 128, Healdsburg.

Hop Kiln Winery: Convert a residence to a two bedroom marketing accommodation with a winery of 30,000 annual cases, 4 events agricultural promotional events and 8 industry wide events on 75 acres. PLP13-0011; 6025 and 6050 Westside Road, Healdsburg.

Seifrick Winery: Two marketing accommodations within the public tasting room building with a winery of 10,000 annual cases, a maximum of 14 promotional events and four industry-wide events for a total of 18 events per year with a maximum occupancy of 60 people on 14.99 acres. PLP12-0020; 8500 Dry Creek Road, Geyserville.

David Coffaro Winery: One marketing accommodation attached to a wine storage building, maximum annual production capacity of 7,000 per year, UPE94-931 & UPE99-0031; 7485 Dry Creek Rd., Geyserville, APN 139-130-031.

Lambert Bridge Winery: Two detached marketing accommodations, maximum annual production capacity of 30,000 per year, UPE02-0063; 4085 W. Dry Creek Rd., Healdsburg, APN 090-130-022.

Silver Oaks Cellars: Three marketing accommodations attached to the winery, maximum annual production capacity of 65,000 per year, UPE93-0070; 24625 Chianti Rd, Geyserville, APN 118-070-012.

Jordan Vineyard and Winery: Two marketing accommodations attached to the winery, maximum annual production capacity of 250,000 per year, under a Land Conservation Act contract. PLP00-0034; 1474 Alexander Valley Rd., Healdsburg, APN 091-030-043.

Hartford Family Winery: Three marketing accommodations attached to the tasting room, maximum annual production capacity of 60,000 per year, UPE00-0122; 8075 Martinelli Rd., Forestville, APN 083-200-053.

Palm Drive Vineyards/Scribe Winery: Four marketing accommodations attached to the tasting room, maximum annual production capacity of 150,000 per year, PLP09-0010; 2300 Napa Rd., Sonoma, APN 126-101-034.

Agricultural Promotional Events:

Currently, the Zoning Ordinance does not limit the number of agricultural promotional events allowed on agricultural zoned parcels. Using the Winery Database prepared by PRMD staff, the average number of approved events at wineries in Sonoma County is 20.

The County has approved similar projects where it was found that the agricultural promotional events, if limited in frequency, size, and hours, are compatible with the agricultural zoned land because such events are a marketing tool to insure the long term viability of wine sales and promote the long-term viability of agriculture in the county. Here, the specific circumstances with this particular application and environmental studies prepared for the project determine the project would not have significant traffic impacts, change the level of service, or create traffic hazards with mitigations to meet sight distance standards. The project site can accommodate all parking needs on the parcel and the uses will not cause a drawdown of wells in the area. Mitigation measures have been incorporated into the project to reduce potential exterior lighting under item 1 (Aesthetics), reduce potential noise impacts under item 11 (Noise), and reduce potential impacts under item 16 (Traffic/Parking) impacts, as discussed further in the Mitigated Negative Declaration.

Permit Sonoma requires that office and administration areas be incidental to the winery use and not exceed 15 percent of the square footage of the winery's production, storage and tasting areas. The proposed administration area for the proposed project is at 14 percent of the total winery facility (refer to Exhibit M - Sheet A1.13).

Food and Wine Pairing:

Food and wine pairing is proposed in both the public and reserve tasting rooms. Pre-prepared packaged foods such as cheese, pre-made sandwiches, crackers and other palate cleansers are allowed to be served in tasting rooms. But prepared or cooked to order foods and table service is generally only allowed as part of an agricultural promotional event. Prepared meals and appetizers are generally not allowed for “drop in guests”, while tours and wine tasting has been allowed on a daily basis. Food service has been a major concern for conversion of agricultural lands to more intense commercial uses.

However, food and wine pairing is a popular industry trend proven to enhance the wine tasting experience leading to increased sales. Serving food during wine tasting, even in small portions, can reduce the potential for intoxication. While few tasting rooms have requested food service on a daily basis, staff recognizes that many established wineries have begun offering similar food and wine pairings on a routine basis. Several wineries were approved for food and wine pairing in their tasting rooms, such as: Nicholson Winery, St. Francis Winery, Rams Gate, Viansa, Lake Sonoma (Sbragia), Korbel, Benzinger, Silver Oak, and Hinkle Winery.

The long-standing policy question with food service at wineries and tasting rooms is how to differentiate this use from a restaurant use and what boundaries should be placed on this type of food service to avoid further intensifying the commercial land use? Food and wine pairing is currently taking place at several existing tasting rooms throughout the County and if occurring during tasting room hours, does not appear to compete with restaurants or construed as a restaurant. The applicants have made it clear to staff they have no intentions of being a restaurant. However, a Use Permit runs with the land and subsequent owners would only be bound by the use permit conditions. Staff recommends that the Board allow food and wine pairing, but, limit the hours of when food and wine pairing can occur to avoid the normal lunch hour (refer to Condition No.122 in Exhibit A).

Scenic Corridor:

Westside Road is designated as a Scenic Resource (Scenic Corridor) by the Sonoma County General Plan (Figure OSRC-1), but, the project site is not designated as a Scenic Landscape Unit. New development, other than barns and similar agricultural support buildings, are generally prohibited within an area equal to 30 percent of lot depth, to a maximum of 200 feet from centerline of the road, whichever is less. The proposed winery building and wine cave are located approximately 240 to 260 feet from the front property line, outside of the scenic corridor setback. The winery building and wine cave conform to all other zoning district setback requirements.

On the west side, a six-foot high wood fence proposed along the southerly property line to reduce winery operational noise will encroach approximately 98 feet within the Scenic Corridor setback (refer to Exhibit L). However, it will be screened by existing structures and existing trees and shrubs located along the front of the parcel. Under Section 26-64-030 (a) -3 it states, in part the following exceptions, where such uses are allowed by the base district with which this district is combined:

Other new structures provided they are subject to design review and

(ii) There is no other reasonable location for the structure,

(iv) Existing vegetation and topography screen the use; (refer to Exhibit W)

The six foot wood fence meets both criterion listed above and will be similar to fences throughout the County. The fence will not be placed along the road frontage of the project site.

The existing hop kiln and bale barn are located within the Scenic Corridor 200-foot setback. Under Section 26-64-030 (a) -3 it states, in part, development within the setback shall be prohibited with the following exceptions, where such uses are allowed by the base district with which this district is combined:

(3) *Maintenance, restoration, reconstruction or minor expansion of existing structures*;

On December 2, 2014, the proposed project went before a joint review with the Design Review Committee and the Sonoma County Landmarks Commission to review the project proposal and project plans. On December 2, 2014 DRC voted to:

- Approve the existing height of the Hop Kiln at 45-feet and Bale Barn at 41- feet which exceed the 35-foot maximum height requirement in the LIA Zoning district.
- Approve maintaining the two structures (Hop Kiln and Bale Barn buildings) in their current footprint within the Scenic Corridor setback.

Therefore, the reconstruction and reuse of the existing hop kiln buildings is allowed within the scenic corridor. Further discussion of the Sonoma County Landmarks Commission review of historical hop kiln buildings is under Issue # 3 below.

Issue #3: Historical and Cultural Resources and HD (Historical District) Combining District

A Historic Resource Study (dated July 2014) and a Supplemental Historic Resource Study (dated March 2015) were prepared for the project by Knapp Architects. Since the project includes the conversion of two existing hop buildings, the project was referred to Sonoma County Landmarks Commission. The site is neither identified in the current Historic Resources Inventory in use by Permit Sonoma, nor is it identified in the expanded list provided in the 2007 Sonoma County Landmarks Commission Five Year Work Plan or the Sonoma County Historic Resources Database.

The report evaluated the historical and architectural significance of two agricultural buildings, the Hop Kiln and Baling Barn, and the wood Trestle that connected them. The report found the site eligible for listing in the California Register, and therefore considered them historical resources for the purposes of CEQA.

On November 4, 2014, the Landmarks Commission reviewed the project plans and the Historic Resource Study prepared by Knapp Architects and accepted the Historic Resource Study, but recommended further review in a joint meeting with the Design Review Committee.

On December 2, 2014, a joint meeting before the Sonoma County Landmarks Commission (LC)

and the Design Review Committee (DRC). The following actions were taken:

- Approve the existing height of the hop kiln at 45-feet and the bale barn at 41-feet which exceeds the 35-foot height requirement in the LIA zoning district.
- Approve maintaining the two structures (hop kiln and bale barn) in their current footprint within the Scenic Corridor setback.
- Final review of the project (after the Board of Zoning Adjustments decision) to be by a joint meeting of the LC and DRC.
- The HD (Historic Combining District) be added to the property.

The report concludes the project conforms to the Secretary of the Interior's Standards for Rehabilitation in almost all respects and would not materially impair the characteristics which make it eligible for listing, meaning that under the CEQA Guidelines, the project would have a less than significant impact on historical resources.

At the applicant's request, the project returned to the Landmarks Commission asking the HD zoning only be applied to the east side of the project site where the hop kiln buildings are located and not apply HD zoning to the west side because the buildings on this side were found ineligible for listing on the California Register. At the July 7, 2015, Landmarks Commission meeting, the Commission voted unanimously to recommend addition of the HD Combining Zone and Landmark Designation on APN 110-240-031 in its entirety (east side of Westside Road) and not recommend adding the HD combining zone on APN 110-240-040 (west side of Westside Road). Their decision was based on findings that the historic resources on the east side of Westside Road met the eligibility and integrity criteria for State and Local County designation and the HD Combining Zone. The structures on the west side of Westside Road have changed over time to the extent that they no longer retained historic integrity that met eligibility criteria. Condition No.78 requires the applicant to apply for a zone change to add the HD combining zoning district on the APN 110-240-031 on the east side of the road prior to temporary or final occupancy of the hop kiln or hop bale barn.

Cultural Resource Evaluation:

A cultural resources evaluation of the property was conducted by William Roop, of Archaeological Resources Service, April 2014. A surface reconnaissance on both the east and west side of the project site. The evaluation concluded that since no significant cultural resources were identified on the property, no further recommendations are warranted for pre-historic materials. However, a condition requires that if during earth disturbing activities on the property a concentration of artifacts is encountered, all work should be halted in the vicinity of the find and an archeologist contacted immediately. A condition also requires during all initial ground- disturbing activities into native soils on the project site a qualified archaeological monitor and/or tribal monitor shall be present. The qualified archaeological monitor and/or tribal monitor shall have the authority to stop and redirect grading activities to evaluate any tribal cultural resources discovered on the property (refer to Condition No. 92 and 93). Further detail is provided in the Mitigated Negative Declaration.

Permit Sonoma referred the project to those Native American tribes to solicit input related to Tribal Cultural Resources. One local tribe responded, the Lytton Rancheria, requesting a mitigation measure be incorporated into the project. The language was added to the mitigation measure (refer to Condition No. 93) and accepted by the tribe.

Issue #4: Land Conservation Act Contract

The project site is under a prime Land Conservation Contract (Williamson Act contract) recorded in 2007 (Ag. Preserve 1-397; OR# 2007-037936). To comply with the contract, land must meet the following standards of the Sonoma County Uniform Rules:

1) The land must be devoted to an agricultural or open space use as defined in the Williamson Act. The County has required at least 50% of the land be devoted to agriculture or open space use to meet this standard.

Staff analysis: The project site is 75 acres with 42 acres planted in vineyard. The property meets the 50% threshold. Since the mid-1800s this property has been in agriculture: fruit orchards, hops, and now grapes. In 1988, this property operated as a pumpkin patch and farm store until 2000. Wine grapes were planted in 1990 and the vineyard currently produces approximately 250 tons of grapes annually.

2) The land must have a minimum parcel size of 10 acres for a Type 1 or 40 acres for a Type 2 contract.

Staff analysis: The property is 75 acres and under a prime (Type I) contract.

3) Compatible uses may be permitted provided that they are incidental to the primary use of the land for agriculture, listed in the County's Uniform Rules for Agricultural Preserves and meet the criteria for compatibility.

Staff analysis: Under the Uniform Rules, the following are listed as compatible uses: winery, tasting rooms, marketing accommodations, and the existing primary residence to remain on the project site. Under the Uniform Rules, the existing barn, existing storage shed/canopy, and existing reservoir, used for the vineyard irrigation, are considered accessory agricultural structures under Rule B.8 and B.9, respectively.

Incidental use has been defined by the County to mean compatible uses which cannot occupy more than 15 percent of the land area or five acres, whichever is less. For the 75 acres parcel size, the 5 acre threshold would apply. Of the 75 acre parcel, approximately 42 acres are currently planted in grapes, of the remaining 33 acres, the total area consists of 3.40 acres for existing and new development area (147,885 square feet). The existing primary residence and area consists of approximately .35 acres. In total, the compatible uses comprise of 3.75 acres of the 75 acre parcel, below the 5-acre threshold. No vines will be removed to accommodate the proposed project. The winery, tasting rooms, existing residence and the related infrastructure and improvements encompass approximately a small portion, approximately 5% of the overall project site and considered secondary to the primary use of the project site which will remain a large commercial vineyard. The 5% of development area is also consistent with the LIA zoning's maximum lot coverage requirement for a parcel greater than 20 acres in size listed under Section 26-040-030 (e) of the Zoning Code.

"Compatible Use" is defined as any use determined by the county or city administering the preserve pursuant to sections 51231, 51238 or 51238.1 or by this act to be compatible with the agricultural, recreational, or open space use of land within the preserve and subject to contract. In addition, Section 51220.5 states that "cities and counties shall determine the types of uses to be deemed compatible in a manner which recognizes that a permanent or temporary population increase hinders or impairs agricultural operations."

The County's Uniform Rules list agricultural promotional events as a "compatible use" for land under an agricultural contract under the following circumstances:

- When directly related to agricultural education or the promotion or sale of agricultural commodities and products produced on the contracted land, and,
- Events last no longer than two consecutive days and do not provide overnight accommodations, and,
- No permanent structure dedicated to events is constructed or maintained on the contracted land.

The proposed events are considered agricultural promotional events according to the current County interpretation and broken down into two categories by the applicant:

- Agricultural Promotional marketing events, include the wine club dinners and luncheons, food and wine pairing, wine releases, and barrel tasting.
- Industry-wide events

Staff analysis: Events would not last longer than two consecutive days. No lodging is provided, except for marketing accommodations, and no permanent structure devoted to event-use would be constructed as part of the project. The agricultural promotional events and industry-wide events would take place inside the public and private tasting rooms or outdoors.

The project must also be found consistent with the state law of the Land Conservation Act (Williamson Act). The following analysis addresses the findings required by the applicable Sections of the Land Conservation Act.

Section 51201 (e) of the Land Conservation Act defines "Compatible Use" as any use determined by the county or city administering the preserve pursuant to sections 51231, 51238 or 51238.1 or by the Act to be compatible with the agricultural, recreational, or open space use of land within the preserve and subject to contract. In addition, Section 51220.5 states that "cities and counties shall determine the types of uses to be deemed compatible in a manner which recognizes that a permanent or temporary population increase hinders or impairs agricultural operations."

Staff analysis: Consistent with Section 51220.5 of the County's Uniform Rules, agricultural promotional events and industry-wide events are considered compatible uses in association with an on-site agricultural use because they are a marketing tool for sales of an agricultural product and promote the long-term viability of agriculture within the county. Events require a Use Permit which limit the frequency and size (# of guests) of events, limit hours, and incorporate conditions into the Use Permit to prevent conflicts with on-site and surrounding agricultural operations.

Section 51238.1 of the Land Conservation Act states, "*Uses approved on contracted lands shall be consistent with all of the following principles of compatibility*:

(1) The use will not significantly compromise the long-term productive agricultural capability of the subject contracted parcel or parcels or on other contracted lands in agricultural preserves.

(2) The use will not significantly displace or impair current or reasonably foreseeable agricultural operations on the subject contracted parcel or parcels or on other contracted land in agricultural preserves.

(3) The use will not result in the significant removal of adjacent contracted land from agricultural or open-space use.

Staff analysis: The proposed use is a winery to process grapes grown on the site and from the local area, and tasting rooms to sell the wine produced on site. No vines would be removed to accommodate the project development. The agricultural promotional events or industry wide events do not compromise agricultural capability because they are marketing tools to help sell wine produced on site and ensure the long term viability of the vineyard and winery. The proposed agricultural promotional events are limited in frequency and size and held in the afternoon and evening hours, avoiding the on-site agricultural activities which occur in the early morning hours. To the north of the proposed project site there are two parcels and to the south is one parcel under Land Conservation Act contracts. These are also commercial vineyard properties along Westside Road.

Issue #5: Traffic and Parking Analysis

The Sonoma County General Plan 2020 Circulation and Transit Element Figure CT-4 identifies Westside Road as a Rural Major Collector. A focused Traffic Study was prepared for the project by a traffic engineer with Whitlock and Weinberger Transportation, Inc. (W-Trans) in 2014, revised February 23, 2015, and further revised for the Final Traffic Study dated March 10, 2016. On April 21, 2017 and September 12, 2017; W-Trans submitted two addendum letters on collision history and sight distance analysis, respectively.

Westside Road is a two-lane rural roadway with paved width of approximately 25 to 26 feet in the vicinity of the project site. It is marked with a double yellow centerline. There is not a posted speed limit in the project vicinity. A speed survey performed by W-Trans at the project site driveway indicates that in the project vicinity speeds are about 30 to 35 mph. The current volume on Westside Road is about 3,000 ADT near Felta Road based on counts performed by the County in August 2012, but drops to about 1,050 vehicles per day near the project site based on counts obtained on July 16, 2013. A count performed by the County in late July 2015 indicates the volumes have dropped 12 to 15 percent since 2012, though the higher 2012 volumes were used by W-Trans for their analysis.

Collision History:

On April 21, 2017, W-Trans provided an addendum letter to the Traffic Impact Study to provide collision history from January 1, 2012 through December 31, 2016. From 2012 to 2016, there were two collisions on the study segment. This data came from the California Highway Patrol published in their Statewide Integrated Traffic Records Systems (SWITRS).

Trip Generation:

Relative to trip generation, it is anticipated that the proposed new winery including tasting rooms would have a total of 15 employees, each generating an average of three trips per day. Truck traffic associated with winery operations is expected to consist of five trips per day, on average. An average of 52 visitors per day is expected for tasting, generating 42 trips daily assuming average vehicle occupancy of 2.5 visitors per vehicle, the proposed project is expected to generate an average of 92 vehicle trips per day.

The project also includes 22 agricultural promotional events per year (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, and 2 events with 300 guests) and 2 industry wide event days with 300 guests. It is assumed that a maximum sized 300-person event would require a staff of 14. Using an occupancy of 2.5 vehicles per guests and solo occupancy for staff, maximum sized event would be expected to generate 268 trip ends at the driveway, including 134 inbound trips at the start of the event and 134 outbound trips at the driveway. W-Trans expects these trips would be spread out such that no more than 60 trips in either direction would occur during a single hour, with staff arriving before and departing after guests. W-Trans also expects the distribution of trips to be weighted more heavily from the south with 75 percent of the trips coming from/returning to this direction.

Sensitivity Analysis:

W-Trans explains that by using the same roadway segment Level of Service methodology in the Highway Capacity Manual it was determined that 208 vehicle trips could be added in each direction on Westside Road *before* the northbound direction would experience unacceptable LOS D operation.

Using the 2.5 guests per vehicle standard ratio, W-Trans estimated that vehicles carry more than 500 guests could arrive at agricultural promotional events during one hour and another set of 500 guests could depart from the same or different winery event and the operation of Westside Road would remain acceptable under the standards established by the County.

W-Trans examined events sizes and even with the 300-person event proposed with this project, and assuming that as many as 150-guests arrive or depart during a *single hour* from the same direction, the road would retain capacity for other events having a combined total of more than 350 guests.

W-Trans explains it is reasonable to expect that up to 75 percent of event traffic would come from the south. Assuming this is split, the largest event for the proposed project would generate 75 guests from the north or 30 vehicles, leaving capacity for the cumulative demand associated with nearly 450 guests arriving and departing from other area wineries during the same, single hour.

With an emphasis that all these trips would need to occur *during a single hour* for the cumulative impact to be experienced, if the trips are spread over more than an hour's time, the cumulative effect is diluted. W-Trans concludes there is adequate capacity for the multiple events to generate trips simultaneously without having a significant negative impact on operation of Westside Road.

Event Coordination:

To avoid the potential for multiple large events occurring simultaneously, winery operators are encouraged to coordinate event schedules with other wineries in the vicinity. The applicant knows the adjacent winery operators and is willing to implement event coordination with these two wineries. A condition has been added to the Use Permit to require event coordination between the Ramey Winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since these event days are determined by the Russian River Valley Grape Growers Association.

In addition, a standard condition is included in the Use Permit for a future event coordination program to be used for wineries:

Condition No 115: *The days and hours for agricultural promotional events shall be subject to review and approval by Events Coordinator or similar program established by the County or at the County's direction. The applicant shall submit to the County an annual request and schedule for agricultural promotional events for each calendar year including the maximum number of participants, times and dates, and to report the actual events from the previous year. The applicant shall contribute, on an annual basis, a fair share towards the cost of establishing and maintaining the program. The program should consider the fairness for long established uses and establish reasonable costs for managing the program.*

Sight Distance and Stopping Sight Distance:

At driveways a clear line of sight needs to be maintained between the driver of a vehicle waiting on the driveway and the driver of an approaching vehicle. Adequate time must be provided for the waiting vehicle to either turn left, or right, without requiring the through traffic to radically alter their speed.

Access and circulation were evaluated by W-Trans, along with field conditions at the site driveway were evaluated to determine adequacy of sight distance, as well as identify any potential for conflict between opposing driveways for the winery site and tasting room site. The tasting room driveway is on the easterly side of the roadway, opposite and offset from the winery driveway. W-Trans determined that conflicts with traffic to and from the opposing project site driveways are not expected.

Sight distances along Westside Road from the existing driveway locations were evaluated based on sight distance criteria contained in *A Policy on Geometric Design on Highways and Streets* published by American Association of State Highways and Transportation Officials (AASHTO). These guidelines are based upon approach travel speeds, and take into account which direction a vehicle would turn onto the major approach. Greater sight distance is needed for the more time-consuming movement of turning left as compared to turning right. The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation.

The prima facie speed is 55 mph, but based on a radar speed survey performed at the driveway, the curves at either side of the site effectively reduce speeds to an average of 30 mph. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet.

The tasting rooms' driveway on the east side, with the removal of the existing Westside Farms sign, to the north of the driveway, the sight distance is more than 400 feet. To the south of the driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic.

The winery driveway on the west side to the south of the driveway, the sight distance is 250 feet. However, to the north of the driveway to meet sight distance of 250 feet trees and vegetation would have to be removed and the northwesterly berm lowered and terraced. This is an improvement that is long overdue. The applicant's engineer, Adobe & Associates, prepared a letter, a Grading and Cross Section Plan, and a Stopping Sight Distance plan demonstrating a sight distance of 250 feet can be achieved to meet standards on the winery driveway to the north by trimming trees and lowering the northwesterly hillside on the project site. An Addendum letter from the traffic engineer of W-Trans, dated September 12, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway (refer to Exhibit U). Low lying vegetation with shrubs and ground cover would be planted in this area, with small to large boulders on the upper berm (Refer to Exhibit U). Adobe & Associates also prepared a video simulation showing vehicle traveling along the project site with the sight distance improvements. The video will be presented at the public hearing. The existing mirror across Westside Road, on the project site, needs to remain which extends sight lines. Furthermore, a condition limits agricultural promotional events on the west side of the project site to a maximum of 30 guests and does not allow industry-wide events on the this side of the project site (Refer to Condition No. 63). A condition by Department of Transportation and Public Works requires the installation of an automated swing or rolling gate at the driveway at the winery and a sign will be placed at the site stating "Not Open To The Public".

<u>On-Site Parking Analysis</u>:

On the east side there will be 24 on-site parking spaces (20 standard and 4 ADA parking spaces) on a chip sealed surface, as well as 58 overflow (unmarked gravel) spaces for the tasting facility. The parking area would be accessed by an 18-foot wide asphalt driveway. The parking area is to be landscaped providing a separation between the primary parking field and the overflow parking. A chip seal base will be used for the primary parking area and gravel for the overflow parking and for the vineyard access road. The winery located on the west side of Westside Road would be developed with a semi-porous concrete driveway with a total of 48 parking spaces including 27 permanent and 21 seasonal overflow parking spaces.

<u>Traffic Control and Parking Management Plan</u>:

The applicant has prepared a preliminary Traffic and Parking Plan (Plan) which depicts where parking attendants and signage would be placed on both project driveways to guide guest vehicles onto the site during the agricultural promotional events and industry wide events (refer to Exhibit X). The Plan also shows that traffic queuing can be done on-site to get vehicles off of the road and onto the project site.

It includes the implementation of the Plan by designating a Parking Coordinator and at least three parking attendants on duty for events of to assist with directing on-site guest parking and circulation, placing signage before any event to direct guest traffic, and parking attendants to monitor traffic -queing on the project site driveways during the entire duration of the events to get vehicles onto the site.

<u>Roadway Segment Operation</u>:

Under Existing plus Project volumes the roadway is expected to operate acceptably in both directions.

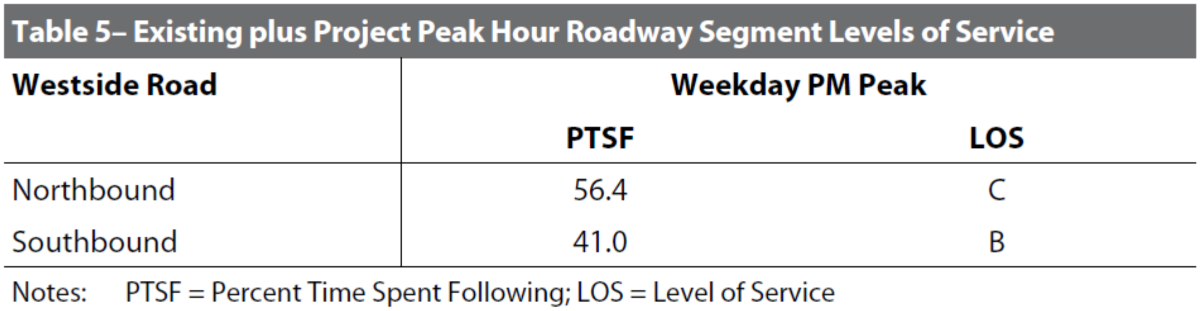

Table 5– Existing plus Project Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	56.4	C
Southbound	41.0	B

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

The winery will not be open to the public. A gate with a sign posted not open to the public will be placed at the winery driveway to restrict public access. The east side of the project site will be dedicated to the public tasting room uses and the related event activities. Fire and emergency access shall be provided per Fire requirements.

Cumulative plus Project:

The roadway is expected to continue operating acceptably at the same levels of service as without the project.

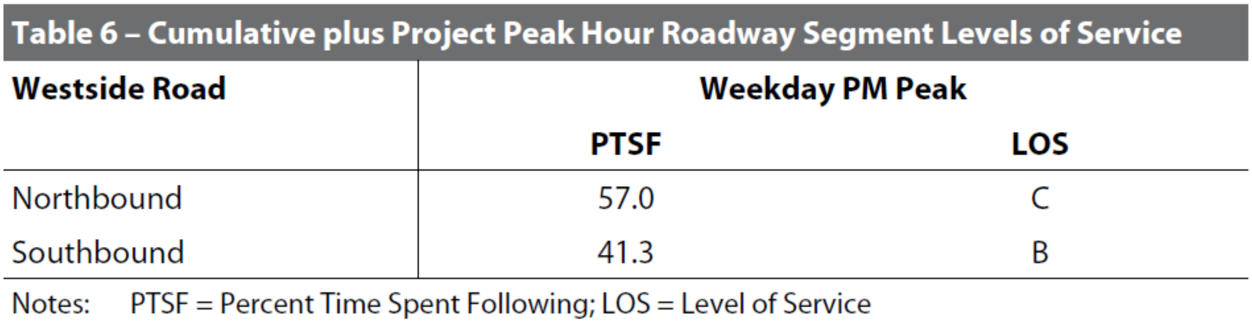

Table 6 – Cumulative plus Project Peak Hour Roadway Segment Levels of Service

Westside Road	Weekday PM Peak	
	PTSF	LOS
Northbound	57.0	C
Southbound	41.3	B

Notes: PTSF = Percent Time Spent Following; LOS = Level of Service

Traffic Conclusion:

- Based on the review and analysis performed, it is anticipated that the proposed project will have a limited impact on traffic operation along Westside Road, and will actually generate fewer special event trips that the previous uses at Westside Farms.

- Westside Road is expected to operate acceptably under volumes including project generated traffic and traffic associated with agricultural promotional events both in the short-term and long-range. Further, multiple events could occur simultaneously without triggering unacceptable operating conditions under the County’s standards.

- Westside Road has experienced collisions at a rate below the statewide average, so exhibits an acceptable safety condition.

- Sight distance from the tasting room driveway on the east side of Westside Road is adequate with the relocation of the existing “Westside Farms” sign and this area left clear to provide acceptable sight distance to the north.

- Sight distance from the winery driveway on the west side of the road is adequate to the south, but inadequate to the north without improvements to increase sight distance. The proposed mitigation includes removing and/or trimming vegetation together with terracing/lowering the hillside on the project site, as necessary.

- Event size on the west side will be limited to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle. The events on the west side will be business and marketing related meetings and technical tastings.
- Very little pedestrian traffic is expected between the winery and tasting room, and that will be limited to staff. However, should other pedestrian traffic be generated, sight lines will be adequate for such crossings upon implementation of the proposed measures noted above.
- A left turn lane is neither warranted nor recommended on Westside Road at the project's driveways.

Sonoma County Department of Transportation and Public Works reviewed the W-Trans analysis and conclusions and found them acceptable. The applicants have agreed to all the traffic and parking mitigation measures and monitoring set forth in the Mitigated Negative Declaration and listed in the Conditions of Approval.

Issue # 6: Noise

The Noise Element of the Sonoma County General Plan establishes goals, objectives and policies including performance standards to regulate noise affecting residential and other sensitive receptors. The general plan sets separate standards for transportation noise and for noise from non-transportation land uses.

A Noise Assessment was prepared by Illingworth & Rodkin, Inc., on October 2013, and revised September 2015, and on February 8, 2017. On August 16, 2017, an Addendum to the Environmental Noise Assessment was submitted by Ilingworth and Rodkin (noise consultant) to consider noise impacts to another existing residence located immediately south of the project site (see Residence 4 in Figure 1 in the Addendum dated August 16, 2017). The Noise Assessment evaluated the existing noise environment and the potential for increased noise as a result of the proposed project.

The project site lies on both sides of Westside Road. The east side is bordered to the north by Gracianna Tasting Room, to the south-southeast by the Russian River, across the river is Riverfront Regional Park, and due south are single family residences. The west side is bordered to the northwest by Arista Winery and southwest by Williams-Selyem Winery, and a single family residence. The noise sensitive receptors are four nearby residences to the south of the project site. The noise assessment noted that the primary ambient source of noise in the project area is the traffic along Westside Road. Other contributors to noise include air planes flying overhead, and agricultural-related activities in the area.

The Sonoma County General Plan Noise Element identifies a goal to:

"Protect people from the adverse effects of exposure to excessive noise and to achieve an environment in which people and land uses function without impairment from noise."

The following General Plan policies, which are applicable for use at the project, are intended to achieve this goal include:

NE-1c: Control non-transportation-related noise from new projects. The total noise level resulting from new sources shall not exceed the standards in Table NE-2 of the recommended revised policies as measured at the exterior property line of any adjacent noise-sensitive land use.

According to the Noise Assessment, there are a number of operations associated with the proposed winery, tasting rooms, and events that will produce noise. These include:

1. Project traffic noise;
2. Winery and seasonal (crush) production operations;
3. Maintenance and forklift operations; and
4. Special event noise

Project traffic noise: On the east side of the project site, are the tasting rooms, office, and marketing accommodations. The existing driveway and parking areas will be used. Noise levels associated with automobiles and light vehicles using the project driveways and parking lots would not exceed the daytime NE-2 noise standards at the nearest residence. Truck operations are expected to occur during daytime hours only and on a basis of one to five minutes per hour, or less, since it is unlikely that more than one heavy truck would arrive and depart during any given hour. Based on these findings, noise associated with truck traffic at the project is not expected to exceed daytime NE-2 noise standards at Residences 1, 2, and 3. In the Addendum, dated August 2017, for Residence 4, noise levels associated with automobiles and light vehicles using the winery's project driveways and parking lots would not exceed the daytime NE-2 noise standards at the property line. Also noise associated with medium truck traffic at the project is not expected to exceed daytime NE-2 noise standards at the property line of Residence 4. However, heavy truck traffic would exceed these standards by up to 5 dBA. Heavy trucks are defined as: 26,000-33,000 lbs, such as garbage trucks, dump trucks, tank truck, tractor unit, etc., as classified by the Department of Transportation's Federal Highway Administration (FHWA) (refer to Exhibit Y). Nighttime truck use is prohibited. In the truck loading and turn around area, the height of the proposed retaining wall on the south side of the loading area shall be extended to 6 feet above existing (above retaining wall) grade. The proposed noise barrier/retaining wall shall consist of masonry materials and the noise consultant must confirm the design, location, and final construction is consistent with the noise standards of the General Plan, prior to operation of the winery. The noise barrier/retaining wall would located outside of the scenic corridor setback. A wood fence 6-feet in height needs to be extended for 100 feet parallel along the southerly property line to reduce winery operation noise. The wood fence would encroach into the scenic corridor setback, but, would be shielded by existing structures and existing landscaping in the site frontage.

Winery and Crush-Related Noise: The winery crush pad and press equipment room will be indoors on the first floor in the western side of the building, which creates shielding of crush-related noise by the building itself from nearby residences. Assuming the worst case scenario, the future crush pad was estimated to be within 1,280 feet of Residence 1, within 1,400 feet of Residence 2 and within 1,275 feet of Residence 3. The assessments conclude the noise associated with crush related noise is not expected to exceed daytime or nighttime NE-2 noise standards at the property lines of the four nearby residences.

Bottling Noise: Bottling will be done in the production facility area, next to the truck access loading zone. The building will provide shielding from noise created during bottling activities. Based on distance and noise shielding, noise from bottling activities are expected to be an L50 of 37 to 42 dBA at Residence 1, an L50 of 36 to 41 dBA at Residence 2, and an L50 of 37 to 42 at Residence 3. Based on these findings, noise associated with bottling is not expected to exceed daytime or nighttime NE-2 noise standard at Residence 1, 2, or 3.

However, in the Addendum, dated August 2017, the noise consultant explains the noise levels from bottling activities are expected to be an L50 of 53 dBA at the property line of Residence 4. The noise associated with bottling noise is expected to exceed daytime and nighttime NE-2 noise standard at the property line of Residence 4 and mitigation is needed. It is concluded that the 6- foot high sound barrier/retaining wall as discussed above will also be effective in reducing daytime or nighttime bottling noise levels to below the L50 NE-2 noise standards at the property line of Residence 4.

Mechanical Equipment: The winery will include noise-generating mechanical equipment, such as air-cooled condensing units, pumps and compressors, as well as, less-significant sources of noise, such as air-conditioning systems and exhaust fans. The project description and drawing do not indicate the precise location of such equipment. The noise assessment considered the “worst-case scenario” where the equipment is placed outside of production buildings and not shielded from the adjacent residences. The assessment indicates that constant L50 noise levels from mechanical equipment may be between an L50 of 32 and 34 dBA at Residence 1 and 2 and between an L50 of 33 and 35 dBA at Residence 3. The noise associated with mechanical equipment is not expected to exceed daytime or nighttime NE-2 noise standard at three of the nearest residences and no mitigation is needed. However, in the August 2017 Addendum, the noise consultant explains the noise associated with mechanical equipment is expected to exceed daytime or nighttime NE-2 noise standard at the property line of Residence 4 and mitigation is required. The southern façade and part of the eastern façade of the Mechanical Equipment Room of the winery building shall be designed and constructed as solid walls (Refer to Sheet A1.12 of the Project Plans, dated August 23, 2017).

Forklift and maintenance operations: The use of forklifts would take place on the first floor inside the winery building, in the outdoor crushing and receiving areas, and in the wine cave. Such activities would also receive considerable shielding from the building. But, outdoor forklift and maintenance operations are considered worst-case condition and were analyzed in the assessment. Forklift and maintenance operations will only occur during daytime hours. Forklifts are not necessary for the tasting rooms’ operations. The noise associated with forklift and maintenance operations is not expected to exceed daytime NE-2 noise standard at Residences 1, 2, and 3. In the Addendum, for Residence 4, it explains based on a review of project drawings, the center of the closest truck loading outdoor area will be about 55 feet from the property line of Residence 4. Using the source levels discussed in the original Noise Assessments, a 6 dB shielding factor for the noise barrier/retaining wall at the edge of the truck loading area and a 6 dB sound reduction for each doubling of the distance between the noise source and the receiver, noise from forklift and maintenance operations activities are expected to be an L08 of 60 dBA at

the property line of Residence 4. The noise associated with forklift and maintenance operations is not expected to exceed daytime NE-2 noise standards at the property line of Residence 4 with the construction the 6-foot noise barrier/retaining wall.

Forklift and maintenance operations will only occur during daytime hours. Based on these findings, the noise assessment concludes that noise associated with forklift and maintenance operations is not expected to exceed daytime NE-2 noise standard at the four nearest residences and no mitigation is needed.

Event Noise at Adjacent Residential Uses: The winery proposes agricultural promotional events and participation in two industry-wide event days. The request includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests For the largest events of 300 guests, a staff of 14 employees is anticipated.

Agricultural promotional events will be held on the east side of Westside Road indoors within the tasting rooms or outdoors at the Picnic Grove area, located along the rear of the property. Agricultural promotional events at the winery are limited to a maximum of 30- guests and no industry-wide events will occur on this side of the project site. The winery building would receive noise shielding from the building structures estimated at 12 dBA (assuming open windows and doors). However, the outdoor events held in the garden area or yard between the tasting room/barn and Westside Road, in the yard south of the barn, or in the picnic grove area would receive little or no noise attenuation from intervening terrain or building structures at Residence 1, 2 and 3. The outdoor area between the public and private tasting room buildings would have some shielding from the private tasting room.

The noise assessment notes that outdoor events that take place around the two tasting rooms could be situated as close as 690 feet from Residence 1; 1,775 feet from Residence 2; and 1,900 feet from

Residence 3. The indoor events at these locations would be located as close as 885 feet from Residence 1; 1,100 feet from Residence 2; and 1,110 feet from Residence 3. It was concluded that all outdoor daytime and nighttime events would exceed County NE-2 standards at Residence 1, 2 and 3 in the amplified music and speech categories, except amplified speech during daytime hours at Residence 3. Additionally, non-amplified music NE-2 standards would also be exceeded at nighttime at Residence 1 and 2.

Outdoor events taking place in the picnic grove area would be approximately 1,525 feet from Residence 1, 1,775 feet from Residence 2, 1,900 feet from Residence 3, and over 1,000 feet from Residence 4. The assessment determined the only County NE-2 standard that would be exceeded during an outdoor event in the Picnic Grove area would be at Residence 2 and would be amplified music in the nighttime.

For Residence 4, in the Addendum, the noise consultant explains that indoor agricultural promotional events held in the tasting rooms would exceed the daytime and nighttime NE-2 standards at property line of Residence 4 by 26 dBA and normal amplified music, amplified speech and non-amplified music would exceed the County daytime NE-2 standards by 2 to 7 dBA at property line of Residence 4. A Mitigation measure has been incorporated into the project to require that doors and windows be closed during agricultural promotional events when amplified music and/or sound is being used. The event space in the reserve tasting room (hop bale barn) and the guest rooms are the closest indoor venues for events to Residence 4, being as close as 125 feet from the property line of Residence 4. Amplified music within the baling barn or tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet.

Based on the Noise Element of the General Plan, the Environmental Noise Assessment prepared by Illingworth and Rodkin, dated March 7, 2017, and the Addendum dated August 16, 2017; and the current Site Plan; the following operational noise limitations related to having agricultural promotional events and industry wide events apply to each of the buildings or site features on the project site:

1. At the **Winery building** (*west side* of Westside Rd):
    - The use of amplified music or sound systems is not permitted either indoors or outdoors. This does not restrict the use of small personal music devices or personal computer music devices used by employees of the winery.
    - Acoustical music is not permitted either indoors or outdoors.

2. At the **two tasting room buildings** (*east side* of Westside Rd):
    - The use of amplified music and sound is permitted indoors during daytime hours with doors and windows closed.
    - The use of amplified music and sound is permitted up to 9 P.M. with doors and windows closed.
    - The use of loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music is permitted indoors with doors and windows closed.
    - Amplified music within the two tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet.
    - The use of outdoor music or sound systems is not permitted around the tasting room buildings.

3. At **Picnic Walnut Grove** (*east side* of Westside Rd):
    - The use of outdoor amplified music or sound systems is not permitted in this area.
    - The use of loud instruments (drums, cymbals, horns, and similar instruments) is

not permitted in this area.

- The use of outdoor amplified speech is permitted, but limited to using a sound system mechanically set to limit the volume level to 78 dBA at 50 feet.
- The use of quieter, **non-amplified,** acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations, is permitted outdoors in the Picnic Walnut Grove, during daytime hours, when in compliance with the *Adjusted* Noise Element of the Sonoma County General Plan. Agricultural promotional events shall cease by 9 P.M.
-

4. Outdoor event activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the approved Site Plan.

The applicants have agreed to all the noise mitigation measures and monitoring set forth in the Mitigated Negative Declaration as listed in the Conditions of Approval.

Issue # 7: Water Use and Groundwater Availability

On December 30, 2015, a Project Water Use Analysis was prepared for the proposed project by Adobe Engineering, which concluded that the water demand for the proposed project would be estimated to be 5.4 million gallons or 16.7 acre feet, annually. The winery wastewater will be recycled for irrigation purposes so the annual demand on the water wells would be reduced to 4.4 million gallons or 14.06 acre feet.

On January 5, 2017, a Geologic Report (Report) was prepared for the project by EBA Engineering. The Report explains the property is currently equipped with five water supply wells located along the eastern margin of the property (see Figure 2). These wells are identified as Wells #1 through #5 and are used to provide water for the on-site operations, and to two neighboring property owners to the west.

Wells #1 and #3 will service the proposed development. Well #1 was installed in August 2013 and was constructed with a 50-foot sanitary seal, thereby suitable as a public water supply source for the proposed winery and domestic uses. An 8-hour well capacity test was performed on January 16, 2014 by Petersen Drilling & Pump, Inc. demonstrating a sustainable yield of 45 gallons per minute (GPM) with a resulting drawdown of 1.5 feet. Full recovery following the cessation of pumping was achieved within one hour. A copy of the test results is in Appendix B of the report. Well #3 will be used for landscape irrigation. For Well # 3, pumping test data is not available, but, it has a reported yield of approximately 300 GPM.

The most prominent surface water feature in proximity of the project site is the Russian River, which borders the entire eastern boundary of the property. The Russian River is a managed water system as governed by State Water Resources Control Board (SWRCB). Surface water flow in the Russian River is perennial in nature. As shown on Figure 2 (Appendix A), Wells #1 through #3 range from approximately 250 to 340 feet from the edge of the primary river channel, whereas the separation from Wells # 4 and #5 is approximately 70 feet. The project site is not located within one of the drought priority watersheds or reaches of interest identified in the State Water Resources Control Board's Russian River Tributaries Emergency Regulation. Table 1 below provides a summary of the project water demands based on Adobe's analysis in gallons per year and acre-feet per year measurements.

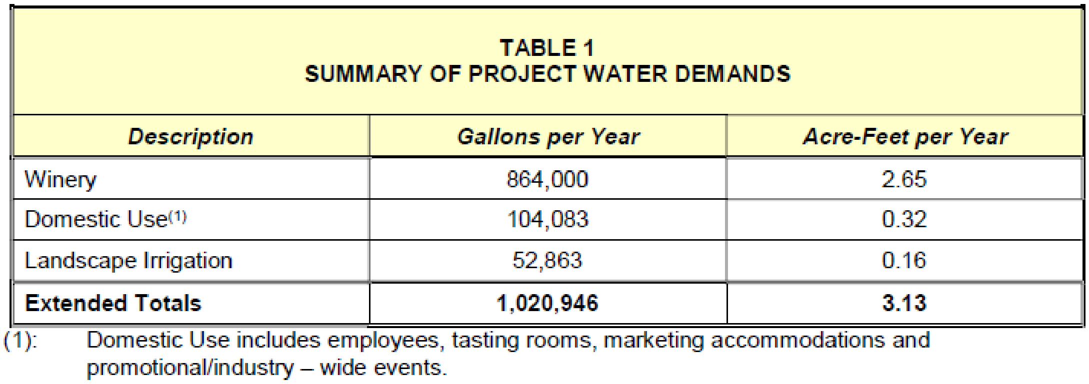

TABLE 1
SUMMARY OF PROJECT WATER DEMANDS

Description	*Gallons per Year*	*Acre-Feet per Year*
Winery	864,000	2.65
Domestic Use(1)	104,083	0.32
Landscape Irrigation	52,863	0.16
Extended Totals	**1,020,946**	**3.13**

(1): Domestic Use includes employees, tasting rooms, marketing accommodations and promotional/industry – wide events.

EBA concludes that the water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the proposed improvements and will not result in negative impacts to local groundwater or surface water resources. This conclusion is based on the following variables:

1) The site is located within a Class 1 water area, which is identified in the Sonoma County General Plan as a major groundwater basin;

2) The underlying aquifer is comprised of alluvial deposits associated with the Russian River, which is a managed water system that ensures perennial flow throughout the year and serves as a continuous source of recharge to the aquifer;

3) Well capacity test results for Well #1 demonstrated a sustainable yield of 45 GPM while only inducing 1.5 feet of drawdown. This is indicative of a highly prolific aquifer system;

4) Based on the yield characteristics of the on-site wells, the wells will only have to pump for less than two hours (Well #1) and six minutes (Well #3) per day to accommodate the peak water flow demands; and

5) The projected radius of influence characteristics induced by the pumping operations will not encroach onto neighboring properties. In addition, the proposed water use is projected to induce no measureable changes in surface water flows in the Russian River.

The EBA report was found acceptable by Permit Sonoma staff. Based on the evidence in the Geologist Report prepared by a Senior Hydrologist with EBA Engineering, the project would not substantially deplete groundwater supplies or interfere substantially with groundwater recharge in the area and not induce measure changes in the surface water flows in the Russian River. No further mitigation is required.

Issue # 8: Biological Resources

A Habitat Assessment, dated June 24, 2014, prepared by Wildlife Research Associates and Jane Valerius Environmental Consulting in response to the proposed project. On May 5, 2017, an addendum letter was provided by Wildlife Research Associates to address protection measures for the Western Pond Turtle. The Habitat Assessment evaluated the potential for occurrence of 58 special-status plant species, and 26 special-status wildlife species.

Surveys for special status plants were conducted on April 28 and May 12, 2014, which covered the flowering period for all of the special status plants that have potential to occur within the project area based on the presence of potential habitat. The assessment concluded that no special-status plants are likely to occur within the proposed project area and none were observed.

In addition, the biologist evaluated the California red-legged frog, Western pond turtle, Foothill yellow-legged frog, Nestling Passerines, Nestling Raptors and roosting bats for their high potential to occur at the project site. The assessment found that several passerine (perching birds) species were observed on site, such as the California towhee and scrub jays, build stick nests in trees and shrubs, while others, such as the white-breasted nuthatch and chestnut backed chickadee, nest in tree cavities. Disturbance during nesting season (February 15 to August 15) may result in potential nest abandonment and mortality of young, which is considered a “take of an individual. The mitigation measures described in the Assessment to avoid impacts to passerines and nesting raptors have been incorporated into the project’s Conditions of Approval.

Relative to mammals, the assessment found that the renovation of buildings may cause direct mortality of roosting bats that use the structures. All existing structures were investigated for the presence of bats. Mitigation measures have been incorporated into the project to restrict grading activities during nest season, pre-construction surveys before any construction activities, delineation of buffer zones around nesting trees, construction fencing, and require direct supervision by a qualified bat biologist during the building conversions of the hop kiln and bale barn to protect bats.

On the east side of the property is a grove of Northern California black walnut trees adjacent to the Russian River referred to as the Picnic Grove Area. The biologist explains that black walnut trees are not truly endemic or native which means they do not qualify as special status. The project proposal explains that outdoor events will be held under the grove on a seasonal basis and picnic tables will be placed in this area. The biologist concludes the proposed uses for this area would not have an adverse impact upon the grove.

The project development will result in the removal of a total of 21 trees as part of the project. This includes 16 native trees: 6 coast live oak trees, 5 valley oaks, 4 cottonwoods and one redwood. The County’s Tree Protection Ordinance requires one hundred percent (100%) replacement of trees or the payment of in-lieu fees. The VOH district under Section 26-67-030 of the Zoning Code requires mitigation for loss of valley oaks one of the following measures:

(1) retaining other valley oaks on the subject property,

(2) planting replacement valley oaks on the subject property or on another site in the county having the geographic, soil, and other conditions necessary to sustain a viable population of valley oaks,

(3) a combination of measures (1) and (2), or

(4) payment of an in-lieu fee, which shall be used exclusively for valley oak planting programs in the county. Such person shall have the sole discretion to determine which mitigation measure to use to mitigate the valley oak loss.

A project applicant has the sole discretion to determine which mitigation measure to use to mitigate the valley oak loss. The applicant intends to add native trees. Mitigations require the final landscape plans will be reviewed by the Sonoma County Landmarks Commission and the Design Review Committee and construction fencing under the drip-line of all trees that will be retained. An arborist shall inspect the location of the construction fencing to insure the root zones of the trees to remain are protected.

Issue # 9: Greenhouse Gas Analysis

On October 28, 2013, a GHG Emissions Analysis was prepared and revised on October 1, 2014 by Illingworth & Rodkin, Inc. The California Emissions Estimator Model, Version 2013.2.2 (CalEEMod) was used to predict operational period emissions. The Year 2015 was used for modeling, as this assumed to be the first full year after construction that the project could be operational. However, the project was not deemed complete for processing until 2017 and annual emissions occurring after 2015 would be lower as vehicle and electricity production emission rates are anticipated to continually decrease.

Annual Operational GHG Emissions in Metric Tons of CO2e

Source	Methodology	Emissions
Mobile	Includes daily traffic generation including truck traffic	181
Mobile	24 Annual Events	22
Area	Includes landscaping from CalEEMod default	<1
Electricity	Based on CalEEMod default adjusted to PG&E emission rates published by CPUC	56
Natural Gas	Based on CalEEMod default	52
Water	Based on CalEEMod default	18
Solid waste	Based on CalEEMod default	20
Wine fermentation	Based on IWCC v1.3 estimate for 60,000 cases	125
Total		**475**

As shown in the table above, the proposed project would have total direct and indirect emissions that are below the GHG operational threshold (1,100 metric tons of CO2e per year) recommended by BAAQMD for new projects. Therefore, the project's greenhouse gas emissions would not significantly contribute to a cumulative impact on global climate change. Further details are discussed in the Mitigated Negative Declaration.

Issue # 10: Neighborhood Compatibility

Early Neighborhood Notification letters we mailed out to property owners within 300-feet of the project site. The project site is located outside of the Dry Creek Valley Citizens Advisor Committee. However, the project was referred to two local public interest groups Westside Community Association and WASA (Westside Association to Save Agriculture), who have concerns with allowing the reuse of the hop kiln buildings for tasting rooms within the scenic corridor, concentration of wineries and tasting rooms with events along Westside Road, and potential traffic and traffic safety impacts caused by the project. Staff has received letters in opposition and letters in support of the proposed project refer to Exhibit Z.

The traffic study prepared for the project was reviewed and found acceptable by the Sonoma County Department of Transportation and Public Works. Conditions of approval require driveway improvements, right of way dedication, and all parking be done on site. The frequency and size of the annual agricultural promotional events are limited and industry wide events will be a total of two days a year. Improvements are required on the west side of the project site to meet sight distance standards. Also on the west side of the project site, agricultural promotional events are limited to a maximum of 30 guests which equates to 12 vehicles or less. Hours of operation for the winery, the tasting rooms, agricultural promotional and industry wide events have been limited and food service has been limited on the project site.

A Traffic Control and Parking Management Plan has been prepared by the applicant to demonstrate queing areas for guest vehicles along the both the winery and tasting rooms driveway approaches and the locations of parking attendants on duty for the duration of events with 100 guests or more.
The Noise assessments prepared for the project analyzed noise impacts at the four closest residences' property lines. With the implementation of the mitigation measures, noise generated from construction, truck movement, winery production activities, and during agricultural promotional events and industry-wide events; at the property lines of the four sensitive receptors (four residences) would be maintained at or below the County NE-2 standards to a level of less than significant.

The Groundwater Availability Study prepared by EBA Engineering concludes that the water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the proposed project and will not result in negative impacts to local groundwater or surface water resources. In addition, the proposed water use is projected to not change surface water flows in the Russian River.

The proposal to convert the two hop kiln buildings to tasting rooms was reviewed in a joint session of the Sonoma County Landmarks Commission and the Design Review Committee. A condition of approval requires the applicant apply for a rezoning to place the HD (Historical District) overlay zone on the east side of the project site. Conditions have been incorporated into the project to require a final joint design review session before the Sonoma County Landmarks Commission and the Sonoma County Design Review Committee to reduce potential impacts from exterior lighting shall be fully shielded, downward cast, and Dark Sky compliant. Visual impacts have been addressed through the Design Review Committee, resulting in landscape screening that is more appropriate for the rural agricultural setting.

The County Fire Marshal reviewed the project and will require that the project comply with Fire Safe Standards, including fire protection methods such as sprinklers in buildings, alarm systems, extinguishers, vegetation management, hazardous materials management, and management of flammable or combustible liquids and gases. At the Fire Marshal's request, the applicant submitted a fire safety evaluation that analyzes the proposed project and recommends building features and operational standards to safely manage distilling operations.

Issue # 10: Environmental Determination

A Mitigated Negative Declaration has been completed in compliance with CEQA and the State CEQA Guidelines. All potential environmental impacts associated with the project will be mitigated to less than significant with the adoption of the mitigation identified in the MND and there is no substantial evidence in the record to support a contrary conclusion. The MND was circulated through the State Clearinghouse. A large public hearing sign was posted at the project site for 30 days, the hearing notice was published in the newspaper, three notices were posted along Westside Road, and public hearing notices were mailed to neighbors within 300-feet of the project site. In accordance with CEQA, the Board of Zoning Adjustment must adopt a mitigation monitoring program to ensure that the mitigation measures adopted herein are implemented. A mitigation monitoring program for the project is incorporated into the

Conditions of Approval. The Mitigation Monitoring program will be implemented in accordance with all applicable requirements of CEQA and State CEQA Guidelines.

STAFF RECOMMENDATION

Staff recommends that the Board of Zoning Adjustments adopt the Mitigated Negative Declaration and approve the request for a Use Permit to construct a new winery building (two story, approx. 32,210 square feet) with a maximum annual case production of 60,000 cases, a new wine cave (approx. 20,720 square feet), a conversion of an existing hop kiln building to a public tasting room open from 10 am to 5 pm, 7 days a week, and a conversion of an existing hop baling barn to a reserve tasting room with a two-guest room marketing accommodation unit on the upper floor. Approve the 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and the participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west of the project site, limit the size of agricultural promotional events to a maximum of 30 guest and not allow industry wide events on this side of the project site. Approve a four- year Use Permit term allowed under Section 26-92-130 of the Zoning Code.

FINDINGS FOR RECOMMENDED ACTION

1. The Board of Zoning Adjustments has considered the Mitigated Negative Declaration prepared to address environmental impacts of the project, together with all comments received during the public review process. Based upon the full record of proceedings (including the Initial Study and all comments received), there is no substantial evidence that the project as approved will have a significant environmental effect because Mitigation Measures have been incorporated into the Project as Conditions of Approval and agreed upon by the project applicant. Changes or alterations have been required of or incorporated into the project through the Conditions of Approval that mitigate or avoid the potentially significant environmental effects of the proposed project. These changes or alterations have been agreed to by the applicant and are subject to the Mitigation Monitoring Program contained in the Conditions of Approval. The Mitigated Negative Declaration has been completed in compliance with State and County CEQA guidelines and reflects the independent judgment and analysis of the County of Sonoma.

2. The project is consistent with the General Plan land use designation of Land Intensive Agriculture, and General Plan objectives to facilitate County agricultural production by allowing agricultural processing facilities and uses, including a winery and wine cave, in the Agricultural Land Use categories (Objectives AR 1.1, AR 1.2 and AR 5.1). Processing of agricultural products of a type grown or produced primarily on site or in the local area and tasting rooms and other temporary, seasonal, or year-round sales and promotion of agricultural products grown or processed in the county, subject to the criteria of General Plan Policies AR-5c, AR-5g, AR-6d, and AR-6f, are uses permitted with a Use Permit in the LIA zoning district. The project is consistent with General Plan Goal AR-5, which states that agricultural support services should be conveniently and accessibly located to the primary agricultural activity in the area because the winery is located in an area producing wine grapes and located within the Russian River Appellation. Tasting rooms, agricultural promotional events and industry-wide events will promote the winery and the wines produced on the site, educate visitors on the making of wines, and increase wine club membership; all as part of the marketing of an agricultural product grown and processed in Sonoma County. These activities are consistent with General Plan Objectives AR-1.1, AR 1.2, AR 5.1 and General Plan Policies AR-1a, AR-4a, AR-5c, AR-5g, AR-6a and AR-6d.

3. The primary potential land use conflicts associated with the proposed agricultural processing and visitor-serving uses, including the winery, tasting rooms, agricultural promotional events, and industry-wide events are aesthetics, exterior lighting, traffic, parking, hydrology and water use, water quality, and noise. Conditions of approval have been incorporated into the project to reduce these and all other potential impacts to a less than significant level. The proposed design plans to convert the two existing hop kiln buildings into tasting rooms received preliminary approval in a joint session of the Sonoma County Landmarks Commission and the Design Review Committee. The two hop kiln buildings are dilapidated and unless they are rehabilitated, the County could lose an important part of the local agricultural heritage. The joint committee also recommended approval of allowing the two hop kiln buildings to remain within the scenic corridor setback along Westside Road and to be kept at their present height, which exceeds the 35-foot height limit in the LIA zoning district. A condition of approval requires that HD (Historical District) zoning be placed on the east side of the project site where the hop kiln buildings are located. The winery building and wine caves on the west side are located outside the 200-foot scenic corridor setback and meet other setback requirements and the 35-foot height limit in the LIA zoning district. All elements of the final site plan and design require final approval by the Design Review Committee and the Landmarks Commission prior to issuance of building permits, to ensure compliance with conditions of approval and mitigation measures related to aesthetics, neighborhood compatibility and preservation of historic and cultural resources. New exterior lighting shall be low mounted, downward casting, and fully shielded to prevent glare. Lighting shall be shut off automatically after closing and security lighting shall be motion-sensor activated.

The Final Traffic Study prepared for the project by the traffic engineer from W-Trans, dated March 10, 2016, was reviewed and accepted by the Sonoma County Department of Transportation and Public Works. An Addendum letter prepared by W-Trans, dated April 21, 2017, explains that collision history for the study area indicates there were two collisions on the study segment in the most recent five-year period according to California Highway Patrol records. The collision rate is below average and according to the traffic engineer of W-Trans, the segment appears to be operating within expected safety parameters. The Conditions of Approval require driveway improvements, right of way dedication, and provision of all parking on site with no parking allowed on Westside Road. The frequency and size of agricultural promotional events are limited, and industry wide events will be two days total. Sight distances along Westside Road from the existing driveway locations were evaluated by W-Trans based on sight distance criteria contained in “A Policy on Geometric Design on Highways and Streets,” published by American Association of State Highways and Transportation Officials (AASHTO). The stopping sight distance criterion for private street intersection was applied by W-Trans for this evaluation. The minimum stopping sight distance needed for an approach speed of 35 mph is 250 feet. Sight distance to the north of the tasting room driveway on the east side, after removal of the existing Westside Farms sign, is more than 400 feet. To the south of the tasting room driveway, the sight distance is more than 400 feet, which is more than adequate for the speed of traffic. The sight distance to the south of the winery driveway on the west side is 250 feet. To the north of the winery driveway, vegetation will be removed and the northwesterly hillside of the project site lowered and terraced to allow a sight distance of 250 feet, in accordance with a letter report, Grading and Cross Section Plan, and a Stopping Sight Distance plan prepared by the applicant’s engineer, Adobe & Associates. Adobe & Associates also prepared a video simulation showing vehicles traveling along the project site with the sight distance improvements completed and sight stopping distance scenario. An Addendum letter from the traffic engineer of W-Trans, dated September 13, 2017, explains that with these improvements to increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway. Also, an existing mirror across Westside Road on the project site will remain and will extend sight lines.

In addition, a mitigation has been incorporated into the project to limit guest capacity for agricultural promotional events on the west side of the project site to a maximum of 30 guests which equals 12 vehicles using the standard ratio of 2.5 persons per vehicle. Industry wide events will not be held on this portion of the project site. A Traffic Control and Parking Management Plan has been prepared by the applicant to demonstrate queing areas for guest vehicles along the two project driveways for the winery and tasting rooms and the locations of parking attendants on duty for the duration of events. A Traffic Study's sensitivity analysis was done to demonstrate that even with events happening at the same time at more than one winery, there would not be traffic conflicts or an overconcentration of use. However, a condition has been added to the Use Permit to require event coordination between the Ramey winery and the two closest wineries (Williams-Seylem and Arista) for larger events of 100 guests or more, with the exception of the two industry wide event days since these event days are set by the Russian River Valley Grape Growers Association. The conditions also prohibit scheduling larger events during large organized bicycle events. Furthermore, a standard condition is included in the Use Permit requiring the applicant to participate in a future event coordination program to be used for wineries.

Based on the results of the Noise Assessment, dated March 2017 and the Noise Addendum dated August 2017 prepared by Illingworth & Rodkin, Inc., due to the distance of sensitive receptors (residences) and consistency with Table NE 2 of the Noise Element of the General Plan, mitigation is required to reduce heavy truck noise and mechanical and bottling noise. By extending a proposed retaining wall on and along the southerly property line next to the winery building, placing solid walls in the area of the mechanical room and restricting nighttime truck use and nighttime bottling, the noise standards of the General Plan can be met. Conditions of approval provide mitigation to reduce potential noise impacts from the different site features and buildings. The use of amplified music and sound, loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music are only permitted indoors in the two tasting room buildings during daytime hours until 9 P.M. with doors and windows closed. Amplified music within the tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet. No outdoor music or use of sound systems is permitted around the tasting room buildings. No amplified music or sound is permitted either indoors or outdoors at the winery building. Outdoor events can only occur within the Picnic Grove Area until 9 P.M. and may use amplified speech limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. In the Picnic Grove Area, the use of quieter, non-amplified, acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations, is permitted outdoors, during daytime hours until 9 P.M. Prior to temporary or final occupancy of the winery building or tasting room buildings, a long term, on-going Noise Management and Monitoring Plan for event activities shall be submitted and cleared by the Permit Sonoma Health Specialist. The Plan shall be implemented for the project operations. The applicants have agreed to the Mitigation Measures and Monitoring program.

The Groundwater Availability Study prepared by EBA Engineering concludes that the water supply characteristics of the underlying aquifer utilized by Wells #1 and #3 are more than adequate to accommodate the water demands associated with the proposed project and will not result in negative impacts to local groundwater or surface water resources. This conclusion is based on the fact that the project site is located within a Class 1 water area, identified in the Sonoma County General Plan as a major groundwater basin, and the underlying aquifer is comprised of alluvial deposits associated with the Russian River, which is a managed water system that ensures perennial flow throughout the year and serves as a continuous source of recharge to the aquifer. The projected radius of influence characteristics induced by the pumping operations will not encroach onto neighboring properties. In addition, the proposed water use is projected to induce no measurable changes in surface water flows in the Russian River.

All project development will be over 800-feet from the Russian River. According to the Plan, there will be a slight increase in runoff for the 2-year 24-hour storm as a result of the proposed improvements. The increase in the runoff in the area of the winery improvements will be captured in the existing pond. The existing pond will have adequate capacity to capture increase. Water treatment will be achieved by allowing the runoff to flow through vegetated buffer areas prior to entering the pond. There will be a slight increase in runoff east of the tasting room improvements that will infiltrate into the existing vegetation prior to exiting the property. The Best Management Practices incorporated into the proposed project, including the vegetated buffer areas, will provide the necessary treatment to meet the County's Low Impact Development (LID) requirements. . These improvements as designed would reduce the potential impacts on water quality to a level of less than significant.

The industrial wastewater from the proposed winery processing will be collected, aerated and stored in a series of treatment tanks to be disposed of via an irrigation system to serve the on-site vineyard. Domestic sewage disposal from the tasting rooms, marketing accommodations, guest and employee restrooms will be disposed of via on-site septic systems adjacent to the tasting room buildings on the east side and near the existing farmhouse on the west side. Both the winery wastewater system and the domestic systems will be designed by an engineer to meet all applicable standards. The property consists of flat gentle sloping terrain with slopes ranging between 5-15 percent. The soil classification of the project site is "Yolo Loam" which is commonly found in the Russian River and Dry Creek Valleys and described as sandy loam, gravelly loam, silt loam, and clay loam surface layers in some areas. Yolo Loam is suitable for domestic and industrial wastewater disposal systems. The Russian River forms the eastern boundary to the property. Both the winery wastewater system and domestic septic systems will be more than 800 feet from the Russian River.

4. The proposal is consistent with the LIA (Land Intensive Agriculture) zoning designation, which allows the following under Section 26-040-020 (i) of the Zoning Ordinance with a Use Permit approval: tasting rooms and other temporary, seasonal or year-round sales and promotion of agricultural products grown or processed in the county. Sonoma County has a long history of permitting agriculture promotional events at wineries as a marketing tool that promotes the wine produced or grown on site. Project conditions of approval prohibit the winery facility from being rented out to third-parties for any activities, including events, weddings or concerts.

5. The project is consistent with the Land Conservation Act because: 1) the project will be supportive of agricultural production on the project and in the local area; 2) the project would not affect the agricultural use on adjacent properties because noise will be controlled and all parking needs can be accommodated on the project site; 3) the project site will continue to be devoted to agricultural use because well over fifty percent of the property is planted in vines; 4) all other uses, including the winery building, tasting rooms, associated parking, landscaping and outdoor activity area, and existing residence are compatible with the agricultural use of the property and are consistent with the Land Conservation Act's Principles of Compatibility and the County's Uniform Rules for Agricultural Preserves. The existing and proposed development will collectively occupy no more than 3.75 acres of the 75 acre site, which meets the threshold to

ensure that they remain incidental to the primary use of the land for agriculture; 5) there will be no removal or displacement of vines; 6) operation of the tasting rooms and hosting agricultural promotional events are consistent with the Land Conservation Act because they are marketing tools to help sell the wine produced on-site and ensure the long term viability of the vineyard and processing facility; 7) no permanent structures solely devoted to the agricultural promotional event activities will be constructed on the site, and none of the events will last more than two consecutive days; 8) the marketing accommodations for two guest rooms are consistent with the local Uniform Rules; and 9) the agricultural promotional events and industry-wide events are annually limited in number, duration, and scope to ensure that the increase in the temporary human population drawn to the site will not hinder or impair agricultural operations.

6. The establishment, maintenance or operation of the use for which application is made will not, under the circumstances of this particular case, be detrimental to the health, safety, peace, comfort and general welfare of persons residing or working in the neighborhood of such use, nor be detrimental or injurious to property and improvements in the neighborhood or the general welfare of the area. As discussed in Finding 2 above, in summary, the particular circumstances in this case are: exterior lighting must be low mounted, downward casting and fully shielded to prevent glare, lighting shall shut off automatically after closing and security lighting shall be motion-sensor activated; Westside Road is adequate to support the volume of traffic associated with the proposed land uses; improvements will be done on the project site to provide adequate northerly sight line on the winery side of the project site, the project will not compromise agricultural capability because the proposed use is related to agriculture and no vines will be removed to accommodate the project; and mitigations have been incorporated into the project to ensure that noise from construction, winery operations, and agricultural promotional event and industry wide event activities shall meet the Daytime Noise limit standards established in the General Plan, with limited hours of event activities, and the conditions placed on the project to control noise and restrict the use of any outdoor amplified music and sound systems. Other project related circumstances include that the project will not create a detrimental concentration of visitor-serving and recreational uses because the traffic generated by the project will not result in road access conflicts; the project will preserve historic resources important to the local agricultural heritage and the rural character of the neighborhood; the project applicant will coordinate agricultural promotional events with the two adjacent wineries to off-set event days and/or event times, and the larger agricultural promotional events with 100 guests or more will not be held at the same time as a large, organized bicycle event. The project site wells will not affect or cause a significant drawdown of neighboring wells in the area or the Russian River; a Traffic Control and Parking Management Plan will be implemented to control guest traffic entering and exiting the project site, and guest vehicle parking and movement on the project site. The use of amplified music or sound and loud musical instruments are only permitted indoors at the tasting room buildings during daytime hours with doors and windows closed. Outdoor events and activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the Site Plan. In the Picnic Walnut Grove area, amplified speech is limited to sound systems mechanically set to a volume level no greater than 78 dBA at 50 feet. The winery's Use Permit is under a one-year review of event activities after commencement of the first event to determine condition compliance.

SONOMA COUNTY BOARD OF ZONING ADJUSTMENTS

Draft Conditions of Approval
Exhibit A

Staff:	Traci Tesconi	**Date:**	September 21, 2017
Applicant:	David and Carla Ramey Trust	**File No.:**	UPE14-0008
Owner:	David and Carla Ramey Trust	**APN:**	110-240-031, -032 and -040
Address:	7097 Westside Road, Healdsburg		

Project Description: Request for a Use Permit to construct a new winery building with a maximum annual case production of 60,000 cases and a new wine cave on the west side of the project site. On the east side of the project site is the conversion of a historic hop kiln building to a public tasting room and conversion of a historic hop bale barn to a reserve tasting room with a two-guest room marketing accommodation on the upper floor. The request also includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests), and participation in industry wide events totaling two event days per year with a maximum of 300 guests on 75 acres. On the west side of the project site, agricultural promotional events would be limited to a maximum of 30 guests and industry wide events will not be held on this side of the project site. A four- year Use Permit term to activate the permit is requested under Section 26-92-130 of the Zoning Code. No weddings, receptions, concerts, or non-agricultural related events are permitted under this Use Permit.

Prior to commencing the use, evidence must be submitted to the file that all of the following non-operational conditions have been met.

1. Within five working days after project approval, the applicant shall pay a mandatory Notice of Determination filing fee of $50.00 (or latest fee in effect at time of payment) for County Clerk processing, and $2,216.25 (or latest fee in effect at time of payment) because a Mitigated Negative Declaration was prepared, for a **total of $2,266.25 made payable to Sonoma County Clerk** and submitted to PRMD. If the required filing fee is not paid for a project, the project will not be operative, vested, or final and any local permits issued for the project will be invalid (Section 711.4(c)(3) of the Fish and Game Code.) NOTE: If the fee is not paid within five days after approval of the project, it will extend time frames for CEQA legal challenges.

BUILDING:

2. The applicant shall apply for and obtain building related permits from the Permit and Resource Management Department (PRMD). The necessary applications appear to be, but may not be limited to, site review, building permit, and grading permit.

3. Prior to initiation of the approved use, the project shall comply with the accessibility requirements set forth in the most recent California Building Code (CBC), as determined by the PRMD Building Division. Such accessibility requirements shall apply to all new construction and remodeling and, where required by the CBC, to retrofitting of the existing structure.

4. The business operator shall post a sign that includes the phone number for a current job manager for the benefit of neighbors. The job manager can be contacted if there are any problems associated with the construction process site such as dust, storm water runoff, hours of operation, equipment noise, traffic issues or lack of compliance with any project conditions of approval.

5. Any wine cave used for guided tours or public/private assembly shall comply with the model California Codes including, but not limited to exiting, fire suppression, lighting and accessibility regulations.

HEALTH:

“The conditions below have been satisfied BY ______________________________ DATE ________

PRIOR TO BUILDING PERMIT AND VESTING THE USE PERMIT:

Water:

6. Prior to building permit issuance the applicant shall have the proposed water supply system evaluated for potential contamination or pollution via backflow by an American Water Works Association certified Cross Connection Control Specialist. The recommendations for cross connection control shall, at a minimum, meet the requirements of the 2013 California Plumbing Code and subsequent editions adopted by Sonoma County. A copy of the report must be submitted to the Project Review Health Specialist for review.

   If the applicant has been required to do a cross-connection control survey by the California Department of Public Health, then a copy of that survey may be submitted to meet this condition within 120 days after occupancy.

7. Prior to building permit issuance and project operation, provide the Project Review Health Specialist with the bacteriological (E. Coli and total coliform) arsenic and nitrate analysis results of a sample of your water tested by a State-certified lab. If the analysis shows contamination, the applicant will be required to treat the well per County requirements and re-test the well. If the contamination cannot be cleared from the well destruction under permit of this Department may be required.

8. Prior to the issuance of building permits the applicant shall provide an engineered design of the water supply system, construct and/or develop the water sources (wells and/or springs), complete the appropriate water quality testing and apply for a water supply permit from the State Drinking Water Program because it has determined that more than 25 persons per day for 60 days within a year will be served by the water system. A copy of the Use Permit application and conditions must be provided to the State Drinking Water Program in order to obtain appropriate raw water source sampling requirements. (This process should begin as soon as possible, as the application, plan check and sampling will take some time.) Prior to the issuance of building permits, copies of the clearance letter must be submitted to the Project Review Health Specialist, or the State Drinking Water Program may e-mail clearance directly to PRMD.

9. The water supply well is required to have a 50-foot annular seal prior to vesting the Use Permit. Annular seals are installed at the time of construction of the water well, and are very difficult (and sometimes impossible) to retro-fit in an economic manner. If documentation of a 50-foot annular seal cannot be obtained, then a new water well may be required.

10. Prior to the issuance of any building permit an Easement is required to be recorded for this project to provide Sonoma County personnel access to any on-site water well serving this project and any required monitoring well to collect water meter readings and groundwater level measurements. Access shall be granted Monday through Friday from 8:00 a.m. to 5:00 p.m. All Easement language is subject to review and approval by PRMD Project Review staff and County Counsel prior to recordation.

11. Prior to building permit issuance, a water well serving this project shall be fitted with a groundwater level measuring tube and port, or electronic groundwater level measuring device. Water meter(s) to measure all groundwater extracted for the permitted use shall be installed on the water system. A Site Plan showing the location of the well with the groundwater level measuring device and the location of the water meter(s) shall be submitted to the PRMD Project Review Health Specialist.

Septic:

12. Prior to building permit issuance and vesting the Use Permit, the applicant shall obtain a permit for the sewage disposal system. The system may require design by a Registered Civil Engineer or Registered Environmental Health Specialist and both soils analysis, percolation and wet weather testing may be required. Wet weather groundwater testing may also be required. The sewage system shall meet peak flow discharge of the wastewater from all sources granted in the Use Permit and any additional sources from the parcel plumbed to the disposal system, and shall include the required reserve area.

This project is approved for agricultural promotional events and shall provide septic system capacity in accordance with PRMD Policy 9-2-31 (available on PRMD's website under Policy and Procedures). The project septic system shall be designed to accommodate 100 % percent of the wastewater flow from an event with 60 guests, in addition to peak wastewater flows from all other sources plumbed to the septic system, including the 15 employees listed in the traffic study.

If a permit for a standard, innovative or experimental sewage disposal system sized to meet all peak flows cannot be issued, then the applicant shall revise the project (fees apply and a hearing may be required) to amend the Use Permit to a reduced size, not to exceed the on-site disposal capabilities of the project site and attendant easements. The Project Review Health Specialist shall receive a final clearance from the Well and Septic Section that all required septic system testing and design elements have been met.

13. Application for wastewater discharge requirements shall be filed by the applicant with the North Coast Regional Water Quality Control Board. Documentation of acceptance of a complete application with no initial objections or concerns by the Regional Water Quality Control Board shall be submitted to the Project Review Health Specialist prior to building, grading for ponds or septic permit issuance (if the Regional Water Board Water Resource Engineer or Environmental Specialist have objections or concerns then the applicant shall obtain Waste Discharge Requirements prior to building permit issuance).
A copy of the Waste Discharge Permit shall be submitted to the Project Review Health Specialist prior to issuance of a Certificate of Occupancy or project operation and vesting the Use Permit.

14. In-room Jacuzzi tubs, hot tubs or any other over-size tub designed for use by two or more persons, or any common area Jacuzzi or hot tub, or Vichy Shower shall not be allowed unless they are specified in the septic system analysis and additional capacity in the septic system is allocated for their use.

15. Toilet facilities shall be provided for patrons and employees prior to vesting the Use Permit. A copy of the Floor Plan showing the location of the restrooms shall be submitted to the Project Review Health Specialist prior to issuance of building permits.

16. Prior to building permit issuance and vesting the Use Permit, sewage disposal system(s) shall be evaluated relative to the proposed wine cave(s). If the floor of the wine cave(s) are lower than any wastewater disposal field or septic tanks, a minimum 50-foot setback from any tanks, sumps, and septic disposal field shall be maintained. The Project Review Health Specialist shall receive a Topographic Map created by a Civil Engineer, Surveyor or REHS depicting the septic system and wine cave components for review.

Consumer Protection:

17. Prior to the issuance of building permits and the start of any on-site construction, plans and specifications for any food facility that provides food or beverage to the public must be submitted to, and approved by the Department of Health Services, Environmental Health & Safety Section. Be advised that major expenses can be triggered relating to the need for commercial exhaust hoods, fire suppression systems, food storage space and walk in refrigerators/freezers dependent upon the scale of food service and the menu items selected. Early consultation with Environmental Health & Safety is recommended. All food service on this site shall be limited to the scale, scope, frequency and any menu limitations specified under the Planning conditions in this Use Permit.

If the project will operate under a Wine Tasting Room Exemption, the exemption requires:

a. Proof of a State Wine Grower License (Alcoholic Beverage Control 02 license).

b. A statement that the wine tasting facility will not offer for sale, food or beverage for onsite consumption (with the exception of the actual wine tasting, prepackaged non-potentially hazardous beverages and crackers).

c. Note that this Use Permit requires that if any of the following items are new or replacement installations they shall be built to CalCode standards: all flooring, counter tops, restrooms and sinks in the food or beverage service area. The goal is to minimize the need to replace new materials when a small change in the menu triggers the need for a Food Facility permit.

Contact the Department of Health Services, Environmental Health & Safety Section at 565-6565 for information and instructions. An e-mail of the approval from the Environmental Health & Safety Section or a copy of the Plan Check Approval shall be presented to the Project Review Health Specialist to verify compliance with requirements of the California Retail Food Code (CalCode).

Solid Waste:

18. Prior to building permit issuance, the applicant shall submit a design for trash enclosures and recycling areas for review and approval by the PRMD Building Plan Check Section. (Fees may apply.) Note that trash trucks must have at least a 32-foot turning radius at the trash enclosure and the dumpster must have 16 feet of overhead clearance.

Noise:

19. Prior to the issuance of building permits, noise mitigations shall be photocopied from the Noise Study Addendum and attached to the building plans submitted for plan check.

20. NOTE ON GRADING, IMPROVEMENT, AND BUILDING PLANS:

Construction activities associated with this project shall be restricted as follows:

a. All internal combustion engines used during construction of this project will be operated with mufflers that meet the requirements of the State Resources Code, and, where applicable, the Vehicle Code. Equipment shall be properly maintained and turned off when not in use.
b. Except for actions taken to prevent an emergency, or to deal with an existing emergency, all construction activities shall be restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays and 9:00 a.m. and 7:00 p.m. on weekends and holidays. If work outside the times specified above becomes necessary, the applicant shall notify the PRMD Project Review Division as soon as practical.
c. There will be no starting up of machines nor equipment prior to 7:00 a.m, Monday through Friday or 9:00 am on weekends and holidays; no delivery of materials or equipment prior to 7:00 a.m nor past 7:00 p.m, Monday through Friday or prior to 9:00 a.m. nor past 7:00 p.m. on weekends and holidays and no servicing of equipment past 7:00 p.m., Monday through Friday, or weekends and holidays. A sign(s) shall be posted on the site regarding the allowable hours of construction, and including the developer's phone number for public contact.
d. Pile driving activities shall be limited to 7:30 a.m. to 7:00 p.m. weekdays only.
e. Construction maintenance, storage and staging areas for construction equipment shall avoid proximity to residential areas to the maximum extent practicable. Stationary construction equipment, such as compressors, mixers, etc., shall be placed away from residential areas and/or provided with acoustical shielding. Quiet construction equipment shall be used when possible.
f. The Permit Holder shall designate a Project Manager with authority to implement the mitigation prior to issuance of each building/grading permit. The Project Manager's phone number shall be conspicuously posted at the construction site. The Project Manager shall determine the cause of noise complaints (e.g. starting too early, faulty muffler, etc.) and shall take prompt action to correct the problem.

Mitigation Monitoring: PRMD staff shall ensure that the note listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing)

Vector Control:

21. A Mosquito and Vector Control Plan acceptable to the Marin-Sonoma Mosquito and Vector Control District (telephone 707-285-2200) shall be submitted prior to bringing the public onto a property with ponds. The Project Review Health Specialist shall receive a copy of the Mosquito and Vector Control Plan and an acceptance letter from the Marin-Sonoma Mosquito and Vector Control District.

PRIOR TO OCCUPANCY:

Noise:

22. Prior to issuance of temporary or final occupancy of the winery building, or vesting the Use Permit, to reduce noise levels from heavy trucks using the truck loading and turn around area, and from bottling noise, the height of the retaining wall on the south side of the loading area shall be extended to 6- feet above existing grade (above the retaining wall as depicted on project plans) and shall consist of masonry materials to act as a noise barrier. This noise barrier/retaining wall with a height of 6-feet above the existing ground level shall extend for 100-feet parallel to the southerly property line boundary of the winery site. The barrier height in relation to building pad elevation must be certified by the project engineer. The sound consultant shall confirm in writing that the design, location, and final construction of the noise barrier/retaining wall complies with the required noise standards as described in the Noise Study Addendum, prepared by Illingworth and Rodkin, dated August 16, 2017. (Refer to Sheets A0.00, A1.02, and A2.04 of the Project Plans, dated August 16, 2017).

    Mitigation Monitoring: Prior to temporary or final occupancy of the winery building or vesting of the Use Permit, a letter from the sound consultant shall be submitted to the Project Review Health Specialist confirming the noise barrier/retaining wall consisting of masonry materials has been located, designed, and constructed in accordance with the recommendations as described in the Noise Study Addendum, prepared by Illingworth and Rodkin, dated August 16, 2017.

23. The southern façade and part of the eastern façade of the Mechanical Equipment Room of the winery building shall be designed and constructed as solid walls with any and all materials recommended by the sound consultant to ensure a 28+ dBA reduction and meet 42dBA nighttime standard per adjusted Table NE-2 (Refer to Sheet A1.12 of the Project Plans, dated August 16, 2017).

    Mitigation Monitoring: Prior to issuance of any building permit for the winery building, project plans shall depict the southern façade and part of the eastern façade of the Mechanical Equipment Room of the winery building shall be installed with solid walls. Prior to temporary of final occupancy of the winery building, a letter from the sound consultant shall be submitted to the Project Planner confirming the solid walls have been constructed in accordance with the recommendations as described in the Noise Study Addendum dated August 16, 2017.

24. Prior to temporary or final occupancy of the winery building or tasting room buildings, a long term, on-going Noise Management and Monitoring Plan for event activities shall be submitted to the PRMD Project Review Health Specialist and found to be acceptable. The plan shall address potential cumulative noise impacts from all events in the area. Implementation of the on-going Noise Management and Monitoring Program shall be required upon operation of the project.

Septic:

25. Prior to building occupancy, all wastewater plumbing shall be connected to a sewage disposal system that has been constructed under permit for the proposed use by the PRMD Well and Septic Section. The Project Review Health Specialist shall receive a final clearance from the

District Specialist that all required septic system testing, design elements, construction inspections and any required operating permits have been met.

Wine Caves and Radon Gas:

26. Prior to completion of wine cave excavation, radon gas exposure shall be tested by an Electret-Passive Environmental Radon Monitor (E-PERM) or other method as approved by PRMD. A copy of the lab report shall be submitted to the Project Review Health Specialist. If radon gas is found to be present in excess of 25 pCi/L, then mitigation methods shall be implemented into the wine cave design.

27. Following construction but prior to wine cave operation, radon gas exposure shall be re-tested by an E-PERM or other method as approved by PRMD. A copy of the lab report shall be submitted to the Project Review Health Specialist. Where radon is found to be in excess of 100 pCi/L in areas where winery workers or guests are exposed, appropriate mitigation measures (such as continuous ventilation during human occupancy) shall be taken to comply with OSHA regulations. Where radon is found to be in excess of 25 pCi/L (25% of the maximum allowable exposure limit), airborne radioactive area signs shall be posted to conform to OSHA regulations.

OPERATIONAL REQUIREMENTS:

Water:

28. The property owner or lease holder shall have the backflow prevention assembly tested by an American Water Works Association certified Backflow Prevention Assembly Tester at the time of installation, repair, or relocation and at least on an annual schedule thereafter.

29. A safe, potable water supply shall be provided and maintained.

30. The location of the wells, and groundwater elevations and quantities of groundwater extracted for this use shall be monitored quarterly and reported to PRMD in January of the following year pursuant to Section WR-2d of the Sonoma County General Plan and County policies. Annual monitoring fees shall be paid at the rate specified in the County Fee Ordinance. If the County determines that groundwater levels are declining in the basin, then the applicant shall submit and implement a Water Conservation Plan, subject to review and approval by PRMD.

31. Required water meters shall be calibrated, and copies of receipts and correction factors shall be submitted to PRMD Project Review staff at least once every five years.

Septic:

32. Maintain the Annual Operating Permit for any package treatment plant, alternative (mound or pressure distribution) or experimental sewage disposal system installed per Sonoma County Code 24-32, and all applicable Waste Discharge Requirements set by the Regional Water Quality Control Board.

33. Use of the on-site wastewater disposal system shall be in accordance with the design and approval of the system.

34. All future sewage disposal system repairs shall be completed in the Designated Reserve areas and shall meet Class I Standards. Alternate reserve areas may be designated if soil evaluation and testing demonstrate that the alternative reserve area meets or exceeds all of the requirements that would have been met by the original reserve area. If wastewater ponds or a package treatment plant are needed, then a modification of the Use Permit may be required, as determined by PRMD.

35. When permitted agricultural promotional events exceed 60 persons, the permit holder shall provide portable toilets meeting the following minimum requirements:

    a. An adequate number of portable toilets shall be provided, but in no case shall the number of portable toilets be less than one toilet per one hundred (100) event employees and visitors per day for day use.

    b. Portable hand washing facilities shall be provided with all portable toilets used for serving visitors or the public. Employees serving food to visitors or the public must have access to permanently plumbed running hot and cold water sinks plumbed to a permitted on-site wastewater treatment system or public sewer.

    c. Portable toilets shall be serviced as needed, but in no case less than once every seven days.

    d. The applicant shall provide an accessible portable restroom on the job site where required by Federal, State or local law, including but not limited to, requirements imposed under OSHA, the Americans with Disabilities Act or Fair Employment and Housing Act.

    e. Portable toilets shall not be brought on-site prior to 48 hours before the special event and shall be promptly serviced and removed within 48 hours after the special event.

    f. If complaints are received by PRMD regarding the number of available portable toilets that PRMD deems a valid complaint, the applicant or current operator of the Use Permit shall increase the number of portable toilets and/or increase the frequency of maintenance of the portable toilets for the remainder of the agricultural promotional event and at future agricultural promotional events as directed by PRMD. The property owner and/or his agent(s) are expected to maintain portable toilets and hand washing units so that:

        i) The holding tank does not leak or overflow.
        ii) Toilet paper is promptly replaced when the dispenser runs out.

        iii) Water, paper towels and soap are promptly replaced when the hand washing units run out.

        iv) The wait to use a portable toilet shall not be so long that people use alternatives to sanitary restroom facilities.

        v) Reliance upon portable toilets shall not create a public nuisance.

36. Portable toilets and portable hand-washing facilities shall be placed and maintained for employees as needed on the work sites, but in no case shall they be serviced less than once per three days when 24 hour operations are conducted, and once per seven days when only daytime operations are conducted. The permitee shall provide an accessible portable restroom on the job site where required by Federal, State or local law, including but not limited to, requirements imposed under OSHA, the Americans with Disabilities Act or Fair Employment and Housing Act.

<u>Consumer Protection:</u>

37. Obtain and maintain all required Food Facility Permits from the Sonoma County Environmental Health Division if required for the wine tasting activities approved in this Use Permit. State law allows for a wine tasting exemption from a Food Facility Permit. However, in order to qualify for the wine tasting exemption State law requires that no food or beverage be sold for on-site consumption except for wine tasting, prepackaged non-potentially hazardous beverages and crackers. No food or beverage shall be sold for off-site consumption except for bottles of wine and prepackaged non-potentially hazardous beverages. Contact the Environmental Health Division at 565-6547 for information and instruction sheet. Note that no food service exceeding the limits specified under the planning conditions shall be authorized on this site by the issuance

of any retail food facility permit, catering permit, mobile food vendor permit or building permit.

38. Obtain and maintain all required Food Industry Permits from the Sonoma County Environmental Health Division prior to serving any food.

Noise:

Noise shall be controlled in accordance with Table NE-2 (or an *adjusted* Table NE-2 with respect to ambient noise as described in General Plan 2020, Policy NE-1c,) as measured at the exterior property line of any affected residential or sensitive land use:

ABLE NE-2: *Adjusted* Maximum Allowable **Exterior Noise** Exposures

Hourly Noise Metric[1], dBA	Daytime[1] (7 a.m. to 10 p.m.)	Nighttime[1] (10 p.m. to 7 a.m.)
L50 (30 minutes in any hour)	45	40
L25 (15 minutes in any hour)	50	45
L08 (4 minutes 48 seconds in any hour)	55	50
L02 (72 seconds in any hour)	60	55

[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level. The L02 is the sound level exceeded 1 minute in any hour.
[2] This table has been adjusted downward by 5dB for simple tone noises, music and speech.

TABLE NE-2: *Adjusted* Maximum Allowable **Special Event** Noise Exposures

Hourly Noise Metric[1], dBA	Daytime[2] (7 a.m. to 10 p.m.)	Nighttime[2] (10 p.m. to 7 a.m.)
L50 (30 minutes in any hour)	45	40
L25 (15 minutes in any hour)	50	45
L08 (4 minutes 48 seconds in any hour)	55	50
L02 (72 seconds in any hour)	60	55

[1] The sound level exceeded n% of the time in any hour. For example, the L50 is the value exceeded 50% of the time or 30 minutes in any hour; this is the median noise level. The L02 is the sound level exceeded 1 minute in any hour.
[2]This table has been adjusted downward by 5 dB due to events with speech and music.

39. No nighttime heavy truck deliveries and/or shipments is permitted, and no nighttime bottling is permitted between the hours of 10 P.M. and 7 A.M.)

Mitigation Monitoring: Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing

40. Based on the Noise Element of the General Plan, the Environmental Noise Assessment prepared by Illingworth and Rodkin, dated March 7, 2017, and the Addendum dated August 16, 2017; and the current Site Plan; the following operational noise limitations apply to each of the buildings or site features on the project site:

1. At the **Winery building** (*west side* of Westside Rd):
   - The use of amplified music or sound systems is not permitted either indoors or outdoors. This does not restrict the use of small personal music devices or personal computer music devices used by employees of the winery.
   - Acoustical music is not permitted either indoors or outdoors.

2. At the **two tasting room buildings** (*east side* of Westside Rd):
   - The use of amplified music and sound is permitted indoors during daytime hours up to 9 P.M., with doors and windows closed.
   - The use of loud instruments (drums, cymbals, horns, and similar instruments) and acoustical music is permitted indoors with doors and windows closed.
   - Amplified music within the two tasting room buildings shall be maintained at normal, not peak amplification levels, such that the L50 level of the amplified music not exceed 72 dBA at a distance of 50 feet.
   - The use of outdoor music or sound systems is not permitted around the tasting room buildings.

3. At **Picnic Walnut Grove** (*east side* of Westside Rd):
   - The use of outdoor amplified music or sound systems is not permitted in this area.
   - The use of loud instruments (drums, cymbals, horns, and similar instruments) is not permitted in this area.
   - The use of outdoor amplified speech is permitted, but limited to using a sound system mechanically set to limit the volume level to 78 dBA at 50 feet.
   - The use of quieter, **non-amplified,** acoustic musical instruments (such as piano, stringed instruments, woodwinds, flute, etc.) not exceeding the level of ordinary conversations of 60 dBA at 3 feet, is permitted outdoors in the Picnic Walnut Grove, during daytime hours only, and when in compliance with the *Adjusted* Noise Element of the Sonoma County General Plan and shall cease by 9 P.M.

4. Outdoor event activities, including outdoor wine tasting, are only permitted at the Picnic Walnut Grove area, as depicted on the approved Site Plan.

<u>Mitigation Monitoring</u>**:** If noise complaints are received from nearby residents, and they appear to be valid complaints in PRMD's opinion, then the applicant shall conduct a Noise Study to determine if the current operations meet noise standards and identify any additional noise Mitigation Measures if necessary. A copy of the Noise Study shall be submitted to the Project Review Health Specialist within sixty days of notification from PRMD that a noise complaint has been received. The owner/operator shall implement any additional Mitigation Measures needed to meet noise standards.

41. Agricultural promotional events shall not consist of weddings, concerts, dances or personal/business parties, but shall consist of wine marketing events, wine pairing meals or events promoting a specific aspect of Sonoma County agriculture.

<u>Mitigation Monitoring</u>: If noise complaints are received from nearby residents, and they appear to be valid complaints in PRMD's opinion, then the applicant shall conduct a Noise Study to determine if the current operations meet noise standards and identify any additional noise Mitigation Measures if necessary. A copy of the Noise Study shall be submitted to the Project Review Health Specialist within sixty days of notification from PRMD that a noise complaint has been received. The owner/operator shall implement any additional Mitigation Measures needed to meet noise standards.

Solid Waste:

42. All garbage and refuse on this site shall accumulate or be stored in non-absorbent, water-tight, vector resistant, durable, easily cleanable, galvanized metal or heavy plastic containers with tight fitting lids. No refuse container shall be filled beyond the capacity to completely close the lid. Garbage and refuse on this site shall accumulate or be stored for no more than seven calendar days, and shall be properly disposed of at a County Transfer Station or County Landfill before the end of the seventh day.

Smoking:

43. Smoking is prohibited at any public event, in any dining area, service area (including entry lines or ticket purchase lines) and in any enclosed area that is a place of employment (Sonoma County Code 32-6). “No Smoking” signs shall be conspicuously posted at the point of entry into every building where smoking is prohibited by Chapter 32 of the Sonoma County Code. The California Health and Safety Code (section 113978) also requires the posting of “No Smoking” signs in all food preparation areas, all retail food storage areas, and all food utensil washing areas. Note that Health and Safety Code section 113781 definition of food includes any beverage intended for human consumption.

44. A “Designated Smoking Area” may be established in unenclosed areas consistent with Sonoma County Code section 32-3. Designated Smoking Areas must be at least 25 feet away from any building or area where smoking is prohibited, must be conspicuously identified by signs as a smoking area, and shall be equipped with ash trays or ash cans.

GRADING AND STORM WATER:

“The conditions below have been satisfied BY ______________________________ DATE ________

45. Grading and/or building permits require review and approval by the Grading & Storm Water Section of the Permit and Resource Management Department prior to issuance. Grading permit applications shall abide by all applicable standards and provisions of the Sonoma County Code and all other relevant laws and regulations.

46. A drainage report for the proposed project shall be prepared by a civil engineer, currently registered in the State of California, be submitted with the grading permit application, and be subject to review and approval by the Grading & Storm Water Section of the Permit and Resource Management Department. The drainage report shall include, at a minimum, a project narrative, on- and off-site hydrology maps, hydrologic calculations, hydraulic calculations, pre- and post-development analysis for all existing and proposed drainage facilities. The drainage report shall abide by and contain all applicable items in the Drainage Report Required Contents (DRN-006) handout.

47. Drainage improvements shall be designed by a civil engineer, currently registered in the State of California, and in accordance with the Sonoma County Water Agency Flood Control Design Criteria. Drainage improvements shall be shown on the grading plans and be submitted to the Grading & Storm Water Section of the Permit and Resource Management Department (PRMD) for review and approval. Drainage improvements shall maintain off-site natural drainage patterns, limit post-development storm water levels and pollutant discharges in compliance with PRMD’s best management practices guide, and shall abide by all applicable standards and provisions of the Sonoma County Code and all other relevant laws and regulations. Drainage improvements shall not adversely affect adjacent properties or drainage systems.

48. The applicant shall provide grading plans, prepared by a civil engineer currently registered in the State of California, which clearly indicate the nature and extent of the work proposed and include all existing and proposed land features, elevations, roads, driveways, buildings, limits of grading,

adequate grading cross sections and drainage facilities such as swales, channels, closed conduits, or drainage structures. The grading plans shall abide by and contain all applicable items from the Grading Permit Required Application Contents (GRD-004) handout.

49. Portions of the proposed project are located within a Special Flood Hazard Area (SFHA) and is affected by flooding from the Russian River. No fill shall be placed within a SFHA, unless an engineering analysis demonstrates that no reduction in the flood storage capacity within the SFHA will result from the fill placement and related improvements. Any land subject to inundation by a SFHA shall be delineated and shown on the grading plans as “SUBJECT TO INUNDATION” in one-inch lettering. The base flood elevation is estimated to be at 79 feet above mean sea level. The lowest floor elevation of any habitable structure must be at 80 feet or higher above mean sea level. The grading plans shall show all elevations based upon the North American Vertical Datum of 1988 (NVGD 88).

50. As part of the grading plans, the applicant shall include an erosion prevention/sediment control plan which clearly shows best management practices to be implemented, limits of disturbed areas, vegetated areas to be preserved, pertinent details, notes, and specifications to prevent damages and minimize adverse impacts to the environment. Tracking of soil or construction debris into the public right-of-way shall be prohibited. Runoff containing concrete waste or by-products shall not be allowed to drain to the storm drain system, waterway(s), or adjacent lands. The erosion prevention/sediment control plan shall abide by and contain all applicable items in the Grading Permit Required Application Contents (GRD-004) handout.

51. Residue or polluted runoff from the crush pad or from production areas/activities shall not be allowed to drain directly to the storm drain system, waterway(s) or adjacent lands. Crush pads and production areas shall be covered or drain directly to a proper waste disposal system. No diversion valves shall be allowed.

52. Runoff from waste receptacles or outside washing areas shall not be allowed to drain directly to the storm drain system, waterway(s) or adjacent lands. Areas used for waste receptacles and outside washing areas shall be covered and be separated from the rest of the project site by grade breaks that prevent storm water run-on. Any surface water flow from a waste receptacle or outside washing area shall not be permitted to enter the storm drain system without receiving appropriate treatment.

53. If the cumulative land disturbance of the project is equal to or greater than one (1) acre, then the project is subject to National Pollutant Discharge Elimination System (NPDES) requirements and must obtain coverage under the State Water Resource Control Board’s General Construction Permit (General Permit). Documentation of coverage under the General Permit must be submitted to the Grading & Storm Water Section of the Permit and Resource Management Department prior to issuance of any grading permit for the proposed project.

TRANSPORTATION AND PUBLIC WORKS:

"The conditions below have been satisfied" BY ________________________ DATE ________

54. The Applicant, his or her personal representatives, and project consultants are advised that the issuance of building permits is subject to the payment of a development fee (Traffic Mitigation Fee) as required by Section 26, Article 98 of the Sonoma County Code. The fee is computed multiplying project Average Daily Traffic (ADT) by the commercial fee in effect at the time of permit issuance. Project ADT is the sum of case production ADT and permitted event ADT.

55. To allow for the smooth and safe movement of passenger vehicles entering and exiting the public road that provides access to the property, entry to Westside Road shall conform to AASHTO recommendations. More specifically, the Applicant shall construct all driveway entrances to meet the following criteria:

a. A minimum paved throat width of 24 feet;

b. Return curves having a pavement radius sufficient to accommodate the wheel path of the largest vehicle entering the site; the design may incorporate paved tapers to insure right-turn movements are completed without the need to enter the opposing traffic lane.

c. The driveway shall enter Westside Road as close to perpendicular as possible, but in no case shall the driveway enter the public road at more than 20 degrees from perpendicular.

d. The entrance shall be surfaced with asphalt concrete a minimum distance of 25 feet from the edge of pavement.

e. The minimum sight distance for vehicles exiting the Project driveways shall be in accordance with the findings of the W-Trans traffic study dated March 10, 2016. Prior to issuance of a building permit for the winery building or wine cave, the Applicant shall implement all stopping sight distance improvements as recommended within the study. Improvement of the westerly driveway entry shall conform to the Winery Entry Grading Plan, dated June 26, 2017, prepared by Adobe Associates, Inc. The minimum finished grade shall be established 0.75 feet below the sightline. A hardscape shall be installed along this line to preserve sight distance. Alternatively, the finished grade shall be established 1.0' below the sightline with a low-growing ground cover planted on the surface. Any trees impacting the sight triangle shall be trimmed and maintained sufficiently above the ground surface to clear sight obstructions.

f. Refer to County of Sonoma Department of Transportation and Public Works Construction Standard Drawing 814, latest revision, for private road and driveway intersection details (http://sonomacounty.ca.gov/TPW/Roads/Services/Road-Data-and-Resources/Construction-Standards/).

g. An Encroachment Permit issued by PRMD shall be obtained prior to constructing any improvements within County road right-of-way.

h. All driveway entrance improvements shall be constructed prior to occupancy of any new structure.

56. Prior to PRMD issuance of temporary or final occupancy on building permits for the winery, the Permit Holder shall obtain necessary permits to install an automated swing or rolling gate at the winery production facility (west) project driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement. NOTE: Placement of temporary barricades in this driveway during events does not satisfy this requirement.

Mitigation Monitoring**:** PRMD shall not issue final or temporary occupancy on the winery or tasting room buildings, until the Permit Holder has obtained all necessary permits and has installed the automated swing or rolling gate at the winery production facility (west) project driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement.

57. To minimize pedestrian crossings at Westside Road, the winery production facility parking lot shall remain closed to the public, with the exception of the 30-person agricultural promotional events. During the 30-person events, a Parking Attendant shall monitor the gate to control vehicle and pedestrian access and egress of the winery facility.

58. All guest parking shall be provided on the tasting room side of the public road. The Department of Transportation and Public Works recommends the installation of an automated swing or rolling

gate at this driveway. Fire and emergency access shall be provided per Fire requirements. The gate shall be setback a minimum distance of 30 feet from the edge of pavement. Placement of temporary barricades in this driveway during events does not satisfy this requirement.

59. The Department of Transportation and Public Works recommends the Applicant update the project overflow parking plan to account for previously identified overflow spaces that are eliminated from the production facility parking lot.

60. Under the approval of an Encroachment permit and prior to issuance of any building permits for the winery building on the west side of the project site by PRMD, modifications to the embankment and vegetation on the Permit Holder’s property on the northerly side of the project’s west side driveway entrance shall be completed to allow a minimum of 250-feet of sight distance needed for the critical approach speed. The plans for the modification to the embankment shall be prepared by a Registered Civil Engineer and shown on the final grading plans for the project. The details of vegetation removal shall be done by a licensed landscape architect and depicted on the final landscape plans. This area shall be maintained with hardscape materials or low lying ground vegetation.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading permit or building permit until the Encroachment permit has been approved to allow the modifications to the embankment and vegetation on the Permit Holder’s property on the northerly side of the project’s west side driveway entrance.

61. The existing Westside Farms sign shall be removed and this area left clear to provide adequate sight distance to the north.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading permit until the Westside Farms sign has been removed.

62. Agricultural promotional events on the west side of the project site are limited to a maximum capacity of 30 guests. No industry wide events shall be held on the west side of the project site.

Mitigation Monitoring: Failure by the Permit Holder to adhere to the 30-guest maximum on the west side of the project site or holding industry-wide events on the west side of the project site is considered a violation of the Use Permit conditions and subject to modification or revocation proceedings.

63. To minimize pedestrian crossings at Westside Road, the winery production facility (west) parking lot shall remain closed to the general public. All guest parking shall be provided on the tasting room side (east) of the public road. (On-going Condition).

Mitigation Monitoring: Failure by the Permit Holder to keep the automated gate closed to the general public is considered a violation of the Use Permit conditions and subject to modification or revocation proceedings. (On-going Condition).

64. Parking of vehicles and/or trucks associated with this winery facility is not permitted along any public or private roadways, or shared vineyard roads.

Mitigation Monitoring: If the Permit and Resource Management Department receives complaints that vehicles and/or trucks associated with this winery facility are being parked along public roadways, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification.

65. For the larger industry-wide events and agricultural promotional events of 100 guests or more, at least two parking attendants shall be on duty to direct traffic and guide the on-site parking of guest vehicles. Parking attendants shall remain on duty throughout the duration of the events.

Mitigation Monitoring: If the Permit and Resource Management Department receives complaints that parking attendants are not on duty during the larger industry-wide events and agricultural promotional events, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification.

FIRE AND EMERGENCY SERVICES:

“The conditions below have been satisfied BY ______________________________ DATE ________

66. As a condition of approval by Sonoma County Fire and Emergency Services and the Local Fire Protection District, this project is subject to the Sonoma County Fire Safety Ordinance (Sonoma County Code). All applications for development approvals must be approved by the Sonoma County Fire Marshal, and shall be accompanied when required by code; plans, engineering calculations, and other data necessary to determine compliance with the provisions of the codes, and shall be in compliance with the following conditions: (Ref. California Code of Regulations Title-14, Division 1.5,Chapter 7, Subchapter 2, Articles 1 – 5, when located in the State Responsibility Area (SRA), & Sonoma County Code Chapter 13, Article IV, Section 13-17 & Sonoma County Code Chapter 13.

67. Prior to any construction, or changes in use of existing building or facilities, applicable Fire Code construction permits required by Chapter 1, Division II of the California Fire Code as adopted and amended by Sonoma County Code shall be obtained from the Sonoma County Fire and Emergency Services Department.
    a. The applicant or owner shall demonstrate all existing use permit conditions are in compliance and recommend changes to address previously approved conditions set by the Fire Code Official.

68. Applicant shall provide evidence to Sonoma County Fire that the fire service features for buildings, structures and premises will comply with the California Fire Code as adopted and amended by Sonoma County Code. Including but not limited to: fire apparatus access roads; access to building openings and roofs; premises identification and road naming; gate access & key boxes; fire protection water supplies; and building features.
    a. Access roads: minimum emergency access is required to provide safe access for emergency fire equipment and civilian evacuation concurrently, and to allow unobstructed traffic circulation during a wildfire or other emergency.
    i. Newly constructed access roads from every building to a public street shall be all-weather hard-surfaced (suitable for use by fire apparatus) right-of-way of an approved width and shall extend to within 150 feet (45 720 mm) of all portions of the exterior walls of the first story of buildings as measured by an approved route around the exterior of the building or,
    ii. Buildings occupying greater than 62,000 sqft in total area on the same lot shall have additional fire apparatus access roads from two separate locations or as approved by the fire code official. See appendix D section D104 the exception is deleted by county amendment.
    iii. Buildings with a average height of greater than 30-0 feet shall meet aerial access per D105
    iv. Buildings meeting the requirements of D106 and D107 shall have additional access roads as approved by the fire code official.
    b. Premises Identification and Road Naming: Approved road names & signs, address numbers, building numbers or approved building identification placed in a position that is plainly legible and visible from the street or road shall be provided.
    c. Gates: Where gates or similar barriers are installed across access roads, an approved lock shall be installed as required by the fire code official.
    d. Water Supply: An approved water supply capable of supplying the required fire flow for fire protection shall be provided to premises.
    e. Building features: Fire sprinklers are required and fire alarm system is required.

69. Applicant shall provide evidence to Sonoma County Fire that applicable Fire Code Operational Permits required by Chapter 1, Division II of the California Fire Code as adopted and amended by Sonoma County Code will be obtained from Sonoma County Fire or the local fire code official.

70. Applicant shall provide a written "Fire Safety and Evacuation Plan" (as required by Section 403 and 404 of the California Fire Code) to Sonoma County Fire for approval. This includes but not limited to medial trained staff, fire watch, crowd managers. This plan shall be re-evaluated at any time when requested in writing by the fire code official.

    a. This shall be also provided for the special events larger than 100 persons.

71. Applicant shall provide evidence to Sonoma County Fire that there are enough parking spaces to support the proposed activity without compromising emergency access. A ratio of two persons per vehicle shall be used in making such calculations.

72. Applicant shall provide to Sonoma County Fire evidence of the type of winery cave that is on the facility – either Type-1, 2, or 3. Type 1 Winery Caves are not permitted for public access. Type-2 winery caves permit limited public access. Unless the winery cave is a Type 2 or 3 winery cave, it shall not be permitted to be used for any events.

    a. Wine caves may be required to be sprinklered and provide a fire alarm system

73. Prior to any business operation, applicant shall provide evidence to Sonoma County Fire that the prevention, control and mitigation of dangerous conditions related to storage, dispensing, use and handling of hazardous materials will be in accordance with Chapter 50 of the California Fire Code as adopted and amended by Sonoma County Code.

    a. Provide CUPA Exemption form
    b. Provide CERS ID Number
    c. Contact Hazmat CUPA Division for inspection clearance 707-565-1152

74. Due to the scope of this project a Fire Services Pre-Construction meeting is required at the applicant's cost with the local fire authority included.

PLANNING:

"The conditions below have been satisfied BY ______________________________ DATE ________

75. This Use Permit is for a winery with a maximum annual production capacity of 60,000 cases with public tasting, participation in two industry-wide events days per year with a maximum of 300 people on site per event and 22 agricultural promotional events per year with includes 22 agricultural promotional events per year with a range of maximum guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests). No weddings, receptions, or concerts are proposed.

    Event size on the west side is limited to a maximum of 30 guests, which equates to 12 vehicles using the standard ratio of 2.5 people per vehicle. Industry-wide events will not be held on this side of the project site. The agricultural promotional events on the west side will be business and marketing related technical tastings.

    The 22 authorized agricultural promotional events must promote and market agricultural products grown or processed in the County and be secondary and incidental to agricultural production. All event activities must be directly related to and promote agricultural products grown or processed on the property.

    Hours of operation:

- Winery operations: Monday through Friday, 7:00 a.m. to 6:00 p.m. Non-Harvest Season
  Monday through Friday, 6:00 a.m. to 10:00 p.m. Harvest Season

- Tasting Room hours: 10:00 a.m. to 5:00 p.m., 7 days a week
- Industry- Wide events: 11:00 a.m. to 5:00 p.m., two event days per year
- Agricultural Promotional Events: Varies. 11 a.m. to 3 p.m., 9 a.m. to 9 p.m., or 6 p.m. to 9 p.m. with all clean up completed by 10:00 p.m.

Any proposed modification, alteration, and/or expansion of the use authorized by this Use Permit shall require the prior review and approval of PRMD or the Board of Zoning Adjustments, as appropriate. Such changes may require a new or modified Use Permit and additional environmental review. The use shall be operated in accordance with the proposal statement and site plan (as amended by this application) located in File No. UPE14-0008.

76. This Use Permit (UPE14-0008) shall supersede all prior Use Permits, upon implementation or when all the pre-operational conditions have been met and this Use Permit is vested.

77. Prior to temporary or final occupancy on either the hop kiln or hop bale barn, the applicant shall submit a complete application and current processing fee for Level 1 zone change to add the HD Combining Zone and Landmarks designation on APN 110-240-031 (east side of Westside Road) prior to issuance of any grading or building permit on that parcel. (Adding the HD overlay zone may be processed as a part of the Comprehensive Planning Division's semi-annual package of zone changes required as conditions of approval.)

<u>Mitigation Monitoring</u>: PRMD shall not allow temporary or final occupancy on either the hop kiln or hop bale barn until the applicant has submitted a complete application and current processing fee for Level 1 zone change to add the HD Combining Zone and Landmarks designation on APN 110-240-031 and-032 (east side of Westside Road).

<u>Noise:</u>

78. NOTE ON GRADING, IMPROVEMENT, AND BUILDING PLANS:

Construction activities associated with this project shall be restricted as follows:

a. All internal combustion engines used during construction of this project will be operated with mufflers that meet the requirements of the State Resources Code, and, where applicable, the Vehicle Code. Equipment shall be properly maintained and turned off when not in use.

b. Except for actions taken to prevent an emergency, or to deal with an existing emergency, all construction activities shall be restricted to the hours of 7:00 a.m. and 7:00 p.m. on weekdays and 9:00 a.m. and 7:00 p.m. on weekends and holidays. If work outside the times specified above becomes necessary, the applicant shall notify the PRMD Project Review Division as soon as practical.

c. There will be no starting up of machines nor equipment prior to 7:00 a.m, Monday through Friday or 9:00 am on weekends and holidays; no delivery of materials or equipment prior to 7:00 a.m nor past 7:00 p.m, Monday through Friday or prior to 9:00 a.m. nor past 7:00 p.m. on weekends and holidays and no servicing of equipment past 7:00 p.m., Monday through Friday, or weekends and holidays. A sign(s) shall be posted on the site regarding the allowable hours of construction, and including the developer's phone number for public contact.

d. Pile driving activities shall be limited to 7:30 a.m. to 7:00 p.m. weekdays only.

e. Construction maintenance, storage and staging areas for construction equipment shall avoid proximity to residential areas to the maximum extent practicable. Stationary construction equipment, such as compressors, mixers, etc., shall be placed away from residential areas and/or provided with acoustical shielding. Quiet construction equipment shall be used when possible.

f. The Permit Holder shall designate a Project Manager with authority to implement the mitigation prior to issuance of each building/grading permit. The Project Manager's phone number shall be conspicuously posted at the construction site. The Project Manager shall determine the cause of noise complaints (e.g. starting too early, faulty muffler, etc.) and shall take prompt action to correct the problem.

Mitigation Monitoring : PRMD staff shall ensure that the note listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. Any noise complaints will be investigated by PRMD staff. If violations are found, PRMD shall seek voluntary compliance from the permit holder and thereafter may initiate an enforcement action and/or revocation or modification proceedings, as appropriate. (Ongoing)

Marketing Accommodations:

79. The two guest room marketing accommodations located on the upper floor of the reserve tasting room (hop bale barn) shall not be used for commercial purposes, including, but not limited to, transient occupancy, vacation rental, hosted vacation rental, or farm stay; and a form of monetary compensation shall not be accepted or exchanged. The marketing accommodations are limited to use by private guests of the winery operator or the winery owners.

Mitigation Monitoring: If the Permit and Resource Management Department receives a complaint that the marketing accommodations are being used for occupancy beyond private guests of the winery operator or the winery owners, PRMD staff shall investigate the complaint and if the condition is violated the Use Permit may be subject to modification or revocation.

Planning Fees:

80. This "At Cost" entitlement is not vested until all permit processing costs and development fees are paid in full. Additionally, no grading or building permits shall be issued until all permit processing costs and development fees are paid in full.

81. Construction of new or expanded non-residential development on each lot shall be subject to Workforce Housing Requirements pursuant to 26-89-045 of the Sonoma County Code.

PRIOR TO BUILDING/GRADING PERMIT PHASE

82. Building permits for the winery building and the tasting room conversions shall be filed simultaneously. The applicant expects the tasting room improvements to be completed sooner than the new construction of the winery building and wine cave. The winery building construction shall begin prior to final occupancy issuance of the tasting rooms building by Permit Sonoma to ensure full operation to ensure the project site does not convert to stand-alone tasting rooms.

83. Prior to building permit issuance for the tasting rooms, the property owners shall execute and record a Right-to-Farm declaration on a form provided by PRMD.

Design Review:

84. Prior to issuance of any grading permit for the winery or tasting room development project, a joint meeting shall be held by the Design Review Committee and Sonoma County Landmarks Commission to review and grant final approval on the site plan, building elevations, circulation, parking, landscaping, fencing, irrigation, signage, and exterior lighting plans to minimize any visual impact through design and landscaping improvements. The applicant shall comply with the recommendations listed on the joint DRC/Landmarks Commission Action Sheet, dated December 2, 2014, and any subsequent recommendations.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue any grading, building, or other development permit until the required plans have been given final approval from the Design Review Committee and Sonoma County Landmarks Commission. PRMD shall not issue temporary or final occupancy for any related building permit until a site inspection of the project site has been conducted by the Project Planner to verify exterior building colors, landscape improvements, signage, and exterior lighting have been installed in accordance with approved plans.

85. Prior to issuance of building permits for the winery and/or tasting room buildings, an exterior lighting plan shall be submitted to the Design Review Committee and Sonoma County Landmarks Commission for a joint-committee review and approval. Exterior lighting is required to be fully shielded from off-site views, and directed downward to prevent "wash out" onto adjacent properties or the night sky. Generally, fixtures should accept sodium vapor lamps and not be located at the periphery of the property. Flood lights are not allowed. The lighting shall be installed in accordance with the approved lighting plan during the construction phase.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue building permits for the winery and/or tasting room buildings until an exterior lighting plan has been reviewed and approved by the Design Review Committee and Sonoma County Landmarks Commission in a joint-committee review, consistent with the above mitigation measures and County standards. The Permit and Resource Management Department shall not sign off temporary or final occupancy on any related Building Permit for the winery or tasting room buildings until a site inspection of the property has been conducted that indicates all lighting improvements have been installed according to the approved plans and conditions. If light and glare complaints are received, the Permit and Resource Management Department shall conduct a site inspection and, if warranted, require that the property be brought into compliance or initiate procedures to revoke the permit.

With implementation of the foregoing mitigation, potential impacts due to new sources of exterior lighting and glare would be reduced to a level of insignificance.

86. Additional measures for lighting impacts include: Lighting plans shall be designed to meet the Lighting Zone (LZ2 for rural) standards from Title 24 effective October 2005.

87. All exterior fixtures shall be limited to lamps (light bulbs not exceeding 100 watts.

88. The project site is subject to the VOH district requirements to mitigate for removal of any Valley Oak tree under Section 26-67-030 of the Zoning Code. Any removal of any large valley oak, or any small valley oaks having a cumulative diameter at breast height greater than sixty inches (60″), on any property within the VOH district, the Permit Holder shall mitigate the resulting valley oak loss by one of the following measures:
    (1) retaining other valley oaks on the subject property,
    (2) planting replacement valley oaks on the subject property or on another site in the county having the geographic, soil, and other conditions necessary to sustain a viable population of valley oaks,
    (3) a combination of measures (1) and (2), or
    (4) payment of an in-lieu fee, which shall be used exclusively for valley oak planting programs in the county.

The Permit Holder has the sole discretion under the VOH district criteria to determine which mitigation measure to use to mitigate the valley oak loss. The requirements for each mitigation measure are specified in the Table under Section 26-67-030 of the Zoning Code. Prior to occupancy of the winery or tasting room building whichever is first, the mitigation measure shall be implemented.

Mitigation Monitoring: Prior to issuance of any grading or building permits, or prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission, an appropriate form of mitigation set forth in the Table under Section 26-67-030 of the Zoning Code shall be incorporated into the project and the projects' final landscape plan. Prior to final occupancy on the winery or tasting room buildings whichever is first, the mitigation measure shall be implemented.

89. NOTE ON GRADING PLANS**:** "In the areas of project development, construction fencing shall be installed under the drip-line of all trees that will be retained. Construction fencing shall be placed to ensure that no construction equipment, fill, staging or storage will impact the root zone of these oaks. An arborist shall inspect the location of the construction fencing to insure the root zones of the trees to remain are protected."

Mitigation Monitoring**:** PRMD shall ensure the note has been placed on all grading plans. Also prior to any grading activities the Permit Holder shall submit to the Project Planner evidence through photographs and an arborist letter that construction fencing has been installed prior to issuance of any related grading or building permits for the project.

90. Native trees to be removed greater than 6" DBH should be replaced by planting same species Plantings of native oaks on site at a ratio of 5 to 1 should be installed within the project landscape plan. It is recommended that new landscape plantings utilize as many native species as possible (shrubs and trees).

Mitigation Monitoring: PRMD shall require any planting of any replacement native oaks trees is done prior to issuance of final occupancy of the winery and tasting room buildings for the project.

91. NOTES ON GRADING, IMPROVEMENT, AND BUILDING PERMIT PLANS:

"The following cultural resource protection measures shall be included in the project:

1. All employees or others on the project site/job site shall be told that no artifacts are to be removed from the area except through authorized procedures. In this usage "artifacts" means any item over fifty (50) years of age. As a general rule artifacts greater than 100 years of age should be considered important unless a specific evaluation determines otherwise.
2. If archaeological or paleontological resources are found, all earthwork in the vicinity of the find shall cease, and PRMD staff shall be notified so that the find can be evaluated by a qualified archaeologist. When contacted, a member of PRMD Project Review staff and project archaeologist shall visit the site to determine the extent of the resource and to develop proper mitigation measures required for the discovery. No further grading in the vicinity of the find shall commence until a mitigation plan is approved and completed subject to the review and approval of the archaeologist and Project Review staff.
3. All employees or others on the job site shall be educated and informed that no artifacts are to be removed from the area except through authorized procedures. It should be made clear to all individuals and companies associated with any project that any artifacts found in the course of work are the property of the Agency. It is not up to the contractor to determine what the agency considers important.

4. Any artifacts that are found on or near the project area are to be turned over to, or brought to the attention of, the inspector, project manager, or the discoverer's immediate supervisor.

5. Whenever any artifact is found or reported, a tag should be included that indicates the following: (A) the identity of the finder and the date of discovery; (B) the identity of the inspector or other responsible individual to whom the artifact is given; (C) a description of the location where the artifact was found, such as the approximate distance and direction to the nearest measured point, identification of a point on the building plans, or other reliable, accurate method; and (D) a description of the artifact that will allow it to be identified if the tag and artifact are separated.

6. The inspector shall carry a small supply of plastic baggies and 3x5 cards for documentation of artifacts. The artifact, if portable, should be transported to a safe location where it can be kept until it can be inspected by an archaeologist. "

Mitigation Monitoring: PRMD staff shall ensure that the notes listed above has been placed on all grading, building, and improvement plans prior to issuance of permits. The Permit Holder shall ensure the above protection measures are implemented during ground disturbing activities and project construction. If violations occur, PRMD shall seek voluntary compliance from the Permit Holder and thereafter may initiate an enforcement action and/or Use Permit revocation or modification proceedings, as appropriate. (Ongoing).

92. The Permit-Holder shall be responsible to ensure:

a. There shall be a qualified archaeological monitor and/or tribal monitor present during all initial ground- disturbing activities into native soils on the project. The tribal monitor shall be, but not limited to, a representative(s) of the Lytton Rancheria. The qualified archaeological monitor and/or tribal monitor shall have the authority to stop and redirect grading activities to evaluate any tribal cultural resources discovered on the property. Such evaluation shall be done in consultation with the appropriate tribe. However, if the archaeologist and tribal monitor determine, based on their knowledge and experience, that there is no further need for monitoring, the monitoring may cease.

b. All building and/or grading permits shall have the following note printed on plan sheets:

"In the event that archaeological resources such as pottery, arrowheads, midden or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. PRMD staff may consult and/or notify the appropriate tribal representative from tribes known to PRMD to have interests in the area. Artifacts associated with prehistoric sites include humanly modified stone, shell, bone or other cultural materials such as charcoal, ash and burned rock indicative of food procurement or processing activities. Prehistoric domestic resources include hearths, firepits, or house floor depressions whereas typical mortuary resources are represented by human skeletal remains. Historic artifacts potentially include all byproducts of human land use greater than 50 years of age including trash pits older than 50 years of age. When contacted, a member of PRMD project Review staff and the archaeologist shall visit the site to determine the extent of the resources and to develop and coordinate proper protection/mitigation measures required for the discovery. PRMD may refer the mitigation/protection plan to designated tribal representatives for review and comment. No work shall commence until a protection/mitigation plan is reviewed and approved by PRMD project Review staff. Mitigations may include avoidance, removal, preservation and/or recordation in accordance with California law. Archeological evaluation and mitigation shall be at the applicant's sole expense.

If human remains are encountered, all work must stop in the immediate vicinity of the discovered remains and PRMD staff, County Coroner and a qualified archaeologist must be notified immediately so that an evaluation can be performed. If the remains are deemed to be Native

American, the Native American Heritage Commission must be contacted by the Coroner so that a “Most Likely Descendant” can be designated and the appropriate provisions of the California Government Code and California Public Resources Code will be followed.”

Mitigation Monitoring: Prior to any ground disturbing or grading activities, the Permit Holder shall be responsible for ensuring a qualified archaeological monitoring and/or tribal monitor is present during all initial ground-disturbing activities into native soils on the project. The PRMD shall not issue any grading or building permit until staff has determined the above note has been placed on the plans. In the event that archaeological resources, tribal cultural resources, or cultural resources are discovered, such as pottery, arrowheads, midden, or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. Failure by the Permit-Holder to comply with these requirements shall be considered a violation of the Use Permit and may result in the modification or revocation proceedings of the said Use Permit.

93. The installation of adequate bicycle racks near the entrance to the proposed public tasting room. Please reference the bicycle parking standards provided on pages 19 and 20 of the 2010 Sonoma County Bicycle and Pedestrian Plan, which can be found via the following link; http://www.sonoma-county.org/prmd/docs/misc/bikeplandraft.pdf. Additional bicycle parking guidelines are also provided by the Association of Pedestrian and Bicycle Professionals (APBP), which can be found online at the following website; http://www.apbp.org/resource/resmgr/publications/bicycle_parking_guidelines.pdf. Please note that the SCBPAC recommends the installation of inverted-U style bicycle racks.

Construction Phase:

94. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS:

“The Permit Holder shall be responsible for controlling dust and debris during all construction phases. Consistent with BAAQMD guidance, the following measures shall be implemented by the permit holder on the project site during the construction period:

a. Water all active construction areas at least twice daily

b. Cover all trucks hauling soil, sand, and other loose materials or require all trucks to maintain at least two feet of freeboard.

c. Pave, apply water three times daily, or apply (non-toxic) soil stabilizers on all unpaved access roads, parking areas and staging areas at construction sites.

d. Sweep daily (preferably with water sweepers) all paved access roads, parking areas and staging areas at construction sites.

e. Hydro-seed or apply (non-toxic) soil stabilizers to inactive construction areas.

f. Enclose, cover, water twice daily or apply (non-toxic) soil binders to exposed stockpiles dirt, sand, etc.

g. Limit traffic speeds on unpaved access roads to 15 mph.

h. Install sandbags or other erosion control measures to prevent silt runoff to public roadways.

i. Replant vegetation and ground cover in disturbed areas as quickly as possible. The Permit Holder shall be responsible for controlling dust and debris during all construction phases."

<u>Mitigation Monitoring</u>: If dust complaints are received, PRMD staff shall conduct an on-site investigation. If it's determined by PRMD staff that complaints are warranted, the Permit Holder shall implement greater or additional dust control measures as determined by PRMD or PRMD may issue a stop work order.

95. Prior to issuance of final occupancy on any related building permit, landscape planting and irrigation shall be installed in accordance with the plans approved by the Design Review Committee and Sonoma County Landmarks Commission. A site inspection by the Project Planner is required and a letter from the Landscape Architect or Contractor must be submitted verifying landscape and irrigation installation is in accordance with approved plans.

<u>Mitigation Monitoring:</u> The Permit and Resource Management Department shall not issue final occupancy on any building related permit until it has been verified by a site inspection by the Project Planner and a letter from the Landscape Architect or Contractor that landscaping and irrigation have been installed in accordance with approved plans.

With the implementation of these mitigation measures, the project effect on scenic vistas and scenic resources would be reduced to a less than significant impact. (Also see item 1.d, below, regarding mitigation for night lighting.)

96. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**:** "To avoid or minimize potential impacts to passerines and raptors that may potentially nest in the trees**,** the following requirements shall be implemented during all stages of project development and construction:

1. Grading or removal of nesting trees should be conducted outside the nesting seasons, which occurs between approximately February 15 and August 15.
2. If grading between August 15 and February 15 is infeasible and groundbreaking must occur within the nesting season, a pre-construction nesting bird (both passerine and raptor) survey of the grasslands and adjacent trees shall be performed by a qualified biologist within 7 days of ground breaking. If no nesting birds are observed no further action is required and grading shall occur within one week of the survey to prevent "take" of individual birds that could begin nesting after the survey.
3. If active bird nests (either passerine and/or raptor) are observed during the pre-construction survey, a disturbance free buffer zone shall be established around the nest trees until the young have fledged, as determined by a qualified biologist.
4. The radius of the required buffer zone can vary depending on species, (i.e., 75-100 feet for passerines and 200-300 feet for raptors), with the dimensions of any required buffer zones to be determined by a qualified biologist in consultation with CDFW.
5. To delineate the buffer zones around a nesting tree, orange construction fencing shall be placed at the specified radius from the base of the tree within which no machinery or workers shall intrude.
6. After protective construction fencing is in place around the buffer zones, there will be no restrictions on grading or construction activities outside the prescribed buffer zones."

<u>Mitigation Monitoring</u>: PRMD staff shall ensure that the above mitigation measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

97. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**:** "To prevent direct mortality of bats that may roost in tree cavities, crevices, exfoliating bark, or foliage of the trees identified on the site, the following requirements shall be implemented during all stages of project development and construction:

1. Potential habitat trees shall be removed only between approximately March 1 or when evening temperatures are above 45° F and rainfall less than ½ " in 24 hours occurs, and April 15, prior to parturition of pups. The next acceptable period is after pups become self-sufficient (September 1 through October 15), or prior to evening temperatures dropping below 45°F and onset of rainfall greater than ½" in 24 hours.

2. Tree removal shall be conducted using a two-stage process over two consecutive days. With this method, small branches and small limbs containing no cavity or crevice or exfoliating bark habitat on habitat trees, as identified by a qualified bat biologist are removed first on day 1, using chainsaws only (no dozers, backhoes, etc.). The following day (Day 2), the remainder of the tree is to be removed. The disturbance caused by chainsaw noise and vibrations, coupled with physical alteration, has the effect of causing colonial bat species to abandon the roost tree after nightly emergence for foraging. Removing the tree the next day prevents re-habitation and re-occupation of the altered tree.

3. Trees containing suitable potential habitat must be trimmed with chainsaws on Day 1 under initial field supervision by a qualified bat expert to ensure that the tree cutters fully understand the process, and avoid incorrectly cutting potential habitat features or trees. After tree cutters have received sufficient instruction.

4. All other vegetation other than trees within the Limit of Work should be removed prior to tree removal, according to the dates provided above. If vegetation must be removed outside those dates, a 50-ft buffer around each habitat tree should be observed to reduce likelihood of abandonment of the roost and young.

5. If non-habitat trees must be removed outside seasonal periods of bat activity as described above, a 50-ft. buffer around each habitat tree shall be observed to reduce likelihood of abandonment of the roost and young.

6. In order to minimize potential take of solitary bats, tree removal should begin with small trees and vegetation on the site, followed by smaller trees in each location where trees are to be removed. Only chainsaws should be used, to create a noise disturbance that will be sufficient to cause roosting individual to abandon the site.

   <u>Mitigation Monitoring</u>**:** PRMD staff shall ensure that the above mitigation measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

98. NOTE ON ALL GRADING, BUILDING, AND IMPROVEMENT PLANS**: "**To prevent direct mortality of bats that may roost in structures on the site, the following requirements shall be implemented during all stages of project development and construction:

A. Large Barn: Under direct supervision of a qualified bat biologist, and only during "seasonal periods of bat activity", conduct partial dismantling of portions of the exterior siding and roofing materials to increase light and airflow into structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this, but the upper loft will also require supplemental lights aimed up from the floor directly beneath the hop cars to cause bats to abandon the roost crevices.

“Seasonal periods of bat activity” are identified as:

1. Between March 1 (or when heavy rains [greater than ½” in 24 hrs.] cease and/or evening temperatures remain above 45F) and April 15 (after which time females will begin to give birth to pups.
2. Between September 1 (after all pups are self-sufficient) and approximately October 15 (or before heavy rains [greater than ½” in 24 hrs.] begin and/or evening temperatures fall below 45F)

B. South Hop Barn: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing materials to increase light and airflow into structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

C. North Hop Barn: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing material to increase light and airflow into the structure, causing bats to abandon the structure of their own volition. All walls will require some removal of siding material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

D. Residence: Under direct supervision of a qualified bat biologist, and only during seasonal periods of bat activity, conduct partial dismantling of portions of exterior siding and roofing materials to increase light and airflow into the structure, causing the bats to abandon the structure of their own volition. All walls and portions of the soffit boards will require some removal of material to accomplish this. Refer to mitigation above to identify the seasonal periods of bat activity.

E. Chicken Shed: No further actions are required to prevent the use by bats or take of roosting bats.

F. Pump/Storage Barn: To reduce the likelihood of this building being used by bats abandoning the larger structures, all doors should be left open during the day and night hours. No further actions are required.”

Mitigation Monitoring **:** PRMD staff shall ensure that the measures are listed on all grading, building and improvement plans, prior to issuance of grading or building permits. Failure by the applicant to comply with the above requirements may result in a revocation or modification of the Use Permit.

99. To protect the potential presence of the western pond turtle and its habitat, the following terms are recommended:

a. Establish and maintain a minimum 50-foot wide setback around the reservoir prior to any ground disturbing activities or project construction. Except for the exclusions stated herein, no activities shall occur within the setback area. Excluded from the setback area required by this term are any features, and access to such features, that are currently in existence and are delineated on the proposed development map. Features are defined as including but not limited to: cropland and planted landscape areas, roads and roadways, bridges, equipment and material storage areas, buildings, structures, fences, wells, pipes, drainage facilities, utility lines and poles, pumps, sumps, and water diversion and storage facilities. Planting and irrigation of riparian vegetation within the setback area is allowed;

b. A qualified biologist shall conduct a pre-construction survey for western pond turtle, in those areas not already paved or graveled. If pond turtle is observed in the proposed construction area, the biologist shall notify CDFW and provide a relocation plan for the individual.

c. In the future, prior to dredging the reservoir, a plan should be created to avoid disturbing the emergent (wetland) vegetation around the reservoir during dredging operations. Approval of any dredging operations should be obtained from the California Department of Fish and Wildlife; a. Establish and maintain a minimum 50-foot wide setback around the reservoir.

Mitigation Monitoring**:** Prior to issuance of any grading permit or any ground disturbing activities, the Permit Holder shall be responsible for establishing a 50-foot wide setback from the existing reservoir. Under the guidance of a qualified biologist, Wildlife Exclusion Fencing (WEF) shall be installed at the edge of the 50-foot setback line and shall remain in place throughout the duration of the project and while construction activities are ongoing. Upon project completion the WEF can be completely removed and the areas returned to original condition or better.

100. A total of 21 trees are proposed for removal as part of the project development, they include: 6 coast live oak trees, 5 valley oaks, 4 cottonwoods and one redwood, all of which are native trees. Prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission and prior to PRMD issuance of any grading or building permit, a certified arborist shall submit a final tree survey and inventory to the Project Planner. The arborist shall provide the replacement value of the trees to be removed and the protection measures during construction activities for the remaining trees. A final landscape plan shall be based on the findings of the arborist report address the replacement of any native specimens.

Mitigation Monitoring: Prior to final design review before a joint meeting with the Design Review Committee/Sonoma County Landmarks Commission and prior to issuance of any grading or building permits, the Project Planner shall review the arborist report and shall review the final design plans to ensure that the replacement trees are incorporated into the final landscape plan.

101. The project site is subject to the VOH district requirements to mitigate for removal of any Valley Oak tree under Section 26-67-030 of the Zoning Code. Any removal of any large valley oak, or any small valley oaks having a cumulative diameter at breast height greater than sixty inches (60″), on any property within the VOH district, the Permit Holder shall mitigate the resulting valley oak loss by one of the following measures:

(1) retaining other valley oaks on the subject property,

(2) planting replacement valley oaks on the subject property or on another site in the county having the geographic, soil, and other conditions necessary to sustain a viable population of valley oaks,

(3) a combination of measures (1) and (2), or

(4) payment of an in-lieu fee, which shall be used exclusively for valley oak planting programs in the county.

The Permit Holder has the sole discretion under the VOH district criteria to determine which mitigation measure to use to mitigate the valley oak loss. The requirements for each mitigation measure are specified in the Table under Section 26-67-030 of the Zoning Code. Prior to occupancy of the winery or tasting room building whichever is first, the mitigation measure shall be implemented.

102. The following dust control measures will be included in the project:

a. Water or dust palliative shall be sprayed on unpaved construction and staging areas during construction as directed by the County.

b. Trucks hauling soil, sand and other loose materials over public roads will cover the loads, or will keep the loads at least two feet below the level of the sides of the container, or will wet the load sufficiently to prevent dust emissions.

c. Paved roads will be swept as needed to remove soil that has been carried onto them from the project site.

d. Water or other dust palliative will be applied to stockpiles of soil as needed to control dust.

PRMD staff shall ensure that the measures are listed on all site alteration, grading, building or improvement plans, prior to issuance of grading or building permits.

103. The applicant shall include these Conditions of Approval on separate sheets of plan sets to be submitted for building and grading permit applications.

104. All grading and development on site shall be done in compliance with the County Tree Protection Ordinance, including protection of trees during construction with a chain link fence at the drip-line, and replacement of damaged or removed trees. The project's grading and landscape plans shall detail all tree protection implementation measures.

PRMD shall not sign off the grading or building permit for issuance until the project grading and landscape construction documents clearly show all tree protection measures (as required in the County Tree Protection Ordinance). PRMD shall not sign off the grading or building permit for occupancy until a site inspection has been conducted, and the applicant has provided written verification from the project's landscape architect or contractor, that the tree protection measures were complied with.

105. All building and/or grading permits shall have the following note printed on plan sheets:
''In the event that archaeological resources such as pottery, arrowheads, midden or culturally modified soil deposits are discovered at any time during grading, scraping or excavation within the property, all work shall be halted in the vicinity of the find and County PRMD - Project Review staff shall be notified and a qualified archaeologist shall be contacted immediately to make an evaluation of the find and report to PRMD. PRMD staff may consult and/or notify the appropriate tribal representative from tribes known to PRMD to have interests in the area. Artifacts associated with prehistoric sites include humanly modified stone, shell, bone or other cultural materials such as charcoal, ash and burned rock indicative of food procurement or processing activities. Prehistoric domestic resources include hearths, firepits, or house floor depressions whereas typical mortuary resources are represented by human skeletal remains. Historic artifacts potentially include all by-products of human land use greater than fifty (50) years of age including trash pits older than fifty (50) years of age. When contacted, a member of PRMD Project Review staff and the archaeologist shall visit the site to determine the extent of the resources and to develop and coordinate proper protection/mitigation measures required for the discovery. PRMD may refer the mitigation/protection plan to designated tribal representatives for review and comment. No work shall commence until a protection/mitigation plan is reviewed and approved by PRMD - Project Review staff. Mitigations may include avoidance, removal, preservation and/or recordation in accordance with California law. Archeological evaluation and mitigation shall be at the applicant's sole expense.

''If human remains are encountered, all work must stop in the immediate vicinity of the discovered remains and PRMD staff, County Coroner and a qualified archaeologist must be notified immediately so that an evaluation can be performed. If the remains are deemed to be Native American, the Native American Heritage Commission must be contacted by the Coroner so that a ''Most Likely Descendant'' can be designated and the appropriate provisions of the California Government Code and California Public Resources Code will be followed.''

Building/grading permits shall not be approved for issuance by Project Review staff until the above notes are printed on the building, grading and improvement plans.

106. A Water Conservation Plan shall be submitted for all buildings and landscaping prior to building permit issuance, subject to PRMD review and approval. The Water Conservation Plan shall include all reasonably feasible measures to reduce water demand to the maximum extent feasible and enhance water resource recovery to maintain sustainable water supplies. Measures that must be evaluated include: installation of low-flow fixtures, best available conservation technologies for all water uses, rainwater and stormwater collection systems and graywater reuse. Landscaping plans must comply with the County Water Efficient Landscape Ordinance. Prior to Building Permit Issuance a Landscape Permit application shall be submitted for all new and rehabilitated landscapes, as required by the Water Efficient Landscape Regulations (Chapter 7D3 of the Sonoma County Building Code). Verification from a qualified irrigation specialist that landscaping plan complies with the County Ordinance shall be provided prior to building permit issuance. The measures in the plan shall be implemented by the applicant and verified by PRMD staff prior to Certificate of Occupancy or operation of the use.

107. Prior to final or temporary occupancy on the winery or tasting room buildings, the Permit Holder shall submit for approval to the Project Planner at PRMD a Traffic and Parking Management Plan prepared by a qualified traffic engineer. In order to provide orderly and efficient movement of vehicles entering the site and to minimize traffic impacts on the public road the Traffic and Parking Management Plan shall include; but not limited to, on-site traffic control measures for all events that exceed 125 guests. Traffic control shall be located off of the public road.

Mitigation Monitoring: The Permit and Resource Management Department shall not issue temporary or final occupancy on any building permit for the winery or tasting room buildings until the any grading permit until a Traffic and Parking Management Plan has been submitted and approved by the Project Planner at PRMD.

USE PERMIT OPERATIONAL REQUIREMENTS

108. If pomace is to be disposed of, it shall be disposed of in a manner that does not create a discharge to surface water, or create nuisance odor conditions, or attract nuisance insects or animals, according to the following priority:

1. Pomace shall be composted and land applied, or land applied and disced into the soil on vineyards or agricultural land owned or controlled by the applicant.

2. Pomace shall be sold, traded or donated to willing soil amendment or composting companies that prepare organic material for use in land application.

3. Pomace shall be transported to any County's composting facility in a fashion that allows the pomace to be used by the County’s composting program.

Pomace shall not be disposed of into the County solid waste landfill by direct burial, except where all possibilities to dispose according to priorities 1 through 3 above have been exhausted. In all cases, care shall be taken to prevent contamination of pomace by petroleum products, heavy metals, pesticides or any other material that renders pomace unsuitable for composting with subsequent land application. Land application, placement of pomace into a composting facility or disposal shall occur within two weeks of the end of wine grape crush.

Mitigation Monitoring: If the Permit and Resource Management Department receives complaints regarding objectionable odors from pomace stockpiling and/or disposal, PRMD staff would investigate the complaint and if the condition is violated the use permit may be subject to modification. With implementation of the foregoing standard condition, project impacts associated with the creation of objectionable odors would be less than significant.

109. The Permit-Holder prior to scheduling any large agricultural promotional events of 100 guests or more on the project site shall coordinate events with the two adjacent winery operators within one-half mile to off-set event days and/or event times, with the exception of the two industry wide event days because these days are set by the Russian River Valley Grape Growers Association. Furthermore, the Permit Holder shall not hold larger agricultural promotional events of 100 guests or more when there is a large bike event sponsored by a bona-fide organization or group (on going).

Mitigation Monitoring: Failure by the Permit Holder to coordinate the larger agricultural promotional events of 100 guests or more on the project site with the two adjacent winery operators within one-half mile or holding a larger agricultural promotional event of 100 guests or more during a large bike event ,as specified above, shall be considered a violation of the Use Permit conditions and subject to modification or revocation proceedings.

110. This permit shall be subject to revocation or modification by the Board of Zoning Adjustments if: (a) the Board finds that there has been noncompliance with any of the conditions or (b) the Board finds that the use for which this permit is hereby granted constitutes a nuisance. Any such revocation shall be preceded by a public hearing noticed and heard pursuant to Section 26-92-120 and 26-92-140 of the Sonoma County Code.

111. This use shall be constructed, maintained, and operated in conformance with all applicable county, state, and federal statutes, ordinances, rules, and regulations. A violation of any applicable statute, ordinance, rule or regulation shall be a violation of the Use Permit, subject to revocation or modification.

112. One-Year Review. A review of event activities under this Use Permit shall be undertaken by the director one year after commencement of the first event to determine compliance with the Conditions of Approval applicable to agricultural promotional events. The director shall give notice of this Use Permit review to all owners of real property within three hundred feet (300′) of the subject site plus any additional property owners who have previously requested notice. The director shall allow at least ten (10) days for comment. If the director determines that there is credible evidence of non-compliance with the Conditions of Approval applicable to events or that event activities constitute a public nuisance, the director shall refer the matter to the Board of Zoning Adjustments for possible revocation or modification of the Use Permit with regard to events. Any such revocation or modification shall be preceded by a public hearing noticed and heard in compliance with the Zoning Code. This Use Permit review shall not include any other aspect of the original Use Permit approval, unless other Conditions of Approval have not been met, violations have occurred, or the use constitutes a public nuisance.

113. The days and hours for special events shall be subject to review and approval by a Special Events Coordinator or similar program established by the County or at the County’s direction.

The applicant shall submit to the County an annual request and schedule for special events for each calendar year including the maximum number of participants, times and dates. The applicant shall contribute, on an annual basis, a fair share towards the cost of establishing and maintaining the program. The program should consider the fairness for long established uses and establish reasonable costs for managing the program.

114. Annual Report. After commencement of event activities, the owner/operator shall submit a report each year to PRMD by January 15th describing the number of agricultural promotional events that occurred during the previous year, the day, date, time, and duration of each event, the number of persons attending each event, the purpose of each event, and any other information required by the director. The annual report shall also include the proposed events for the coming year.

115. Customer and Site Visitor Management. The operator of the establishment shall take all reasonable steps, including contacting law enforcement in a timely manner, to prevent customers

or other persons from engaging in objectionable activities on the premises, parking areas under the control of the operator, and other public or quasi-public areas within site of the premises during business hours.

116. Staff Training. Within 90 days from issuance of a Certificate of Occupancy or if no building permit is required, within 90 days of issuance of the Use Permit, all owners, managers, and employees selling alcoholic beverages at the establishment shall complete a certified training program in responsible methods and skills for selling alcoholic beverages. The certified program shall meet the standards of the California Department of Alcoholic Beverage Control or other certifying/licensing body, which the State may designate. New owners, managers, and employees shall complete the training course within 30 days of the date or ownership or employment and every third year thereafter. Records of successful completion for each owner, manager, and employee shall be maintained on the premises and presented upon request by a representative of the County.

117. Food Service Condition:

A restaurant, café, delicatessen or any other food service offering cooked-to-order food is prohibited. Table service, retail sales of cooked or prepared food or menu items are prohibited in the tasting room, except within the reserve tasting room for food and wine pairings as noted below. The following types of food service are allowed under this permit:

a. Samples or tastes of pre-packaged food, such as crackers, nuts or other palette cleansers, featuring local foods and food products offered in conjunction with wine tasting.

b. Prepared meals or appetizers featuring local foods and food products offered in conjunction with agricultural promotional events, such as wine club parties, and winemaker dinners, and with food and wine pairings as limited below. Such meals/appetizers may be prepared in a food preparation area prior to serving as described on the approved project floor plan. The preparation area can include counter space, a double sink, microwave oven(s), warming oven(s), refrigeration, a stove or range, and an exhaust hood.

c. Retail sales of pre-packaged food not associated with the activities described in a) and b) are allowed in conjunction with wine tasting subject to the following limitations:

    i) Retail sales of pre-packaged food featuring local foods and food products shall be permitted only during tasting room hours as approved by this Use Permit.

    ii) Retail sales of pre-packaged food available for on-site consumption only.

    iii) No indoor seating area or table service is permitted in conjunction with retail sales of pre-packaged food. Outdoor seating areas are permitted for use as outdoor picnic areas.

    iv) No off-site signs advertising retail sales of pre-packaged food is permitted. All project signage shall conform to the Zoning Code Sign Regulations.

Food and Wine Pairing:

Seating in the reserve tasting room shall be limited to15 seats and no more than 15 persons.

Food and wine pairings shall be selected by the winery with no menu options allowed.

Such pairing shall be limited to small appetizer-like portions, are limited to no more than four days per week and no more than twice per day at specified times (11:00 a.m. and 2:00 p.m.) avoiding the lunch hour and shall not be open to drop in guests.

118. Any proposed modification, alteration, and/or expansion of the use authorized by this Use Permit shall require the prior review and approval of PRMD or the Board of Zoning Adjustments, as appropriate. Such changes may require a new or modified Use Permit and additional environmental review.

119. The Director of PRMD is hereby authorized to modify these conditions for minor adjustments to respond to unforeseen field constraints provided that the goals of these conditions can be safely achieved in some other manner. The applicant must submit a written request to PRMD demonstrating that the conditions is infeasible due to specific constraints (e.g. lack of property rights) and shall include a proposed alternative measure or option to meet the goal or purpose of the condition. PRMD shall consult with affected departments and agencies and may require an application for modification of the approved permit. Changes to conditions that may be authorized by PRMD are limited to those items that are not adopted standards or were not adopted as mitigation measures or that were not at issue during the public hearing process. Any modification of the permit conditions shall be documented with an approval letter from PRMD, and shall not affect the original permit approval date or the term for expiration of the permit.

The owner/operator and all successors in interest, shall comply with all applicable provisions of the Sonoma County Code and all other applicable local, state and federal regulations.

Supplemental Application Information

Existing use of property: Vineyard; single-family residence.

Acreage: 75

Existing structures on property: Single family residence; hop kiln; baling barn; two non-residential cottages; barn; pole barn; pump house; construction trailer

Proximity to creeks, waterways and impoundment areas: Adjacent to Russian River

Vegetation on site: 42 acres of vineyard; many oaks, bay laurels, buckeye, willows, black walnut, cottonwood

General topography: Flat, rising to west

Surrounding uses to (Note: An adjoining road is not a use.)

North: Vineyard, tasting room

South: Residence, Russian River

East: Russian River; County park

West: Vineyards, winery

New structures proposed (size, height, type): Existing hop kiln and baling barn footprints increased nominally by required egress stairs; height unchanged. New winery built into west side hill with a 75' x 290' footprint, a front elevation height of 28' and bermed at the rear.

Number of employees: Full time: 15 Part time: 3 Seasonal: 6

Operating days: Tasting 7 days; winery Mon-Fri except 7 days during harvest

Hours of operation: Tasting 11-5; winery 8-5 except 8-10 during harvest.

Number of vehicles per day: Passenger: 87 Trucks: 5

Water source: Three wells on property

Sewage disposal: Leach field; pre-treated drip irrigation.

Provider, if applicable: ______

Provider, if applicable: ______

New noise sources (compressors, power tools, music, etc.): Infrequent music during summer daytime hours; air compressor; wine press operation; bottling line.

Grading proposed: Amount of cut (cu. yds.): 14,600 Amount of fill (cu. yds.): 150 Will more than one acre be disturbed by construction of access roads, site preparation and clearing, fill or excavation, building removal, building construction, equipment staging and maintenance, or other activities? Yes x No ___ If Yes, indicate area of disturbance(acres): 2.8

Identify method of site drainage (sheet flow, storm drain, outflow to creek or ditch, detention area, etc.): Sheet flow and existing ditch flow.

Vegetation to be removed: Almost none; a few trees which will be replaced.

Will proposal require annexation to a district in order to obtain public services: Yes ___ No x

Are there currently any hazardous materials (chemicals, oils, gasoline, etc.) stored, used or processed on this site? Yes x No ___

Will the use, storage, or processing of hazardous materials occur on this site in the future if this project is authorized? Yes x No ___

Fire safety information (existing/proposed water tanks, hydrants, emergency access and turnaround, building materials, etc): ______

Ramey Vineyards, LLC (David and Carla Ramey) - UPE14-0008

County Use Permit Application--Proposal Statement

Dated October 3, 2014

7097 Westside Road, Healdsburg, CA 95448

Proposal Summary

This property, known as Westside Farms, totals 75 acres in one parcel, 42 acres of which are planted to wine grapes. Six and one-half acres lie to the west of Westside Road and currently contain a residence, a barn, a pole barn, two outbuildings and a 3½ acre-foot reservoir. On this side of the property we wish to construct a 60,000-case winery comprised of caves and, in front of the caves, a cut-and-fill, low-profile, two-story winery building, which will not be visible from Westside Road. Grapes will be locally sourced, primarily on-site and from Sonoma County, as well as from bordering counties.

To the east of Westside road, vineyard extends to the tree line adjacent to the Russian River. Near the entrance from Westside Road are a hop kiln and a baling barn, built in 1949, which have fallen into disrepair. We wish to refurbish the hop kiln into a public tasting room, leaving the exterior similar to its current appearance while maintaining the furnace and ductwork in the south side to demonstrate the building's original use. We wish to refurbish the three-story baling barn as a private, invitation-only tasting room: equipment storage on the ground level; a kitchen and meeting area for private tastings and meals on the mid-level; and two bedrooms as marketing accommodations on the top level, with two work stations. These accommodations will be used solely as approved by applicable zoning. The two barns will be connected by an elevated walkway evoking the railcar trestle which during the hop harvest carried dried hops from the kiln to the baling barn. The baling barn will also be refurbished to maintain its current appearance.

Past uses of the property

As far back as the mid-1800s this property has been in agriculture: fruit orchards, hops, and now grapes. Purchased by Ron and Pam Kaiser in 1988, this property was christened Westside Farms and operated as a pumpkin patch and farm store with hay rides starting in 1989 and continuing until 2000. Wine grapes were planted in 1990 and the vineyard currently produces approximately 250 tons of grapes annually. Initially, during the mid-nineties, Westside Farms was open five to six days each week from May through November. After that they were open to the public seven days a week during the month of October. Weekdays were focused on school groups totaling 200-400 children plus parents arriving in school buses and car pools, with an additional 100-200 children arriving after school. Weekends would see 300 to 1000 cars arriving over the course of a day with 400-600 maximum people on site at any one time. At any given moment, 200-300 cars might have been parked on site.

Project Background

Founded in 1996, Ramey Wine Cellars and now Ramey Vineyards, LLC are wholly owned by David and Carla Ramey. The winery is currently housed in two leased buildings in the town of Healdsburg and produces approximately 40,000 cases of wine annually with its own staff and

EXHIBIT C

equipment. The wine has been widely critically acclaimed and is distributed nationally and internationally. David Ramey has been a resident of Sonoma County since 1980 and has worked as winemaker at several Sonoma County wineries, including Simi, Matanzas Creek and Chalk Hill, along with Dominus and Rudd in the Napa Valley. Ramey Wine Cellars employs fifteen people, thirteen of whom live in Sonoma County.

The core team for the development of the project is comprised of architects Lundberg Design of San Francisco; general contractor Earthtone Construction of Sebastopol; civil engineers Adobe Associates of Santa Rosa; and geotechnical engineers Condor Earth Technologies for cave design and RGH Consultants for site work.

Project Details

The tasting room will be open from ten AM to five PM seven days a week, staffed by three employees during peak season with 75 visitors expected on a peak day. Proposed events are detailed in the attached table. The tasting room will be closed to the public on special event days. Depending on the size of the event, they will be held either in the baling barn (private tasting room); in the open space between the hop kiln and the baling barn; under the black walnut grove between the vineyard and the Russian River; or in the winery. Domestic flows will be discharged to septic systems designed adjacent to the tasting room and near the existing farm house. Winery process waste water will be collected, aerated and stored in a series of tanks for discharge by irrigation to the land. A Waste Discharge Permit from the North Coast Water Quality Control Board will be obtained and maintained.

Preliminary Studies

A traffic study has been completed by Whitlock & Weinberger Transportation. Their conclusion is that "A left-turn lane is neither warranted nor recommended on Westside Road at the project's driveway," and that the property's "prior use generated substantially more event traffic during the month of October than the currently proposed project will generate over the course of an entire year."

A noise assessment study was completed by Illingworth & Rodkin. Their conclusion is that amplified music and speech at events should occur only during daytime hours (7:00 a.m. to 10:00 p.m. per the report) within the private tasting (baling) barn or in the picnic (black walnut) grove. This conforms to our plans.

A greenhouse gas emissions analysis was completed by Illingworth & Rodkin. Their conclusion is that total direct and indirect emissions are projected to be only 43% of the operational threshold recommended by BAAQMD for new projects, and that "the project's GHG emissions would *not significantly* contribute to a cumulative impact on global climate change." A potential reduction in emissions may be realized when the approximately 200 tons of Chardonnay grown on the property are no longer trucked elsewhere in Sonoma County (principally Sonoma Valley) but instead are processed on site.

Additionally, we plan on continuing the stewardship of the property's agricultural heritage in a number of ways. We have completed an extensive repair of an eroding bank of the Russian River in the northeast corner of the property, a project completed by BioEngineering Associates. We're working with Master Gardener Janine Weaver of Garden Weaver Designs to select plant materials for landscaping that will be successful on our site. There will be raised bed planters for vegetables and herbs between the hop kiln tasting room and Westside Road as well as elsewhere on the property. We've spoken with Vinny Cilurzo of Russian River Brewing Company about planting a correct selection of hops which we'll then provide for their brewing. We've engaged arborist Frederick Frey of Vintage Tree Care to prune existing trees and cull those that are past their prime. We've engaged Chris Conrad of Bee Conscious to relocate nine bee colonies from the hop kiln walls to hives elsewhere on the property. We collaborated with the Russian River Wild Steelhead Society and CA Fish and Game in installing root wads along our banks of the Russian River to provide fish habitat. And as existing grape contracts expire and we assume control of the vineyard, we'll move to Integrated Pest Management utilizing Biological Control to minimize chemical inputs. We, and our children, plan on being stewards of this property for generations.

In order to meet anticipated Use Permit conditions requiring that permits be obtained from multiple government agencies, we request additional time for the Use Permit filed under UPE14-0008, as allowed under Section 26-92-130 of the Zoning Code. We request a four-year Use Permit with a one-year extension. Thank you.

Napa Sonoma
RAMEY
WINE CELLARS

RECEIVED
JAN 29 2015
PERMIT AND RESOURCE
MANAGEMENT DEPARTMENT
COUNTY OF SONOMA

January 23, 2015

Mr. Tennis Wick
Director, Sonoma County PRMD
2550 Ventura Avenue
Santa Rosa, CA 95403

Dear Director Wick,

I write in response to the letter from Mr. Marc Bommersbach and the Advisory Board of the Westside Community Association dated January 14, 2015. I'd like to briefly correct and clarify a number of misstatements in that letter and their prior letters.

--We propose a winery of 32,000 square feet, cut-and-fill new construction with 21,000 square feet of caves—not the 46,000 square feet *plus* caves claimed. The winery site sits outside the 200 foot scenic corridor easement, and further, will not be visible from Westside Road.

--The three year average (2012-14) grape yield from the 42 acres of vineyard at Westside Farms is 214 tons. At 61 cases per ton, this will produce 13,000 cases of wine, not 7,000 to 9,000. We currently produce, within the city of Healdsburg, 40-45,000 cases of wine from about 700 tons of grapes. Of this, approximately two-thirds come from Sonoma County and one-third from Napa. In the Russian River AVA we have long bought grapes from the Dutton's, the Martinelli's, the Rochioli's and Kent Ritchie. Vineyards sources in 2014 along Westside Road include Campbell-McKinney, Bucher, Rochioli, and our own vineyard. In the Sonoma Coast AVA we buy from the Martinelli's Charles Ranch, the Platt Vineyard and Rodgers Creek Vineyard. "Locally-sourced" has been and is interpreted by the County as grapes from Sonoma County and adjacent counties. This language was inserted into our project statement at the request of our planning staffer, Traci Tesconi. It does not mean that we need to, or intend to, begin importing grapes from multiple adjacent counties; to suggest so is disingenuous. Our single largest product, and the one most likely to grow, is Russian River Chardonnay. It will grow as we begin, in 2017, to use all the Chardonnay from our property—most of which is now trucked to Chateau St. Jean in Kenwood.

--The concern about an increase in traffic overlooks the traffic engineer's conclusion that "the proposed project will have a limited impact on traffic operation along Westside Road, and will actually generate fewer special event trips than the previous use for Westside Farms" [that of pumpkin patch and hay trailer rides].

--The stated calculations of entertainment and administrative space are wildly exaggerated. The winery building itself will have 45,470 square feet (sf) of production space (including 21,000sf of cave), not 27,050, and 7,460sf of administration, production offices and marketing space—exactly 14.09%. The hop kiln and baling barn do not pertain to this calculation. But even looking at lumping together the winery and the two barns, there will be 6,400sf of combined entertainment space in the two barns and the winery, not 11,700, and 4,500sf of offices, not 6,000.

--To characterize our project as an event center and assert that we're proposing a restaurant and resort facility is completely incorrect. We will be entertaining invited guests for a small number of

25 HEALDSBURG AVE., P.O. BOX 788, HEALDSBURG, CA 95448 / T 707.433.0870 / F 707.433.0871
info@rameywine.com / www.rameywine.com

lunches or dinners, mostly indoors. As stated in our proposal, there will be no weddings or concerts and none of the facilities will be available to outside parties. There is no reference to a restaurant on any of our plans. Marketing accommodations *are* allowed on Williamson Act properties [Rule 8.3-B-2 of the Uniform Rules for Agricultural Preserves]; we propose two of these, not two to four. These will be available by invitation for our employees and guests at no charge. The authors want to skip directly from the use of the hop kiln and baling barn for hops to our proposed use as tasting rooms, omitting their recent use for pumpkin patch sales and hay rides, which drew far more people and cars at one time than anything we might possibly envision.

--The fact that the existing barns lie within the 200-foot scenic setback was addressed by the joint Landmarks and Design Review Committees meeting, along with the height regulation [Design Review Committee Record of Action, Dec. 2, 2014, attached]. Without rehabilitation and repurposing to support the current economic use of the property, these two historic buildings will continue to decay and collapse.

--It is impossible to see how the 24 events requested might be construed as 44 event days.

--The authors claim a 19% increase in footprint of the hop kiln when in fact it will be 7.5%; that will be due to the elevator for handicap access so the internal footprint of the kilns will be respected.

We reached out to Nancy Citro of the Westside Community Association and met with a group of them at her home on September 5th, 2013. As the owners of two residences on Westside Road and members of the Association ourselves, we share their concerns about traffic and quality of life on Westside Road. Our property has a long history of commercial agriculture which we intend to continue; our daughter Claire has joined the family business and lives in the yellow farmhouse at Westside Farms with her husband, Ivan. Our son Alan is finishing his final semester of college and has informed us that he, too, intends to join the family business. At the September 5, 2013 meeting, however, we were informed that the steering committee of the Westside Community Association has adopted the position of opposing *any* additional tasting rooms on Westside Road. We went to the meeting hoping for a dialogue with our neighbors but instead ran into preformed opposition. The many false and distorted allegations in these letters might have been cleared up if they had reached out to us, but working together is not their intent: complete blockage of new projects is. We will continue to make ourselves available to our Westside Road neighbors and welcome the opportunity to correct their misconceptions.

Thank you for your consideration.

Sincerely, David Ramey

Subject: RE: Response to Marc Bommersbach letters

Director Wick, et al.,

I apologize, I left out the code reference for the rule pertaining to guest lodging on a Williamson Act parcel: that is Rule 8.3-B-2 of the Uniform Rules for Agricultural Preserves.

Additionally, I'd like to elaborate on our business a bit. My wife Carla and I started our project in 1996 and have grown it so that we now have fifteen full-time employees, thirteen of whom live in Sonoma County. We have done this with no partners or investors, just a line of credit with Silicon Valley Bank, and have grown the business out of cash flow. We bring income into Sonoma County from all fifty states and twenty-three foreign countries. We are currently debt-free, other than the mortgage on Westside Farms, and have never taken any money out of the company, preferring to grow it and invest in land and a winery. It is a multi-generational family business. The claim that we intend to import grapes to our site from every adjacent county is particularly galling. In 2014 we purchased $1,513,004 worth of Sonoma County grapes--yet, we do not have our own permanent home. While we've equipped and staffed our leased facilities in Healdsburg, we've no guarantee that the next generation of lessors will continue to lease to us. If a 75-acre site with 42 acres of grapes is an inappropriate location for a mid-sized family winery, I'm not sure where in Sonoma County to go. If the authors of the letter have their way, Westside Road would turn into a collection of ranchettes which are not reliant on the land for their living. They seem to be attempting an end run around county zoning laws to convert LIA zoning into Rural Residential.

Conversations with other members of the WSCA lead us to believe that the small group of single-issue activists who form the association advisory committee do not speak for the entirety of the membership.

Thank you, again, for your consideration--

David Ramey

Re: Ramey Winery, UPE14-0008

Dear Traci:

This letter follows up my emails to you about the sight distance requirements for the entrance to Westside Road from the property on the west side of the Road (APN 110-240-040). The existing driveway does not meet safe sight distance requirements as outlined in Caltrans Design Manual. Based upon a design speed of 35 mph the stopping site distance required is 250 feet. The attached Exhibits show the grading necessary to provide the required safe sight distance for this existing entrance proposed landscaping to restore that area to provide an enhanced vegetative buffer to onsite improvements. Whether the existing driveway is used for the existing residential use or a new proposed commercial use this driveway is not safe and should be improved. I trust this information will be of assistance as you plan on processing the Use Permit application. Please let me know if you need any additional information.

Very truly,

David Ralston Brown

Addendum No. 2 to the Traffic Study for the Ramey Winery Project

Dear Mr. Ramey;

We have again reviewed the sight distance analysis performed for your project. As stated in the "Traffic Study for the Ramey Winery Project," March 10, 2016, 250 feet of sight distance is needed to the north to provide adequate visibility for oncoming drivers to react to and stop for traffic exiting the project driveway on the westerly side of Westside Road. Upon constructing the improvements proposed, which will increase sight lines to the north to at least 250 feet, sight lines will be adequate to allow safe operation of the driveway under the conditions evaluated. For the east side driveway serving the proposed tasting rooms, the 400-foot sight distance requirement can be met under existing conditions upon removal of the existing Westside Farms sign.

Feel free to contact me if you have any questions or comments. Thank you for allowing us to provide these services.

Sincerely,

Dalene J. Whitlock, PE, PTOE

Ramey Wine Cellars Traffic Control Plan

UPE14-0008

The east side of the road, where the tasting room is, will be open to the public. The west side of the road, where the winery will be located, will not be open to the public. We estimate that the highest number of people invited to the winery for standard business operations at one time would be thirty. Using the County's calculation of 2.5 people per car this translates to a maximum of 12 cars at one time for the 30 guest agricultural promotional event. Cased goods storage is off site and employee operations are to remain separate with email, fax etc. used to avoid crossings. The driveways are offset requiring a right turn followed by a left turn signal before turning into the eastside driveway.

Both sides of the road are planned so that no cars will be stopping in the driveway immediately upon entry so as to avoid queueing on Westside Road. The property was previously operated as a pumpkin patch, with upwards of 1,000 visitors and 600 cars, with horses crossing the road throughout the month of October. The currently proposed uses represent substantially lower volumes than were historically experienced.

With that in mind, we have created a list of concrete plans as well as additional protocols that we will implement as needed so as to further the safety of the project.

Plans to be put into effect

- Coordinate events with winery neighbors and bicycle groups to ensure that events will neither begin nor end at two sites along Westside Road simultaneously
- Widen and flare the entry driveways to allow vehicles to enter more easily and quickly, thereby eliminating potential for vehicles to queue on Westside Road
- During events station traffic control personnel well away from Westside Road to contain any queuing that might occasionally occur on-site and not on the roadway.
- Complete grading and removal of shrubbery to ensure clear lines of sight from the driveways along Westside Road.
- A temporary sign will be placed on the east side of the road saying "Ramey Wine Cellars Tasting Room" printed on both sides with arrows pointing east so that there is no confusion as to which driveway to turn into.
- Signs saying "pull forward" could be placed about 100 feet in from the road to ensure cars do not stop immediately after pulling into the driveway.
- A gate will be the west side of the road to ensure no public access.
- Employees will be trained to avoid crossing the road unless absolutely necessary and to ensure guests never cross the road.
- A sign will be placed by the gate on the west side of the property stating 'not open to the public.
- Signs will be placed on the site designating the primary parking attendants' station during all events on the east side.
- The gate on the east side will remain open for public hours and all events to get guest vehicles on site to the designated parking areas in a timely manner. On the west side, the gate will open for the smaller 'agricultural promotional' events, with traffic control staff on duty for the duration of the event to monitor the gate and control access and egress of vehicles on the site.

MEMO

DATE: **August 22, 2017**

TO: **Traci Tesconi, Supervising Planner**

FROM: **Becky VerMeer, Environmental Health Specialist-Project Review**

SUBJECT: **Truck Sizes as defined by the Transportation's Federal Highway Administration**

Trucks as defined by (empty) weight in categories of Light, Medium and Heavy and by the Dept. of Transportation's Federal Highway Administration (FHWA) classifications:

Light Trucks: Passenger cars and small trucks

Up to 14,000 lbs

FHWA classes 1-3

5 lug wheel hub (depending on the year of the vehicle, more hubs =heavier duty suspension and load capacity)

Medium Trucks: Box truck, Van, Flatbed truck, Fire truck (may be Heavy Trucks too), RV, Ford F-650 Medium Duty, Delivery truck, Cutaway van chassis, Bottler

14,001 lbs -26,000 lbs.

FHWA classes 4-6

6-8 lug wheel hubs

Heavy Trucks:

26,001- 33,000 lbs. Garbage trucks, Dump trucks, Tank Truck, Tractor Unit, Mobile Crane, Cement Mixer Truck, Ford F-750, Semi trucks, 18 wheelers,

FHWA classes 7-8

Requires a Class B Commercial Driver's License for non-combo vehicles or Class A Commercial Driver License for combo vehicles (tractor-trailers)

Typically have 3 or more axles

Super Heavy Trucks:

- 33,000 lbs+
- Requires escorts and special permits for Highway use
- Usually for Off Highway vocations like logging, mining, etc.

Re: Application of David and Carla Ramey, # UPE14-0008 ("Ramey project" or "project")
Westside Farms

Dear Ms. Tesconi:

My wife, Carol and I have lived in our home on the Lazy W Ranch, at 7330 Westside Road, Healdsburg, since 1977. Carol has resided full-time on the Lazy W since the mid 1960's, and her family has owned the Ranch since 1944.

Attached is a photo depicting the view we have from our yard of the Ramey's vineyards, their hop kiln buildings and the former Westside Farms Store.

We cannot attend the public hearing on September 21, 2017, due to a long-scheduled family gathering away from Sonoma County that week.

Carol and I strongly support the Ramey project.

The Rameys have been, and will continue to be our good neighbors. We place a high value on having friendships with all of our neighbors on Westside Road. We feel comfort in being able to contact any neighbors to discuss common interests, and to offer or ask for help. We feel strongly that communication is the best way to solve issues with neighbors, instead drawing battle lines and filing complaints with code enforcement.

The Rameys were good enough to invite the entire Lazy W Ranch family to the Ramey home at Westside Farms, where every detail of the Ramey project was shown to us. Of course, we had many questions about the project, because our homes and daily activities will be in close proximity to the project activities, and there will be impacts. I was very attentive in listening and learning about the project. Carol and I give our enthusiastic support for the project with full knowledge of what will happen when it is approved and implemented.

We know that the plans call for a 32,210 sq. ft. winery, a tasting room and a wine cave. We are very happy to learn that the project calls for the restoration and good use of the historic hop kiln buildings. Those structures have deteriorated with the passage of time, and are on the verge of collapse. When the structures are restored and in use, all persons traveling on Westside Road will benefit. The restored buildings will be captivating.

Carol and I lived on Westside Road when it was less traveled. While we may fondly remember the past, we do not live there. In the long ago it was rare to see a bicycle, and the sight of someone running on the side of the road meant that something terrible had happened.

We have the benefit of knowing from our experiences with our neighboring wineries, that you learn to live with change, and that when you have good people running the wineries, care is taken to minimize traffic, noise and other impacts. We value our good relations with the people at William Selyem, Arista, Gracianna, Thomas George Estates, Porter Creek, Rochioli, Landmark and others.

We have been members of the Westside Community Association and the Wohler Bridge Association. Some of our neighbors who are miles away from Westside Farms, and will not have direct impacts from the Ramey project, raise objections, citing traffic, noise, etc. as factors supporting a denial of the project. The argument that there are already too many wineries and tasting rooms is invalid. There is no end to the "there are already too many" argument. Honest residents on Westside Road, know that the only significant cause of slow traffic is the hundreds (and on some days, thousands) of cyclists. There are already too many tractors, trucks, wind machines, tourists, delivery trucks, workers, joggers, races, homes, people, etc......This will always be the case, until we decide to live in the present. Driving slower on the road has benefits.

The Ramey project will keep the beautiful views of vineyards and the historic hop kilns. The use of the land will remain agricultural. We are happy to hear that the Rameys hope to add additional agricultural activities like growing hops, vegetables and using sheep for organic weed control. These are activities we hope to engage on the Lazy W.

More than any other factor, we know the Rameys will operate their project with empathic awareness of all impacts their activities will have on their neighbors. For all of these reasons, we respectfully ask that the Ramey project be approved.

Sincerely,

Leonard C. Curry
photo attached

Subject: Re: Ramey

Dear Traci,

Here is the email I have been trying to send:

I am writing to endorse the construction as proposed by Dave Ramey of a winery on his property neighboring that of Williams Selyem on Westside Road. Dave and I have discussed each of our plans as they have evolved in a very collaborative and neighborly way. We are happy to endorse his proposal wholeheartedly.

The key points to us are:

1. His plan will refurbish the hop kiln and bailing barn, historic properties, which have been deteriorating for many years. They are the only major eyesore on Westside Road and repurposing them as Dave suggests will be a great improvement for the area including us as they are practically at our entrance. We have visitors who comment on why they are allowed to deteriorate.

2. As you know, Dave and his family run one of the most prestigious wineries in the County and own a high quality Chardonnay vineyard right next to these structures.

3. We are happy that both Claire and Alan have joined him to create a second generation of family ownership of this important Sonoma Winery. We too are family owned and such ownership guarantees a special concern for the area.

Keeping viable agricultural businesses on Ag-zoned land is an important bulkwark against creeping residential development, which has been occurring too often in the County. Once precious Ag land is lost, it is gone forever and changes the whole tone and feel of the County.

For all these reasons, we urge that a use permit be granted so that this winery can be constructed and the hop kiln historic properties be renovated to improve the viewshed of Westside Road for all who us it.

With kind regards,

John S. Dyson

SONOMA COUNTY FARM BUREAU
Affiliated with California Farm Bureau Federation and American Farm Bureau Federation

March 10, 2016

Tennis Wick
Sonoma County Permit and Resources Department
550 Ventura Ave
Santa Rosa, CA 95403

Dear Mr. Wick,

Sonoma County Farm Bureau has learned of a project that aligns with our objective of preserving agriculture in Sonoma County. We support David and Carla Ramey and their proposed winery at the old Westside Farms on Westside Road. Ramey Wine Cellars is one of the premier wineries of Sonoma County.

Thirty-five years ago David came to Sonoma County to work with Zelma Long at Simi Winery. He then became winemaker a Matanzas Creek and subsequently Chalk Hill Winery helping build both businesses to the status they have today. In 1996, he and Carla started their wine brand, Ramey Wine Cellars, producing world class premium wines. Currently, they lease two production facilities in Healdsburg with no guarantees of permanency.

This project is important to Sonoma County and the Russian River Valley AVA. Considering the Ramey's style, class and integrity, we can envision their improvement of this property along Westside Road by upgrading the hop barn and baling barn that are both presently in decline. Their proposed winery would be built into the hillside and largely unseen. They would work within the planning process to build a winery of taste.

Please consider their proposal. The Rameys are not producers coming in from out of the area. They have long term roots in Sonoma County. They recently integrated their daughter into the business and have plans for their son as they intend for this to be a family legacy.

Thank you for your consideration.

Sincerely,

John Azevedo

Santa Rosa, CA 95401

Mr. Wick:

My family has been on Westside Road for almost 80 years and we have seen many changes. Some are for the better and some not. Not long ago, all the neighbors knew each other and were friendly and shared a common interest of the love of their land. Now, it seems like only location and profit are important. What was once a quiet country road has now become a very popular destination for Sonoma County tourists. We need to be careful not to commercialize this road to a point of ruining the rural character..

The Ramey project is different. This family is dedicated to producing fine wine and has quite a track record to prove it. The property they intend to develop into a medium sized vineyard and winery are a perfect fit for them and for Westside Road. They are serious and that is what we need on this road. The restoration and re purposing of the hop kilns on the property is a welcomed improvement. The original owners, the Litton family were good friends with my grandparents and we look forward to having the Ramey family as our neighbor.

As you may know, we have been concerned about the events of the wineries. We believe that a producing winery should be able to promote their wines with a tasting room, a few industry events, and a few private events for their customers. However, the number of events should be limited and should end well before sunset. Weddings are not agricultural in any way and should not be allowed. The safety of the public as well as the residents of Westside Road should come first. The quality of life for those of us that actually live on our farms should not be impacted.

We support David Ramey's common sense approach to this project. He has assured me that there will be a few winery related events with no weddings, concerts, and rental of their facilities to an outside party. Most events will be limited to private invitation only lunches indoors and occasionally outside picnics.

The Ramey project is a fine example of the type of winery that fits our road. The quality of their product comes first and they do not need gimmicks to sell their wine.

If you have any questions, please contact me.

Sincerely,

Tom Rochioli

April 12, 2015

Mr. Tennis Wick
Sonoma County PRMD
25580 Ventura Avenue
Santa Rosa, California, 95403

Dear Director Wick,

I am a lifelong resident of Westside Road in Healdsburg and my family has been farming on the same land in the Russian River Valley since 1958. I operate a diversified farming operation on our Westside property with 40 acres of premium wine grapes and an organic dairy farm. Additionally, my wife and I have our own wine brand from grapes both grown on the family vineyard and purchased from other local growers. Diane and I are also members of the Westside Community Association.

I am writing in support of David and Carla Ramey's proposed winery project on Westside Road. I believe this project will help protect vital farmland in the area, preserve a wonderful piece of our Sonoma County's agricultural history, and provide critical local agriculture processing for many farmers in Sonoma County.

The Ramey's project fits within the land use designation of the property. It will repurpose the hop barns, which would have most likely been demolished if someone else had purchased the vineyard land. Their foresight and vision will preserve a part of Sonoma County's rich agricultural heritage and protect the land as a viable producing agricultural property.

As a dairy farmer and grape grower, I understand how important local processing is to perishable agricultural crops. One of the biggest challenges of dairy farming is the lack of competition for our products via local processing. With wine grapes, we are blessed with a variety of local wineries that can purchase and process our crop. This also keeps our business carbon footprint to a minimum by selling to a winery a mile or two down the road.

The farmers I have talked to in the Westside Road area fully support the Ramey winery project. Please don't allow a vocal minority of non-agricultural residents to dictate the use of our agricultural lands and its rural heritage.

Sincerely,

John Bucher

RE: Request for Use Permit to allow conversion of hop kiln and baling barn to tasting rooms including two marketing accommodations rooms

Dear ~~Ms. Grosch~~, Ms. Tesconi

This letter is intended to be applied to the public record as a positive declaration in favor of the use permit under consideration by the Permit & Resource Management Department in relation to the Ramey Cellars notice of waiver.

We are aware of the intent to use and acknowledge that the impacts, if any, will be minimal and concur with staff that any land use alteration is consistent with the neighborhood, land use zoning and county intent.

As neighbors we are familiar with the wine business and its need to offer the complete "Sonoma County" experience since healthy brands are critical to a viable and positive economic environment. We will be pleased to see the approval of this use permit and the restoration of a landmark that deserves reminding our community of its storied past. We are convinced the Ramey's will do a first-class job.

Best regards,

Lisa & Trini

PERMIT AND RESOURCE
MANAGEMENT DEPARTMENT
COUNTY OF SONOMA

April 5, 2016

Traci Tesconi
Supervising Planner, PRMD
2550 Ventura Avenue
Santa Rosa, CA 95403

Dear Traci:

When I recently inquired at Ramey Cellars why I had not yet seen any construction at their Westside Farms site, I was shocked to learn that there have been delays upon delays due to a few neighbors who have taken it upon themselves to speak for those of us who have been here the longest, and for those of us who chose to be here precisely for the inimitable agricultural advantages which this part of Sonoma County has enjoyed historically since the early 1900's, and even before.

As you well know, I have had my share of battles with outsiders who have decided to become neighbors and then try to write their own rules! I shall not recite the list herein, for you know who they are!

I would like to weigh in on what I feel is a grave injustice in delaying David and Carla Ramey's intention and proposal to establish their eponymous Winery on the former site of Westside Farms. Having been a Westside Road resident for 40 years, with a sizeable agricultural property here, I cannot imagine having a more wonderful agricultural neighbor along this highly-prized agricultural Sonoma County road.

When I heard about the above situation, I went out to the Ramey's site to see for myself what could possibly be an issue *for there to be any serious discussion in opposition to what I recognized would only be a great addition to our agricultural neighborhood.*

I could not even find the winery site to the west side of the road! It was only after I had gone well past the site that I finally turned around and proceeded back north up Westside Road. I barely saw the yellow house tucked off to the west. Once in the driveway, I was shown where the proposed winery will be located and how it will be constructed. *There is no way that this structure would be intrusive to our Westside Road corridor or environment.* The Ramey's seem to have self-mitigated any concerns, even, in my opinion, though they should be able to have placed it closer to the road if they had so desired. It is their property; it is an agricultural structure; and it is totally in line with the other many recently constructed wineries along Westside Road, *one of which was heretofore permitted almost on the road*! Even that one, at which even I was appalled as it was going up, is now a nice addition to our agricultural neighborhood!

T 707-433-3790 • mmeq@att.net • C 707-321-2440

I have reviewed the plans for the Ramey's renovation of the Hop Kilns and the Bailing Barn. I find them to be wonderfully thought out to maintain their original integrity, while bringing them up to date to be used for today's agricultural purposes, as well as making Westside Road even more scenically stunning in maintaining its rural character.

If the powers that be in this county, allow "City" People to increasingly and subtly gain a voice to dictate their totally uninformed notions, fueled by their own power-trip-lies and dictums, then we who love and work everyday to preserve Sonoma County in particular, and Agriculture in general, are allowing seeds to be planted to destroy our own County. It takes a firm hand and resolve to keep Agriculture alive. I witnessed such a phenomenon in Santa Clara County, where my family had ranches when I was growing up. It starts slowly and, seemingly innocuously, until ultimate destruction of, not only a way of life, but of a once pristine and life-giving environment.

Another huge plus for the County to approve the Ramey's permit is that they have no interest in having weddings or other non-agricultural events at either of their locations. They agree with me entirely that there should *be no permits for gatherings to increase a "bottom line" which has little or nothing to do with their agriculturally-based permit.*

I have long been of the opinion that the County has over-burdened itself with permitting such events...even allowing way too many so-called Wine Events. Passport Weekend and a few others used to be a pleasure and an added attraction for everyone. Now, they no longer seem to be a special occasion, but have become a special turn-off and merely an excuse for the wineries and limousine businesses to increase their bottom lines, with often-debauched tourists spreading out onto County roads.

The Ramey's intended production of no more than 60,000 cases seems totally within acceptable lines of our neighborhood here. The fact that the Ramey label is well-renown for their quality Sonoma County wines speaks volumes already as to type of facilities they are proposing for Westside Road, as well as to their reputation. We are, indeed, very fortunate that it is Claire and David Ramey and their family who are the applicants for such a project.

As a devoted and proven Ag person here in the County, and throughout my life, and as a Westside neighbor, I ask that Ramey Wine Cellar's Permit be granted forthrightly, without further delays due to the limited minds of a relative few activists, who are simply enamored with their own voices, and who invade such neighborhoods as ours to seek to be "big fish in a little pond"!

Most respectfully submitted,

Joan

Redwood Empire
Vineyard Management

Mr. Tennis Wick
Director, Sonoma County PRMD
2550 Ventura Avenue
Santa Rosa, CA 95403

RECEIVED
APR 13 2015
PERMIT AND RESOURCE
MANAGEMENT DEPARTMENT
COUNTY OF SONOMA

RE: File 14-0008, 7097 Westside Road

Dear Tennis,

Thank you for the opportunity to provide you with a letter to support Ramey Vineyards and the winery proposal at Westside Farms.

As the owner of Redwood Empire Vineyard Management for over thirty-two years I have worked with a variety of wineries and their owners. Mr. Ramey has established his winery as a business that is committed to the highest quality standards and best practice-in the agricultural world since 1996. He thoughtfully has created a winery with integrity and consideration of his surrounding neighbors. He generates economic growth back into our communities by providing jobs and opportunities for people living in Sonoma County.

The proposal set forth by Mr. Ramey is a refreshing change of venues. The concept of keeping the larger events to a minimum, no barrel tastings, restoring the hop kilns, and maintaining the agricultural region of the land is good common sense out in this part of Westside Road. Mr. Ramey is a long-time local family winemaker. His daughter, Claire joined the family in 2013 and works side by side with him and his wife Carla. His son, Alan will be joining the family tradition too. Ramey Vineyards has established a commitment and passion in the industry in a unique approach that represents Sonoma County wine country. This multi-generational family keeps their roots with a strong agricultural base and sensitivity to the community as their business ventures expand.

In closing, I would like to express that Ramey Wine Cellars is a family business with intentions to improve Sonoma County by developing their Westside Road land to fit in with this community and preserves the history of the beginnings of wine making. New opportunities will come from this project that will breathe life into our towns as more jobs will be created and stimulate growth. In my opinion, the developmental impact would be minimal and promotes agricultural life that is the backbone of our county. We need to embrace people like Dave and Carla Ramey for wanting to spend their life-earned savings right here in Sonoma County. To rebuild and preserve these hop kilns should be viewed as an act of tremendous foresight. We will all be able to enjoy this great preservation of our rich agricultural history.

Tennis, I know you are a fair and considerate leader here in Sonoma County. Please don't allow these wonderful people to have their hands tied behind their back. Let them flourish and do what they do best, promote the Sonoma County wine industry. I strongly urge your team to consider this project proposed by Mr. Ramey as a welcome change and a new vision for wineries in the future.

Sincerely,

Kevin Barr
President, Redwood Empire Vineyard Management

To: The Sonoma County Landmarks Commission

Re: Historic Designation of 7097 Westside Road

Dear Commissioners,

At our Dec. 2nd hearing before the Landmarks Commission the issue was raised as to whether both sides of the property, east and west of Westside Road, should be combined into a Historic District. We were asked to undertake another study. The same architectural historian who had completed the first study of the hop kiln and baling barn, Frederic Knapp, was engaged. You have a copy of his full study. He concludes that Historic District designation is not warranted. He notes that the buildings on the western portion of the property:

--do not have rare or noteworthy functions and features, in contrast to the hops complex on the other side of the road.

--neither they nor the rest of the subject property appear eligible to the California Register, and therefore do not meet the significance criteria for County landmark status and HD zoning.

--Applying HD zoning to the subject parcel would not add a measurable degree of historical protection for the hops complex . . .

--The intent of the HD zoning can best be achieved by applying it only to the Hop Kiln, Baling Barn, and Trestle; the County's prevailing zoning regulations are the best choice for the subject parcel.

Thank you for your consideration of this new study.

Sincerely,

David Ramey

Subject:	WCA comments on 7097 Westside Road UPE14-0008
Attachments:	V2_WCA Sept 2017_7097Westside (3).docx; attch.#1 WCA 7097WestsideRamey 1-14-2015.pdf; attch.#2 warning sign.JPG

Traci,
Attached are comments from the Westside Community Association (WCA) Advisory Group regarding the above mentioned project. This letter summarizes the issues that were raised in our meeting on August 10 as well as supporting attachments which includes the WCA January 15, 2015 letter submitted during the initial study phase.

As outlined in the letter, the WCA is requesting that the Permit Sonoma staff recommend denial of this project.

This project is bisected by Westside Road resulting in driveways and public access on both side of the road, in an stretch with very limited sight distance and in close proximity to three other tasting rooms. As such, it will create significant road safety and joint road use conflicts.

Furthermore, with the winery operation only 10-20 feet from the property line to an adjacent residential use, it is unlikely that the project can meet the County's noise standards,

Other project concerns are addressed in the attached material

A separate e-mail with additional attachments will be sent due to the file size

The WCA greatly appreciates your consideration of these issues.

Thank you,

Marc Bommersbach
Westside Community Association Advisory Group

County of Sonoma
Permit Sonoma Department
Attention Traci Tesconi, via e-mail traci.tesconi@sonoma-county.org

RE: UPE14-0008, 7079 Westside Road

Dear Ms. Tesconi:

This letter supplements our letter dated January 14, 2015, on the above referenced application; a copy of that letter is appended (attachment #1).

For the reasons stated in the January 2015 letter and as augmented and reinforced in this letter, the Westside Community Association (WCA) requests that the County staff recommend to the BZA a denial of this application because at this location the proposed project will be detrimental to the health and safety of persons residing, working or visiting the area and detrimental to the general welfare of our community. (CEQA Mandatory Finding of Significance)

Specific concerns are:

1. Inadequate sight lines and close proximity to several adjacent tasting rooms access roads would cause traffic safety and joint road use conflicts
2. Minimum setbacks to adjacent properties will create significant unmitigated noise impacts
3. 60K case winery, office and hospitality complex/ operation and is out of scale other facilities on Westside Road and incompatible with the neighborhood
4. Disproportionate focus on hospitality and promotional uses which is inconsistent with the General Plan
5. Location within the scenic corridor would be inconsistent with the Open Space - Scenic Corridor Element
6. Situated in a high concentration of existing wineries/tasting rooms detrimental to the rural character

1. Significant impacts to public safety would result from the two opposing driveways with insufficient sight distances located in close proximity to three other tasting rooms.

The W-Trans traffic study dated March 10, 2016 does not adequately address the traffic safety and joint road use impacts associated with this project.

First, the project is on two sides of the road, with driveways directly opposing each other on a section of Westside Road with very limited sight distance. Attachment #2 shows a sign for an event at a winery located next door, warning drivers of stopped traffic during an event. This sign was placed at the location of the existing driveways for the proposed Project, and illustrates the challenging sight distances that currently exist for drivers visiting the three (3) existing wineries located in the quarter mile (1/4 mile) stretch of road where the Project is to be located.

Second, the prevailing speed analysis, indicating a speed of 35 mph, appears to be inaccurate. The prevailing speed study should be independently verified because is does not reflect speeds of drivers actually using this section of roadway.

Third, The W-Trans study did not apply the correct standard for a significance threshold and mitigations required for Discretionary Use Permit projects per the *Sonoma County Guidelines for Traffic Impact Studies.* As required by Section 6 of these guidelines, projects requiring traffic impact studies must meet 11 thresholds of significance. The County document states:

> "A project would have a significant traffic impact if it results in any of the following conditions:
> 9. Sight Lines: The project constructs an unsignalized **intersection (including driveways)** and/or adds traffic to an existing unsignalized intersection approach that does not have adequate sight lines based on Caltrans criteria for state highway intersections <u>and</u> AASHTO criteria for County **roadway intersections**." (Emphasis added)

The requirement for Staff to use the AASHTO **roadway intersection** standards was confirmed in the June 1st hearing for a proposed project at 4603 Westside. The W-trans study uses the shorter "stopping distance criteria for private driveways". Unless the proper sight distance significance threshold is achieved and the impacts mitigated, the County cannot approve a mitigated negative declaration for a project with a significant **unmitigated** impact.

At the prevailing speed assumed in the W-trans study of 35 mph, a sight distance of 390 feet is necessary in both directions. At 40 mph the required sight distance is 445 feet. The W-Trans study must be redone using the correct AASHTO roadway intersection standard – Attachment # 3. The Department of Transportation and Public Works is requiring removal of a hillside to increase the sight distances to the north, but even with this mitigation, it is not sufficient to create adequate sight distances.

Fourth, even if the County relies on stopping distance as opposed to sight distances for assessing traffic safety, the possibility of queuing onto Westside Road must be considered. With events of up to 300 people entering and exiting the two opposing driveways there are likely to be backups on Westside. Queuing was also considered by the BZA as a reason for denial of 4603 Westside that had similar issues using the minimum stopping distance standard. Meeting the minimum stopping distance standard is simply not sufficient to ensure the safety of the public in this stretch of Westside Road with limited visibility and three other winery/tasting room access roads in close proximity.

Finally, joint road use conflicts with visitors, local traffic, large trucks and bicycles all using this stretch of Westside Road were not addressed at all. Westside Road is a heavily used bicycle route with a bicycle "Level of Service (LOS) E. The April 2017 Level of Service Analysis shows that Westside is already at Level of Service C, with at least three (3) known projects in addition to the subject project, the Level of Service Analysis should address cumulative impacts of existing and known projects as well as the potential of increased visitation at existing wineries when permits are modified to add promotional and hospitality activities.

2. Noise assessment does not appear to adequately mitigate winey equipment and truck noise impacts on adjacent sensitive land uses.

The potential for noise environmental impacts from the project located at 7097 Westside Road (UPE14-0008) was assessed and reported by Illingworth & Rodkin (I&R) in four *Environmental Noise Assessment* documents dated October 9, 2013, September 4, 2015, March 7, 2017 and August 16, 2017.

According to General Plan Noise Element Policy NE-1c, *the total noise levels resulting from new sources shall not exceed the standards in Table NE-2 as measured at the exterior property line of any adjacent noise sensitive land use.*

The October 9, 2013 document was prepared with two major (critical) General Plan Policy NE-1c inconsistencies:

- The adjacent noise sensitive land use (APN 110-240-024) south of the proposed winery and wine cave location was omitted; and
- Noise levels for the noise sensitive land use (APN 110-240-020) south of the proposed wine tasting and events location were measured at the "residences" rather than the exterior property line.

An addendum was prepared dated September 4, 2015 assessing amplified music and speech generated at the Walnut Grove measured at the exterior property line of the APN 110-240-020 property. Yet, the March 7, 2017 *Environmental Noise Assessment,* which was prepared and described as twice revised contained the same original Policy NE-1c inconsistencies and critical omissions noted in the original 2015 document. This was brought to the attention of planner Traci Tesconi in a meeting held on August 10, 2017. As a result, a fourth assessment was prepared dated August 16, 2017, which included the adjacent noise sensitive land use (APN 110-240-024) immediately south of the proposed winery location.

Given the close proximity to sensitive land uses, a peer review should be required.

Further comments will be submitted under separate cover.

3. The 60K case size and intensity of winery, hospitality and office complex is out of scale with other Westside Road facilities and are incompatible with the neighborhood

As stated in the WCA January 14 letter, the Project is simply too large in scale compared to other winery/tasting rooms recently permitted on Westside Road. Attachment #6 is a summary of the other production facilities permitted in the Westside Area, which indicates an average of less than 20,000 cases.

Attachment #7 is a calculation of the square footage of various project components based on the preliminary design drawings.

Based on the most recent search of the files, the WCA believes the Project features include: Overall construction of 46,000 sq. ft., four (4) tasting rooms, three (3) kitchens, two (2) overnight lodgings, 6,000 sq. ft. of office space and 11,700 sq.ft. of hospitality area is simply too much commercial development for a rural area. This is particularly the case given the other 29 permitted facilities in the Westside Area.

4. The large land area and facilities dedicated to non-agricultural activities is not consistent with the general plan requirement that such uses and facilities be limited in scale and intensity, and secondary to agriculture.

General Plan policy AR6 states that visitor serving uses should be secondary and incidental to local agriculture. As stated in the WCA January 14 letter, the scale of visitor serving uses is disproportionate to the processing facilities and as mentioned above, out of scale with surrounding operations. Attachment # 8 shows the approximate area of the primary hospitality operation, and covers nearly 3 acres. The four tasting rooms, three kitchens, lodgings and other event space comprise nearly 65% of the size of the processing area.

The 24 Ag promotional event-days for up to 300 guests is much larger than for neighboring wineries. The average number of events per facility on Westside Road is 11, including industry events. The most recent project approval on Westside was for 12 events, which included 8 days of industry events.

5. The reconstruction of abandon hop kiln structures to tasting rooms, food service facilities and lodgings within the scenic corridor conflicts with the General Plan Scenic resource element, and detrimental to rural character.

See WCA January 14, 2015 and December 2, 2014 letters regarding the inappropriateness of reconstruction and intensification of use of existing farm structures within the scenic corridor.

As stated in these letters, Westside Road embodies Healdsburg's rich agricultural heritage. Keeping these old structures located within the scenic corridor in their natural state should be a priority. Attachment #9 is a picture of an old barn in the scenic corridor on Westside Road is one of the most recognizable scenes of Sonoma County agriculture. Converting such structures as the one shown in the photo, or the hop kilns at the Project into a tasting rooms, surrounded by parking with big signage and very commercial oriented uses should not be permitted. Such buildings could be used as barns for equipment storage for example.

Also, the County was not willing to allow conversion of an agricultural building in the scenic corridor to be converted to a tasting room for a recent project proposal on Westside Road.

6. The location of the winery, food service and logging and entertainment facilities in such close proximity to three (and potentially four such facilities) within a half mile will constitute a detrimental concentration under the General Plan.

The proposed project would result in the fourth tasting room in 0.25 miles. Attachment # 10 is an aerial view of this concentration of tasting rooms

The BZA is considering concentration in its approvals of applications for visitor serving facilities and activities. In a recent denial of a project in the same vicinity as the Project (4603 Westside Road PLP14-0031), the BZA resolution denying the project states:

> *"2. Event and Tasting Room Traffic .... Westside Road has 29 permitted wineries along the roadway, and traffic on Westside Road includes operational traffic from wineries, travel to/from tasting rooms and winery event traffic. The Project would result in four wineries with tasting rooms and events within 0.6 miles. The proposed winery is adjacent to MacRostie Winery at 4603 Westside Road to the south and near three tasting rooms to the north: VML Winery and Alysian Wines at 4035 Westside Road and Baccigalupi Winery at 4353 Westside Road."*
>
> *"The proposed addition of another winery and tasting room in close proximity to the existing tasting rooms would contribute to a concentration of uses that would be incompatible with the neighborhood character and deleterious to the rural character of the immediate area."*

In addition, as the attachment to the January 18 letter shows, that with 29 permitted facilities on Westside Road, any additional facilities or events would have a significant cumulative impact on the number of events and visitor serving activities.

For the above reasons, and site constraints, the WCA requests that the Project be denied.

Sincerely,

Westside Community Association Advisory Committee

Calculations of Square Footages from Hop Kiln Application Drawings

Drawing A1.10

1. Existing Hop Kiln buildings 2 buildings at 35.5' X 35.5' X2 = 2,520 sq. ft.

Added footprint area from rebuilding Hop Kilns

1 - 16'X10' = 160 sf. Electrical/HVAC space
1- 16'X10' = 160 sf. Mechanical/Plumbing
1- 10'X10' = 100 sf. Stair well
1 – 6'X10' = 60 sf. Elevator
Total increase = 480 sf.

Ratio of new to existing square footage to new = 480/2,520 = **19% increase.**

Currently there is no use of the non-conforming hop kiln structures. Even if there was a legal non-conforming use such as a tasting room, or other such use, the proposed modifications exceed 10% of the existing footpring of the building.

Calculation of Square footage of visitor serving and entertaining facilities

Hop Kilns tasting rooms	2,520 sf.
Winery tasting rooms	4,200 sf.
Bale Barn	3,600 sf.
Bridge	1200 sf.
Total	11,700 sf.

Winery size approximately 26,000 sf. plus cave storage.

Winery sf. calculations

Dear Landmarks Commissioners

I am writing in response to the request by Ramey Vineyards LLC to have APN 110-240-040 removed from consideration for Historic District status.

As a 60+ year resident of Westside Road I have seen many changes on this small stretch of rural road. Living nearing 10 miles from town and working in Healdsburg all my life I have had a front row seat, nearly every day, to the changes that have taken place. With the unprecedented growth of the wine industry in the area, we seem to be loosing our heritage properties at an alarming rate. The property at 7097 Westside Road is a perfect example of one of the few remaining heritage properties that add to the rural character that make Westside Road a special place for its residents and visitors alike.

The Litton ranch is one of the few remaining remnants of the flourishing hop industry that played such an important role in the agricultural history of Sonoma County. This was a true working ranch with a farm house, equipment and storage barns, and an operating hop kiln and bailing barn. Knapp Architects states "Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property". This is beyond my comprehension since I have always viewed this as one ranch. Knapp Architects refers to the subject property as a "home farm". Doesn't that in itself mean they are interrelated? Knapp also states that the "very old" Main House and Barn "appear" not to be eligible to the California Register. I wonder if they might appear to be eligible of the California Register by another architectural firm.

I don't understand Knapps Architects continued efforts to disconnect the two parcels in question. They talk about an "ambiguous visual connection to the subject property, at best", but anyone who stands on either property can easily see that vistas from either property is enhanced by the other. In other Historic Districts I have noted that the propose of the district is to propose boundaries that protect vistas, and that other buildings contribute positively to the environment setting. These boundaries also help to control projected road work and development in the area that would detract from the historic nature of the hop barns. APN 110-240-040 must be protected in order to insure the significance of the hop processing facilities. The statement that HD designation may "inhibit future changes on the subject parcel" is actually the reason why both properties need to be included in the historic district.

In the conclusion to the "Supplement to Historical Study" Knapp states that "If the current winery proposal is approved.....then the HD zoning overlay is applied to it afterwards, there could be the perverse effect..." Fortunately no project has been approved for the parcel in question, so that is not a concern. Then Knapp reaches the conclusion "(Even worse, applying HD zoning to the subject parcel now could interfere with the winery project which offers the only hope of preserving the deteriorating hops complex....)". I must take exception to this conclusion. How could Knapp possibly know that the ONLY way to save the hop barn complex is to disallow the HD overlay on the farm house property? I conclude that the best way to preserve the historic nature of the Litton property is to include both parcels in a Historic District. This would save one of the few remaining heritage properties for generations to come. I ask that the Landmark Commisson look past the current owners and recognize the importance of your actions in saving this most valuable Sonoma County asset, for now and in the future.

Thank you

Jim Dreisback

Dear Landmark Commissioners, UPE14-0008

I am responding the Knapp Architects supplement study for the Ramey Winery project at 7097 Westside Road. At your December 2nd meeting, your commission recommended that the parcel on the west side of Westside Road also be designated as HD. The parcel opposite the street on the east side currently has the HD overlay. I support your evaluation and recommendation.

The Knapp Architects Supplemental Study says that the buildings on either side of the street don't relate to each other or depend on each other. But common sense, suggests to me that they very much depended upon and related to each other.

"Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property." (page 10)

In considering the ranch and its buildings, it makes sense to me that the farmhouse was the hub of the ranch, and the other buildings supported the activities of the ranch owners.

The farmhouse looks down upon the hop and baling barns. Both pictures were taken in the front yard of the farmhouse. One shows the house, turning to the east, is the view of the barns.

applying HD zoning to the subject parcel now could interfere with the winery project which offers the **only hope** of preserving the deteriorating hops complex.) For these reasons, it appears that the intent of the HD zoning can best be achieved by applying it only to the Hop Kiln, Baling Barn, and Trestle; the County's prevailing zoning regulations are the best choice for the subject parcel.

What is troubling is that this conclusion seems like a threat with no other solution.

It is my hope that the project built at this site be appropriate in its scope, size and fit to support Sonoma County's farming heritage and embrace the rural character of the scenic corridor on Westside Road.

Sincerely

Nancy Citro

Healdsburg, CA 95448

Dear Landmark Commissioners, UPE14-0008

I am responding the Knapp Architects supplement study for the Ramey Winery project at 7097 Westside Road. At your December 2nd meeting, your commission recommended that the parcel on the west side of Westside Road also be designated as HD. The parcel opposite the street on the east side currently has the HD overlay. I support your evaluation and recommendation.

The Knapp Architects Supplemental Study says that the buildings on either side of the street don't relate to each other or depend on each other. But common sense, suggests to me that they very much depended upon and related to each other.

"Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property." (page 10)

In considering the ranch and its buildings, it makes sense to me that the farmhouse was the hub of the ranch, and the other buildings supported the activities of the ranch owners.

The farmhouse looks down upon the hop and baling barns. Both pictures were taken in the front yard of the farmhouse. One shows the house, turning to the east, is the view of the barns.

The fact that there is now a busy two lane road cutting through the ranch, doesn't change the history that it was once a working ranch with a house, a commercial farming operation, and other buildings that supported the animals and maintenance of the ranch.

Another point in the study - the property history clearly mentions a collection of buildings, specifically the blacksmith shop, smoke house, corn crib and small barn. Only the small barn is mentioned in the study, and it states "these buildings are no longer extant" Did the author mean no longer stand out, or no longer exist? I believe they do exist.

The property history says the rear half of the Barn was probably built in the 1800s and that the
Kaisers "rebuilt deteriorated walls, installed new roof, rebuilt and expanded breezeway porches..." It says "Barn/garage adjacent to home was renovated, expanded and re-roofed in
1989." It describes the Cottage as "Garden cottage and deck with walk-in cold box built in 1992,
with permits." It refers to a "Collection of small buildings on home site—blacksmith shop, smoke house, corn crib, small barn—all add historic charm. All are in use, though upgrade work remains to be done." **These buildings are no longer extant**.

A final conclusion in the study states:

mostly to inhibit future changes on the subject parcel. If the current winery proposal is approved for the subject parcel and then the HD zoning overlay is applied to it afterwards, there could be the perverse effect of holding the subject parcel for many years in the condition it will reach when the new winery is completed. (Even worse,

applying HD zoning to the subject parcel now could interfere with the winery project which offers the **only hope** of preserving the deteriorating hops complex.) For these reasons, it appears that the intent of the HD zoning can best be achieved by applying it only to the Hop Kiln, Baling Barn, and Trestle; the County's prevailing zoning regulations are the best choice for the subject parcel.

What is troubling is that this conclusion seems like a threat with no other solution.

It is my hope that the project built at this site be appropriate in its scope, size and fit to support Sonoma County's farming heritage and embrace the rural character of the scenic corridor on Westside Road.

Sincerely

Re: UPE 14-0008
Applicant: David and Carla Ramey

Dear Commissioners:

This letter is in support of the Rameys' request that the Historical District designation not be applied to the portion of their proposed project along the west side of Westside Road but, instead, be applied only to a separate parcel across the road, to the east. As you may recall, the Rameys have already agreed to allow the imposition of HD zoning on that eastern parcel: the parcel containing the historic hop kilns and related structures.

The purpose of the upcoming Landmarks hearing on this project (set for July 7, 2015) is to further discuss whether HD zoning is appropriate for the portion of the proposed project that lies on the west side of Westside Road. The Joint Landmarks Commission and Design Review Committee meeting of December 2, 2014 issued a recommendation that all parcels comprising the project - on both sides of Westside Road - be designated HD zoning. The Rameys have asked for reconsideration of that one issue.

The property on the west side of the road is APN 110-240-040 and lies within the Fifth Supervisorial District. The east parcel - containing the hop kilns and related buildings - is across the road and is identified as APN 110-240-031. That eastern parcel is in the Fourth Supervisorial District. A copy of the County Assessor's Map for that portion of Westside Road is attached to this letter, with the Ramey parcels marked in yellow and the neighbors' properties marked in green.

As suggested by the Joint Landmarks Commission and Design Review meeting last December, the Rameys retained Knapp Architects to prepare a supplemental report specifically discussing the portion of the project along the west side of Westside Road. That report was submitted to you in April 2015. As indicated in the Supplement to Historical Resource Study, the west side of the property contains buildings of a different nature and character than the historic east side.

The western portion of the project is different from the eastern portion in many ways. First, the western portion is about 1/10 the size of the property on the east side of the road. [Supplement, p. 3]. Second, the buildings on the west side of the road are not directly across from the east side's hop kilns and related buildings. [Supplement, p. 4]. Third, in relatively recent times, the property on the west side of the road has had many changes: the construction and installation of an irrigation pond, several additions to the "main house" with associated changes in both roof line and building outline, and changes to the barn as late as 1989 with visible differences in architecture/construction in various portions of the building. [Supplement, pgs. 4, 6, 10]. Fourth, while the main house and barn had early beginnings, "they can no longer convey their beginnings clearly enough to be eligible for their age alone." [Supplement, p. 15]. Fifth, several of the original buildings have already been torn down [Supplement, p. 8] and the Pole Barn and Cottage are relatively recent construction [Supplement, p. 13]. Finally, unlike the hop kilns and related structures on the east side of the road, there is no evidence that the buildings on the west side are any more historic than other properties on the roadway: The Main House, the Barn, and the Shed are not buildings which "embody the distinctive characteristics of a type, period, region, or method of construction." [Supplement, p. 13].

As such, on behalf of David and Carla Ramey and their family members, we ask that the Landmarks Commission make a recommendation that the HD zoning be applied only to the portion of this project that is on the east side of the road (APN 110-240-031) and that the parcel on the west side of the road (APN 110-240-040) remain governed by the County's prevailing zoning regulations.

Thank you for your consideration of this letter as well as the Knapp Supplement to Historical Resources Study discussing the property on the west side of the roadway.

Very truly yours,

Kimberly Corcoran

Subject: Landmarks Commission - Ramey

Dear Landmarks Commissioners

I am writing in response to the request by Ramey Vineyards LLC to have APN 110-240-040 removed from consideration for Historic District status.

As a 60+ year resident of Westside Road I have seen many changes on this small stretch of rural road. Living nearing 10 miles from town and working in Healdsburg all my life I have had a front row seat, nearly every day, to the changes that have taken place. With the unprecedented growth of the wine industry in the area, we seem to be loosing our heritage properties at an alarming rate. The property at 7097 Westside Road is a perfect example of one of the few remaining heritage properties that add to the rural character that make Westside Road a special place for its residents and visitors alike.

The Litton ranch is one of the few remaining remnants of the flourishing hop industry that played such an important role in the agricultural history of Sonoma County. This was a true working ranch with a farm house, equipment and storage barns, and an operating hop kiln and bailing barn. Knapp Architects states "Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property". This is beyond my comprehension since I have always viewed this as one ranch. Knapp Architects refers to the subject property as a "home farm". Doesn't that in itself mean they are interrelated? Knapp also states that the "very old" Main House and Barn "appear" not to be eligible to the California Register. I wonder if they might appear to be eligible of the California Register by another architectural firm.

I don't understand Knapps Architects continued efforts to disconnect the two parcels in question. They talk about an "ambiguous visual connection to the subject property, at best", but anyone who stands on either property can easily see that vistas from either property is enhanced by the other. In other Historic Districts I have noted that the propose of the district is to propose boundaries that protect vistas, and that other buildings contribute positively to the environment setting. These boundaries also help to control projected road work and development in the area that would detract from the historic nature of the hop barns. APN 110-240-040 must be protected in order to insure the significance of the hop processing facilities. The statement that HD designation may "inhibit future changes on the subject parcel" is actually the reason why both properties need to be included in the historic district.

In the conclusion to the "Supplement to Historical Study" Knapp states that "If the current winery proposal is approved.....then the HD zoning overlay is applied to it afterwards, there could be the perverse effect..." Fortunately no project has been approved for the parcel in question, so that is not a concern. Then Knapp reaches the conclusion "(Even worse, applying HD zoning to the subject parcel now could interfere with the winery project which offers the only hope of preserving the deteriorating hops complex....)". I must take exception to this conclusion. How could Knapp possibly know that the ONLY way to save the hop barn complex is to disallow the HD overlay on the farm house property? I conclude that the best way to preserve the historic nature of the Litton property is to include both parcels in a Historic District. This would save one of the few remaining heritage properties for generations to come. I ask that the Landmark Commisson look past the current owners and recognize the importance of your actions in saving this most valuable Sonoma County asset, for now and in the future.

Thank you

Jim Dreisback
9545 Westside Road
Healdsburg, CA 95448

Dear Landmark Commissioners, UPE14-0008

I am responding the Knapp Architects supplement study for the Ramey Winery project at 7097 Westside Road. At your December 2nd meeting, your commission recommended that the parcel on the west side of Westside Road also be designated as HD. The parcel opposite the street on the east side currently has the HD overlay. I support your evaluation and recommendation.

The Knapp Architects Supplemental Study says that the buildings on either side of the street don't relate to each other or depend on each other. But common sense, suggests to me that they very much depended upon and related to each other.

"Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property." (page 10)

In considering the ranch and its buildings, it makes sense to me that the farmhouse was the hub of the ranch, and the other buildings supported the activities of the ranch owners.

The farmhouse looks down upon the hop and baling barns. Both pictures were taken in the front yard of the farmhouse. One shows the house, turning to the east, is the view of the barns.

applying HD zoning to the subject parcel now could interfere with the winery project which offers the **only hope** of preserving the deteriorating hops complex.) For these reasons, it appears that the intent of the HD zoning can best be achieved by applying it only to the Hop Kiln, Baling Barn, and Trestle; the County's prevailing zoning regulations are the best choice for the subject parcel.

What is troubling is that this conclusion seems like a threat with no other solution.

It is my hope that the project built at this site be appropriate in its scope, size and fit to support Sonoma County's farming heritage and embrace the rural character of the scenic corridor on Westside Road.

Sincerely

Nancy Citro

Dear Landmarks Commissioners

I am writing in response to the request by Ramey Vineyards LLC to have APN 110-240-040 removed from consideration for Historic District status.

As a 60+ year resident of Westside Road I have seen many changes on this small stretch of rural road. Living nearing 10 miles from town and working in Healdsburg all my life I have had a front row seat, nearly every day, to the changes that have taken place. With the unprecedented growth of the wine industry in the area, we seem to be loosing our heritage properties at an alarming rate. The property at 7097 Westside Road is a perfect example of one of the few remaining heritage properties that add to the rural character that make Westside Road a special place for its residents and visitors alike.

The Litton ranch is one of the few remaining remnants of the flourishing hop industry that played such an important role in the agricultural history of Sonoma County. This was a true working ranch with a farm house, equipment and storage barns, and an operating hop kiln and bailing barn. Knapp Architects states "Simply put, the subject property is best understood as a home farm, and APN 110-240-031 across the road is best understood as a hops operation, and they do not relate or depend on each other enough to be combined into a single property". This is beyond my comprehension since I have always viewed this as one ranch. Knapp Architects refers to the subject property as a "home farm". Doesn't that in itself mean they are interrelated? Knapp also states that the "very old" Main House and Barn "appear" not to be eligible to the California Register. I wonder if they might appear to be eligible of the California Register by another architectural firm.

I don't understand Knapps Architects continued efforts to disconnect the two parcels in question. They talk about an "ambiguous visual connection to the subject property, at best", but anyone who stands on either property can easily see that vistas from either property is enhanced by the other. In other Historic Districts I have noted that the propose of the district is to propose boundaries that protect vistas, and that other buildings contribute positively to the environment setting. These boundaries also help to control projected road work and development in the area that would detract from the historic nature of the hop barns. APN 110-240-040 must be protected in order to insure the significance of the hop processing facilities. The statement that HD designation may "inhibit future changes on the subject parcel" is actually the reason why both properties need to be included in the historic district.

In the conclusion to the "Supplement to Historical Study" Knapp states that "If the current winery proposal is approved.....then the HD zoning overlay is applied to it afterwards, there could be the perverse effect..." Re: UPE 14-0008
Applicant: David and Carla Ramey

Dear Commissioners:

This letter is in support of the Rameys' request that the Historical District designation not be applied to the portion of their proposed project along the west side of Westside Road but, instead, be applied only to a separate parcel across the road, to the east. As you may recall, the Rameys have already agreed to allow the imposition of HD zoning on that eastern parcel: the parcel containing the historic hop kilns and related structures.

The purpose of the upcoming Landmarks hearing on this project (set for July 7, 2015) is to further discuss whether HD zoning is appropriate for the portion of the proposed project that lies on the west side of Westside Road. The Joint Landmarks Commission and Design Review Committee meeting of December 2, 2014 issued a recommendation that all parcels comprising the project - on both sides of Westside Road - be designated HD zoning. The Rameys have asked for reconsideration of that one issue.

The property on the west side of the road is APN 110-240-040 and lies within the Fifth Supervisorial District. The east parcel - containing the hop kilns and related buildings - is across the road and is identified as APN 110-240-031. That eastern parcel is in the Fourth Supervisorial District. A copy of the County Assessor's Map for that portion of Westside Road is attached to this letter, with the Ramey parcels marked in yellow and the neighbors' properties marked in green.

As suggested by the Joint Landmarks Commission and Design Review meeting last December, the Rameys retained Knapp Architects to prepare a supplemental report specifically discussing the portion of the project along the west side of Westside Road. That report was submitted to you in April 2015. As indicated in the Supplement to Historical Resource Study, the west side of the property contains buildings of a different nature and character than the historic east side.

100 B Street, Suite 400, Santa Rosa, California 95401 · tel: (707) 526.4200 fax: (707) 526.4707
CMPRLAW.COM

The western portion of the project is different from the eastern portion in many ways. First, the western portion is about 1/10 the size of the property on the east side of the road. [Supplement, p. 3]. Second, the buildings on the west side of the road are not directly across from the east side's hop kilns and related buildings. [Supplement, p. 4]. Third, in relatively recent times, the property on the west side of the road has had many changes: the construction and installation of an irrigation pond, several additions to the "main house" with associated changes in both roof line and building outline, and changes to the barn as late as 1989 with visible differences in architecture/construction in various portions of the building. [Supplement, pgs. 4, 6, 10]. Fourth, while the main house and barn had early beginnings, "they can no longer convey their beginnings clearly enough to be eligible for their age alone." [Supplement, p. 15]. Fifth, several of the original buildings have already been torn down [Supplement, p. 8] and the Pole Barn and Cottage are relatively recent construction [Supplement, p. 13]. Finally, unlike the hop kilns and related structures on the east side of the road, there is no evidence that the buildings on the west side are any more historic than other properties on the roadway: The Main House, the Barn, and the Shed are not buildings which "embody the distinctive characteristics of a type, period, region, or method of construction." [Supplement, p. 13].

As such, on behalf of David and Carla Ramey and their family members, we ask that the Landmarks Commission make a recommendation that the HD zoning be applied only to the portion of this project that is on the east side of the road (APN 110-240-031) and that the parcel on the west side of the road (APN 110-240-040) remain governed by the County's prevailing zoning regulations.

Thank you for your consideration of this letter as well as the Knapp Supplement to Historical Resources Study discussing the property on the west side of the roadway.

Very truly yours,

Kimberly Corcoran

Mr. Tennis Wick
Director, Sonoma County PRMD
2550 Ventura Avenue
Santa Rosa, CA 95403

Dear Director Wick,

I write in response to the letter from Mr. Marc Bommersbach and the Advisory Board of the Westside Community Association dated January 14, 2015. I'd like to briefly correct and clarify a number of misstatements in that letter and their prior letters.

--We propose a winery of 32,000 square feet, cut-and-fill new construction with 21,000 square feet of caves—not the 46,000 square feet *plus* caves claimed. The winery site sits outside the 200 foot scenic corridor easement, and further, will not be visible from Westside Road.

--The three year average (2012-14) grape yield from the 42 acres of vineyard at Westside Farms is 214 tons. At 61 cases per ton, this will produce 13,000 cases of wine, not 7,000 to 9,000. We currently produce, within the city of Healdsburg, 40-45,000 cases of wine from about 700 tons of grapes. Of this, approximately two-thirds come from Sonoma County and one-third from Napa. In the Russian River AVA we have long bought grapes from the Dutton's, the Martinelli's, the Rochioli's and Kent Ritchie. Vineyards sources in 2014 along Westside Road include Campbell-McKinney, Bucher, Rochioli, and our own vineyard. In the Sonoma Coast AVA we buy from the Martinelli's Charles Ranch, the Platt Vineyard and Rodgers Creek Vineyard. "Locally-sourced" has been and is interpreted by the County as grapes from Sonoma County and adjacent counties. This language was inserted into our project statement at the request of our planning staffer, Traci Tesconi. It does not mean that we need to, or intend to, begin importing grapes from multiple adjacent counties; to suggest so is disingenuous. Our single largest product, and the one most likely to grow, is Russian River Chardonnay. It will grow as we begin, in 2017, to use all the Chardonnay from our property—most of which is now trucked to Chateau St. Jean in Kenwood.

--The concern about an increase in traffic overlooks the traffic engineer's conclusion that "the proposed project will have a limited impact on traffic operation along Westside Road, and will actually generate fewer special event trips than the previous use for Westside Farms" [that of pumpkin patch and hay trailer rides].

--The stated calculations of entertainment and administrative space are wildly exaggerated. The winery building itself will have 45,470 square feet (sf) of production space (including 21,000sf of cave), not 27,050, and 7,460sf of administration, production offices and marketing space—exactly 14.09%. The hop kiln and baling barn do not pertain to this calculation. But even looking at lumping together the winery and the two barns, there will be 6,400sf of combined entertainment space in the two barns and the winery, not 11,700, and 4,500sf of offices, not 6,000.

--To characterize our project as an event center and assert that we're proposing a restaurant and resort facility is completely incorrect. We will be entertaining invited guests for a small number of lunches or dinners, mostly indoors. As stated in our proposal, there will be no weddings or concerts and none of the facilities will be available to outside parties. There is no reference to a restaurant on any of our plans. Marketing accommodations *are* allowed on Williamson Act properties [Rule 8.3-B-2]; we propose two of these, not two to four. These will be available by invitation for our employees and guests at no charge. The authors want to skip directly from the use of the hop kiln and baling barn for hops to our proposed use as tasting rooms, omitting their recent use for pumpkin patch sales and hay rides, which drew far more people and cars at one time than anything we might possibly envision.

--The fact that the existing barns lie within the 200-foot scenic setback was addressed by the joint Landmarks and Design Review Committees meeting, along with the height regulation [Design Review Committee Record of Action, Dec. 2, 2014, attached]. Without rehabilitation and repurposing to support the current economic use of the property, these two historic buildings will continue to decay and collapse.

--It is impossible to see how the 24 events requested might be construed as 44 event days.

--The authors claim a 19% increase in footprint of the hop kiln when in fact it will be 7.5%; that will be due to the elevator for handicap access so the internal footprint of the kilns will be respected.

We reached out to Nancy Citro of the Westside Community Association and met with a group of them at her home on September 5th, 2013. As the owners of two residences on Westside Road and members of the Association ourselves, we share their concerns about traffic and quality of life on Westside Road. Our property has a long history of commercial agriculture which we intend to continue; our daughter Claire has joined the family business and lives in the yellow farmhouse at Westside Farms with her husband, Ivan. Our son Alan is finishing his final semester of college and has informed us that he, too, intends to join the family business. At the September 5, 2013 meeting, however, we were informed that the steering committee of the Westside Community Association has adopted the position of opposing *any* additional tasting rooms on Westside Road. We went to the meeting hoping for a dialogue with our neighbors but instead ran into preformed opposition. The many false and distorted allegations in these letters might have been cleared up if they had reached out to us, but working together is not their intent: complete blockage of new projects is. We will continue to make ourselves available to our Westside Road neighbors and welcome the opportunity to correct their misconceptions.

Thank you for your consideration.

Sincerely,

David and Carla Ramey

DESIGN REVIEW COMMITTEE RECORD OF ACTION

December 2, 2014

Item No.1 Time: 3:00 p.m.
File: UPE14-0008
Applicant: David and Carla Ramey
Staff: Traci Tesconi
Cont'd from: N/A
Env. Doc: N/A
Proposal: Request for a Use Permit and Administrative Design Review for a winery (two story, approx. 23,000 sq ft) with a maximum annual case production of 60,000 cases with a wine cave (approx. 20,720 sq ft) and conversion of hop kiln building to public and private tasting rooms open from 10 am to 5 pm, 7 days a week, and conversion of a hop baling barn to a public and private tasting room with a two-guest room marketing accommodation unit on the upper floor and to include 22 agricultural promotional events with a range of guests (10 events with 30 guests, 5 events with 60 guests, 5 events with 120 guests, & 2 events with 300 guests) and participation in industry wide events totaling two event days with a maximum of 300 guests on 75 acres. A four- year Use Permit term is requested under Section 26-92-130 of the Zoning Code. No weddings or concerts are proposed. The parcel is under a prime Land Conservation Contract. The project site is located along a Scenic Corridor.
Location: 7097 Westside Road, Healdsburg
APN: 110-240-031, -032, and 040 Supervisorial Districts: 4 & 5
Zoning: LIA B6, 60 acre density, BR (Biotic Resource), SR (Scenic Resource), VOH (Valley Oak Habitat), F1 (Primary Floodplain), F2 (Secondary Floodplain)

Public Hearing: No

PEOPLE PRESENT:
Design Review Committee: Don MacNair, Jim Henderson, Melinda Grosch
Staff: Traci Tesconi
Applicant: David and Carla Ramey and their consultants
Others: Landmarks Committee and Staff, Denise Peter

PROJECT DESIGN: [ ] Final Review [ ] Referral [X] Preliminary Review

Exterior Lighting	X				
Fence Design	X				

VOTE: The Design Review Committee (DRC) approved the existing height of the Hop Kiln and Bale Barn buildings which exceeds 35 feet. The DRC also approved maintaining these two structures in their current footprint within the Scenic Corridor setback.

Don McNair: Aye Jim Henderson: Aye Melinda Grosch: Aye
Ayes: 3 Noes: 0 Absent: 0 Abstain: 0

The Land Marks Commission (LRC) and DRC took the following actions together:

- Final review of the project (after the Board of Zoning Adjustments decision) to be by the Joint LRC / DRC.

- The Joint LRC / DRC recommend that the HD (Historic Combining District) be added to the property.

DESIGN REVIEW RECORD OF ACTION SHEET
COMMENTS & CONDITIONS

Applicant: David and Carla Ramey
Address: 7097 Westside Road, Healdsburg
File: UPE14-0008
Date: December 2, 2014

NOTE: the applicant is urged to respond under each comment as to how plans have been revised. If a recommended change is not made, please indicate why. Please submit your responses with plans for Joint Landmarks Commission and Design Review Committee Final Design Review.

SITE PLAN

1. Parking on new winery (west) side of Westside Road the parking/drive seems to be a huge expanse of asphalt.

Response: ____________________

2. Flip parking stalls to opposite side of lot so that they are adjacent to building rather than having people cross the drive aisle.

Response: ____________________

3. Trash enclosure – where is it?

Response: ____________________

ARCHITECTURE: Building Elevations, Colors, Materials, etc.

1. New winery building is so completely divergent from the historic nature of the Hop Kiln, etc. Completely modern office type structure out in the rural area. Not the appropriate aesthetic for this location. How do you soften the building without relying only on the vines?

Response: ____________________

2. Should not really be able to see solar panels as you approach the building or from above (adjacent properties).

Response: ____________________

3. Consider design elements or re-massing to soften the front Hop Kiln elevation. The ramp and elevator structure look ultra modern in contrast to the rural character of the Hop Kilns.

Response: ____________________

LANDSCAPING: Design, Plant Types and Sizes, Irrigation, etc.

1. Rethink the "rosemary garden" as it has a very rigid geometric structure and detracts from the Hop Kiln building. The retaining walls along the edges of this area are particularly distracting, but may need to be maintained to preserve characteristics of Hop Kiln buildings.

Response: ____.

2. Need tree islands in the parking lot – one every eight spaces.

Response: ____.

3. Consider framing but not obscuring view of north end of Hop Kiln building with vegetation.

Response: ____.

4. Put oaks in the roundabout middle of new winery (west side) parking lot rather than olives. Oaks are part of the vernacular of the landscape.

Response: ____.

5. Don't want the landscaping to change the character of the view as you come around the corner – iconic view of Hop Kiln building. Soften the retaining walls along edge of "rosemary" garden. Plant something more natural and not so rigid rather than the rosemary.

Response: ____.

6. DRC Committee member MacNair: Urges the use of oaks near Hop Kiln as this would have been an oak woodland.

Response: ____.

7. LC Committee member McAllister: New landscaping is too strident in front of the Hop Kiln building. Would like to see the grades and mood of the front the same as they are currently – retain the ramp as historic but garden doesn't work. Garden is a good idea but needs to be elsewhere. Front of Hop Kiln and Baling Barn needs to stay quieter. Landscape plans need to be more fully developed. Espalier apples may be problematic – too hot? And need shade in the parking area which they don't really provide.

Response: ____.

8. LC Committee member Much: Historic view of Hop Kiln is very important so make sure landscaping doesn't interfere with that. Leave ramp but replace rosemary with grasses. Berms to hide or soften retaining wall would be good.

Response: ____.

9. LC Committee member Simpson: Liked open landscaping; likes agricultural use in parking lot (apples, olives); don't obscure the view; don't "over polish" – keep the feel authentic.

Response: ____.

SIGNS

1. Are Corten letters going to be back lit?

Response: No.

2. Need full set of sign plans for all internal and directional signs and any signs that will be along Westside Road.

Response: ____.

ROAD

1. Crossing by pedestrians?

Response: Not going to be an issue as operating as two separate businesses.

2. Concerned about potential employee crossing road.

Response: ____.

EXTERIOR LIGHTING

1. Need lighting plans

Response: ____.

FENCE DESIGN

1. Need gate and entry designs and elevations

Response: ____.

Subject: Proposed Ramey Winery Site

Director Wick, et al.,

We are writing to express our support of David and Carla Ramey's proposed winery project on Westside Road. We believe that this project will in fact preserve a precious part of this county's agricultural history.

So much of our county's agricultural success today stems from attracting visitors to our farms and facilities and providing an on-site personal experience. We believe that their repurposing of, and creating access to, these historic structures, while still maintaining an agricultural use, will benefit all of us in the long run. Without a viable economic use of the old Westside Farms baling barn and hop kiln, this property cannot sustain itself.

We have had a business relationship with the Rameys for going on eight years now. They have conducted their business with the utmost integrity and have always been true to their word. We believe their project will insure an agricultural use of this historic site, all the while providing much needed jobs and tax revenues for our county.

Sincerely,

Lee and Pamela Martinelli

RE: UPE14-0008; 7097 Westside Road Healdsburg, Ramey Vineyards LLC

Dear Mr. Wick,

The Westside Community Association (WCA) submits the following comments regarding the proposed Use Permit for a new winery and entertainment facilities at 7097 Westside Road (Project).

The Project, which includes a large winery, several tasting rooms, restaurant related facilities, lounge and overnight accommodations, is:

1. Too large in scale,
2. Disproportionately focused on entertainment and events,
3. Located within the scenic corridor,
4. Situated in a high concentration of existing wineries and tasting rooms, and
5. Has cumulative impacts that have not been assessed.

1. Too Large in Scale: This is the most intense project ever proposed for Westside Road, and is out of scale with other recently permitted projects. The project consists of over 46,000 square feet of new construction plus the construction of wine caves, four (4) separate tasting rooms, including a VIP lounge, three (3) kitchens, and two (2) overnight accommodations.

A 60,000 case operation would be significantly larger than neighboring facilities. Westside Road has 23 permits for grape processing. While decades ago two facilities were permitted for more, the average maximum permitted production of the other 21 faculties is 20,000 cases. The 42 acres of grapes planted on the Project site translates into roughly 7,000 to 9,000 cases of production utilizing on-site fruit.

The Project proposes to import fruit from as far away as Lake, Mendocino, Napa and Marin counties. Since the vast bulk of the fruit will be transported to the winery, there is no justification for a winery size in this rural location much larger than the 20,000-case average in the area.

In addition, a 60,000 case winery, importing the bulk of its fruit from far away does not appear to have a strong agricultural justification for re-locating a processing facility currently located within the City of Healdsburg to an already impacted and important rural roadway.

Furthermore, the existing winery in Healdsburg employs a staff of 15 people. Moving the existing operation out of town will mean that 15 people that now work in a location with access to transportation and other services will have to commute out to the far reaches of Westside Road, and in addition to the extra truck trips for importing fruit, will add yet more traffic on this already impacted rural roadway.

2. Disproportionate focus on entertainment: A large proportion of the Project's square footage is geared around entertainment, events and commercial office space, and calls into question whether the visitor serving and administrative components of the project are truly incidental and secondary to agriculture. With the 3-story baling barn, tasting rooms in the hop kilns, and tasting rooms and kitchen located within the winery as well, there is more than 11,700 square foot of entertainment and visitor serving facilities, and 6,000 square feet of office space. Actual winery processing space is 27,050 square feet, which means that entertainment and office space is equal to approximately 65% of the space dedicated to actual wine processing. The County has determined that amount of marketing and administrative office uses should not exceed 15% of the winery size to be considered "incidental" in use.

The proposed lounge, commercial kitchen, food service facilities, and lodgings together, effectively represent a restaurant or resort facility, which is not allowed in neither LIA zoning nor on Williamson Act lands, and these features should be removed from the project.

The strong hospitality and entertainment orientation weakens the agricultural connection justifying a location in a very rural area on Westside Road. It suggests that the main reason for moving the existing processing facilities from a location in Healdsburg, with good highway and transportation access for it operations and employees, to Westside Road; is to exploit the location on this rural roadway, for commercial marketing purposes.

3. Scenic Corridor and Non-Conforming Use Restrictions: Westside Road is a designated Scenic Corridor under the Open Space Element of the County General Plan. The proposed project would result in several structures, parking and other development within the 200-foot setback. (See Attached WCA Letter submitted on December 2, 2014 to the Design Review Committee.)

The WCA does not believe that constructing tasting rooms and other visitor serving facilities in the location of the current hop kilns and bale barn complies with either Sonoma County zoning ordinances, the General Plan Open Space Element or Section 65567 of the State Planning and Zoning law.

Westside Road embodies Healdsburg's rich agricultural heritage, with scenic vistas and historic structures, which provide continuity with our past and enhance our quality of life. The Project threatens this heritage. This Project includes large structures and parking adjacent to historic buildings and viewscapes, and includes intense visitor serving uses that will be degrade the rural character of the area.

4. **Situated in a high concentration of existing facilities**: Per General Plan Ag Resource Elements AR – 5F(3), 5G, and AR-6F, a detrimental concentration of wineries, tasting rooms and event facilities is a rationale for the County to deny a discretionary Use Permit.

There are already three (3) other facilities with visitor serving uses within the quarter mile stretch of Westside Road where the Project is proposed to be located[1]. Adding a fourth, very large project in this particular stretch of road, in close proximity to several other event facilities, will create traffic issues that have not been assessed. In addition, Westside Road is a designated County bicycle way. It is one of the most popular bicycle routes in the County, and is used by farm equipment and many local and visiting motorists as well. Such a tight concentration of event facilities will also greatly impact the rural character and rural landscapes on this already impacted and important rural scenic byway.

Also, having the winery across the street from the tasting room and entertainment facilities will create additional road safety issues with visitors and employees forced to cross the narrow roadway with limited sight lines.

5. Cumulative Impacts: The cumulative impacts for an additional and very large project as proposed in the area will be significant. Westside Road currently has 27 permitted tasting rooms, entertainment facilities, and wineries. It is an area that has one of the highest concentrations of events and event facilities in the County, and already has a detrimental concentration of events and event facilities.

---

[1] Other three facilities - Arista UPE09-0026, William Seylem UPE04-0074, Gracianna Family Winery UPE10-0021,

As a consequence, the cumulative impacts of any additional projects will degrade the rural character of the area. A project proposing a 60,000 case, 46,000 square foot facility with 10,700 square feet of entertainment facilities, 6000 square feet of office space, hosting 44 event days, public tasting and lodging facilities, will have a detrimental impact on the neighborhood.

In addition, the project site is located in a cluster of tasting rooms and wineries that, with the addition of the proposed Project would result in four facilities within approximately one-quarter mile along Westside Road.

Conclusion: The Project is simply too large, and commercially oriented for a rural area such as Westside Road, and will be detrimental to the rural character of the area. In addition, having restaurant facilities and buildings located within the scenic corridor, the Project violates Sonoma County Zoning Code and General Plan requirements. For these reasons, the WCA does not support the County granting a discretionary use permit for the Project. The WCA is also concerned that features of this Project do not comply with the zoning code or Rule 8 of the Williamson Act, and calls into question why the Project was sent for Initial Study review before the non-compliant features are removed.

For the above reasons, the WCA believes that this Project is not suited for the proposed location on Westside Road and should be denied.

RE: 7097 Westside Road, UPE14-0008

Dear Commissioners

This letter is on behalf of the Westside Community Association (WCA) regarding the proposed use of the existing hop kiln structures for entertainment and visitor serving uses, which is included the Ramey Use Permit application.

The WCA does not believe that constructing a tasting room and other visitor serving facilities in the location of the current hop kiln structures complies with either Sonoma County zoning ordinances, the General Plan Scenic Resource Element or Section 65567 of the State Planning and Zoning law.

Section 65567 of the State Planning and Zoning law prohibits issuance of a building permit in contravention of the General Plan's Open Space Element. The proposed new tasting room, entertainment and parking facilities intrude into the 200 foot setback and may not be built consistent with either State law or the General Plan requirements.

The existing hop kiln structures are non-conforming structures because they are located within the 200 ft. scenic corridor setback. The provision of Section 26-64-030 Scenic Resource Combining District apply to properties along scenic corridor, and delineates the conditions whereby construction may be permitted on the properties covered by this provision The proposed project is located in a scenic corridor and thus subject to the provision of this section. Since the proposed project is a not a maintenance, restoration or reconstruction of the existing hop kiln, but rather a new use, requiring virtually all new construction, there is no provision that would permit such new construction and new use within the 200 foot setback.

The provision of Section 26-64-030 allowing construction new barns and similar agricultural support services would also not apply as agricultural support services are spelled out in Policy AR-5f as processing, storage, bottling, canning, and packaging. The proposed use is clearly visitor serving.

Similarly Article 94 – Nonconforming Uses of the Sonoma County Zoning Code delineates the circumstances under which a non-conforming use may be continued or reconstruction may be permitted. Again, the proposed new use and construction does not comply with County codes. Under section 26-94-010 the non-conforming use may be replaced by a use of the same or less intensity upon obtaining a use permit. The proposed project does not qualify under this provision for two reasons. First, the use of the hop kiln structure has been abandoned for a sufficiently long time that any new use would not be replacing a current use. Second, the proposed use is not "the same or less intensity". A tasting room, VIP lounge, marketing accommodations, and two kitchens and dining areas is certainly not a less intensive use.

Section 26-94-020 delineates how a non-conforming use can be reconstructed. Under this provision, the need for reconstruction would have to be as the result of several enumerated circumstances – explosions, acts of god and the like, and presumably be replacement of an existing, non-commercial use. The proposed project does not meet these standard for a reconstruction.

Finally, even if the proposed new construction and use were a continuation of an existing non-conforming use, which is not the case, the proposed modifications, in addition to being a more intense use, would increase the foot print of the structures by more than 10% limitation contained in Section 26-94-010. Based on drawing A1.10 of the application the existing hop kiln structures would be increased by approximately 19%.

Therefore, for the above stated reasons, the WCA requests that the Landmarks Commission not recommend approval of this new construction because is does not comply with the County's General Open Space Element and the County's Zoning Ordinances.

Thank you for your consideration of the important matter.

Sincerely,

Westside Community Association Advisory Board

RE: Request for Use Permit to allow conversion of hop kiln and baling barn to tasting rooms including two marketing accommodations rooms

Dear Commissioners,

This letter is intended to be applied to the public record as a positive declaration in favor of the use permit under consideration by the Permit & Resource Management Department in relation to the Ramey Cellars notice of waiver.

We are aware of the intent to use and acknowledge that the impacts, if any, will be minimal and concur with staff that any land use alteration is consistent with the neighborhood, land use zoning and county intent.

As neighbors we are familiar with the wine business and its need to offer the complete "Sonoma County" experience since healthy brands are critical to a viable and positive economic environment. We will be pleased to see the approval of this use permit and the restoration of a landmark that deserves reminding our community of its storied past. We are convinced the Ramey's will do a first-class job.

Best regards,

Trini + Lisa Amador

Dear Judith,

I have been looking over your website and thought it would be a good idea to introduce myself and my family. After reading the details about our project online I thought your members might appreciate a bit more information about our plans. Before the purchase of Westside Farms became final in December of 2012, we were already familiar with the ranch as we took our then young children to the Kaiser's pumpkin patch a number of times along with their school communities. We have since learned that hundreds of local children, now grown, have shared this wonderful experience.

My husband David has been involved with making wine and buying grapes for over 30 years, mostly in Sonoma County. Working originally for other wineries, such as Simi, Matanzas Creek, Chalk Hill, and Rudd, to name a few; he/we started our own business in 1996 with 250 cases of Chardonnay. Today we make approximately 40,000 cases of wine per year, much of which is Chardonnay from the Russian River Valley. We lease 2 buildings in Healdsburg from the Deas family and a partnership which includes the Deas'. They are warehouse-type buildings on Haydon Street and Healdsburg Avenue.

Our children were born and attended school here in Sonoma County. Our daughter Claire, age 23, and her husband Ivan, live in the old farmhouse on Westside Farms which the Kaisers vacated in December. They have 12 chickens and hope for some goats. Ivan, originally from Montenegro, became a US citizen a few months ago. He grew up on a farm and is very handy to have on the property. Claire has come to work for us full-time at the winery since graduating from college.

Our son Alan, now 22, works for us during the summer between college terms and will be graduating next May. I handle the books, payroll, compliance, and multiple administrative tasks for our business. At the winery buildings we have 11 fulltime local Sonoma County employees, many which live here in Healdsburg. They make it all possible for us and I invite you to visit our website to meet them online. www.rameywine.com

Redwood Empire Vineyard Management has been farming the 42 acres of Chardonnay and Pinot Noir for some time now and is careful to make sure the grapes are farmed sustainably. We have 6 honeybee hives adjacent to the vines, lovingly cared for by Agustin Carrasco, who originally worked for the Kaisers and now works for us as a full-time ranch manager. Planting of bee friendly gardens is on-going. We take our responsibility as caretakers of this exceptional property very seriously.

Last year we commissioned BioEngineering Associates to repair severe erosion along the Russian River at the northern boundary of the property, the same company that the Rochiolis used up river. The natural approach of using layers of willow saplings, gravel, burlap and rock to stabilize the bank allowed us to retain riparian land and preserved vegetation. Tree root wads were placed in the Russian River along our property by the Russian River Wild Steelhead Society and State Fish and Game to create slow water habitat for salmon.

Our property has been in agriculture for over 100 years. It was originally planted with oats, hay and beans, then hops, and when that crop fell to mildew, prunes. Grapes were finally planted in 1990--the crop that enables the majority of local farmers to stay in agriculture and sell their fruit to wineries. We are proud to continue the tradition of supporting agriculture here in Sonoma County and feel that the purchase of this amazing property is the realization of a dream for our family and business.

We are in the process of re-submitting our use permit after receiving suggestions from Traci Tesconi, our planner, for additional studies which should help the planning commission get a clearer picture of our intentions and the state of affairs on the parcel.

Our plan is to refurbish the hop kilns and baling barn and convert them into tasting rooms. We have worked with our architect, Olle Lundberg, to preserve the shape and footprint of one of only eight hop kilns remaining in northern California. We will preserve the furnace and ducting on one side so visitors can see how the hops were processed. I have attached a photo to show how little the buildings will change with the renovation. A large vegetable and flower garden will be planted in front of the kilns with a small orchard planted off to the side. We also plan on building a winery on the upper side of the parcel hidden from the vantage of the road, half buried (cut and fill) so it will save energy and disappear into the slope. The winery will not be open to the public and all shipping fulfillment and case goods storage is off site at the Sonoma County Vintners Coop in Windsor. Not only is this arrangement more convenient for trucking, it also cuts traffic and wear and tear on a rural road. Our completed traffic study found that we would produce significantly less traffic in one year than the pumpkin patch generated in two months.

If you take the time to research our winery you will see that we are in the wine business, not in the event (i.e. wedding) business. None of the facilities we propose will be available for rental or use by outside parties. This August marks only the 3rd consumer event we have ever hosted, an invitation to our mailing list customers to taste our new releases. Most of the popular wine tasting weekends held locally are not attractive to us--our wines carry a higher price point than would be attractive to a large audience. We hope you will come to welcome us as new neighbors of the Westside Road community. As residents of Westside Road ourselves, can understand your concerns.

Thank you for taking the time to read my letter. My family and I welcome your questions.

Sincerely,

Carla Ramey

Good morning Traci

I have been reviewing this project description and I note that two of the historic buildings are not listed as being on the project. In the email below, I mention the blacksmith shop and the corn feeder. Also, the historic significance is not mentioned, the history starts with the purchase of the property by the Kaisers. Since this is such a historically significant property in our neighborhood, I would like to see all the building mentioned, and a discussion as to which ones are going to be torn down along with the history of this site.

Also, I have a phone number of Yolando Solano, but not her email address. Would you please forward this to her? and also add it to the packet for the Dec 2nd Landmarks Commission meeting?

Thank you Traci

Hi Denise,
Are you able to comment on Nancy's concerns about the 2 bldgs? I'm not sure if any of this came up at the last mtg I was not present at.

thanks!
-Bryan

This is an email from Nancy Citro regarding the upcoming Landmarks Commission meeting.

Traci- she attempted emailing you, but got your out of office auto-reply.

Denise- she asked this be sent to Yolanda, but I am sending it to you since you are now the lead on Landmarks Commission.
